Never a Delay

Sedan

Victoria

Town Car

Limousine

THE automobiles used by United States Army Generals over there were closed cars, many of them Winton Six limousines; and the work they performed under the severest tests—weather of every sort, war-worn and shell-ripped roads, practically continuous running, without lights at night—is the best proof that the closed car is much more than a distinguished social vehicle.

Major General Cronkhite, U. S. A., who served in France, Belgium, Alsace-Lorraine, Italy, Luxemburg and Germany, driving as near to the front as a motor car could go, reports that his Winton Six limousine traveled 15,000 miles and that "thruout this entire period I never suffered a moment's delay."

May we send you literature?

The Cover

The Japanese print reproduced on the cover of The Independent this week by courtesy of Yamanaka & Co., New York, is one of the masterpieces of the Popular School of Painting (Ukiyo-ye) of Japan. It represents "Mount Fuji with the Lightning" and is one of a famous set of thirty-six views of the Sacred Mountain of Japan made in the early part of the nineteenth century by Hokusai, the leader of the Popular School.

Just a Word

The Message from the United States Government to the American People published in this issue of The Independent is the fourth of the series which was inaugurated by a foreword by President Wilson in the issue of December 13 and which will continue to appear in The Independent every week.

England, France, Italy and Japan each present a message to the American people in The Independent at monthly intervals. In this issue is a message from the Imperial Government of Japan on "The Plain Facts on Shantung," written by Viscount Uchida, Minister of Foreign Affairs. The British message, to be published next week, will deal with the Turkish problem and the question of a mandatory.

Remarkable Remarks

J. P. MORGAN—I never talk politics.

HENRY FORD—Money is needed only to work with.

SIR OLIVER LODGE—Personally I cannot conceive ether.

JOHN KENDRICKS BANGS—All is not bliss that blisters.

WOODROW WILSON—The ostrich act I see being done all about me.

OLE HANSON—There is, as yet, no synthetic substitute for brains.

ED. HOWE—The jackass should be our national emblem instead of the eagle.

BILLY SUNDAY—Women nowadays don't wear enough clothes to flag a handcar.

MAJOR GENERAL LEONARD WOOD—A verbal message is very soothing for a short time.

CHRISTINE MANN, M. D.—I can dress myself in less than five minutes.

BILLIE BURKE—The art of acting is too serious a thing to be seriously talked about.

ELINOR GLYN—If I were to tell all the truth about love people would tear me to pieces.

EX-KING CONSTANTINE—There are some things kings cannot discuss with newspaper men.

E. A. CUDAHY, JR.—There is no more wholesome meat dish than good old corned beef.

WELL, WELL, WELL!

The New York *Herald* comments thus on the foreword by President Wilson to the series of messages of the United States Government to the American people published weekly in The Independent

MRS. MAY ELIOTT HOBBS—No man in the world can take care of a cow as well as a woman.

GENERAL (Butcher) WEYLER—A dictator is the only guarantee for the restoration of liberty.

DOUGLAS FAIRBANKS—A smile in the morning will do you more good than a grapefruit.

RABBI RUDOLPH GROSSMAN—The theater is and should be the sister of the church and the synagog.

MRS. EDWIN W. SIMS—No happiness is comparable to the happiness of rearing a large family of children.

FLORENCE KING—What's your daughter doing is the greatest problem before this or any other country?

THE PRINCE OF WALES—It is up to us to show the way to the other nations of the world how to overcome difficulties.

HENRY MORGENTHAU—Nothing on earth except a miracle can prevent the death by freezing and starvation of 10,000,000 in Europe and the Near East this winter.

LYMAN J. GAGE—I know if I know anything at all that William McKinley would say to this man (Woodrow Wilson) who is leading the onset for peace and unity among the nations of the world, "God bless the work you are doing. I am with you."

The Independent

January 3, 1920

"The sole salvation for the human race lies in the removal of the primal curse, the sentence of hard-labor for life that was imposed on man as he left Paradise. Some folks are trying to elevate the laboring classes; some are trying to keep them down. The scientist has a more radical remedy; he wants to annihilate the laboring classes by abolishing labor. There is no longer any need for human labor in the sense of personal toil"—and this article tells you why.

Back to Nature? Never! Forward to the Machine

By Edwin E. Slosson

THE story of Robinson Crusoe is an allegory of human history. Man is a castaway upon a desert planet, isolated from other inhabited worlds—if there be any such—by millions of miles of untraversable space. He is absolutely dependent upon his own exertions, for this world of his, as Wells says, has no imports except meteorites and no exports of any kind. Man has no wrecked ship from a former civilization to draw upon for tools and weapons, but must utilize as best he may such raw materials as he can find. In this conquest of nature by man there are three stages distinguishable:

1. The Appropriative Period
2. The Adaptive Period
3. The Creative Period

These eras overlap and the human race, or rather its vanguard, civilized man, may be passing into the third stage in one field of human endeavor while still lingering in the second or first in some other respect. But in any particular line this sequence is followed. The primitive man picks up whatever he can find available for his use. His successor in the next stage of culture shapes and develops this crude instrument until it becomes more suitable for his purpose. But in the course of time man often finds that he can make something new which is better than anything in nature or naturally produced. The savage discovers. The barbarian improves. The civilized man invents. The first finds. The second fashions. The third fabricates.

The primitive man was a troglodyte. He sought shelter in any cave or crevice that he could find. Later he dug it out to make it more roomy and piled up stones at the entrance to keep out the wild beasts. This artificial barricade, this false facade, was gradually extended and solidified until finally man could build a cave for himself anywhere in the open field out of stones he quarried out of the hill. But man was not content with such materials and now puts up a building which may be composed of steel, brick, terra cotta, glass, concrete and plaster, none of which materials are to be found in nature.

The untutored savage might cross a stream astride a floating tree trunk. By and by it occurred to him to sit

inside the log instead of on it, so he hollowed it out with fire or flint. Later, much later, he constructed an ocean liner.

Cain, or whoever it was first slew his brother man, made use of a stone or stick. Afterward it was found a better weapon could be made by tying the stone to the end of the stick, and as murder developed into a fine art the stick was converted into the bow and this into the catapult and finally into the cannon, while the stone was developed into the high explosive projectile.

The first music to soothe the savage breast was the sighing of the wind thru the trees. Then strings were stretched across a crevice for the wind to play upon and there was the Aeolian harp. The second stage was entered when Hermes strung the tortoise shell and plucked it with his fingers and when Athena, raising the wind from her own lungs, forced it thru a hollow reed. From these beginnings we have the organ and the orchestra, producing such sounds as nothing nature can equal.

The first idol was doubtless a meteorite fallen from heaven or a fulgurite or concretion picked up from the sand, bearing some slight resemblance to a human being. Later man made gods in his own image and so sculpture and painting grew until now the creations of futuristic art could be worshipped—if one wanted to—without violation of the second commandment, for they are not the likeness of anything that is in heaven above or that is in the earth beneath or that is in the water under the earth.

In the textile industry the same development is observable. The primitive man used the skins of animals he had slain to protect his own skin. In the course of time he—or more probably his wife, for it is to the women rather than to the men that we owe the early steps in the arts and sciences—fastened leaves together or pounded out bark to make garments. Later fibers were plucked from the sheepskin, the cocoon and the cotton-ball, twisted together and woven into cloth. Nowadays it is possible to make a complete suit of clothes, from hat to shoes, of any desirable texture, form and color, and not include any substance to be found in nature. The first metals available were those found free in

nature such as gold and copper. In a later age it was found possible to extract iron from its ores and today we have artificial alloys made of multifarious combinations of rare metals. The medicine man dosed his patients with decoctions of such roots and herbs as had a bad taste or queer look. The pharmacist discovered how to extract from these their medicinal principle such as morphine, quinine and cocaine, and the creative chemist has discovered how to make innumerable drugs adapted to specific diseases and individual idiosyncrasies.

IN the later or creative stage we enter the domain of chemistry, for it is the chemist alone who possesses the power of reducing a substance to its constituent atoms and from them producing substances entirely new. But the chemist has been slow to realize his unique power and the world has been still slower to utilize his invaluable services. Until recently indeed the leaders of chemical science expressly disclaimed what should have been their proudest boast. The French chemist Lavoisier in 1793 defined chemistry as "the science of analysis." The German chemist Gerhardt in 1844 said: "I have demonstrated that the chemist works in opposition to living nature, that he burns, destroys, analyzes, that the vital force alone operates by synthesis, that it reconstructs the edifice torn down by the chemical forces."

It is quite true that chemists up to the middle of the last century were so absorbed in the destructive side of their science that they were blind to the constructive side of it. In this respect they were less prescient than their condemned predecessors, the alchemists, who, foolish and pretentious as they were, aspired at least to the formation of something new.

It was, I think, the French chemist Berthelot who first clearly perceived the double aspect of chemistry, for he defined it as "the science of analysis and synthesis," of taking apart and of putting together. The motto of chemistry, as of all the empirical sciences, is *savoir c'est pouvoir*, to know in order to do. This is the pragmatic test of all useful knowledge. Berthelot goes on to say:

Chemistry creates its object. This creative faculty, comparable to that of art itself, distinguishes it essentially from the natural and historical sciences. . . . These sciences do not control their object. Thus they are too often condemned to an eternal impotence in the search for truth of which they must content themselves with possessing some few and often uncertain fragments. On the contrary, the experi-

mental sciences have the power to realize their conjectures. . . . What they dream of, that they can manifest in actuality. . . .

Chemistry possesses this creative faculty to a more eminent degree than the other sciences because it penetrates more profoundly and attains even to the natural elements of existences.

Since Berthelot's time, say within the last fifty years, chemistry has won its chief triumphs in the field of synthesis. Organic chemistry, that is, the chemistry of the carbon compounds, so called because it was formerly assumed, as Gerhardt says, that they could only be formed by "vital force" of organized plants and animals, has taken a development far overshadowing inorganic chemistry, or the chemistry of mineral substances. Chemists have prepared or know how to prepare hundreds of thousands of such "organic compounds," few of which occur in the natural world.

But this conception of chemistry is yet far from having been accepted by the world at large. This was brought to my attention during the publication of these chapters in *The Independent* by various letters, one class of which may be represented by the following:

When you say in your article on "What Comes from Coal Tar" that "Art can go ahead of nature in the dye-stuff business" you have doubtless for the moment allowed your enthusiasm to sweep you away from the moorings of reason. Shakespeare, anticipating you and your "Creative Chemistry," has shown the utter untenableness of your position:

"Nature is made better by no mean.
But nature makes that mean: so o'er that art,
Which, you say, adds to nature, is an art
That nature makes."

No, it was not in momentary absence of mind that I

claimed that man could improve upon nature in the making of dyes. I not only said it, but I proved it. I not only proved it, but I can back it up. I will give a million dollars to anybody finding in nature dyestuffs as numerous, varied, brilliant, pure and cheap as those that are manufactured in the laboratory. I haven't that amount of money with me at the moment, but the dyers would be glad to put it up for the discovery of a satisfactory natural source for their tinctorial materials. This is not an opinion of mine but a matter of fact, not to be decided by Shakespeare, who was not acquainted with the aniline products.

Shakespeare in the passage quoted is indulging in his favorite amusement of a play upon [Continued on page 37]

Dr. Slosson Turns the Searchlight of Science on the Trend of the Times

¶ "Back to barbarism!" is the slogan of the hour. Sink into savagery. Praise the country and denounce the city. Extol forests and despise laboratories. Spend \$250,000 on a new gymnasium and let the old library go to ruin. Abolish compulsory Latin and establish compulsory swimming. Patronize football and neglect debating. Up with the soldier and down with the savant. Jazz your music and cube your painting. Roughcast your walls, deckle your bookedges, wormhole your furniture, coarsen your fabrics and deform your pottery. Cultivate the primitive virtues of personal bravery and clan loyalty. Reprove and repress the Christian virtues of kindness and universal sympathy.

The dominant tendency of the times is undoubtedly downward and the advance of science has not yet availed to check it.

It is a reactionary spirit, antagonistic to progress and destructive to civilization. Science and Christianity are at one in abhorring the natural man and calling upon the civilized man to fight and subdue him. The conquest of nature, not the imitation of nature, is the whole duty of man. The true evolutionist's one desire is to get away from nature as fast and far as possible. Anarchy is the natural state of the human race.

We should "move upward working out the brute and let the ape and tiger die."

If He Were President

The Independent Series of Articles on Some Likely Candidates for 1920, Presenting the Views of Leading Republicans and Democrats on the Vital Issues of Today

Hiram W. Johnson

Including an Interview with the Senator and Former Governor of California

By Donald Wilhelm

"I F I were President," sturdily avers Hiram Johnson, "I'd keep my campaign promises, and I beg of you, if you think that is treason, go make the most of it!"

To be sure, now, the very present Senator, onetime nominee for the Vice-Presidency, and former Governor, does not shout such heresy from the housetops; indeed, tho men are reckless about such things when they're quite alone, it may be doubted if he even avers aloud any such schismatic opinions to the ample citizen who fills out and meets him in his boudoir mirror; nevertheless, what the Senator is, and what his record is, speak so loudly that we need not hear his voice. His buckram seriousness and pertinacity and sagacity in such matters, his friends tell you in great long whisperings in your left ear, are irreducible facts. And they go on, even—sometimes with that pride of place that increases on the jump as one progresses westward, clear on out to California—to tell you that Hiram Johnson is the Honestest Hiram yet born, finding prescient proof therefor in the remarkable manner in which, in the years subsequent to March 4, 1921, historians discerned him, spectacled but with resplendent and stubborn strength, in the White House backyard! He was there—in the years subsequent to 1921!—so these prescient enthusiasts now note—because honesty is the best policy, etc. He was there engaged, moreover, not in destroying but in hammering and splicing together campaign planks into promised realities. It is a wonderful fact—these friends' desire and faith. And even Colonel Roosevelt expressed his faith in Governor Johnson's prowess when he said, in his last speech of acceptance: "In Governor Johnson we have a man whose every word is made good by the deeds he has done—the man who, as head of a great state, has practically applied, for the benefit of the people of that state, the principles which we intend to apply thruout the union as a whole. We have named the only type of man who ought to be named for the vice-presidency. We have named a man fit at the moment to be President of the United States."

To this peroration from the man who doubtless would

Press Illustrating

Mr. Johnson, like most men of action, loves dogs

be leading his party out of the bulrushes if he were living now, there were tumultuous cheers and cries of militant and progressive Moose. Nevertheless, it is to be remembered that speeches of acceptance are made in the generous spirit of gratitude for success *about to be* achieved. The proof is that a few weeks before Woodrow Wilson was saying, in private speeches of acceptance, anent Thomas Riley Marshall, né Wabash County, Indiana, much of pleasant vein. And two weeks before that event, in the same generous style, Mr. Taft was saying, anent the Honorable James Schoolcraft Sherman, of Illinois, who did not argue the points, some

grandiloquent things—to which voters replied, in general, that the remarks of Mr. Taft *might* carry weight, and to which the electoral college replied with the figure 8, meaning eight electoral votes, each, for Mr. Taft and Mr. Sherman—the least ever given the chosen candidates of any full-fledged American party.

At that 1912 Taft convention Governor Johnson hurled this at the Taft steam roller: "I object to having California's title to rightful goods"—meaning delegates—"stolen from her and determined by those who stole the goods." But he was not named Vice-President by the Progressives because of that affront to a traditional machine. Nor because the Lincoln-Roosevelt League of Progressive Republicans backed him. Nor because he happened to be the son of Grove L. Johnson, Esq., a supporter of the Southern Pacific Railroad. Nor because the Southern Pacific "owned" California before the state was born, and thereafter owned, operated and looted it with exasperating insolence and power down to the time Mr. Johnson became its Governor, when, says ex-Congressman William Kent, of California, Republican also, "judged by the accomplishments of a few short months, Governor Johnson ranked himself as one of the most efficient executives in the history of our country," which compliment the Senator approves.

It's a long, exciting story, how the Southern Pacific pre-digested California, then, as the manner has been with all pre-digested articles from Noah to date, proceeded to digest it again, little by little; how such men as John R. Haynes, father of California's initiative,

referendum and recall; Messrs. Phelan, Caminetti, Shanahan, Senator Boynton, and Messrs. Lissner, Dickson, Spreckels, Heney, others, fought the octopus to the end; how, at last, Heney, who led the graft prosecution—in which work, as a paid attorney, Hiram Johnson had helped—was shot down, and all but killed, in a courtroom. He passed his leadership in the graft prosecution over to Johnson—who sent Abe Ruef to serve fourteen years in St. Quentin—and passed the surety of his being nominated for Governor over to Johnson, who accepted the responsibility reluctantly as a forlorn hope, took up arms in a tintinabulating tin lizzie, and, with cowbells tinkling to call the farmers in, set out. It is characteristic of his physical and persistent vigor, which makes him a tremendous force, that he touched almost every town in a state 800 miles long, 250 miles wide—a state more than twice as large as Connecticut, Delaware, Massachusetts, Rhode Island, Vermont, New Hampshire, New Jersey and Maine all combined. And everywhere he ended his earnest speeches thus: "My friends, I am going to be the next Governor of California, and when I am I am going to kick out of this government William F. Herrin and the Southern Pacific Railroad. Good night."

He did just that. He kicked them out and locked the gates. Friends pleaded for office-holders. Johnson shook his head: "No, they must go." Before Governor Gillette finished his term, other office-holders got their jobs extended another four years or so. Johnson could not kick them out, so he asked the legislature to abolish their jobs, which it did. And that legislature, led in the Senate by a fine and inflexible leader, Lieutenant-Governor Wallace, and in the House by men as able and well inspired, chose and put thru, from a maze of thousands of bills, such bills that Governor Johnson was able to report, without challenge, in his second inaugural, this list, not altogether complete, of achievements—which has no parallel in America, and entitles its leader to consideration as a candidate for the presidency.

I. The return of the state to its citizens.

II. The abolishment of boss rule—the permanent abolishment of it, as far as then conceivable, by the adoption of the initiative, referendum and recall.

III. The extension of suffrage to women, to which, however, he gave less attention than to other matters, but which resulted in the California vote that defeated Mr. Hughes and returned Mr. Wilson in 1916—about which there is more, anon.

IV. The adoption of the Australian ballot, and of a short ballot.

V. Provision for the non-partizan selection of judges, school officers and county officers, and the establishment of home rule for counties.

VI. Public control of public utilities.

VII. Centralized and systematized control of public business (previously no comprehensive audit had been made of the expenditures of public moneys).

VIII. The adoption of free text books for school pupils.

IX. Prison reform, with a reformatory established for young offenders.

X. Amendments and improvements to the employers' liability act; workingmen's compensation.

And to all this he added, in his inaugurals, sentences pregnant with powerful and conscientious adherence to his promises, and full of eloquence and strength—sentences such as "gave to women who toil shorter hours and more happiness, and to men something of the justice that has been denied them . . . with the mantle of the state for the care and the tenderness of the state for the maimed members of society . . . the establishment of the beacon light of social justice and humanity far beyond the point to which most ambitious commonwealths have gone."

All this suggests something of the man.

As President he could fashion words perhaps as well as President Wilson and hammer them out—his oratory suggests hammering them out—in even less uncertain terms. In fact his power of lucidity and exposition in plain but specific language that every one can understand accounts for much of his success in California. And the manner in which he fretted and stampeded to his support a convention of the bar association in California by the most delicious satire about their lawyer concern over the plight of what he called the submerged four-fifths of California, is such satire as Mr. Wilson probably could not achieve.

If some Californians insist that he is vindictive, it can be answered that there are sour grapes growing in California as elsewhere in the vineyards of the world, or one might submit that he is radical in spirit rather than liberal, and vigorous—"The Public" observes "almost vicious, and more spectacular than Roosevelt," therefore liable to hurt feelings that get into the way. He doesn't spare feelings.

He has sacrificed friends to his self-centered ambitions, one hears frequently, and Frank Heney is taken as illustration. But Mr. Heney was shot because he denounced before the jury a talesman as an ex-convict, was and is such a fighter constitutionally, and it is of course conceivable that if Mr. Johnson did not, as is said, aid Mr. Heney to attain the United States Senate in the three-cornered fight that elected Mr. Phelan, the cause may have lain with either—this witness knows not and says not because motives are precarious matters.

And if it be said that he threw over Mr. Hughes in the last campaign it can be answered that Mr. Hughes ought not to have been sent to California before the primaries had been held. Both progressive and old guard factions wired the Republican National Committee to keep him away until after the primaries. But he was sent, and having arrived was taken into tow by the state's old guard, principally in the form of the San Francisco Chamber of Commerce. Mr. Johnson was quite ignored, his friends pointed out; some metropolitan daily papers opposed to him were not mentioning his name those days and did not record numerous speeches that he made in behalf of Mr. Hughes, and even the Mayor of San Francisco, a friend of Johnson and a man of progressive drift, was not invited to sit [Continued on page 31]

Senator Johnson, elected by the biggest vote ever cast in California, is being talked of as the Presidential candidate most likely, perhaps, to interit Colonel Roosevelt's following

Is Bootlicking Part of the Teacher's Job?

By Marguerite Wilkinson

This is the fourth of a series of articles on "What Is the Matter with the Teacher's Job?" We put the question to a large group of teachers in every state in the Union and asked them to answer from their own experience and to suggest improvements. Their replies came in by the hundreds and Mrs. Wilkinson, who besides being an author is a teacher's wife, arranged from them five articles of inside information on the teachers' grievances—low pay, inefficient school board administration, lack of respect in the community, curtailment of personal rights, unwise choice of school executives. The sixth article will set forth the teachers' own suggestions for the reconstruction of their profession.

HAVE teachers enough freedom of speech in the classroom and outside of it? Are they secure in the other and lesser personal rights that belong to "life, liberty, and the pursuit of happiness"? Do we, as American citizens, want them to be as secure in these rights as we are ourselves? Do we want American children taught by sane, impartial, self-respecting and intellectually efficient men and women? Or do we prefer to put education into the hands of timid, lickspittle creatures of circumstance, pliant according to every turn of the times, changing the colors of their opinions with every change of environment, like the chameleon? Sooner or later, consciously or unconsciously, we must choose. A consideration of what a number of teachers have to say in this connection may prove helpful and is certainly interesting. One teacher, living in a large and unusually liberal western city, writes as follows:

"There is freedom of speech—within limits. To be sure, a teacher who wishes to make literature or science the vehicle for anarchism, Mormonism, or any other ism, is likely to encounter difficulty. Any one who has seen how very open to the planting of misconceptions is the adolescent mind, should not wish to cultivate in the schoolroom any attitude save that of the careful and considerate investigator of opinions. Outside of the classroom, in the company of adults, the teacher should have and express positive views. He will have no difficulty here—again within limits. But everybody has difficulty outside limits. We do not choose as bank cashier the man who advocates the repudiation of public debts, or as a minister a man who preaches atheism. A man may hold any of these views; but he must choose his calling not to interfere with his views, or reconsider his views to suit his calling. The teacher encounters the same necessity. He may become a missionary of an unpopular doctrine, but he should not, in reason, expect his fellow citizens to pay him for spreading it from the vantage point of the teacher's chair."

The moderation of this letter is characteristic of the best letters sent us and of the profession. Teachers who write us on the subject of free speech do not claim the right to put forward extreme or radical propaganda of any kind in the classroom. They seem to desire for themselves only that measure of freedom in the everyday contacts of life and in ordinary social intercourse

that would be freely accorded persons in other professions or in business. Many of them claim that such freedom is not accorded them in the localities where they are employed. One principal of a high school answers our question as follows:

"Teachers do not have the right of free speech. So narrowly is the teacher circumscribed in the matter of self-expression that it is no longer possible for a man or woman to be in this work and maintain his or her self-respect. Most of us lie about our opinions, even when it is legally safe to possess these luxuries. I have known many teachers who are so noncommittal that they will not even express an opinion in regard to the weather. And then men have the gall to write about the days of the Inquisition in 'bloody Spain'!"

Here is comment from another western city:

"Have teachers the right of free speech? No, they have not. This communication has to be confidential. When the battle for clearing the schools of corruption was fought out we had to remain silent. A voter came to me and asked whether he should vote for a corrupt political boss who was running. The boss had whitewashed a principal by introducing evidence against the moral character of a woman who testified against the principal. The evidence was false. And yet I did not dare tell this voter that he must not vote for the boss."

Here is another opinion:

"Have teachers the right of free speech? They have the right, but they are fools if they exercise it. The average community actually looks upon a teacher as one who is employed to teach school, not to meddle in the affairs of the community. If the town is for prohibition, the teacher should be; if it is "wet," the teacher should be. The safest policy for a teacher is to take a fence-straddling point of view in everything. The teacher should be, for his own safety, a politician who is a Dr. Jekyll and Mr. Hyde devel-

oped to the *n*th degree. Don't misunderstand me; I do not believe it is the teacher's duty to take no sides, but I do think it is his best policy, and I speak from considerable experience in trying both methods."

Another teacher says:

"Teachers are restricted in freedom of speech in that, if the politics or religion of the teacher does not suit the influential member of the school board or some big man of influence in the community, the teacher will soon have to seek another loca- [Continued on page 41

"Have teachers the right of free speech?"

Read These Two Comments

Here is what one teacher says: "They are fools if they exercise it. The safest policy for the teacher is to take a fence-straddling point of view in everything."

Or as the president of the Board of Education in one city puts it: "I don't care how you teach. If you don't please the man higher up, out you go!"

A Message from the Imperial Japanese

The Plain Facts on Shantung

By Viscount Y. Uchida
Minister of Foreign Affairs

© E. M. Newman

Fujiyama, the sacred mountain of Japan

THE Treaty of Peace signed at Versailles on June 28, 1919—the most momentous document in history—has been ratified by the rulers and approved by the people of England, France, Italy, Japan—four out of the five of the greater powers responsible for the maintenance of a world peace—and by the main central powers of Europe, responsible for conditions a recurrence of which the signatories—victors and vanquished alike—are leagued together and pledged to prevent if humanly possible. Thus we have reached the third chapter of that dreadful sequence of events into which the world was plunged by declarations which brought practically the entire world into a state of war.

This world war was a holocaust of ruin; it changed so much that now we look out upon a new world. All the old landmarks have gone. But the standards of right and of primitive human justice built upon the broad and firm foundations of our civilizations are not wrecked or lost. We may look forward with great hope, and we must seek among the ruins of the past those principles which are indestructible, which must be eternal. Upon these we must build anew and reconstruct with high endeavor, avoiding the grievous errors which have brought us to this pass.

The peace has been declared, signed and ratified. But the Conference of Paris has not yet by any means concluded its labors. The nations which have signed and ratified the treaty are most solemnly pledged to carry out the terms of the treaty in spirit as in letter. We do not care to discuss the offenses or the penalties, all we care for is that the labors of the Paris convention shall not have been in vain and the peace we have signed and which the people have approved shall be a real world peace on this earth with an ever-increasing goodwill among men.

The people of Japan, who have gone and even now are going thru the fire of unfair criticism from a western world which has been and is misinformed with regard to the conditions and policies of Japan, do not doubt the sincerity of the statesmen and the peoples of America, of England, of France, and of Italy. We must not doubt the sincerity of the peoples of Europe, in their overwhelming desire for a lasting peace which should be the heritage of their posterity. The East fully realizes the outstanding fact that all the western

world is nauseated with the horrors of a war. For generations to come war, as they have known it, is anathema and those who seek war or who, to serve an end, be it great or small, would fan a state of war, cannot escape condemnation. This is the well founded and well balanced opinion among the leaders of thought in this "Land of the Furthest East."

And as the people of America, Great Britain and Europe abhor war, so do the people of Japan seek to avoid it and seek to live in amity and good neighborhood with all the world and more particularly with their neighbors. This is a cold statement of fact which cannot be controverted truthfully or successfully denied. Japan no more than America or England, France or Italy today has desire for a continuance of conditions which, while they have brought unaccustomed prosperity to some, to the larger number have brought great sorrows, incalculable loss and almost insoluble problems. Japan cannot understand why it is the world should doubt Japan's appreciation of this situation or should question a keen desire on the part of Japan to adjust herself to the new conditions in the new world.

"Peace in the Far East" has been and is the most urgent wish of all the thinking people of Japan. In all countries where armies and navies have grown out of proportion to all other public undertakings, the glory of achievement of national armies and navies has been the natural outcome of the effort to instill into the youth of all lands a desire to serve their country and protect their homes should circumstances call for its defense. In this sense "militarism" has appealed to the masses as well as to the classes, but not because of the clank of the saber or the glitter of brilliant accouterment, which are the appeal to a lower intelligence.

Since the day on which Commodore Perry half a century ago brought ships and guns and men of arms to knock at our door Japan has learned much from the West. Much of the naval and military prowess she has attained came as a result of what she bought from or was taught by the West. Her soldiers and her sailors have been trained in and by the West and her international diplomacy and her policies have been shaped largely by her dealings with the West. Thru all the centuries of western growth, thru the days of the rise and decline of great empires, Japan's life had been lived in deep seclusion. Indeed for two centuries and a half we had lived in perfect peace. Was there anything or any chapter in all the earlier history of Japan to mark her out as one of the militarist or aggressive nations of the world? The national character has not changed; it cannot be changed in but fifty years of a certain contact with the militarism of the West.

The war with China was not a war of aggression—far from it. The war with Russia was forced upon Japan and when, in 1914, she entered the Great War

Government to the American People

with her allies of the West, she did so because of loyalty to her obligations and because an enemy had a strong hold in the East. In doing so she threw in her lot with them to stand or fall with them. Japan joined with the victors in making the peace, signed the peace with them and will stand with them in maintaining the peace not only in the Far East, but, if need be, wherever in the world the peace which she helped to make is menaced in violation of the terms of the treaty which she has signed and ratified.

Will not our allies of the West accept this as a simple statement of policy and fact, here as elsewhere? For that it is the policy and the fact, in all the nations with whom Japan has been associated in the making of war and in the signing of peace, we firmly believe.

Reiteration of the statement that Japan intends to keep her pledges and to adhere to the terms of the Treaty of Peace is wearisome, does not appear to the Japanese people or their spokesmen to be necessary or dignified. Japan has kept the faith with all men, she has not failed her friends, shirked her obligations or been ruthless, brutal or aggressive in her treatment of her enemy.

Before the ink was dry upon the signatures of the representatives of the Emperor of Japan to the Treaty of Peace the cry was raised against the Shantung award in that treaty. A widespread and suspicious propaganda was built upon the hypothesis that Japan entered the war without a scintilla of the better or higher motives of her allies, solely for the purpose of self-aggrandizement, and that finally the representatives of the Emperor of Japan signed the treaty with their tongues in their cheeks intending to carry out their part in the letter, perhaps, but not in spirit. In other words, the logical conclusion would be that the Japanese Government was a treacherous conspirator against the peace of the world at the very moment she signed and ratified the Treaty of Peace.

Impossible! The assertion is false; it is dangerous. It is being urged by press agents for ulterior purpose, but there can be but one fair conclusion, based upon all the facts. That conclusion was reached by the conference in Paris, namely, that Japan as one of the five main powers signatory, will keep the faith and abide by the treaty as she always has kept the faith with other nations.

The exact terms of the Treaty of Peace with regard to Shantung are as follows:

Germany renounces, in favor of Japan, all her rights, title and privileges—particularly those concerning the territory of Kiaochow, railways, mines and submarine cables—which she acquired in virtue of the treaty concluded by her with China on March 6, 1898, and of all other arrangements

© E. M. Newman

The famous "torii," or shrine gate, at Miyajima

relative to the Province of Shantung. All German rights in the Tsingtao-Tsinanfu Railway, including its branch lines together with its subsidiary property of all kinds, stations, shops, fixed and rolling stock, mines, plant and material for the exploitation of the mines, are and remain acquired by Japan, together with all rights and privileges attaching thereto.

The German state submarine cables from Tsingtao to Shanghai and from Tsingtao to Chefoo, with all the rights, privileges and properties attaching thereto, are similarly acquired by Japan, free and clear of all charges and encumbrances.

The movable and immovable property owned by the German state in the territory of Kiaochow, as well as all the rights which Germany might claim in consequence of the works or improvements made or of the expenses incurred by her, directly or indirectly, in connection with this territory, are and remain acquired by Japan, free and clear of all charges and encumbrances.

Germany shall hand over to Japan within three months from the coming into force of the present treaty the archives, registers, plans, title deeds and documents of every kind, wherever they may be, relating to the administration, whether civil, military, financial, judicial or otherwise, of the territory of Kiaochow.

Within the same period Germany shall give particulars to Japan of all treaties, arrangements or agreements relating to the rights, title or privileges referred to in the two preceding articles.

Early in the year 1917 the Japanese Government frankly communicated to all the Allied belligerent governments the full intentions of Japan on the occasion of a peace conference "*to demand from the German Government the cession of the territorial rights and special interests which Germany possessed before the war in the Province of Shantung and the islands situated north of the Equator.*"

The governments of Great Britain, France, Italy and the Government of Russia, then existent, promptly and willingly acknowledged the justice of Japan's claims and intentions and agreed to support them at a conference. It is true that the details were not officially made public.

At that time America was not officially at war with Germany, but shortly afterward the United States associated itself with Great Britain, France, Italy, Japan and Russia in the war.

A Message from the United States Government to the American People

What We Expect of Capital and Labor

By Louis F. Post

Assistant Secretary of Labor

THE beginning of a new year is a good time for all of us, conservatives and radicals, employers and workers and those who are neither, to sit down and think. We must make up our minds what we want for the United States and the world for the year 1920 and the years to follow. We must think also how we are to get it—but only after we have decided what we want.

Even if we all wanted the same thing, we could not get it over night. The world is a garden, not a factory. It responds to the rules of growth, not of mechanics. The things we want we must grow.

We can have the fruit only after we have planted the seed and cared for the tree. But what kind of fruit do we want? That is the question we have to decide before selecting the seed. The ground is ready; planting time is here. What sort of seed shall we plant?

Last year we made many mistakes—some of them tragically serious mistakes that must not be repeated if we are to have progress hereafter. On the question of labor, for instance, we were told it was the duty of the workers to serve and sacrifice in the public interest. And we believed it, and we acted upon it—and it was a mistake.

I assert that the workers have no such responsibility. If my authority is asked I refer to the thirteenth amendment to our fundamental law. The worker of today is the historical descendant of the serf of yesterday

and the slave of the day before. Shall we by legislation and injunction seek to turn him back to involuntary servitude? We cannot do it. We shall be most unwise to try.

The worker has the responsibility of respecting the rights of his neighbor. There his responsibility ends. We cannot fasten upon him responsibilities he has not the power or authority to discharge. The responsibility of serving the public interest rests on other shoulders—on the shoulders of those who have the power, and in too many cases have refused to serve.

The life of our people depends, at bottom, on two things: natural resources and human industry. It is with the natural resources, or rather, the persons and corporations that control and represent them, that the primary responsibility of public service lies.

The natural resources were not made for those who own them. They are the gift of God to the whole people, to support their life and provide for their happiness. There is one, and only one, legitimate argument for private ownership of these resources. It is that private enterprise can manage them better than governmental agencies. But that argument necessarily carries with it the supplemental conclusion that the owners are trustees of these properties for the public.

Labor is not a trustee of anything. We have given it nothing with which to serve, and hence it owes us no obligation. With the corporate owners of natural re-

sources it is very different. But we have failed to hold them to their trustee responsibilities. We have been so generous with those who should be our servants that they have become our masters. The rights and privileges we have given and guaranteed to them they have converted into a power over our very lives.

Yet, like apt pupils well rehearsed, we continue to cry "The fault is with labor; it is responsible for all our ills," and have forgotten the essential fact that the responsibility of service is on the other side. We talk excitedly of taking away labor's right to quit working for the profit of others and forget it is a right we have not given. It is an inherent right. We cannot take it away. We shall be ill advised to try.

Suppose that labor should accept and attempt to perform the duty we have sought to place upon its shoulders. Suppose that every worker should lay aside all grievances and turn his whole attention to production. How long would he be permitted to produce? Only until we had reached the point of "over production."

By that I do not mean a point at which our output would exceed our needs, and every citizen would have more than enough of every essential commodity. It would take us a long time to reach such a point—but not so long a time to reach a point at which goods could no longer be sold at the profits desired. The people would need food, shoes, coal and clothing no less than before, but mines, mills and factories would shut down and men everywhere would be out of employment. Would any one say the workers were responsible for such a condition?

It is the trustees of our natural industrial resources who are responsible under every condition for adequately supplying the people's needs. If they refuse to discharge their responsibility, we can take it over and attempt to discharge it ourselves. We can dismiss our present trustees and have all basic industries run by the government.

We can—but we don't want to. Government operation of industry might be bureaucratic and inefficient, but it could be no more autocratic or inefficient than that of the present owners, at least of our natural resources.

There is only one alternative to government operation. It is to compel the present trustees of our resources to carry out their trusts. How that is to be accomplished is a question to consider after we have been convinced that it must be done. Conviction of social sin necessarily precedes conversion to social righteousness. When we are convinced, the rest will be easy.

There are among us today red anarchists and black anarchists, both trying to do our thinking for us. The red anarchists want to drive us their way with bludgeons; the black anarchists to hold us down with chains to their prejudices for their profit. Both are bad. I don't know which are worse.

By "black anarchists" I do not mean the owners or managers of industry. I mean the hangers-on, the lawyers, bond brokers, the publicity scouts and advisors—the walking delegates of business—who would lose their highly profitable jobs if fair industrial adjustments were made. The owners can rest secure in the knowledge that they will be justly compensated if the public wakes up and cancels or regulates their trusteeships. The propaganda of the black anarchists is as bad for the legitimate owners of industry as for the rest of the general public.

We must accept the propaganda neither of the blacks nor of the reds, in lieu of thinking for ourselves. The roads they point lead to chaos in one case and stagnation in the other. We must choose for ourselves the road we will follow. We must do it thoughtfully and humanely and lawfully.

We must have the love of God in our hearts, but not confine it there; it must work out thru our heads and into our social life.

Bringing Cartoons to Life

By Jerome Lackenbruch

WHEN the little animated cartoon figures jiggle across the motion picture screen to caricature our foibles and then suddenly fade away after ten minutes of silent, artificial hilarity, it is difficult to believe that it has taken longer to create them than to make a five reel feature picture.

The conception to the final presentation of an animated cartoon idea on the screen covers a period of about seven weeks, whereas pictures photographed from life are often finished in five weeks. About a dozen artists assist the creative cartoon artist in the mechanical work of preparing the cartoons for the camera. Slow as the process still seems to be, an idea of the development of the process is evidenced from the fact that one of the first cartoons made by Mr. J. R. Bray, the pioneer in this phase of screen humor, consisted of 16,000 individual drawings which took ten months to draw and but ten minutes to reel off on the screen.

Boiled down to its essentials, the making of an animated cartoon comprises five fundamental processes. These are, first, a series of original drawings; second, tracings of the drawings on transparent composition plates; third, the chemical process by which the cartoon figures on the plates are rendered opaque against a background; fourth, the method of photographing; and fifth, the development of the photographic negative.

Before going into the details of each process, it must be remembered that animated cartoons are a series of drawings that are photographed individually. The photographing process is an application of the kodak use of the roll film which is turned for each succeeding exposure.

The animated cartoon of 500 feet consists of from 1200 to 1500 original drawings. These are made by the artist who conceives the "story." The success of the picture depends more on his ability to gage the number of different drawings necessary to represent a single action than upon his draughtsmanship. He often draws detached heads and legs, which are superim-

This strip shows exactly how the final film for an animated cartoon looks. The figures are each drawn in outline, each part of each figure separately, and are then assembled in the proper order and the background put in afterward

posed on detached bodies to make a complete figure. For instance, if the artist wishes to show a figure turning his head and crossing his legs, he does not draw a series of pictures showing the full figure in different poses. Instead, he first draws the body, then on another sheet the head and the legs. Next he draws a head turned toward the audience, and then makes a drawing of the legs, crossed. One drawing of the body suffices for both poses. When these reach the photographer they are assembled according to directions and exposed in the proper order. The same body is exposed in every photograph because it does not move; and those parts which change position are superimposed and fitted exactly to the basic drawing.

All drawings are made on transparent paper and may be photographed several times in different parts of the cartoon. Thus, drawing No. 7 may be a head which is used in connection with the headless body, figure No. 9, and also with figure No. 45, or even with a combination of two other drawings. By this method, time has been saved in drawing the individual pictures and the process of making animated cartoons placed on a practical basis.

When all the drawings have been made, a series of backgrounds, such as houses, streets, churches, etc., are drawn to aid in telling the story. After these are finished, all the drawings are then sent to the copying room, where they are traced upon a thin transparent composition plate which is made by a secret chemical process. The reason for using a transparent plate is that two or more plates must often be photographed, one placed on top of the other, to form a single picture.

Moreover, it is often necessary to photograph three plates together, two of which form a figure, and the third a background. As the figures are drawn only in outline, they would permit the background to show thru unless treated in some way to render them opaque. This difficulty is overcome by coating the drawings on the plates with a specially prepared substance which has no effect on the chemical composition

of the plate itself. Consequently, the part of the background covered by the figure does not show when photographed.

The photographic process itself is carried out with the same materials used in photographing a motion picture with living characters; but the method of using the camera for animated cartoons is quite different.

In ordinary motion picture photography a reel of negative film, 400 feet long, is placed in the camera, which is mounted on a tripod and can be swung in a semicircle on a horizontal axis. As the story is acted on the studio stage the reel is turned by the cameraman, who operates a crank attached to the camera. But in photographing the animated cartoon, the same camera with the same film is fastened above a table on a rigid frame, the lens facing downward. The cameraman sits at the table; and, according to the numbers marked on the pile of plates beside him, exposes them in successive order. Instead of turning the crank by hand, a mechanical arrangement consisting of a slender chain revolving over a sprocket and a set of gears carries the control of the camera shutter to a pedal below the table. This is operated by the cameraman's foot. The contrivance is so regulated that when a plate on the table is exposed to the camera, the photographer presses the pedal, the photograph is taken, and the reel of film turned about one inch, thus revolving the unexposed part of the negative into position for the next photograph. In this single pressing of the pedal the shutter is automatically closed after the photograph is taken. Furthermore, an indicator records the exact number of

Drawings like these are the foundation of the animated cartoons in motion pictures. Each part is drawn separately on transparent paper so that the same head, for instance, can be used with several different positions of the body

photographs made. In short, picturizing the animated cartoon consists of taking from 1200 to 1500 individual, still-life photographs.

After these have been made, the negative film is sent to the developing laboratory, where it is treated the same as other motion picture films. That is, the negative is reprinted on another film called a positive. The positive is not sensitive to light and will keep indefinitely. Finally, the positive print is sent to the editing room, where the cartoon is clipped, and individual pictures taken out or placed in a different order, so that the story may be told more smoothly. The strips cut out are pasted into the film again with a cement that fuses with the celluloid film and does not reveal where the picture has been pieced.

During the war a new use for the processes employed in making animated cartoons was developed by Mr. J. F. Leventhal, of the Bray Corporation. Mr. Leventhal applied the cartoon process to technical drawings and evolved an entire course of instruction on the construction of bombs. This was used in the West Point Military Academy and resulted in reducing a course of instruction that formerly consumed twenty-four teaching hours to fifteen minutes. By means of the animated technical drawing, the most complex mechanical apparatus can be explained graphically with a consequent reduction in the time required for its study and an immeasurable increase in interest on the part of the students.

What She Will Do With the Vote

By Arthur Capper

Former Governor and U. S. Senator for Kansas

THE entrance of women into political activities on a basis of equality with men, which will follow the ratification by the several states of the amendment to the Federal Constitution conferring the right of suffrage on women, presents some new and interesting aspects in national politics. In states where women have not enjoyed the privilege of suffrage some apprehension exists with reference to the effect of the participation of women in politics, lest they become an ultra-radical element of the voting population. In states like Kansas, where women have enjoyed the ballot for a number of years, there is no such misapprehension.

Women as a class are not radicals, but they are progressive and forward-looking. It would be rather strange if this were not so. The fight that woman has been compelled to make in her upward climb after equal civil and political rights with man has tended naturally to cultivate a progressive, forward-looking type of mind. It is not in the least surprising, therefore, to discover, in a study of legislation passed in the several states where

women have enjoyed the ballot for a number of years, a general progressive trend, especially as regards what is commonly termed social legislation. It is logical to presume that in her wider activities in the field of national politics woman will disclose the same progressive social bent.

In Kansas and other suffrage states the legislation that the women voters have concerned themselves specially in has concerned education, child-welfare, child labor, limitation on the hours of labor for women, minimum wage for women, mothers' pensions, equal guardianship, age of consent, "red light" abatement and prohibition. Without exception greater progress has been made in this sort of legislation, I am glad to say, in states that have woman suffrage than in other states, showing that it was directly due to the votes of women or to their influence on male legislators by reason of their possession of the right of suffrage. It follows that in national affairs developments along the same general lines may be expected.

Washington, D. C.

The Story of the Week

Unscrambling the Eggs

ATTORNEY GENERAL PALMER announced on December 18 the acceptance by the leading packing concerns of the country of an agreement that promises to be of far-reaching consequences as regards both the opening up of business and the bringing down of the cost of living. However, as concerns the latter, the "proof of the pudding is in the eating." The agreement was made between the Department of Justice and the so-called "Big Five"—Armour & Co., Morris & Co., Wilson & Co., Swift & Co. and Cudahy & Co.—and is a result of the investigations made by Mr. Palmer and the Federal Trade Commission for several months past. How big the "Five" are is realized by few—doubtless for obvious reasons, but is disclosed by the fact that under the decree to which the packers agreed, nearly one hundred subsidiary companies are directed and enjoined. Mr. Palmer formally announced that the five big packers above named, and their subsidiaries and principal stockholders and managers, had "submitted to all the contentions of the Government, and consented to the entry of an injunction decree providing for the carrying out of those contentions." Under the decree the defendants, either as corporations or as individuals, are compelled in brief:

To sell under supervision of the United States District Court, 1, all their holdings in public stock yards; 2, all their interest in stockyard railroads and terminals; 3, all their interests in market newspapers; and 4, all their interests in public cold storage warehouses, except as necessary for their own meat products; 5, to forever disassociate themselves with the retail meat business, as well as, 6, with all "unrelated lines," such as groceries of all kinds; 7, to forever abandon

the use of their branch houses, route cars, and auto trucks, comprising their distribution system, for any other than their own meat and dairy products; 8, to perpetually submit to the jurisdiction of the United States District Court under an injunction forbidding all the defendants from directly or indirectly maintaining any combination or conspiracy with each other or any other person or persons, or monopolizing, or attempting to monopolize, any food product in the United States, or indulging in any unfair and unlawful practices.

The decree further provides that jurisdiction is perpetually retained by the court for the purpose of taking such other action, or adding at the foot of the decree such other relief, if any, as may become necessary or appropriate for the carrying out and enforcement of the decree, or for the purpose of entertaining at any time hereafter any application which the parties may make with respect to this decree.

The conditions and abuses which it is intended to correct by this decree are grouped and analyzed in detail by Mr. Palmer under several captions: 1, Stockyard ownership; the conditions found to be involved in this ownership are such as to give improper control of both prices and competition; 2, terminal railways; control of these railways carries with it the power to discriminate against other parties and independents in the use of necessary facilities; 3, market papers and journals; control of these furnishes a means whereby the flow of stock to the market may be increased or decreased at the option of the packers. By the use of these three facilities and instrumentalities, the packers had been able, "in pursuance of a common purpose, plan and design," to force out independent packers and outside investors both in ownership and management of most of the stockyards, and to replace these by the parent companies or their representatives.

To cure these evils, the decree perpetually enjoins all of the defendants, and each of them, either as corporations or as individuals, from owning any capital stock or other interest, either directly or indirectly, in any public stockyard market, stockyard terminal railway, or market paper or journal, and further provides that within ninety days the defendants shall file in the court where the decree is entered, for the court's approval, a plan for divesting themselves of such interest in these facilities as they may possess. The decree further provides for an injunction forbidding unfair practices or combinations in reference to the control of meat or its prices, and under this clause any of the defendants violating this injunction can be summarily punished by the court.

The existence of these first three evils, especially the first two, has been in a general way a matter of public knowledge for some time, but the investigation disclosed, in what Mr. Palmer classifies under the fourth and fifth evils, an octopus-like grip on so many of the food essentials of the people of this country, that one's breath is almost taken away as one reads the indictment. Thus, as concerns the fourth evil, we read that the cold storage warehouses were in the beginning adopted as an instrument for enabling the parent companies to extend the volume of their slaughter of

Harding in Brooklyn Daily Eagle

Where do we go from here?

live stock and sale of dressed meat. Then they were constructed in connection with branch houses so that they might be used for storing and holding the finished meats until they were sold. Later they were either built or leased in the large eastern seaboard cities for long-time storage and for storing for export, and then to store non-meat food products. Later control was acquired over public storage warehouses, where surplus space was leased or let to others, and control of these public storage warehouses was employed to aid in control of the prices of meat and substitute foods.

To correct this evil, under this decree the defendants, and all of them, are perpetually enjoined and restrained from owning, directly or indirectly, any capital stock or other interest whatsoever in any public cold storage warehouse in the United States except such as the different companies need for the storing of their own meat products, and they are required to dispose of their present holdings in such warehouses under the direction of the court.

The fifth evil comes under the caption "substitutes for meat." The investigation demonstrated that even with a practical monopoly of the supplies of meat in the country the price could not be controlled by the defendants without the control of substitute foods; that if meat prices advanced out of proportion to those of other substitute foods, the consuming public manifested a tendency to turn to such substitutes. To prevent this it is charged that the defendants sought to control the nation's supply of fish, vegetables, fresh or canned fruits, cereals, milk, poultry, eggs, cheese, and other substitute foods otherwise handled by wholesale grocers or produce dealers. To accomplish this purpose the defendants availed themselves of the advantages at hand in the auto trucks, route cars, branch houses, and storage warehouses owned or controlled by them.

These facilities, intended primarily for the sale of meats, were employed in the distribution of the substitute foods and unrelated commodities. These attempts to monopolize have resulted in complete control in many of the substitute food lines. The control was extensively and rapidly increasing. Yearly great numbers of competitors abandoned the contest and quit business or sold out to the parent corporations or their subsidiaries. Unless prevented by this decree the defendants would have, within the compass of a few years, controlled the quantity and price of practically every article of food found on the American table.

The extent of the business and the character of the methods which the packers employed in securing and maintaining this octopus-like control, is shown by the fact, as stated by Mr. Palmer, that the parent companies, or the individual defendants, and their families maintain and control 574 corporations or concerns, including 131 trade names; that they have a significant minority stock interest in ninety-five others, and an interest of unknown extent in an additional ninety-three. Thus the total number of concerns in which they have control or interest is some 762. But, in addition to the companies in which control has been acquired by outright purchase, the parent companies have in a large number of instances contracted for the exclusive output of many other companies engaged in the production of the substitute foods and the unrelated commodities. The outputs of these plants are marketed by the parent companies, or by their subsidiaries, thru the distribution facilities of the parent companies. In this fashion the parent companies control the output of these concerns and the market price of their products as completely as tho they themselves owned the producing companies. . . .

For the cure and prevention of these evils, the corpora-

Marcus in New York Times

The cheerful giver

tion defendants, and each of them, their successors and assigns, are perpetually enjoined from owning any capital stock or other interest in any corporation which is in the business in the United States of manufacturing, jobbing, selling, transporting, distributing, or otherwise dealing in a list of 126 articles, ranging from spices and vegetables to china, fence-posts, soda fountains and sand. The decree further perpetually enjoins and restrains the defendants from engaging in or carrying on the manufacturing, jobbing, selling, transporting, or otherwise dealing in, any of these articles, with the exception of grain and cereals and a few articles more or less necessary in the conduct of their business.

In general the decree aims to correct all these evils by preventing the defendants from exercising any further control over the marketing of live stock. It forever prevents them from any control over the retailing of meat products. It eliminates them from the field of most meat substitutes. It places the conduct of these great aggregations of capital immediately under the eye of a Federal court with reference to their business practices. But, greater than all of these, in Mr. Palmer's opinion, is the fact that the decree "establishes the principle that no group of men, no matter how powerful, can ever attempt to control the food table of the American people or any one of the necessities or component parts of it."

The effect of the agreement reached, the Department of Justice believes, will be that of practically ending the activities of the so-called packing monopoly, and of materially lowering the cost of living. And in his belief a number of members of Congress shared, as they themselves stated in interviews, shortly after the agreement was reached. Whether this will result remains, of course, to be seen, but one result that cannot be denied is that the country knows, or can know, the extent of the grip that the packing trust has had on it, notwithstanding the many protestations of innocence from that source.

Getting Rid of the Reds

ALMOST simultaneously with the passage by the House of Representatives of the Johnson bill to amend the Immigration Law of October 16, 1918, so as to provide for the deportation and exclusion of aliens who are members of anarchistic and similar classes, the old army transport Buford sailed from these shores for parts unknown, with a passenger list of nearly 300 radicals, including the two "notables," Emma Goldman and Alexander Berkman, who had

finally given up after a long struggle against deportation.

The House passed the amending bill December 20, and the ship sailed December 21. The destination of the Buford was not known to the captain, who received sealed sailing orders with instructions not to open them until he was twenty-four hours at sea, and the Buford's crew of 125 men were armed, as well as supported by a strong detachment of marines, who were to see to it that the "passengers" did not practice what they preach. Thus at last there actually came to pass an event the repeated postponement of which has caused much impatience and embarrassment, not to mention adverse criticism of the authorities, but which, now that it is

Drawn by Ernest Noble

A desperate remedy in England's coal shortage:
"Alfie, go and make faces at the man on the coal
wharf—p'raps he'll throw some lumps at yer"

an actuality, will be welcomed, tho chiefly because of what it promises rather than because of what it is. For it is estimated that there are 60,000 Reds still active in this country.

The "passengers" who sailed away on the Buford came from all parts of the country where they had been convicted by the authorities under existing laws. Pittsburgh furnished 33, Cleveland 36, Youngstown 26, Philadelphia 10, Buffalo 10, New England 43, and the rest came from scattered points such as San Francisco, Chicago and St. Louis.

The round-up shows that there has been finally a widespread awakening to the danger that is in our midst, while the passing of the Johnson amendments to the Immigration Bill gives evidence that Congress too is at last alive to the situation. However, not until the amendments are passed by the Senate and approved by the President, and are actually in force, and perhaps even then not for some time, will the authorities be able to deal with the situation as it should be dealt with.

The sailing of the Buford with its remarkable cargo is only the dénouement of a drama that has been played by each of the 300 alien radicals for some months or even years on our shores. But there is no reason for regarding that event as anything more than a mere superficial symptom, and for believing that there are not still assiduously at work hundreds, perhaps thousands, of times 300 equally extreme radicals who have not even yet been apprehended, and who are doing their best to overthrow our established government by force.

It is these thousands that must be got at in one way or another—in cases where it is possible by arrests, trial and deportation, but in other cases, where such means are not possible, by education.

The New Home Rule

AFFAIRS in this troubled, troublous and troublesome isle have reached the most critical point in its history. At the very moment when the British Government is preparing to present a bill of unprecedented concessions to Irish nationalism a large majority of the Irish people are in open revolt against any form of British control or connection. As soon as peace is declared the Home Rule Act that was passed by Parliament in 1914 and suspended for the duration of the war, comes automatically into effect unless it is immediately superseded by a new measure. Premier Lloyd George has been at work on such a measure for some time and had it ready for Parliament when the increasing disorder culminated in an attempt to assassinate Viscount French, Lord Lieutenant of Ireland. The plot was well contrived and narrowly missed fulfilment. Lord French was specially obnoxious to Irish Nationalists because in 1914 he sympathized with and supported the officers of the British army who threatened to resign rather than carry out the Home Rule Act. He lost his position in the army on this account, but on the outbreak of the war he was placed in command of the British expeditionary force in France, as he had for some years previous been studying that campaign. But his conduct of the war was not satisfactory, tho whether he was to blame for it or not is still under dispute, and after being relieved of his command abroad he was put in charge of the home forces.

Recently as military ruler of Ireland he has used a stern hand in repressing sedition and violence. He proclaimed the Sinn Fein an outlaw organization and closed all its offices. He tried to stop the collection of funds for an Irish Republic. He suppressed the *Cork Examiner* and *The Freeman's Journal* for criticizing the administration. Cattle fairs were prohibited. The Irish Republican leaders in Paris presented to the American Peace Commission an alleged secret order of the Dublin Police Commissioner to the boat detectives that:

Sailors on all American ships now are suspect and all their belongings must be searched and a report made in each case. Only American ships coming to Ireland are to be thus treated.

In spite of greater vigilance and severity on the part of the Government the Sinn Feiners became continually bolder in their operations. Funds and arms were secured by raids and hold-ups. A band of masked men robbed the police barracks at Ballivor of 200 rounds of ammunition. The killing of constables became so common that they were ordered not to go out alone. Finally a blow was struck at the life of the Lord Lieutenant himself. At one o'clock on December 19 as Viscount French was being driven in an armored motor car from the railroad station to the Phoenix Park gate of the Viceregal Lodge he ran into a barrage of bombs and rifle and revolver shots. The assailants, who were hidden behind hedges, trees and carts all along the way, concentrated their attack upon the second car which was supposed to carry the Lord Lieutenant. But the customary order was reversed on this occasion and the empty car came second. Lord French rode in the first car, which by running at high speed escaped serious damage, while the empty car following was shattered by the explosion of a bomb inside. The military guard in a third automobile opened fire in all directions, but only brought down one of the would-be assassins, a grocer's clerk named Savage. None of the other conspirators, supposed to number some thirty, have been caught.

Rope this wild steer!

The Dublin *Independent*, which ventured to refer to the attempted murder as "A Deplorable Outrage," was attacked the following evening by a band of forty men who held up the office force with revolvers and smashed the linotype machines and presses with crowbars.

Cardinal Logue, Primate of all Ireland, issued a message, saying:

It is true that we are subjected to sharp trial and drastic repression, such as has seldom been paralleled in modern times, even by autocratic Russia or overbearing Germany, without serious effort on the part of our rulers to apply remedies which would have infallibly obviated the present conditions and secured tranquillity.

We have been treated like children, our nurses dangling toys and taxing their ingenuity to keep us quiet by devising some shadowy distraction. But our people should be patient, knowing that such an unnatural and violent state of things cannot last. Above all, there should be no reprisals. That way lies ruin.

Holy Ireland, the land of St. Patrick, shall never be regenerated by deeds of blood or raised up by the hand of the midnight assassin.

The new Home Rule bill which Premier Lloyd George outlined in the House of Commons on December 22 is based upon two fundamental principles; first, that the secession of Ireland will not be tolerated and, second, that Ulster will not be forced into union with southern Ireland. There will be at the beginning two legislatures, one for such a section of the six Ulster counties as will give a homogeneous flock of predominately Protestant population and the other for the rest of Ireland. These legislatures will be linked together by a common council composed of representatives elected by the two legislatures. The two sections of Ireland may come together any time they choose. The representation of Ireland in the British Parliament at Westminster, now excessive in proportion to the population, will be reduced from 103 to 42 as provided in the Home Rule Act of 1914.

The powers reserved to the Imperial Parliament will include the crown, peace and war, foreign affairs, army and navy, defense, treason, trade outside Ireland, navigation, including merchant shipping, wireless and cables, coinage, trademarks, light houses and the higher judiciary.

The Irish legislatures will have full control of education, local government, land, agriculture, roads, bridges, transportation, including railways and canals, old age pensions, insurance, municipal affairs and licensing. It is not proposed to retain control of the police in imperial hands beyond three years. The postal service will not be transferred until there is a single Parliament.

Ireland will contribute to imperial expenses and the war debt a fair proportion provisionally estimated at £18,000,000. An appropriation of a million pounds will be made to each of the two legislatures to cover initial expenditures.

In introducing the measure the Premier said:

It is always the right time to do the right thing, and Britain can afford now more than ever to take the initiative. No one will now suspect her of conceding from weakness. The land that by its power destroyed the greatest military empire in the world will not be suspected of quailing before a band of wretched assassins.

The world will know that we are entering upon the task prompted by the deep sense of justice which sustained this land thro these last years of sacrifice.

The Premier pointed out that the Irish question would be settled not by the enactment of a Home Rule scheme but in working it out. Ireland, he said, was the only country in Europe, except Russia, where the classes who elsewhere were on the side of law and order were out of sympathy with the machinery of the Government. While Ireland was never so prosperous as today, the fact remained that Ireland was never so alienated from British rule as she was today. Any attempt at secession would be fought with the same determination, force and resolution as had been shown by the Northern States in America. Great Britain cannot accept separation. The people who think Britain can be forced into it have not read the story of the last five years.

Greater Production, Lower Prices

The Actors' Equity Association, one of the principals in the actors' strike this fall, began a campaign for a theater of its own by giving a ball. An all-star cast unfurled the Equity emblem: in the first row, left to right, H. Reeves Smith, John Charles Thomas, Ethel Barrymore, John Barrymore and Charles Dalton; in the back row, Charles King, Bruce McRae and Charles Cherry

the people of the United States, but also of doing the same thing for the hungry peoples of Europe. The report states that the farmers of this country would have planted the largest acreage in the Nation's history if fighting had continued and the season had been favorable. But in 1919 they did plant an acreage in leading cereals greater by 33,000,000 than the pre-war annual average (1910-1914), which, it is estimated, will yield 635,000,000 bushels more than the pre-war average, and they increased the number of milch cows over 1914 by 2,700,000, of other cattle by 8,500,000, of swine by 16,700,000, and of horses and mules by 1,000,000, or a total of 28,900,000. The planting operations for the year began before the fighting ceased. The call was still for more wheat. The department suggested a maximum fall acreage of 47,206,000 acres and there was actually planted 49,261,000, the largest acreage in the nation's history, 6,960,000 acres more than in 1918 and 15,608,000 more than the five-year average, 1910-1914. The spring wheat acreage was 22,593,000, while the winter and spring plantings combined amounted to 71,854,000 acres, or 7,200,000 more than the preceding record and 19,400,000 more than the pre-war average. It is estimated that the yield will exceed that of 1918 by 1,000,000 bushels and will be the nation's second record wheat crop. The estimated corn crop of 2,910,000,000 bushels will be 300,000,000 greater than that of 1918 and only slightly less than the high yields of 1915 and 1917.

Forecasts of meat production for 1919, from partial reports of slaughtering, indicate that the record figure of last year—20,250,000,000 pounds—will be exceeded this year. The total will probably reach 21,000,000,000 pounds, as follows: Pork, 12,900,000,000 pounds, compared with 11,248,000,000 in 1918 and 8,769,000,000 in

1914; beef, 7,500,000,000, as against 8,500,000,000 in 1918 and 6,079,000,000 in 1914; and mutton, 600,000,000 pounds, as against 537,000,000 in 1918 and 739,000,000 in 1914.

A rough estimate, based upon the number of milch cows and the census average of milk production per cow, indicates that the number of gallons of milk produced in 1919 will aggregate 8,495,000,000, or 57,000,000 more than in 1918 and 1,029,000,000 more than the average for 1910-1914.

The figures for poultry and egg production have not been accurately ascertained, but it is roughly estimated, upon the basis of reported increases from one census to another, that egg production in 1919 will aggregate 1,957,000,000 dozen, as against 1,921,000,000 in 1918 and 1,744,000,000 in 1914, and that the number of poultry raised on farms will approximate 600,000,000.

The exports of foodstuffs, enormous during the war, rose greatly between the armistice and midsummer. The annual average exports of important cereals for the five years preceding the war were 162,000,000 bushels. They rose to 517,000,000 in 1915 and aggregated 448,000,000 in 1919.

Dairy products, of which 25,000,000 pounds were exported on the average during the five-year period before the war, increased in volume to 102,400,000 pounds in 1915, 217,500,000 in 1916, 352,000,000 in 1917, 592,000,000 in 1918, and 781,000,000 in 1919; while the exports of meat and meat products were 1,291,000,000 pounds for the five-year average before the war, 1,500,000,000 in 1915, 1,800,000,000 in 1916, 2,300,000,000 in 1918, and 3,300,000,000 in 1919.

The Expansion of Soviet Russia

BOTH conferences with the Bolsheviks have been suspended if not broken off. At Copenhagen where the Soviet representative, Litvinov, met O'Grady, a British M. P., to discuss exchange of prisoners, no agreement could be reached. The Soviet Government was willing enough to release all the British prisoners but demanded in return that Great Britain not only release the Bolsheviks who had been captured in the war, but also permit the Bolsheviks who had fled from Germany into Denmark to return home. Litvinov also tried to introduce into the conference the question of making peace, but the British Government declined to consider any subject except the exchange of prisoners and advised the Soviet to come to terms with Kolchak and Denikin.

The Dorpat conference split on the question of the disposition of the army of Yudenitch which retreated in confusion to the Estonian frontier after its defeat before Petrograd. Part of his troops deserted to the Bolsheviks. Others discarded their arms and disappeared. The rest were left to freeze and famish among the swamps on the southern shore of the Gulf of Finland. The Estonians refused to allow them to reënter Estonia unless they were disarmed because of fear of depredations by roving bands of demoralized soldiery during the winter when the entire population was on the verge of destitution. General Yudenitch proposed to move his troops south into Latvia for shelter and reorganization, but the Letts objected to their presence as strongly as the Estonians. It was also suggested that the Allies send them to other fronts, but ships are lacking to carry them either to Archangel, Odessa or Vladivostok, and besides the Allies are unwilling to abandon the Baltic front which offers such an exceptional opportunity for an attack upon Petrograd. If the Bolsheviks were freed from danger from this quarter they could transfer the forces they have gathered for the defense of Petrograd to the south, where they could be used against General Denikin, or to the east, where they could be used against Admiral Kolchak.

For this reason the Soviet delegates to the Dorpat conference insisted, before undertaking peace negotiations, that the Estonians disarm and intern or expel the Northwestern army of Yudenitch. The Estonians would have been glad enough to comply, but here the Inter-Allied Commission interposed a veto and demanded that the Estonians receive the Yudenitch troops and permit them to reorganize for another invasion of Soviet Russia. The Estonian Government replied that it was quite willing to permit the reorganization of the army in Estonia provided that the Allies would guarantee Estonian independence. Otherwise since Kolchak and Denikin had refused to recognize the independence of the Estonians they feared that the army, after having taken Petrograd and overthrown the Soviet, might be turned against Estonia in order to force the country back into Russia.

So the interference of the Allies put a stop to the Dorpat conference, altho both the Soviet Republic and the Estonian Republic were anxious to make peace and had come to an agreement as to their mutual boundary. The Soviet Government withdrew its delegates from Dorpat and prepared to renew its attack upon the Estonian frontier at Narva, with stronger forces than before, being able to use for this purpose the shock troops which broke the Kolchak front before Omsk.

Troops of this quality are no longer needed in Asia, for the Kolchak forces are retreating eastward as rapidly as the scanty transportation facilities on the Sibe-

rian railroad will permit. In many regiments his soldiers, on the approach of the Bolsheviks, have killed their officers and gone over to the enemy. In many places the local Bolsheviks have risen and taken possession of towns in advance of the arrival of the Soviet troops. The seizure in this fashion of the town of Taiga, at the junction of the branch line leading north to Tomsk, cut off Tomsk from all rail connection and forced the evacuation of that city on December 16.

The Kolchak forces hoped to be able to make a stand at Novo Nikolayev on the Ob River, but this city on December 13 fell into the hands of the Bolsheviks, who captured there 10,000 soldiers and 500 officers and a section of the American Red Cross. The retirement of Admiral Kolchak has been so hasty that much of his munitions and millions of rubles of his money have been lost to the enemy. One of his difficulties in evacuating Omsk was to carry off what is left of the \$200,000,000 in gold which the Czechoslovaks in 1918 took from the Bolsheviks at Kazan and turned over to the Omsk Government on its foundation a year ago. Kolchak tried to send a shipment of this bullion over the Siberian railroad to Vladivostok, but Hetman Semenov, a rival Cossack general, who has control of an intermediate section of the road, stopped the shipment on the route and stored the gold in the local bank of Chita, his own headquarters, telegraphing Kolchak that he considered it unsafe to send it further east.

Even with such a gold reserve and before the military collapse, the banknotes issued by the Kolchak Government had fallen lower than any other in Siberia. There are in circulation paper currency of the old empire of the Romanovs, of the republic under Kerensky and of the dictatorship of Kolchak. Every week a meeting of bankers and railroad men fixes their relative

ANOTHER FALSE DIAGNOSIS

The Specialists (in consultation): "Poor wretch! Well, gentlemen, we are all agreed he has reached that stage of dissolution when he can no longer take nourishment"

value for the coming week. In November the relative rate of exchange was declared to be:

1 ruble gold = 10 Romanov ruble notes.

1 Romanov note = 5 Kerensky notes.

1 Kerensky note = 2 Kolchak notes.

The Yudenitch and Soviet notes are worth still less. A ruble is normally worth about half a dollar in American money. Besides these various and uncertain issues and the currency of all nations carried in by the Allied troops, the local business houses issue their own money, often in most informal fashion. An American soldier making a purchase in a Vladivostok shop and tendering a 100-ruble note in payment may receive as change a scrap of paper that the merchant has torn off and inscribed "Three rubles." The older readers of *The Independent* will remember that after our Civil War city stores coined or printed their own small change for local circulation.

The western front of Soviet Russia has advanced about 1400 miles since last summer and even Irkutsk, to which city Kolchak has moved his seat of government, is not entirely safe. But a new and more serious feature of the situation is that the Bolsheviki have also gained control of the southern branch of the Siberian railroad leading from Orenburg into Russian Turkestan and to the borders of Persia, Afghanistan, India and China, where Mohammedan Bolsheviki are conducting an active propaganda in the native languages to induce insurrections. A Korean delegation has gone to Moscow to get the aid of the Soviet Government in throwing off Japanese rule. The Chinese have been promised by the Soviet the return of the Chinese Eastern Railroad, the branch of the Siberian which takes a short cut across Manchuria to Vladivostok. Persians and Indians are offered freedom from British rule. Trotzky is reported to have said: "It is in China, with unlimited human resources, that the Bolshevik movement will find troops to throw against western Europe."

The Japanese are alarmed at the rapid approach of the Bolsheviki toward the Pacific, and have indicated a willingness to forward reinforcements as far as Irkutsk, where Kolchak has set up his headquarters.

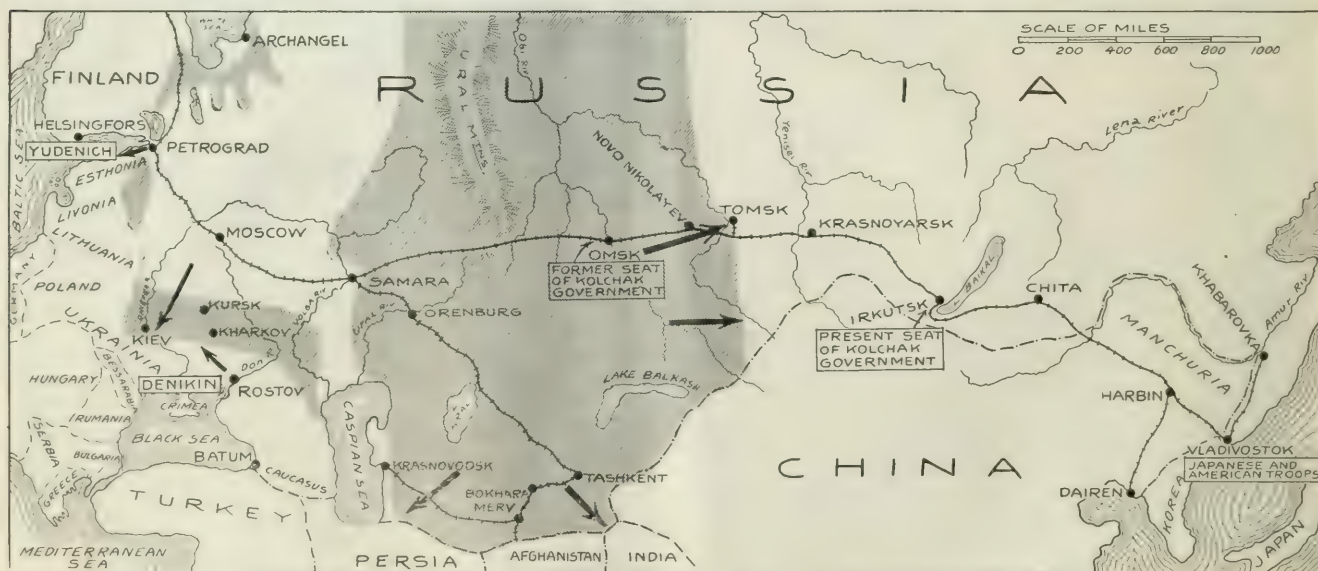

Two Attacks on the Eighteenth Amendment

THE Supreme Court had scarcely rendered its decision upholding the validity of the Wartime Prohibition Act, when the liquor interests, either at bay or undaunted, began to carry their fight further, and along even more fundamental lines than before. In this attack the Liquor Dealers' Association of New Jersey led off on December 16, and the State of Rhode Island followed on December 17. In the first case permission was asked of the Supreme Court not only to institute original proceedings to have the Eighteenth amendment declared unconstitutional, and New Jersey and Federal authorities enjoined from enforcing it, but also to seek an injunction against enforcement of the Volstead Prohibition Enforcement Act.

The Association's brief alleged that the Constitutional amendment was an interference with the state police powers and a violation of the Fifth Constitutional Amendment, which prohibits the taking of private property without just compensation; that neither Congress nor the state legislatures had authority to propose or ratify the amendment, and that the amendment when passed by the House did not receive the support of two-thirds of the membership as the Constitution provides, but only of two-thirds of the members present.

The proceedings begun in the second case were practically similar to those in the first, tho with the interesting difference that they were started by a State and were based on the principle of State Rights. The Attorney General of Rhode Island, Mr. H. C. Rice, filed a brief in which the Supreme Court was asked to compel Attorney General Palmer to appear and make answer. The court was also asked to declare the Eighteenth amendment void and to enjoin government officials from putting the Volstead law into effect.

It is maintained that Congress had no authority to submit the joint resolution to the various states, and the exercise by Congress of the power to enact the resolution is declared "unconstitutional and revolution-

RECENT EXTENSION OF SOVIET RUSSIA

The shaded area on the map shows the territory which has now come under the control of the Bolsheviki as compared with the extreme limit reached by the anti-Bolshevik forces during the past six months. The arrows in the shaded area indicate the main lines on which the Bolsheviki are at present advancing. Their chief advance is toward the east. The forces of Admiral Kolchak, which last summer had almost reached Samara, have had to retire into Siberia and have now withdrawn from Tomsk. Their retreat has enabled the Bolsheviki also to follow down the other railroad leading from Samara thru Orenburg to Tashkent and Merv in Turkestan. This brings them into contact with Persia, Afghanistan, India and China which are being permeated with Bolshevik propaganda. General Denikin, who a few months ago was moving rapidly northward and expected soon to take Moscow, has been driven back and lost most of Ukraine. General Yudenitch, who a few weeks ago was within sight of Petrograd, has been driven back into Estonia. The Allied and American troops have been withdrawn from Archangel, but this city holds out against the Bolsheviki

Photographs from Wide World

On the Way to the Pole

The Leden Arctic expedition which left New York last summer narrowly escaped serious disaster. The "Finback," Christian Leden's ship, was wrecked off a reef in Hudson Bay and ice-locked. After desperate attempts the members of the party finally succeeded in reaching a barren island off Cape Fullerton and from there were finally able to make the fifty-mile trip to the mainland. The photograph at the top of the page shows the party cooking their first meal after their escape from the wreck. Here are three of the Eskimos who befriended them

Even the baby, it seems, has learned how to use the popular weapon and help picket in this rent strike of Brooklyn families. The landlords attempted to evict the families, but the furniture movers refused to put out their brother union members

ary." It is also argued that the proposal of the amendment is not within the intent and scope of Article 5 of the Constitution, but is "an unconstitutional and revolutionary proposal" to the state legislatures of a "revision and addition to the Constitution of the United States that is destructive of the fundamental principle of the said Constitution and of the government established thereby," and, that "the proposal of the so-called Eighteenth amendment, for the reasons aforesaid and otherwise, is unconstitutional, inoperative and void."

The legislatures of the states, too, alleges the brief, assumed a power not delegated to them by the Constitution "and in derogation of the constitution and laws of the State of Rhode Island" in enacting resolutions of ratification.

But that the two actions soon will not be the only ones filed to test the validity of the Eighteenth amendment, was indicated by a statement made on behalf of the liquor interests of New York City. Indeed, the indications are that a multitude of such actions will be brought, and on various grounds. The decision of the court relating to Wartime Prohibition opened the way for the attack on the prohibition amendment itself. The opinion of the court in that decision is regarded as showing "the consequences to property and to personal rights of constitutional prohibition to be so grave, and the ramifications to be so tremendous," that actions must be brought to test the amendment itself. In addition to the grounds that the New Jersey interests and the State of Rhode Island made use of, the New York interests have suggested the following:

1. That the Federal Constitution was adopted to administer a republican form of government and that this form of government can only be changed by the unanimous action of all the states.

2. That a republican form of government guarantees certain rights, privileges and immunities which may not be taken away even by the vote of the majority, and the Constitution may not be amended so as to destroy these rights.

3. That the intent of the framers of the Federal Constitution and the condition precedent to its acceptance by the original members of the Federal compact was that while the Federal Government had delegated to it certain powers, such as the right to regulate interstate commerce, all powers not specifically thus delegated were reserved to the states, and among these the one of paramount importance was the so-called police power.

The Problem of India

FOR the last five years India has been a sealed book. The British censorship has been so strict that wars of more than minor importance and political disturbances involving millions of natives have not become known to the outside world in any detail until long afterward. For instance, it is only now that we are beginning to get full information of the riots at Amritsar early last April. From the evidence taken by the Hunter investigating committee in India the political demonstrations in the Punjab were put down with great severity. The causes of the disaffection, according to Commissioner Kitchin, of the Lahore district, were: first, that the whole country was tired of war; second, the poorer classes had been hard pressed by high prices; third, political agitation, and, fourth, the Mohammedan alarm at the prospective disappearance of Turkey, the last independent Mohammedan power. The arrest of two agitators, Dr. Satyapal and Dr. Kitchlew, aroused Amritsar to hot indignation. To prevent riots the country was declared under martial law and all assemblages forbidden. But a crowd, said to number more than twenty thousand, gathered at Amritsar and were listening to hundreds of speakers when the soldiers appeared upon high ground near by and poured a volley into the mass of people. According to the Indian accounts of the affair, no warning was given in advance of the firing. Sir M. F. O'Dwyer, Lieutenant Governor of the Punjab, gives the number of victims as 500 killed and 1500 wounded, but the Indians claim that it was much larger.

Lahore was saved from anarchy by the imposition of martial law and the use of four airplanes. Governor O'Dwyer allowed no correspondents to visit the scene of the disturbances and no news to be sent out. A leading citizen of Lahore, who secretly made his way to Bombay and published an account of the trouble at Lahore in the *Chronicle*, was sentenced to two years at hard labor. Colonel Frank Johnson, who had charge of Lahore, said that the only incident he regretted was the flogging of a priest and wedding party, which, constituting more than ten persons, had congregated contrary to orders. He explained that the magistrate responsible had been removed.

Undeterred and undiscouraged by such disturbances the British Government is deliberately going ahead with its plans for conferring upon India as upon Ireland a greater measure of self-government. A bill has been passed by Parliament to carry out the reforms recommended by the Montagu-Chelmsford report. The proposed government of India is to be a diarchy in which responsibility is shared between an executive nominated by the Crown and ministers chosen from an elected legislative body. The scheme is so contrived as to place upon the natives a gradually increasing responsibility for the administration of the country beginning with local areas.

On December 23 King George, Emperor of India, issued the following proclamation:

Another epoch is reached today in the annals of India. I give royal assent to the act, which takes its place among the great historic measures passed by the Parliament of this realm for the better government of India and the greater contentment of her people.

The act, which has now become a law, intrusts elected representatives of the people with a definite share in the Government and points the way to a fully responsible Government hereafter. If, as I confidently hope, the policy which this act inaugurates should achieve its purpose, the results will be momentous in the story of human progress.

I have watched with understanding and sympathy the growing desire of my Indian people for representative in-

Beauty Made Permanent

A distinctive merit in Crane kitchen equipment is that its original attractiveness, every detail of its alluring cleanliness and all of its carefully-designed sanitary features, are made permanent with minimum effort. It is naturally clean—and easily kept clean.

CRANE

products embody the best materials and represent the highest craftsmanship. They are complete, convenient, durable—the choice of those who keep in mind that a well-ordered, sanitary kitchen is a pre-requisite of comfort in any household.

The same standards of quality and utility apply to Crane bathroom fixtures and heating, ventilating and vacuum cleaning systems. To assure conformity to these standards, heating, plumbing or sanitary accessories, not made by the Crane Co. itself, are made in many cases from their own specifications and designs. stitutions. Their scope has been extended, stage by stage, until there now lies before us a definite step on the road to responsible Government. I shall watch your progress along this road.

The path will not be easy, and in the march toward the goal there will be the need of perseverance and mutual forbearance between all sections and races of my people in India. I am confident that those high qualities will be forthcoming.

I rely on the new popular assemblies to interpret wisely the wishes of those they represent and not forget the interests of the masses who cannot yet be admitted to the franchise. I rely on the leaders of the people and the ministers of the future to face responsibility and endure misrepresentation, and to sacrifice much for the common interests of the state, remembering that true patriotism transcends party and communal boundaries.

The question of police strikes is as acute in England and France as in the United States. The London police recently struck and forced concessions. The French Parliament has under consideration a law extending the right to form trades unions "to employees and workers of the state, the departments, the communes, and public institutions, except (1) to soldiers of all ranks in the military and naval forces on active service, (2) to members of the police force, (3) to judicial magistrates, (4) to prefects and sub-prefects."

It is proper to punish the profiteers. It is more effective to devise means for increasing production, reducing waste and short-circuiting the connection between producer and consumer. But don't expect these measures or any others to make any immediate or considerable change in the high cost of living. The rise began many years ago and has been vastly accelerated by the war. It is world-wide and affects in some measure all peoples whether they are honest, industrious and thrifty or corrupt, idle and careless, whether they are ruled by king, congress or soviet. The fundamental cause is the increase of nominal money and the decrease of real wealth. Property has been destroyed and promises to pay have multiplied. The belligerent governments spent over \$200,000,000,000 on the war and the

London Evening News

"On Behind!" An explanation of England's frequent transportation difficulties. The efforts of the Director General, Sir Eric Geddes, in the driver's seat are made ineffectual by the strike menace who helps himself to a ride in the wagon

damages amount to as much more. The debts of these governments have increased from \$40,000,000,000 in 1914 to \$220,000,000,000 in 1919. Their issue of paper money has risen from \$8,000,000,000 to \$36,000,000,000, which is more than could be redeemed at once by all the gold and silver dug out of the ground since man began to dig. The world, in short, is suffering from a bad case of inflation of the currency such as on a smaller scale afflicted the United States for a dozen years after the Civil War. Legislation cannot cure it, tho it may alleviate the symptoms. Talking and worrying about it aggravates the case. But if the patient, man, will keep calm and work hard and live simply he will eventually recover.

Gabriele d'Annunzio is now discredited by the people of Fiume who gave him such a wild welcome two months ago when he took possession of the city. Premier Nitti has negotiated some sort of a compromise which it is believed will be approved by the British and French and acceptable to the Yugoslavs. But this involved the withdrawal of d'Annunzio's volunteers and the occupation by Italian regulars. On December 14 the National Council of Fiume agreed to Nitti's proposal by a large majority. But d'Annunzio refused to accept this decision and appealed to a plebiscite. In this the people voted by three to one in favor of d'Annunzio's withdrawal, but he ordered the ballot boxes seized and the vote suppressed.

Marshal Joffre in his testimony before the French Parliamentary Commission repudiates the charge that the French General Staff was outwitted by the German at the opening of the war. It was, he says, known in 1913 that the Germans were going to attack thru Belgium and the French plans of defense were changed accordingly. Great Britain was counted upon to send over immediately six divisions as had been long before arranged in the secret military convention between France and Great Britain. But as it turned out the British could only get four divisions into action by August 23 and by that time the Germans had broken thru the Belgian barrier, so both French and British had to fall back. Lord French, who had been selected in advance to lead the British expeditionary force, says in his recent book:

"The British and French General Staffs had for some years been in close secret consultation with one another on this subject. The area of concentration for the British forces had been fixed on the left flank of the French, and the actual detraining stations of the various units were all laid down in terrain lying between Maubeuge and Le Cateau."

London World

The magic key

What's Happened

New Zealand has voted for prohibition by 5,000 majority and the nation will go dry next June.

Eggs dropped from 85 to 55 cents a dozen in Lincoln, Neb., after 2,000 women had united to fight the high price.

Montenegrins are fighting the Serbian army of occupation in order to preserve the independence of Montenegro from absorption into the new kingdom of the Serbs, Croats and Slovenes.

Bulgaria seems to be turning toward Bolshevism as a way out of the troubles brought upon her by the peace treaty. In the municipal elections at Sofia, the capital, the Bolshevik candidates won.

Miss Mary Peabody, a Radcliffe graduate and a former teacher in the Cambridge, Mass., public schools, is among the radicals whose names were taken in a raid on alleged Red headquarters in Cambridge.

The high cost of food affected Mobile, Ala., more than any other city during November, increasing seven per cent there as compared with less than five-tenths of one per cent in New Orleans and Louisville.

The new Italian Foreign Minister, Signor Scialoja, told the Italian Chamber of Deputies that he hoped to secure the support of France and England for the Italian claims in Dalmatia which Secretary Lansing refused to accept.

Some 4,500,000 American soldiers and sailors will be rewarded for the part they played in the Great War by receiving the Victory Medal. This medal has been adopted by all the Allied Nations to commemorate their winning of the war.

Yale University has authorized the appointment of a professor of School Administration and director of University Extension who will work to bring about a closer relation between the University and the public schools of Connecticut.

Marked increases in the salaries of men in the Navy were urged by Secretary Daniels in a letter to Speaker Gillett of the House. It will be impossible to operate the number of ships that should be kept in commission unless something drastic is done, Secretary Daniels points out.

The Aztec Spring ruins on the edge of the Montezuma Valley in Colorado will henceforth be known as the Yucca House National Monument, according to a proclamation issued by President Wilson. They were donated to the United States by Henry Van Kleeck of Denver, Col.

Almost two million new pairs of army shoes will be sold to the public at prices ranging from \$7.50 to \$8.25 a pair, according to an announcement made by Secretary of War Baker. The retail stores operated by the Quartermaster General and army retail stores will announce the date of sale.

The Surest and Best Help

for all House-Cleaning

Most every household feels the scarcity of help, especially when cleaning is to be done. Settle the cleaning problem once and for all.

ARCO WAND VACUUM CLEANER

Install this permanent cleaner and from that day the cleaning becomes a pleasure and not a drudgery.

The ARCO WAND is useful all over the house and a few moments' easy stroking with the handy tools takes up all dust, dirt, or lint, and pipes it away to the sealed dust bucket of the machine. Floors, rugs, carpets, curtains, upholstery, mouldings, shelves, drawers, mattresses, pillows, clothes, sills, or steps, etc., are cleaned to perfection. No extra help is needed.

Easily put in any building, OLD or NEW

The ARCO WAND Vacuum Cleaner is made in sizes for Residences, Apartments, Hotels, Clubs, Schools, Theatres, Churches, and any Public or Private Buildings. Also made mounted on Truck for Factories and large Business Buildings. May be purchased on easy payments if desired, from dealers everywhere.

Send at once for catalog, The ARCO WAND, which gives full descriptions and illustrates many of its labor- and money-saving uses.

Department C 59 **AMERICAN RADIATOR COMPANY** 816-822 South Michigan Ave., Chicago
Makers of the world-famous IDEAL Boilers and AMERICAN Radiators

Machines set in basement or side room. A suction pipe runs to each floor. ARCO WAND Vacuum Cleaners, hose, and tools are sold by all Heating and Plumbing Trade, in sizes at \$195 up. Price does not include labor, connections and freight. Sold on easy payments.

"Where There Aren't No Ten Commandments"

A New Year's Resolution

DID you ever reflect what a large proportion of this earth has been declared by the poets to be exempt from the jurisdiction of the moral law? Combine Kipling's well-known saying, "There's never a law of God or man runs north of fifty-three" and his petition to be shipped "somewhere's east of Suez" "where there aren't no ten commandments" and the task of the Recording Angel is considerably lightened. Since millions of well-behaved Scotchmen and Scandinavians live north of the fifty-third parallel, it is to be assumed that the poet did not intend to be taken too literally; but even the wild Alaskan frontier has become one of the most safe and respectable portions of the continent. And Orientals are developing a close acquaintanceship with the Ten Commandments, not to mention the later Fourteen.

The moral frontier which is merely on the outside of a settled community is not much to worry about, as the merchant and the missionary speedily erase it. Kansas of the border ruffians became in a single generation the forerunner of every civic reform and was rebuked by New England statesmen for being too Puritanic in its views on liquor. Who now thinks of Kentucky as a "dark and bloody ground"? We must go to Mexico to find the faintest trace of the old frontier tradition that a man's own hand must protect his purse and his head. Even the headhunter of the Philippines is now a tax-paying, ball-playing, self-respecting citizen and the ex-cannibal of Fiji is content to devour edifying books in the Carnegie library.

But the civilizing task is not confined to pushing the moral frontier farther and farther away from the centers of civilization. To match the frontier on the outside of the community there is a frontier within. Barbarism is a disease that strikes first at the heart and brain. It is in the largest cities, amid the most imposing material evidences of our progress, that doors must always be locked and certain streets may not wisely be

passed at night by the obviously prosperous. It is our oldest states that are ruled by the worst political leaders. Not Sitting Bull or Jesse James but Alderman McBoodle threatens our modern frontier.

We should all take warning from the fate of our recent enemy. In spite of much random talk about Huns and Prussian boorishness, it is the simple fact that in all material respects Germany was in the first rank of the world's civilization. If universal education, flourishing industry, widely diffused prosperity and comfort, interest in science and scholarship, competent administration and civic order can make a body politic immune from barbarism Germany should have been safe forever. And yet for five years nearly the whole of this earth was cut off from Germany not only by a line of trenches but a barrier of moral indignation. When the fighting line was spoken of as "the frontier of civilization" we felt the phrase to be a natural one. When the illiterate Serb, the half-civilized negro from French Africa, and the man of alien tradition from the distant East foregathered in the common cause we felt that they stood on the right side of the moral frontier. We ceased to talk about the treacherous and cunning Oriental or the cruelty of the Apache and the Zulu, because we stood before the horrible miracle of greater perfidy and more relentless cruelty applauded by seventy million cultured Europeans.

Civilization has conquered Germany and will doubtless recivilize her. But our old sense of security has gone forever. Without eternal vigilance the same fate may strike ourselves, tho perhaps in a different form. Barbarism overwhelmed Germany in the form of militarism and the creed of the State. Barbarism has since overwhelmed the young Russian republic in the form of anarchic license and the creed of the No-State. History has but one piece of advice good for all times and places; let him that thinketh to stand surely take heed lest he fall.

The Breakfast on the Snow

By Joe Cone

All night the ghostly flakes came down
And buried forest, field and town
Till earth was white and cold;
All day the storm kept up its might—
For beast and bird was naught in sight
Except a desert wold.

Next morn the storm had ceased, but drear
The sunless landscape far and near,
And in the barren wood
The birds, with hunger in their breasts,
Deserted sheltered nooks and nests
To vainly search for food.

Round house and barn and lowly shed,
From dooryard tree to tree they sped,
With plaintive cries and low;
But nothing met their anxious eyes,
Excepting bleak and wintry skies,
And miles of crusted snow.

Then, happy thought, a peck of grain
We spread upon the snowy plain,
And quickly drew from sight;

Then one by one, and two and two,
Came trooping all that feathered crew
Around the table white,

Were sparrows, starlings, black as night,
And snowbirds with their breasts of white,
Each picking as for life;
Were robins, chippies, blithe and gay,
Nuthatches and a big blue jay,
Who loudly called his wife,

Were "bob-whites" running here and there
As if on skates, with haughty air,
And bluebirds flashing low;
Woodpeckers large, woodpeckers small,
With scores of more, and friendly all,
At breakfast on the snow.

The morn was loud with grateful song
And chatter from that woodland throng,
Tho skies were dark and low;
Ne'er was a gath'ring joyous more
Ne'er was a meal like that before,
The breakfast on the snow.

If He Were President

(Continued from page 8.)

on the platform at the Hughes meeting in San Francisco. On the evidence as presented, thus, Mr. Johnson would at best have been justified in sitting back and letting candidate Hughes take defeat so far as California was concerned. And, moreover, it is apparent now that Mr. Hughes would have done better anyhow to make a few front-porch speeches, as Mr. McKinley did—this, if for no other reason, because he thus would have escaped the blunder of going into states where women had enjoyed suffrage and public experience for many years without having on his train one woman who could talk intelligently and sympathetically with such women. Coming at the situation conversely, if Mr. Hughes had at least stayed away until after the California primaries, if a woman instead of James Garfield had been head of the women's bureau of the Republican National Committee, if she had sent some real women politicians west with Mr. Hughes, and if he had not ignored Mr. Johnson and the strength he had anent the women's vote in California, Mr. Hughes might be President, for California turned the tide, which made it assume new importance politically, and made the women's vote in California seem to have vast significance.

The present candidate for President rode into prominence in California affairs fortuitously, of course; the shooting of Heney cast the die. But this fact would be of importance only if he had failed utterly in office, for it is one thing to be given a job, another to do it; one thing to make a contract, another to fulfil it. Mr. Taft, to illustrate, entered the White House not only fortuitously but most propitiously. And that California did not feel at all about Governor Johnson as this nation felt about Mr. Taft one year after he entered office is reflected in the eloquent fact that tho he entered the executive mansion with a scant majority of 22,000, four years later the state gave him a majority of 196,000 and when he ran for Senator gave him 292,000—the hugest vote ever given any one by California and, as far as I can ascertain, the biggest majority ever given any United States senator. Such united support—combined now with that of California business men who first condemned the Governor for an impossibilist and radical and now are arguing in concert to the business men of the nation his common sense—is significant first because it indicates that he probably has in common the interests of hundreds of thousands of far westerners of all political affiliations, next because it helps to persuade both political strategists and voters that the time has come when the traditional center of population may not be nearly so vital to a candidate as the center of ideas and ideals, now that distance no longer counts, oceans even are no more and science throws information thru the air instantaneously

A Four-Minute Lesson In Personal Efficiency

By EDWARD EARLE PURINTON

RECENTLY I talked with the highest salaried man in the world. I asked him how he had succeeded. He quietly answered, "I have not succeeded! No real man ever succeeds. There is always a larger goal ahead."

This multi-millionaire has outrun every rival on earth. But he has not reached the goal of his own satisfaction—any more than YOU have. But he is efficient. He began by wanting something so hard the whole world couldn't stop him.

What Do YOU Want?

What would you like to be more than anything else? Look back ten years. How would you like to live that period all over again? If you could have known then what you know today, how much time, health, money, faith, energy you could have saved!

I have believed for many years that the right kind of a course in practical, every-day, human efficiency, would supply an effective and much needed shortcut to highest achievement and would save many grinding, discouraging and expensive years of haphazard experience.

It is much better to learn and profit by the mistakes and false moves of others than to waste valuable days and years waiting for experience. Don't rely on your own bitter experience in the hope of doing better "next time." With the proper knowledge, you will save mistakes.

It has been my privilege to act as teacher and counsellor for thousands of ambitious men and women—from the million dollar corporation head to the most humble beginner in the ranks.

And I have concluded that the average man engaged in a large enterprise, who has not yet applied efficiency methods to himself and his associates, has been losing from \$1,000 to \$100,000 a year—while the individual, professional or industrial worker has been losing from \$100 to \$5,000 a year.

For twenty years I have been studying at close range, the exact reasons for these people's failure to get ahead. And into my new Practical Course in Personal Efficiency I have put in compact form the results of this study of individuals and business concerns.

The Seven Lessons

give you the Essence of Efficient Living and Business Achievement. They teach you in a few pleasant evenings of study

- How to Measure Your Efficiency.
- How to Get Ahead.
- How to Keep Well.
- How to Improve Your Finances.
- How to Organize Your Work.
- How to Be Efficient at Home.
- How to Plan Your Life.

By showing you in my lessons what other men and women—just like yourself—have learned and done and been, I believe sincerely that I can save you about ten years of costly experimenting and can show you how to save your strength and energy and special abilities for clean-cut, economical and success-bringing work.

Efficiency is nothing less than the difference between wealth and poverty, fame and obscurity, power and weakness, health and disease, growth and death, hope and despair. The step from one of these extremes to the other is a short and easy one—if you KNOW HOW.

EDWARD EARLE PURINTON.

* * * * *

JOHN H. PATTERSON, President of the National Cash Register Company, says:

"I began to mark passages in your writings which I wished especially to remember. I found after I had completed my reading that I had practically marked up the entire work."

TRUMAN A. DE WEESE, of the Shredded Wheat Company, says:

"If I were rich I would distribute about a million copies of Mr. Purinton's Efficiency Work among the million Americans whom I think need the sound wisdom and advice it contains."

ONLY FIVE DOLLARS

Examine It Free

The most amazing thing about Mr. Purinton's Practical Course in Personal Efficiency in seven lessons is the low price at which it is now possible to secure it. So confident is the Independent Corporation that the tremendous value of the Course will be apparent to you as soon as you have examined it, that they will send the entire seven lessons for the asking, without any obligation on your part. Without paying a cent you may see for yourself how twenty-one years of study on the part of the author has been concentrated into the shortest possible expression of the most necessary principles of efficiency.

Then when you decide to keep the Course send only \$5 in full payment. For this small sum you become owner of a work that has been worth thousands of dollars to others and may well prove to be the means of increasing your health and your pleasures and adding to your income every year of your life. Mail the coupon now before this low offer is withdrawn.

any distance and throws it to and fro by wire faster far than time travels. In other words, California is as near all parts of the county virtually as Ohio or Indiana, therefore the old tradition that a Californian ought not and can not be President may well go by the board.

The Senator has been, is, as President probably would be, no slave to party. In his first inaugural he begged the Legislature "to eliminate every private interest. . . . It is not with any partizan spirit that I appeal to you for aid. Democrats and Republicans alike are citizens. . . . And may God in his mercy grant us the strength and the courage to do the right." Analysis would be long, but scrutiny of his work in California demonstrates, as his bolting the Old Guard in 1912 proves, that his spirit is rather in consonance with the old couplet:

"For the thing-to-be-done does not tarry the will of the Doer,
But the Doer must be at the beck of the thing-to-be-done."

The thing-to-be-done, as the Senator sees it, is, just now, one imagines, to make himself President. He has been in the Senate during only half a term, quite at the beck of the thing-to-be-done. In short space he has made himself felt, towering the senior Senator from California and most all others. The records of the Senate show that he offered amendments to the Espionage Bill, to the Priority Shipping Bill relating to damage to carriers, to the War Tax Bill, and a bill to provide a minimum wage, and introduced various bills and amendments looking to relief of individuals, etc.—such bills as take up much of the procedure of the Senate. In relation to the Espionage Bill, he pleaded in a long speech for freedom of speech and of press. "Let disloyalty be punished . . . but do not put fear into a brave man's heart; do not padlock his lips when he is trying to do his best . . . do not set neighbor to watch neighbor. Leave us in this time of stress the right to talk from our hearts honestly and loyally." He demanded the conscription of wealth, in arguing for his amendment to the War Tax Bill, insisting: "There is no justification, in my opinion, for returning two billions or more of war profits"—to the large steel corporations and others—"and taking only an additional half billion than there would be for putting all these taxes upon the ordinary man and putting upon that ordinary man every particle of the expense of government. I insist that these rates should be raised so that practically every dollar under this bill may be raised by war-profits taxes, by income taxes, and by the taxes upon alcoholic beverages and the like and that every consumer's tax that is in the bill, whether it be little or whether it be big, whether it touch one class or another class, shall be eliminated"—which is a popular approach to the plowshare called war taxation. By resolutions he demanded that our troops be withdrawn from

JAPAN

Insularity

THE gravest danger to national progress is the fallacious idea of self-sufficiency. Ease of communication, free interchange of ideas and ideals, facile trade channels and unrestricted travel build that better understanding and friendship upon which national prosperity is founded.

For thirteen years the Japan Society, composed of 1,200 Americans, has been working to bring about improved conditions between Japan and the United States. To business firms and individuals we have supplied accurate and timely trade information of tremendous value.

Russia or that, at least, a policy on the part of the Administration be presented. He offered an amendment dealing with war workers' transportation. He fought the President's plan of paying as high a premium as has been paid railroad investors for the use of their properties during the war-time "receivership" of the roads, and said "In our scrupulous care to see that justice is done to the railroads of the nation, let us do justice to the people as well. . . . Years and years of dealing with the problem of railroad transportation in its various phases convinced me that the only way in which the intertwining difficulties of the railroad situation could be solved would be by the Government itself."

And he also fought the League of Nations!

In fact, when I sought persistently, after several casual interviews, for privilege to take his intimate measurement with a fountain pen, and to get him to tell me what he would do if he were President, he shied me off at least fifteen cubits by telling me twice "I am wholly engrossed in the League of Nations contest, which means more to the republic than any candidacies or any promise in presidential possibilities. I would, therefore, be under many obligations to you if you would deal with the innumerable candidates who are now really presidential possibilities and eliminate me entirely."

When the Senator was Governor California's Anti-Alien Act, prohibiting aliens from acquiring land in California, was passed. Secretary of State Bryan journeyed to the Pacific Coast to prevent execution of the Act. Governor Johnson went ahead and put it into effect anyway. According to his interpretation of the League he would be inconsistent if he submitted to it even on this score, of itself. Were he President he would favor the restriction of immigration—which becomes steadily a bigger and bigger issue—and, at least, would have the knowledge and experience to deal understandingly with phases of the question, which is, of course, a national question.

This same disposition to restrict immigration somehow makes him acceptable to union labor, of course. It may indeed be therefore one of the reasons why the Nonpartizan League, which is a labor movement as well as an agrarian one, which, it is claimed, could, in many circumstances elect a President, is well disposed toward him.

By the same chain of circumstances, or of vision, if Mr. Johnson were President he could not carry the support of labor and of the Nonpartizan League and fail to oppose the packers and fail to carry thru means looking to reduction of costs of living, if that be a hard bone of contention still, and any means looking to improvement in the processes of distribution and marketing, in which vast questions he long has been deeply interested, having, in fact, achieved a goodly share in making practicable the vast and effective distribution of California products. Incidentally, it is worth noting, also, he has been singu-

larly successful in carrying the farmer vote of his home state. And, incidentally, also, has given no intimation of any desire for free trade.

He is, withal, thus, a man of a kind content to keep America working intensively at its own social and economic betterments without interference from or in foreign affairs. He championed the war, and if our soldiers follow him, sentence by sentence and act by act, thru his days in the Senate, they see that he has obviously kept his interest in their welfare to the fore. And if they go further, the four millions or so of them, with their great fireside influence, which is just as varied an influence probably as that of any other group of four millions except that it is likely to display some salient and common modes of measurement, they would of course strike upon the inevitable question, "Who is best qualified to represent us?"

And, if they cherished still the spiritual leadership of Colonel Roosevelt, "Who—Johnson or General Wood—is best qualified to inherit the Roosevelt mantle?"

The ten years General Wood gave to the study of military science Mr. Johnson, the lawyer by training, gave to applied leadership and to grappling with economic and social problems as well as those of administration. The military man, naturally, is given to defense of old institutions as they were, the lawyer, usually, to defense of them as they are, the journalist and publicist defends them as they are likely to be—which is flattering to some of us, disturbing to some of us. At any rate there is a fine example of desire confounding realities in the manner in which many Americans expect another Roosevelt. That is natural—and fatuous! To imagine that either General Wood or Senator Johnson is another Roosevelt is to mother a myth; and, on the part of either of these men, or any man, is the sheerest conceit—like the fetish that lands so many fanatics in asylums—fanatics who insist they are the newborn Christ. It is quite in order to expect another Colonel Roosevelt in the course of a century, but not before, if then.

Moreover, this "passing down" of the Presidency is out of order. The President's suggestion that all good Americans vote the Democratic ticket demonstrated that Americans want no dictation. Then, too, voters should remember this little incident, for, verily, it hath a brick in it.

The evening after Mr. Taft's election, Mrs. Taft, very happy, admitted to another woman: "Mr. Roosevelt did this—he elected Mr. Taft."

"Yes," answered the other, prophetically, "but don't you think that's too great a gift for any man to give?"

It was too great a gift; it always will be. And the recourse is to take each candidate as a problem in itself—him, and the service he has rendered.

There is no other conclusive or even satisfactory way.

Washington, D. C.

Back to Nature? Never! Forward to the Machine

(Continued from page 6)

words. There is a possible and a proper sense of the word "nature" that makes it include everything except the supernatural. Therefore man and all his works belongs to the realm of nature. A tenement house in this sense is as "natural" as a bird's nest, a peapod or a crystal.

But such a wide extension of the term destroys its distinctive value. It is more convenient and quite as correct to use "nature" as I have used it, in contradistinction to "art" meaning by the former the products of the mineral, vegetable and animal kingdom, excluding the designs, inventions and constructions of man which we call "art."

We cannot, in a general and abstract fashion, say which is superior, art or nature, because it all depends on the point of view. The worm loves a rotten log into which he can bore. Man prefers a steel cabinet into which the worm cannot bore. If man cannot improve upon nature he has no motive for making anything. Artificial products are therefore superior to natural products as measured by man's convenience, otherwise they would have no reason for existence.

Other of my offended readers wrote in this fashion:

How can you say that art surpasses nature when you know very well that nothing man is able to make can in any way equal the perfection of all nature's products?

And again:

It is blasphemous of you to claim that man can improve the works of God as they appear in nature. Only the Creator can create. Man only imitates, destroys or defiles God's handiwork.

Now these two correspondents are really raising the same objection, tho the first is couched in naturalistic and the second in theological language. It is curious to see that their point of view is identical, altho they may think themselves far apart. It shows how widely the pan-pagan spirit has spread that it affects both the theological and untheological types of mind.

It is highly amusing to be accused of blasphemy because I point out a few imperfections in nature. A few centuries ago I should have been accused of blasphemy if I had said a good word for nature. I could quote—if anybody would read them—a continuous series of citations from the church fathers of every one of the first eighteen centuries of the Christian era proving that nature was altogether corrupt, vile, degrading and accursed; something to be avoided, fought, subjugated and eradicated as the only hope of man's salvation. I can read my correspondent out of any church he may belong to on this point by reference to the books of the founders of his faith. He probably does not realize what a heretic he is in his unbounded worship of nature. The Bible indeed tells us that the Creator when he first looked over his work pronounced it "good," but we know that he later discarded many of those early models, such as the megalosaurus and the pterodactyl, in favor of more mod-

ern designs, and man has continued the work of his Maker by improving on the cattle and fruit trees that he inherited. He has even made some changes for the better in his own appearance if we may judge from the pithecanthropus, but nothing to boast of compared with what he might do for himself by a strict course in eugenics.

The revival of the worship of the heathen earth goddess, Magna Mater, began in an inoffensive fashion in the latter part of the eighteenth century and has since infected all classes and countries. It is now securely enthroned in the two strongholds that were erected against it, church and school. The neo-pagan poet Swinburne, who wrote

Thou hast conquered, O pale Galilean;
The world has grown gray from thy breath.
was premature in his despair. He might better have written

Thou hast conquered, O rosy Rousseau
The world has grown gay from thy breath.

FOR the cult of naturalism is now dominant everywhere. The call of the wild is drowning out the appeal of civilization. "Back to barbarism!" is the slogan of the hour. Sink into savagery. Praise the country and denounce the city. Admire cliffs but make fun of skyscrapers. Extol forests and despise laboratories. Exalt the physical and ignore the intellectual. Spend \$250,000 on a new gymnasium and let the old library go to ruin. Abolish compulsory Latin and establish compulsory swimming. Patronize football and neglect debating. Up with the soldier and down with the savant. Jazz your music and cube your painting. Roughcast your walls, deckle your bookedges, wormhole your furniture, coarsen your fabrics and deform your pottery. Condemn everything new and worship everything old. Regenerate obsolescent languages, restore antiquated spelling, adopt medieval costumes, revive ancient rituals, inflame traditional animosities, resurrect forgotten realms, re-erect overthrown barriers. Cultivate the primitive virtues of personal bravery and clan loyalty. Reprove and repress the Christian virtues of kindness and universal sympathy.

Some of the signs of the times I have enumerated are good things in themselves, some are trifles of no consequence, but they all hang together and a floating straw shows the current of a river as well as a log. A change in taste is often the precursor of a shift of the trend of human affairs. The dominant tendency of the times is undoubtedly downward and the advance of science has not yet availed to check it.

It is a reactionary spirit, antagonistic to progress and destructive to civilization. Science and Christianity are at one in abhorring the natural man and calling upon the civilized man to fight and subdue him. The conquest of nature, not the imitation of nature, is the whole duty of man. Metchnikoff and St. Paul unite in criticizing the

body we were born with. St. Augustine and Huxley are in agreement as to the eternal conflict between man and nature. In his Romanes lecture on "Evolution and Ethics" Huxley said: "The ethical progress of society depends, not on imitating the cosmic process, still less on running away from it, but on combating it," and again: "The history of civilization details the steps by which man has succeeded in building up an artificial world within the cosmos."

There speaks the true evolutionist, one whose desire is to get away from nature as fast and far as possible. Imitate Nature? Yes, when we cannot improve upon her. Admire Nature? Possibly, but be not blinded to her defects. Learn from Nature? We should sit humbly at her feet until we can stand erect and go our own way. Love Nature? Never! She is our treacherous and unsleeping foe, ever to be feared and watched and circumvented, for at any moment and in spite of all our vigilance she may wipe out the human race by famine, pestilence or earthquake and within a few centuries obliterate every trace of its achievement. The wild beasts that man has kept at bay for a few centuries will in the end invade his palaces; the moss will envelop his walls and the lichen disrupt them. His tools and weapons will dissolve into the rust from which he rescued them. The clam may survive man by as many millenia as it preceded him. In the ultimate devolution of the world animal life will disappear before vegetable, the higher plants will be killed off before the lower, and finally the three kingdoms of nature will be reduced to one, the mineral. Civilized man, enthroned in his citadel and defended by all the forces of nature that he has brought under his control, is after all in the same situation as a savage, shivering in the darkness beside his fire, listening to the pad of predatory feet, the rustle of serpents and the cry of birds of prey, knowing that only the fire keeps his enemies off, but knowing too that every stick he lays on the fire lessens his fuel supply and hastens the inevitable time when the beasts of the jungle will make their fatal rush.

Chaos is the "natural" state of the universe. Cosmos is the rare and temporary exception. Of all the million spheres this is apparently the only one habitable and of this only a small part—the reader may draw the boundaries to suit himself—can be called civilized. Anarchy is the natural state of the human race. It prevailed exclusively all over the world up to some five thousand years ago, since which a few peoples have for a time succeeded in establishing a certain degree of peace and order. This, however, can be maintained only by strenuous and persistent efforts, for society tends naturally to sink into the chaos out of which it has arisen. The natural law of the degradation of morality corresponds to the natural law of the degradation of energy. In the language of the old theology it was expressed by saying "Satan is prince of this world." It is no longer

proper to mention the devil in polite society except as an expletive. But tho we may deny the existence of the arch Anarch we cannot repeal the law. If we are too insensitive to feel the downward drag in ourselves we can readily observe the effects in our neighbors.

WE should "move upward working out the brute and let the ape and tiger die." Our sins are mostly survivals. Like the vermiform appendix they are vestigial organs, needing amputation. It is those who believe in perpetuating the pugnacious propensities of the lower animals and man in his lower stages who are responsible for these last five years of war and the consequent anarchy. Modern literature is tainted thruout by that most pestilential heresy, zoolatry. From the child's primer to the sociological treatise, animals and insects are held up for our admiration and imitation. The lion and the eagle are made the emblems of patriotism. Our authors and artists and musicians deliberately turn their backs on the future and point to the past as our goal. They take lessons in form and rhythm from the African negro and prehistoric man.

The lament "Great Pan is dead!" was a false alarm. Never was he so much alive as today. Never was animality more admired. Never such a deification of the strength of man and the beauty of woman. Never so much money spent on lust and sensuality and play as now. Never so much violence and lawlessness and hate and manslaughter. Pan has displaced Pallas in the Parthenon. Pan has crowded out the preacher from the pulpit. Pan is the symbol of the semi-man. His furry ears and hairy legs were reminiscent of the brute from which man has evolved. Being the emblem of the bestiality that survives in humanity he was, quite rightly, identified by the early Christians with the devil, the eternal adversary. His worship was the exaltation of the physical and the emancipation of the primitive passions. His home was in the forest and he only ventured into the city at the Saturnalia when the people, tired of the practise of their acquired virtues, relapsed temporarily into savagery.

Those who say "God made the country but the devil made the city" are reading history backward. The word "pagan" means literally "countryman" (*paganus*). "Civilization" is by self-definition a product of the city dweller (*civis*). Our modern nature-lovers are trying to rob the Creator of credit for the highest products of creative activity. They would make a scapegoat of God and drive him out of the town into the desert. But God is not in the thunder or whirlwind, but in the voice the artificial creation of man. It is only by overcoming nature that man can rise.

The sole salvation for the human race lies in the removal of the primal curse, the sentence of hard labor for life that was imposed on man as he left Paradise. Some folks are trying to elevate the laboring classes; some are trying to keep them down. The scien-

tist has a more radical remedy; he wants to annihilate the laboring classes by abolishing labor. There is no longer any need for human labor in the sense of personal toil, for the physical energy necessary to accomplish all kinds of work may be obtained from external sources and it can be directed and controlled without extreme exertion. Man's first effort in this direction was to throw part of his burden upon the horse and ox or upon other men. But within the last century it has been discovered that neither human nor animal servitude is necessary to give man leisure for the higher life, for by means of the machine he can do the work of giants without exhaustion. But the introduction of machines, like every other step of human progress, met with the most violent opposition from those it was to benefit. "Smash 'em!" cried the workman. "Smash 'em!" cried the poet. "Smash 'em!" cried the artist. "Smash 'em!" cried the theologian. "Smash 'em!" cried the magistrate. This opposition yet lingers and every new invention, especially in chemistry, is greeted with general distrust and often with legislative prohibition.

Man is the tool-using animal, and the machine, that is, the power-driven tool, is his peculiar achievement. It is purely a creation of the human mind. The wheel, its essential feature, does not exist in nature. The lever, with its to-and-fro motion, we find in the limbs of all animals, but the continuous and revolving lever, the wheel, cannot be formed of bone and flesh. Man as a motive power is a poor thing. He can only convert three or four thousand calories of energy a day and he does that very inefficiently. But he can make an engine that will handle a hundred thousand times that, twice as efficiently and three times as long. In this way only can he get rid of pain and toil and gain the wealth he wants.

Gradually then he will substitute for the natural world an artificial world, molded nearer to his heart's desire. Man the Artifex will ultimately master Nature and reign supreme over his own creation until chaos shall come again. Science and theology teach the same duty of man, tho they express it in different terms. In the language of science, according to Ostwald, man should utilize for his own purposes the largest amount of the raw energies of nature with the highest possible ratio of efficiency. In the language of theology, according to the Bible, man imitates his Creator to the extent of his powers in making a better world and waging increasing warfare against the prince of this world.

In the ancient drama it was *deus ex machina* that came in at the end to solve the problems of the play. It is to the same supernatural agency, the divinity in machinery, that we must look for the salvation of society. It is by means of applied science that the earth can be made habitable and a decent human life made possible. Creative evolution is at last becoming conscious.

New York City

Is Bootlicking Part of the Teacher's Job?

(Continued from page 9)

tion. A man or any other profession is seldom affected by these whims of a board."

In thinking over these answers it may be something of a shock to many good citizens to learn that a teacher, who must usually move from town to town in order to advance herself in her profession, is likely to have to change her opinions with her residence or keep very quiet about them. To win favor in each community she must appear to become "wet" or "dry," Catholic or Protestant, Republican or Democratic, as the case may be. In one community pressure was brought to bear on a principal of one of the schools to enter another denomination (in spite of the fact that his own church was well represented in the town) simply because "the best people," including members of the school board, belonged to the other denomination. In the same town a teacher displeased certain prominent persons by attending a mission church in the slum district. The mission chapel was of the same denomination as that which the prominent persons attended in the uptown residence district. If a teacher be sincere in the acceptance of any creed—and of what value is religion without sincerity—how is it possible to make such adjustments?

This pressure of the community mind upon the individual is felt keenly in many ways, but most keenly, perhaps, in connection with religion and politics. One of our correspondents tries to tell why:

"While educational offices are political, teachers will not have free speech. We have the right to it, the same as other citizens; but are we classed as citizens? We doubt it. We must not say we are Democrats or Republicans (for the children may learn our way), not if we teach both sides of the story justly and they have a Democratic or Republican father or mother. We must not take a stand for or against our school legislation. If the jobs are political ones and we stand on the wrong side, we lose the job or else become cross-roads. We like the man who stands firm for or against issues, but in a politics-ridden educational system with its petty jealousies and sectional rivalries, it does not agree with a man's pocket-book to take the definite stand, though his conscience may be clear."

Here is specific information in this connection:

"I had the *Literary Digest*, *The Independent* and other magazines in my schoolroom and we kept up on topics of the day. I have no preference when it comes to political parties, but not one thing could I say in loyalty to our President without incurring the enmity of all the Republicans in town. I could not even teach patriotism without calling down upon my head the hatred of one member of the board who, I judged, was pro-German."

Another correspondent writes us a long and interesting story of pro-Ger-

manism at work in war time to suppress the free speech of patriotic Americanism. In reading the story we may focus attention, if we wish, simply on the suppression of Americanism. It would be wiser to consider also the faults in an educational system that make it possible for right-minded professional men and women to be bullied to their own disadvantage and the disadvantage of their country. For now that the war is over, these same auto-crats, and others, may be working against liberty and progress by repressing the freedom of their teachers in other ways and for other reasons, the teachers, seemingly helpless in their clutches. Here is the story:

"In the spring of 1917, the teachers of our high school, with the principal's consent, were planning a Red Cross program by which to earn the school's admission to the Junior Red Cross. Because one day after school some of us discussed informally and tentatively the assignment of parts for the program, we were accused of insubordination and were not allowed either then or later to give any entertainment for the Red Cross. We were so dumb-founded by the accusation that we protested, carrying the matter to the superintendent. He agreed with the principal, and said that we should never again plan or even suggest programs or "hold meetings" unless ordered to do so by the principal.

"In the fall of 1917, the superintendent visited an English class and found them discussing the causes of the war. He criticized the teacher, telling her that it was not the time to discuss the causes of the war, as nobody understood them. It was her business, he said, to teach English. In a few days a faculty meeting was called, and the principal repeated and amplified the criticism, telling all teachers of English and history to teach what was "in the book." All but one protested, and later the teacher who was first re-proved spoke of it before a member of the local War Council (on which the superintendent himself sat) and the member told her to report if more was said. No more was said, but the one teacher who did not defend our course was the only one to remain in favor with the school administration.

"Later a debate was being planned in which criticism of a government war measure was made a part. Two of the debaters were unwilling to criticize war measures in public debate. They asked to have the question changed. That was refused and they withdrew from the debate. They were in my English class and when they told me what they had decided, I approved. It has always been my habit to encourage free discussion in my classes, and never to insist on a parrot-like agreement with my opinions. Quite apart from the question as to whether the war measure was expedient, I approved the decision of the boys to withdraw from the debate rather than use what they considered

There is no better covering than

CON-SER-TEX Canvas Roofing

Above all things you are interested in your home. You are always willing to add to its comfort and coziness—its security and charm.

Here's an opportunity to make your porch floors and roofs as up to date as the interior of your home. Your opportunity lies in the use of CON-SER-TEX, a scientifically treated canvas roofing.

When properly laid it lasts longer than tin or shingles. It is much easier and cheaper to lay. It is mildew proof. It deadens the noise of the rain and stops the rattle of the wind. It lessens work and the cost of repairs. The cold of the blizzards and the heat of midsummer do not affect it.

It adds charm and neatness to your home because it lies flat, clings tight and does the work. Generous sample, price list and descriptive matter upon request. Write today.

arguments of dubious loyalty. I am trying to make this sun-clear, because I was standing for the right of the boys to make their own moral judgments, and my approval of their course cost me my position.

"Not, of course, immediately. First the principal interviewed me, intending to make me retract what I had said, and urge the boys to return to the debate. He refused at the start to allow that the boys had any moral scruples. The superintendent had decided that the question was all right. Therefore, he said, neither the boys nor I had any right to think differently. We had the 'right' to obey. (Do I hear an echo from Potsdam?) He reproved me for allowing the boys even to talk about the debate, unless with approval. Altho it was outside of class he said they had no business to be talking to me unless they were loyal to the school. I protested that they *were* loyal to the school. He said they could not be if they differed from the superintendent. Angrily, he said, 'You are denying us the right of free speech!' But, said I, 'What becomes of my free speech and the right of the boys?' He was more angry than ever, maintained more firmly that there should be but one moral judgment in the school, the superintendent's. I promptly offered to resign. But there was a shortage of teachers that spring and he refused to go that far.

"Some days later the superintendent interviewed me. To him, also, I offered to resign. But he refused the generous offer, a fact that puzzled me till this spring. He made clear that loyalty meant absolute, unquestioning agreement with the 'constituted authority' of the school, a modest reference to himself!

"In April, 1919, I was told by the superintendent, that because of my flagrant disloyalty (to himself) in the matter of the debate of 1918, I would not be offered a contract. He said with refreshing frankness that he had made up his mind in the spring of '18 to fire me the next year.

"As the contracts were already made before I was notified, I knew that closed the matter, but rather out of curiosity I went to the president of the Board of Education to ask what charge had been made against me to them. He is a man of education, holds a responsible position, and is of undoubted ability and loyalty. Yet here is his educational creed, stated so vividly that I recall these sentences word for word: 'I don't know what charge was made against you and I don't care to know. I don't care how you teach. If you don't please the Man Higher Up, out you go! You may be the best teacher in the State, but you don't please the Man Higher Up. What you teachers need to learn is that there is a man over you with a whip, and the sooner you learn it the better.'"

In summing the matter up this teacher says, quietly, "Yet several millions better than I, for that trifle called freedom, lost their lives. Had I not the right to teach my pupils to stand

for the ideals for which these died?" This stringent censorship of ideas and ideals makes dull and unprofitable the meetings and social gatherings which teachers attend and thru which they should be able to find pleasure, profit and intellectual growth. The fear of displeasing somebody in some petty way is the spectre at every feast. It is what makes it impossible for teachers with good minds and warm hearts to acquit themselves as brilliantly as they would like in mixed social gatherings. They are afraid to say the interesting things that occur to them. It is the reason for the lifeless boredom of most faculty meetings. And, since it has been hinted to us that meetings of institutes and even of the N. E. A. are not always enlivening and stimulating, it may be the reason for that, also. It is a well known fact among teachers brave enough to talk to each other confidentially that most meetings planned for them and in which they participate are exceedingly dull. They continue to go with their usual docility simply because it is necessary. Teachers sometimes endure, patiently and submissively a boredom so ponderous that any group of persons from another profession—say a group of journalists—at the end of ten minutes would get "fighting mad" just for the purpose of making something interesting happen!

Imagine a group of college-bred men and women who have traveled and read and thought sitting meekly in a semicircle before a principal who, after asking them to discuss the "aims of education" (a new topic to most of them, of course!) writes down on the blackboard for their instruction the names of most of the Christian virtues, as if none of the group had ever heard of them and as if it were a new idea to associate them with education! Or imagine a bluff, kindly principal holding a meeting because it is the right day to hold it and without any more important reason, and trying to explain to a similar group of men and women of culture that we should have a "fool-proof method" in education (as if there could be any such thing!) because teachers, "as they come, on the hoof" can not be trusted to adapt themselves to the exigencies of the occasion and the needs of the individual child! Yet these things have happened—and other things.

Consequently, teachers have lost prestige in many places and among many people. It is not easy to look to them for intellectual leadership when they may not dare to be leaders, when they are afraid to discuss even their own problems at faculty meetings, where, for the good of all children, the frankest, freest and most stimulating discussion should be encouraged. But, wherever it exists, it ill becomes the public to reproach teachers for this subservieny. Teachers, with all their good qualities, are only human, and the public has laid too heavy a burden upon them and given much too little for the bearing of it. The public is to blame in that it has taken away from thousands

American commercial attention is focussing upon the Far East, and rightly so, because in the East are found more millions of possible purchasers of American merchandise than in any other part of the world.

To American business men who are interested in this possible trade expansion we offer the whole-hearted cooperation of our world wide organization. :: :: :: :: ::

 2. Point out the different pictures that are suggested by the poem.
 3. Which picture is most suitable for illustration?
 4. Compare the poem with Longfellow's "The Birds of Killingworth."
 5. Explain in what way the poem is related to "The Rime of the Ancient Mariner."
 6. Point out and explain figures of speech that occur in the poem.
- II. Back to Nature? Never! Forward to the Machine. By Edwin E. Slosson.
 1. After you have read the article, give a clear explanation of the meaning of the title.
 2. In what sense is "Robinson Crusoe" "an allegory of human history"?
 3. Write an anecdote that will tell about man in "The Appropriative Period."
 4. Write an anecdote that will tell about man in "The Adaptive Period."
 5. Explain why it is proper to speak of the present time as "The Creative Period."
 6. Write an imaginative story in which you account for the invention of the Aeolian harp.
 7. Tell a story that will show something concerning the Greek idea of Hermes.
 8. What is the character of Athena as presented in "The Odyssey"?
 9. Give a short talk in which you explain the development of any one of the following: music, textiles, medicine.
 10. Give a clear explanation of the quotation from Shakespeare.
 11. What is meant by saying that Shakespeare's favorite amusement was making "a play upon words"?
 12. Show that the following sentence is closely related to the theme of Tennyson's "Idylls of the King": "We should Move upward working out the brute and let the ape and tiger die."
 13. Prepare a brief for an argument that will show whether or not you agree with the following sentence: "The dominant tendency of the time is undoubtedly downward."
 14. Read aloud the paragraph beginning, "There speaks the true evolutionist."
 15. Which part of the paragraph just mentioned is most pleasing in style?
 16. Is it true that "Pan has displaced Pallas in the Parthenon"?
 17. What was the "Deus ex machina" in the ancient Greek drama?
 18. What does Dr. Slosson mean by saying: "Man the Artificer will ultimately master Nature"?
 19. Explain how the article awakens interest in the study of physics and of chemistry.
- III. Is Bootlicking Part of the Teacher's Job? By Marguerite Wilkinson.
 1. What is the difference between absolute freedom of speech and legal freedom of speech? Is absolute freedom of speech ever possible?
 2. What sort of freedom of speech should exist in the schoolroom?
 3. What is "A politician who is a Dr. Jekyll and Mr. Hyde"?
 4. Why is it necessary for the safety of the country to have men and women of genuine initiative become teachers?
- IV. The Plain Facts on Shantung. By Viscount Y. Uchida.
 1. Summarize the points by which Viscount Uchida supports his views concerning Shantung.
- V. Bringing Cartoons to Life. By Jerome Lackenbruch.
 1. Give a talk explaining how cartoons are "Brought to life."
- VI. What She Will Do with the Vote. By Arthur Capper.
 1. Does the thought of the article agree or disagree with the thought expressed in Ruskin's essay, "Lilies"?
 2. Read Tennyson's interesting narrative poem, "The Princess." Would Tennyson agree or disagree with the thought of the article?
 3. In a short composition give an estimate of the national importance of the following subjects: education, child welfare, child labor, hours of labor for women, mothers' pensions.
 4. Write an editorial article pointing out the political service that women voters are most likely to perform.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

- I. The Irish Question—"The New Home Rule."
 1. In what respects does the new Home Rule Bill differ from that of 1914?
 2. How does it compare with the measures proposed by Gladstone?
 3. Why is Protestant Ulster opposed to Home Rule?
- II. The Shantung Controversy—"The Plain Facts on Shantung."
 1. Read carefully the clauses of the Treaty of Versailles dealing with the question as given in the article by Viscount Uchida. Just what does Japan gain? What does Germany lose? What does China lose? Is it true that Shantung is "annexed"?
 2. What reservation on the subject of Shantung has been proposed in the Senate?
 3. How and when did Germany obtain the Kiaochow concession?
- III. Capital and Production—"What We Expect of Capital and Labor," "Unscrambling the Eggs," "Greater Production, Lower Prices."
 1. Mention some advantages and disadvantages of big industrial combines. Do you think that meat would be cheaper or dearer if the "Big Five" had not been organized to control the packing trade?
 2. What does Mr. Post mean by "over-production"; "basic industries"; "black anarchists"?
- IV. Woman Suffrage—"What She Will Do with the Vote."
 1. Write a brief résumé of the history of the Woman Suffrage movement up to the present time.
 2. Is there any evidence to justify the apprehension that women will "become an ultra-radical element of the voting population"?
 3. What are the problems which are likely to become the chief subjects of interest to the women voters?
- V. The Policies of Senator Johnson—"If He Were President."
 1. Discuss the relationship of Senator Johnson to the Progressive Party movement. If he should be free to write his own platform in 1920 what issues, judging from his record and expressed opinions, would he emphasize?
 2. What is Senator Johnson's "foreign policy"? Why does he oppose the League of Nations?
 3. Get hold of some recent issues of the "Congressional Record" containing speeches by Senator Johnson on current problems.
- VI. Civil War in Russia—"The Expansion of Soviet Russia."
 1. Compare the recent peace negotiations mentioned in the article with the projected "Prinkipp" conference advocated last winter. Do you think that the Bolsheviks have gained or lost strength in the interval? In what other respects has the situation changed?
 2. What are the "Baltic Provinces" of Russia and what forces are fighting there? Describe the attitude to each other of: (a) the German "Balts," (b) the Estonians, (c) the Letts, (d) the Bolsheviks, (e) the anti-Bolshevik Russians, (f) the German Government, (g) the Entente Powers, (h) the Poles, (i) the Lithuanians, (j) the Finns.
- VII. British India—"Massacre in India."
 1. Compare the unrest in India with that in Egypt. What similarities can you find in the nationalist movement in the two countries?
 2. Why is the Mohammedan population discontented at this time? Do you think that sympathy with the plight of Turkey is a cause? What Mohammedan States have fallen under European control during the last hundred years?
 3. How much farther south would Bolshevism have to spread to menace the Indian frontier? Can you find a reason in the British position in India for (a) the agreement with Persia, (b) the occupation of the Caucasus region, (c) interest in Afghanistan, (d) the plan for a "mandate" in Mesopotamia?

of teachers the conditions that make for intellectual quickness, vigor and independence.

Moreover, in this article, it has been possible to hint at only a few of the ways in which this repressive fear works. Reams could be written, as one teacher says, on the problem of textbooks. Reams could be written on the waste of initiative made necessary in the mechanical school system in which every minute of a teacher's day is planned for her by supervisors and all possibility of personal growth thru a first-hand study of individual problems discouraged. Comedies could be built up on the theme of the small tyrannies of dress and manners.

By a process very much like natural selection we are weeding out the best personalities from the ranks of the teaching profession; that is we are putting too much of a premium on the possession of the quiescent qualities and doing nothing to reward the more vigorous virtues. We are doing nothing to make young men and women of force, intellectual integrity, sympathetic imagination and genuine initiative want to take up the teacher's work. Those who would gladly be poor for the sake of a great accomplishment will be discouraged by the conditions that seem to them to make the accomplishment well nigh impossible. We may comfort ourselves by thinking of this or that liberal community where teachers have every reasonable freedom. But we should not allow ourselves to forget the other communities. We should not let poverty and the fear of autocrats thrust their gag into the mouth of knowledge.

New York.

A Message from the Imperial Japanese Government to the American People

(Continued from page 11.)

24, 1918, were published. Consequently it is not conceivable that the United States Government was not aware of the intentions of Japan, when America entered the war.

Immediately after the assembling of the conference in Paris—or early in February, 1919, Baron Makino, speaking to the newspaper correspondents assembled in Paris from all corners of the world, said that in desiring to secure the right to the former German concessions in the Province of Shantung, Japan does not seek more than a fair division, in coöperation with China. Further, Baron Makino said, "Japan has repeatedly announced that she has no territorial ambitions in China, but desires to live in amity with her neighbor. The acquisition of territory belonging to one nation, which it is the intention of the country acquiring to exploit to its sole advantage, could not be conducive to amity or good will. It would therefore be folly on the one hand to say that Japan seeks to live in amity and good neighborhood when on the other hand she takes that from which she secures the

Stop the Leaks that Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

Read "The Couple That Spent Every Cent," on the Inside Back Cover

sole advantage to the exclusion of the original owner."

The ultimatum issued by Japan to Germany reads as follows:

Considering it highly important and necessary in the present situation to take measures to remove all causes of disturbances to the peace of the Far East and to safeguard the general interest contemplated by the agreement of alliance between Japan and Great Britain in order to secure a firm and enduring peace in Eastern Asia, the establishment of which is the aim of the said agreement, the Imperial Japanese Government sincerely believe it their duty to give advice to the Imperial German Government to carry out the following two propositions:

To withdraw immediately from the Japanese and Chinese waters German men-of-war and armed vessels of all kinds and to disarm at once those which cannot be so withdrawn.

To deliver on a date not later than September 15, 1914, to the Imperial Japanese authorities, without condition or compensation, the entire leased territory of Kiaochow, with a view to eventual restoration of the same to China.

Since the award of the conference in Paris by which the representatives of the great powers proclaimed their confidence in the good faith of Japan, the Premier of Japan, Mr. Hara, and the Foreign Minister have also given the most categorical confirmation of the intentions of Japan and the assurances of the Japanese delegates that as soon as it was reasonably possible, to return the leased territory of Kiaochow to China. Indeed Japan has given ample guarantee to China and to the rest of the world that she will not seek to violate China's sovereignty in the Province of Shantung or elsewhere in China.

All Japan asks is to be allowed the time and opportunity to demonstrate to the limit of possible demonstration her desire for friendship and good neighborliness with China.

The development of the resources of Shantung with equal opportunity in that development must be of immense advantage to all concerned and more especially to the millions of Chinese now living in the province. These millions Japan does not seek to "enslave" or "exploit," as is so untruthfully charged against her, but to benefit and assist in the achievement of their ambitions and their hopes.

If the people of America would consider this question in its true light; if they would delete the specious argument of the active propagandist in America, they should have no difficulty in finding safe ground for assurance that for every reason Japan must keep the faith with her friends and that in fact China will benefit by the decision with regard to Shantung as reached by the conferees in Paris.

In 1914 Germany was strongly entrenched in Shantung and fortified in Kiaochow. The German influence was rapidly increasing in China while China as a Government was growing weaker in all departments. The nation was divided, civil war existed, the constitution was not in force, and, with the exception of revenues pledged for loans and undertakings managed by

foreigners, the financial system was in chaos and available resources negligible. Everywhere the German was strengthening his grip in trade, in politics and in economic privileges.

When the war broke out Germany had a powerful naval base at Tsingtau and from that point threatened the commerce of the Pacific. China was neutral—a forced neutrality. She could not declare war because she had not the sinews thereof. It has been said that China was prevented from entering the war in 1914 by Japan. That statement is absolutely false. Some of the leading men in China did propose a declaration of war, but it was not taken seriously and was bitterly opposed by the powerful southern element and by a considerable number of the more influential men in the North.

It was a bitter day for the Germans in the Far East and in Germany when Tsingtau was taken over by the Japanese in trust pending the decision of the conference. It is almost certain that had the Paris Conference decided otherwise or had the amendment proposed in the Senate of the United States to substitute "China" for "Japan" as the recipient of Tsingtau and the concessions of Shantung been passed and accepted, it would have been many years before China got back her rights and her sovereignty in that province. Everything would have depended on the good faith of Germany, the strength of China or the power of the League of Nations to enforce the terms of the treaty. Otherwise beyond question the peace of the Far East must have been constantly menaced. Now, the situation for China and for all the rest of the world depends upon the good faith of Japan.

Japan is determined to restore Tsingtau to China in full sovereignty. What Japan intends to retain are only the economic privileges granted to Germany, which she will share with China, and she has no intention to hold or demand any right whatsoever which is likely to affect China's territorial sovereignty.

Japan is ready and will not hesitate to enter upon negotiations with the Government of China as to arrangements for the restitution of Tsingtau, as soon as possible after the Treaty of Versailles comes into force.

Upon the conclusion of an agreement between Japan and China for the restitution of Tsingtau, the Japanese troops now guarding that leased territory and the Shantung Railway will be completely withdrawn. Why not wait a while and see? Japan has not hitherto broken her word, nor will she do so now. Japan is the one foundation upon which the Far Eastern base of the rainbow of hope for the world now rests. She has pledged her word to her allies, to China and to civilization. Like all the rest of those who made the peace and accepted office in the League of Nations, Japan knows her responsibilities and is as jealous of her name and standing among the nations as America or France, England or Italy.

What the small packers say about meat competition

During a recent hearing a number of the smaller packers were asked for their opinions of competition in the meat industry.

The following quotations, we believe, are typical of the feeling throughout the entire meat packing industry:

Michael Ryan, President of the Cincinnati Abattoir Company, said: "I have been a competitor of the large packers for the last 40 years, and I have never found a disposition on their part to crush competition. . . . They have concealed nothing nor attempted any unfair practices."

T. Davis Hill, Vice-President Corkran, Hill & Company, Incorporated, Baltimore, asserted that: "The big packers cannot control the market for the reason that there are too many outside packers. . . . Some days the small packers make the market for the big packers. We have no fear of the big packers' competition. . . . The large packers have never tried to undersell us or drive us out of business."

G. H. Nuckolls, President of the Nuckolls Packing Company, Pueblo, Colorado, said: "So far as

profits go, my company has made a larger percentage on its turnover than any of the so-called Big Five."

J. C. Dold, President of the Jacob Dold Packing Company, Buffalo, New York, testified: "I recall no instances where we were ever hampered by any packer in the control of any stock or in the purchase of our supplies at competitive market prices."

John J. Felin, President John J. Felin Company, Packers, Philadelphia, Pa.: "I have known all the packers for years and have never seen any unfair dealings on their part. I know of no methods that have been adopted by any of them that were unjust, unfair and monopolistic."

There is probably no business in America more keenly competitive than the packing industry, and none that serves the public on a smaller margin of profit.

Swift & Company's profits during the first eight months of our present fiscal year have averaged two-fifths of a cent on each pound of meat and all other products sold.

Where Our Navy Stands

In the Message from the United States Government to the American people, published on pages 51 and 52 of this issue, Secretary Daniels points out that the eighteen capital ships now under construction for the United States navy will be the most powerful fighting craft ever built by any nation. "Had we no others," Secretary Daniels says, "they alone would give us a navy more powerful than those of most great nations."

The official Navy Department figures show this relative future standing of the world's navies, based on tonnage built and building:

	Ships	Tonnage
Great Britain	846	2,829,661
United States	782	2,067,478
Japan	332	980,426
France	241	799,873
Italy	206	434,724

Recently there has been talk in London of scrapping a large part of the British navy, many of whose vessels would be ineffective against battle cruisers of the most modern construction.

Remarkable Remarks

SENATOR ASHURST—Prevent experimenting on any animal except man.

PHILIP GIBBS—I like the social atmosphere of the American postoffice.

CHARLES E. HUGHES—You did not destroy force when the Kaiser was de-throned.

AMY WREN—Today the grandmother goes out as beautifully clothed as the granddaughter.

ANNE RITTENHOUSE—We are spending altogether too little time at our dressing table.

MRS. JAMES L. LAIDLAW—There never were more girls fitted to be help-mates than there are today.

EMMA GOLDMAN—This practice of deportation means the beginning of the end of the United States Government.

DRAMATIC CRITIC ALEXANDER WOLCOTT—The beauty of the Fokine ballet in "Aphrodite" makes you swoon.

PROHIBITION COMMISSIONER KRAMER—Hair tonics that are hair tonics in name only must be made undrinkable.

SENATOR JOHN SHARP WILLIAMS—I would rather be a dog and bay at the moon than to spend one day in the

Speech by Senator Porkbarrel

By Preston Slosson

"I have no confidence," said he, "In treaties made in Gay Paree. Americans should scorn such stuff; The Treaty's Foreign! That's enough. Why should Americans be sent To Europe; that Wicked Continent?"

"And yet with a little amputation I could make the Treaty suit the nation.

The League of Nations we must drop Or make it a mere Talking Shop; Another name we'll find, of course, The League that Can't and Shan't Enforce.

"With frenzied eye I scan the map And everywhere I see the Jap; Let's cut the Shantung clauses out Japan will go then—without doubt—I feel the matter most keenly, becuz I never knew where Shantung was.

"England, our friend ten months agone, Is now that Perfeed Albion! To get the European goat Let's rob Australia of her vote; Put Canada outside the fence To increase the New World's influence.

"A President was chosen for 'Twas said he kept us out of war; A nobler title unto fame Should hallow now the Senate's name; The world acclaims the blest release: 'The Senate Keeps Us Out of Peace'."

United States Senate after the expiration of my term.

CHRISTY MATHEWSON—As far as I know age helps only wine and shoes.

W. J. BRYAN—Those eligible for the Democratic nomination should advance and give the countersign.

FLORENZ ZIEGFELD, JR.—A lot of girls make the mistake of trying to imitate the vampire type.

GOVERNOR CALVIN COOLIDGE—There is no right to strike against the public safety by anybody anywhere anytime.

DON MARQUIS—It is a mistake to try to raise polecats either for home use or for market in a very small apartment.

LUKE MCLUKE—The menfolks get a lot of pleasure out of taking a few hours off to gab about how much the womenfolks gab.

EX-EMPEROR KARL—Had I been free to determine the course to be taken Austria would not have been in the war.

CRIME COMMISSIONER H. B. CHAMBERLAIN—Chicago has more murders in a year than England, Scotland and Wales.

SOPHIE IRENE LOEB—Cupid composes, woman supposes, man proposes, marriage disposes, affinity interposes, and divorce closes.

HEALTH COMMISSIONER R. C. COPELAND—City women with the silk stockings and flimsy dress generally live longer than do their sisters on the farm.

SALLY JAMES FARNUM—We ought to bring up our youth so that they shall be so beautiful that no amount of undressing will be either ugly or immodest.

LOWNEY'S COCOA

For your children's sake

AT GROCERS IN FLAVOR-TIGHT
TINS

Mother,

How do you make your children's Cocoa?

Do you simply take a teaspoonful of 'most any cocoa, pour boiling water over it, add a little sugar and let it go at that?

For your children's sake, we respectfully hope not.

To start with, you'll need a children's cocoa like Lowney's. We say "children's cocoa," because Lowney's contains just the correct amount (25%) of nutritive cocoa-butter fats to digest easily in little "tummies" and at the same time to nourish and energize growing bodies.

When your children squirm and say—as they are bound to sooner or later—"I'm tired of plain milk," don't be anxious. Give them their milk in an agreeable disguise by serving Lowney's Cocoa—made according to the simple directions on the tin. But—*be sure the milk is not boiled. The quality of its goodness is changed by boiling.*

Lowney's is very easy to prepare—and how the children love it!

LOWNEY'S COCOA has always met the Government Pure Food Standards. It meets, too, Dr. Wiley's and the Westfield Standards of Pure Foods. Equally important, it always meets the purity standard established by The Walter M. Lowney Co.

A Message from the United States Government

The Navy's Future

By Josephus Daniels
Secretary of the Navy

Fourteen thousand U. S. sailors at the Great Lakes Naval Training Station listening to a speech made by the Secretary of the Navy

THREE and a half years ago a far-visioned American Congress paused in the act of appropriating more money for naval construction than had ever previously been expended in one year by any single power to place the United States on record as desiring the creation at the end of the war of an international organization for the limitation of armaments and establishment of permanent peace.

Seldom have men acted with greater wisdom and foresight. One would hardly expect, in a bill authorizing unsurpassed expenditures for war preparations, to find the inspiration toward a League of Nations to preserve world peace. Yet it is there—and who will say the place was not appropriate? “We arm because we must, not because we want to,” the Congress said, in effect. “We hope the day may soon arrive when this sort of thing will no longer be necessary.”

The Congress declared it to be the policy of the United States “to adjust and settle its international disputes by mediation and arbitration.” It said this country looked “with apprehension and disfavor upon

a general increase in armament thruout the world” but recognized “that no single nation can disarm without a common agreement.”

Building upon this sound premise, Congress “authorized and requested the President to invite . . . all the great governments of the world to send representatives to a conference which shall be charged with the duty of formulating a plan for a court of arbitration or other tribunal to which disputed questions between nations shall be referred for adjudication and peaceful settlement.”

Provision for the appointment of American delegates and an appropriation for the conference was made, and Congress gave a sign of its earnestness in the remarkably inspiring provision that “if peaceful determination of all international disputes shall render unnecessary the maintenance of competitive armaments . . . such naval expenditures as may be inconsistent with the engagements made in the establishment of such tribunal or tribunals may be suspended when so ordered by the President of the United States.”

It was this now forgotten mandate of an American Congress for peace that was executed by President Wilson at Paris when the League of Nations covenant was accepted by the great powers. I cannot re-read its lines without a thrill, they are so shot thru with typically American idealism. This declaration of American policy and American hopes was adopted by both houses practically unanimously. Senators Lodge, Poindexter and Penrose, I now recall, voted for it three times: once in committee and twice on the Senate floor.

The three year program of 156 ships set out by the naval appropriation bill of 1916 now is nearing completion. The eighteen capital ships—six battle-cruisers and twelve dreadnoughts—work upon which was delayed by the demand when we entered the war for lighter ships for the submarine campaign, are all under construction.

They will cost in the neighborhood of \$20,000,000 each. Armed with 16-inch, 50 caliber guns, they will be the most powerful fighting craft in the world. A single discharge of their combined batteries would provide enough energy, could it be harnessed, to lift a battleship the height of the Washington monument. For years to come these vessels will form the backbone of our navy. Had we no others, they alone would give us a navy more powerful than those of most great nations.

These great fighting craft were ordered by Congress much as a man orders an accident insurance policy—in the hope that we may never need the protection they will afford. My hope, which I believe is shared by all Americans except those enamored of Prussian militarism, has always been that we might some day somehow be able to do away with the necessity of appropriation and taxation for huge naval armaments. Upon becoming the Secretary of the Navy one of my first proposals was that the great powers join in a year's vacation from competitive battleship building. The outbreak of war in Europe upset that plan, but the war has given us the greater opportunity to accept if we will a permanent vacation from this wasteful competition.

With the United States in the League of Nations, it would join with the other nations without greedy designs and colonial ambitions in contributing during the early days of the League to the international police force that would be necessary, until the world had learned to think in terms of peace instead of war, to compel world-wide respect for the League's mandates.

The necessity for building naval armaments under the whip and spur of competition would be relieved at once. And, as the possibilities of the League unfolded and there came thruout the world that same respect for the codes of peace that there is for civil law, naval

Secretary Daniels is at his best when he is talking to the gobs

construction could gradually be cut to a minimum and burdensome taxation for these purposes largely eliminated.

We should always need a navy of some proportions for encouraging international amity by exchanging visits of fleets and for the important work of survey and discovery, not to speak of its value as a reserve force of power while world conditions are being stabilized.

Ultimately our navy under the League of Nations would be serving only the purposes of peace. If, however, we fail to join the League, there is a very different story to tell.

If America renigs and deserts and refuses to play the part to which she was in honor committed when she sent her first soldiers and sailors overseas; if she chooses in the future to be a hermit nation, having no touch with other nations except the limited contracts of trade, then she must take up the burdens and responsibilities that fall to a hermit nation.

It is unthinkable to any American that the United States should be unable to defend itself against any nation or any combination of nations if it were attacked. If we refuse to accept the common defense provided by the covenant and the League goes on without us, as it certainly would, then our responsibilities will be immeasurably increased.

The League of Nations will function, but not in a way friendly to the United States. Our former allies, dominating the League, will [Continued on page 71

Constantinople, a city of more than a million population—looking across the Golden Horn from Pera to Stamboul

To Undo a Century of Turkish Rule

By Charles A. McCurdy, K. C., M. P.

Parliamentary Secretary to the Ministry of Food in the British Cabinet

FOR eight hundred years the Turk has proved himself, in the words of Gladstone, "the one great anti-human specimen of humanity"; as Cardinal Newman described him, "the anti-Christ among the races of men." The history of the Turkish empire in Europe and Asia alike is one long record of wickedness and destruction. It is the story of a barbarian power holding in its brute clutch countries that were once the most fruitful and beautiful regions of the earth, oppressing and torturing its Christian subjects in recurring gusts of cruelty down the centuries. Beneath the blight of Pashadom civilization disappears; fertile territories that for thousands of years had supported a teeming human life become desolate. Only a perpetual harvest of human suffering bears witness to the character of Turkish culture.

It is a humiliating and saddening thought that the European peoples have for so long tolerated the presence of this iniquity, and it would be unprofitable to recall the long history of European jealousies which resulted in the maintenance of Ottoman dominion to this day. I cannot think without regret of the fact that

even at the commencement of the present war, the Western Allies in a moment of extreme difficulty gave the Turkish Empire an offer of security, on condition of neutrality in the Great War, nor can I do otherwise than rejoice to think that the Turk refused that last offer of political salvation.

If the history of the Turk, prior to 1914, had been free from all the record of cruelties with which it is filled, the story of the last few years would alone make it impossible for any self-respecting and Christian people to tolerate the continuance of Turkish misrule and oppression over millions of our fellow Christians. The Turk utilized the opportunity of the Great War to commit the most deliberate and cold blooded massacres of inoffensive human beings which history records.

First of all, they disarmed the Armenian population, and then issued orders to the local governors for their wholesale massacre. For months the killing proceeded. Armenians were collected in barns and burnt to death; Armenian men, women and children were driven into the desert to die; Armenians were taken in shiploads to sea, and there drowned like dogs; Armenians were

led in batches to the shambles to be killed by the knife. The whole Armenian population was seized. The younger women were sold by auction or taken by the officials for their harems.

Nearly a million men, women and children perished in that sickening massacre by the order of the Turkish Government. What the actual number may be of Turkish subjects murdered since 1914 by order of the Turkish Government it is impossible to say; it is certain nearly a million Armenians were put to death, and perhaps double this number, under circumstances of appalling cruelty and horror.

It ought not to be possible for any decent minded man to suggest as a solution of that Turkish problem, which still remains to be solved by the Great Powers who now hold in their hands the future destinies of Europe, that the Ottoman Empire should, under any terms, be permitted to govern the miserable survivors of its recent massacres; but, if the Allies cannot find among themselves powers able and willing to become responsible for the good government of Turkish lands for some considerable period of time, the maintenance of Turkish rule, no doubt with an elaborate pretense of safeguards and assurances, may yet be the impotent conclusion of the matter.

At present the Allied powers stand committed to a more righteous solution. When a few months ago Damad Ferid Pasha, the Turkish Grand Vizier, appeared before the Council of the Allied Powers of Versailles and modestly claimed on behalf of his master the restoration of the Turkish Empire, he met with a round and categorical refusal; the Council replied in polite and diplomatic terms, that the Turk "has no capacity to rule over alien races. The experiment has been tried too long and too often for there to be the least doubt."

By the Covenant of the League of Nations, accepted by the Allied Conference on April 28, 1919, the Allied Powers laid down in definite terms the method by which they proposed to deal with the peoples formerly the subjects of Turkish misrule. Clause 22 of the Covenant reads as follows:

To those colonies and territories which as a consequence of the late war have ceased to be under the sovereignty of the States which formerly governed them, and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, there should be applied the principle that the well-being and de-

velopment of such peoples form a sacred trust of civilization and that securities for the performance of this trust should be embodied in this Covenant.

The best method of giving practical effect to this principle is that the tutelage of such peoples should be entrusted to advanced nations who, by reason of their resources, their experience, or their geographical position, can best undertake this responsibility, and who are willing to accept it, and that this tutelage should be exercised by them as Mandatories on behalf of the League.

The character of the Mandate must differ according to the stage of the development of the people, the geographical situation of the territory, its economic conditions, and other similar circumstances.

Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized subject to the rendering of administrative advice and assistance by a Mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory.

The meaning of the clause is plain. It is intended that the Armenians and other subject races shall become self-governing nationalities. The Turkish Empire is not to be divided up as spoils to the conquerors but to be divided among the various races of which it is composed. The Covenant recognizes the fact that hundreds of years of Turkish rule have not left those nationalities in a condition, either political or economic, which would make it either safe, or possible to bestow on them at once, the burdens and responsibilities of self-government.

It is proposed that they shall be given, for as many years as may be found necessary, administrative advice and assistance in the difficult task of building up new states which may in due course find a place among the brotherhood of civilized people.

The task of the Mandatory Powers will not be an easy one; for centuries these races have been deprived of all political freedom. They have had no experience of the machinery of humane and civilized government. They have been to a large extent deprived of the benefits of education, as it is understood in Western Europe. Their financial position will be one of extreme difficulty for years to come. On the other hand, the potential resources of the Ottoman Empire are almost unlimited. There is a great field for a profitable expenditure of capital in the construction of highways, railroads and harbors, in the reclamation of lands once fertile, that have now for centuries lain untilled. There

Wide World

Refugees from Turkish cruelty. The children in the desert were found wandering like animals, half starved, after a Turkish massacre of Armenians, and were brought back to Syria

are rich alluvial plains which only require modern methods of irrigation to be transformed into some of the best wheat fields in the world. There are vast undeveloped oil fields. There are excellent prospects for the cultivation of cotton.

In less than two years of war, the British occupation of Lower Mesopotamia has demonstrated how rapidly a wilderness can be reclaimed. Thousands of men have repaired the crumbling banks of the Euphrates, and for the first time for centuries Lower Mesopotamia has been kept free from floods. Lands, which had been uncultivated for centuries, have been turned into wheat fields, vegetable gardens, dairy farms, and poultry farms to provide for the needs of the British forces in Mesopotamia. English and German engineers have long been awake to the vast industrial possibilities of the Ottoman Empire.

The Mandatory Powers, which are to be entrusted with this supreme opportunity, will need to be possessed of the most complete disinterestedness and singleness of purpose if they are worthily to play the part of trustees for their less civilized, or less educated, brethren.

What powers are willing, and can be trusted, to render this great service to humanity? We may rule out at once the smaller peoples. Neither Greece nor Bulgaria are likely to commend themselves for a task of this magnitude. Among the greater powers of Europe, the selection is not without difficulties which in some cases would probably prove insurmountable. It is useless to ignore the fact that the position of a Mandatory Power, exercising the influence and enjoying the commercial opportunities which are inseparable from its office, is one which must arouse jealousy and suspicion in Europe, whose diplomatic history has been one long story of jealousies and suspicions for the last hundred years. During the whole of that time, every great power in Europe has been constantly exercised as to the future of the Turkish Empire. It has been the chessboard of contending ambitions, the breeding ground of bitter rivalries. It is not easy for a European power to forget all the prejudices which have motivated European diplomacy for so long; and to readily acquiesce in the new conception which the Covenant of the League of Nations embodies.

It would be difficult for any European government to view with equanimity the presence at Constantinople of a power whose presence there at any time in the last hundred years would have been regarded as a diplomatic disaster, if not an immediate cause for war.

And apart from the difficulties which arise out of the century-old prejudices of European diplomacy there is a further difficulty to be considered. The trusteeship of the whole derelict Empire of Turkey would be a task almost beyond the strength of any European power. It will need the services of many competent and trained administrators and officials. A considerable military force will be necessary to maintain order in districts where disorder has for centuries been a normally recurrent condition. Engineers, scientists, medical missions, educational missions will all be needed to guide the new states into the paths of social and political stability and financial prosperity. Vast sums of money will be needed as well as a small army of administrators and teachers.

So far as Syria and Mesopotamia are concerned it seems likely that France and Great Britain respectively will delimit spheres of activity and become responsible for the trusteeship of these districts. Misunderstandings have already arisen, but these will be composed.

The two outstanding problems are the future of Constantinople and Armenia. The case of the Armenians is the most urgent. A few years ago the remnant of that unhappy people sent to the Parliament of Great Britain and of France and to the United States an S. O. S. call, which set forth the plain facts of the matter.

What are the Allies going to do about it?

What will the United States do about it?

The Armenians have themselves expressed a strong desire for the help and assistance of the United States.

If the United States can undertake the work it will lift a load of anxiety and care not from the hearts of the unhappy Armenian people alone, but from the hearts of thousands of men and women in this country who feel keenly the impotence of Europe in face of the long drawn out agony of a Christian people.

A refugee of South Kurdistan who was saved from starvation when the British Army came

The German People Drift

By Sanford Griffith

During the war Mr. Griffith was a Major in the American Expeditionary Forces. This article of his on present-day Germany is based upon his own recent observations of conditions there.

THE soul of a nation, its purpose, and its will to exist—and not any amount of its material prosperity—are the real test as to its durability. Applying this measure to Germany to-day, will the verdict be disintegration or unity? The material differences between victory and defeat are often slight, but the moral ones are profound.

A traveler from Prague to Vienna and Berlin this last winter could not but feel the difference in the atmosphere of these three cities. In Prague was jubilation. Dinners were numerous, and there was always an atmosphere of plenty. In reality there was next to nothing. A great part of the people were on the verge of starvation, but they held their heads high. They knew precisely what they needed to realize their national aspirations, and, without awaiting the good pleasure of any one, were out taking it.

In Berlin, and to a lesser degree in Vienna, poverty and hunger, though no greater than in Prague, were more glaring and the people were in general deeply dejected. There is a point in fatigue where moral values lose their force as compared with immediate material needs. In these last months the German people have been dangerously near this point of exhaustion. The strain of a long war combined with the new anxieties of the revolution were too much for many of the people.

Underwood & Underwood

New German bills for 50 pfennige and one mark

Military defeat and the fall of the old régime removed from many all purpose in effort. Threatened confiscations of property and anarchy have discouraged thrift.

The external aspects of Germany since the outbreak of the revolution are not wanting in interest. People rove about the streets of the large cities in crowds without an objective. The benches "Unter den Linden" in peace time were shinily varnished and empty. Pedestrians hurried by.

Now there are always loungers. Groups of people gather on the street corners to discuss the latest political rumors. They crowd before the billboards from force of habit developed during the war to read the latest press dispatches.

Soldiers shuffle along the streets with their uniforms in disorder. Many discharged soldiers still wear parts of their uniforms. They peddle smuggled cigarets and soap. Some merely drift about, gazing listlessly in the shop windows, gathering in hundreds at the least unusual incident. The haughty officer for a time was missing from the picture, and the Imperial Guard made way for the "Proletarian Guard." Soldiers at first were inclined to show their freedom by slouching about while on guard duty. Or, sitting down with their guns across their knees, they would rise for no one. This phase, however, changed back into one, as we will see later, of strict discipline.

Underwood & Underwood

"The material differences between victory and defeat are often slight, but the moral ones are profound"

A cross-section of the German crowd these last months shows neither optimism nor deep dejection. The crowd was simply passive. This was partly aimlessness and apathy, partly the normal aspect of the German crowd. I have often wondered at its silence. In peace times, thirty thousand workmen sometimes gathered of an afternoon to demonstrate. From half a dozen different platforms local bosses delivered the same speech, all beginning and ending at the same time. Cheers were delivered methodically and together. The resolutions passed at the end were usually unanimous.

The revolution has not radically changed this. I attended a Bolshevik meeting of some four thousand. The crowd was so quiet that the soft voice of one of the women speakers could be heard at the back of the house. At the end of each speech, simultaneously, were the conventional "*Es lebe hochs.*"

As compared to the American street crowd, demonstrations in Germany are strangely silent. I mingled with the crowds which on May 20 demonstrated for and against the signing of the Allied peace terms. In the parades were men and women from all the suburbs of Berlin. Some of them had walked from early morning until late afternoon. They marched in orderly ranks of eight. Each section had its banners: "Down with the starvation peace," "No peace by force" and "Bread and peace at any cost." When the Scheidemann columns passed those of the Independents there was none of the bantering which adds to the joy of a parade in America. These Germans were evidently not out for a good time.

After the meetings they broke up into street corner groups. Unlike the Hyde Park discussions in which all bystanders join, the German debate would be carried on by two or three among perhaps twenty onlookers. It would seem that the crowds were seeking a political opinion, rather than looking for an opportunity to air one. Well dressed men and women took part in the debates along with the man of the street. Their discussion of the peace terms was not particularly edifying. It was narrow common sense at best. For example, the

demand for milch cows to replace those taken from France and Belgium made a profound impression. On the other hand, the technicalities of the financial clauses, the real national burden, were such as to make them pass almost unnoticed. In the latter part of May the people were not yet fully awake to the extent of their weakness nor to their liabilities. Their Government did not have the courage to tell them and the newspapers avoided the disagreeable word. They had yet to learn what defeat means.

The Germans had various reactions to the hardships of the present moment. Dr. Kerschensteiner declared in a lecture given in Munich:

"The hand of Fate has smitten us so heavily that even today we cannot grasp the full extent of our downfall. Some suffer, but remain silent. Others whine and complain. A third class begs and prays for help from our enemies. Lastly are the throngs which day and night fill the music-halls and cabarets, making merry today quite unmindful of the morrow."

In many respects the German of today has become more Latin than the Latin. His former methodical and at times ponderous mental mechanism now makes abrupt leaps and occasionally misses a count. How much of it is due to change and reduction of diet it is hard to say. In the course of conversation a German would often with great vehemence declare that Germany would never sign. Then a moment later, when he had almost convinced you, he would abruptly change his whole attitude, breaking into tears over the picture of a helpless Germany, a people accepting with resignation anything the Allies might choose to impose on them. This is even more conspicuous in the street debates. Here some ten different subjects will be raised in half as many minutes. This mental leap-frogging is the more notable in that every one does not, as in an Anglo-Saxon crowd, feel an irresistible desire to join in.

Another aspect of frayed nerves has been the general craving for wild and lavish amusement. All Europe has felt it, but in Germany it has taken more exaggerated forms than elsewhere. It has been stimulated by the war-profiteers, who for [Continued on page 73]

Not idle curiosity but real hunger has driven these German children to investigate the gutter

Too Many Bosses

And They All Take It Out on Teacher

By Marguerite Wilkinson

This is the fifth of a series of articles on "What Is the Matter with the Teacher's Job?" We put the question to a large group of teachers in every state in the Union and asked them to answer from their own experience and to suggest improvements. Their replies came in by the hundreds and Mrs. Wilkinson, who besides being an author is a teacher's wife, arranged from them five articles of inside information on the teachers' grievances—low pay, inefficient school board administration, lack of respect in the community, curtailment of personal rights, unwise choice of school executives. The sixth article will set forth the teachers' own suggestions for the reconstruction of their profession.

THE teachers who have written us what they think about school administration and school executives have made complaints that can be classified under four heads, as follows:

1. *We have too many "bosses."* We have too many supervisors, principals, superintendents, and specialized experts. Consequently the educational system is becoming too mechanical and young men and women with much personal force and initiative do not wish to be teachers. In the days of "the little red school-house" education offered more of a chance for personal influence.

2. *Because our executives get their positions from boards politically chosen, they are frequently "politicians,"* that is, trucklers, and continue to hold their positions, in spite of the fact that they are often inefficient, lazy, or corrupt, by catering to the politically chosen persons who appointed them.

3. *These executives, whether good or bad, have the powers of autocrats, and frequently exercise them.* They themselves are not in any way accountable to the teachers who work under them, but can "hire or fire," promote or demote them at pleasure and for the slightest cause.

4. *Teachers think that they do a work quite as difficult and valuable as the work of executives and that their pay is disproportionately low when compared with the pay of executives.*

The man who has written most sanely with regard to the superfluous supervisor and the effect of too much supervision in making education mechanical is himself a school executive of high standing. This is what he says:

"Because the supply of qualified teachers has never been adequate, America has developed a hierarchy of supervision the like of which is known nowhere else. The superintendent secures a few highly paid supervisors who drive or lead their poorly trained subordinates into teaching subjects indifferently known. Aside from the

occasional inevitable clash of personalities, such necessary supervision of the ignorant and unskilled has not been burdensome; if, however, half or all of the teaching corps is well trained, it is sometimes of slight value, sometimes harmless, but most likely a source of constant irritation. There is always something incongruous about an inexperienced girl trying to instruct a successful teacher old enough to be her mother; if in addition, the teacher in the ranks knows more about this doctrinaire's specialty than she herself does, a situation is created without a parallel in other professions. Inefficient or excessive supervision is annoying; a device which makes mediocre teachers out of impossible tyros, plagues those who have outgrown its need. Parenthetically, it may be remarked that the evils of supervision are not experienced by supervisors themselves or by college professors.

"Efficiency" is the catchword of modern school administration. Standards and card catalogs are devised in the commendable endeavor to give every teacher a rating. Education at best is personal influence, but administrative machinery can be no respecter of persons. A school board rules that every teacher must attend summer school, regardless of the fact that larger educational interests would be served if some traveled while others slept or read fiction, and the incompetents who were the occasion of the ruling should be given longer leave of absence than a single summer. Because a thousand teachers are novices five thousand are made to read the beginner's 'reading circle' book. Because he has dawdled a few hours in a laboratory and can therefore muster the semester hours of training required by inspecting authority, a loafing, inconsequential ignoramus replaces a mature personality of wide experience but lacking in nominal training. A somebody without specific little classroom units of culture may be worth more than a nobody with nothing else, and the mechanical expedients of administration harass those who are too valuable to be thus annoyed, [Continued on page 76]

London Opinion

Teacher: "You've been a very naughty boy, Bertie, you must stay in for an hour after school."
Bertie: "Very well, Miss Jones, if you aren't afraid of the principal, I'm not!"

Compromise

By Hamilton Holt

NEARLY two months have elapsed since the Senate voted down the fourteen reservations to the Covenant of the League of Nations submitted by Senator Lodge in behalf of the Committee on Foreign Relations and the five reservations submitted by Senator Hitchcock in behalf of the Administration.

Since then senatorial sober second thought has had time to assert itself. This, together with an overwhelming demand from the country for compromise and action, would seem to make it fairly safe to predict that the Republicans and Democrats will soon reconcile their differences and ratify the Treaty.

It can be demonstrated, I think, that most of the Lodge reservations are objectionable, and that some of them, if adopted, would reduce the treaty to a mere debating society. But the time has gone by to argue the merits and demerits of these reservations. The question is whether a compromise can be found between the Lodge and Hitchcock points of view that will be honorable to the United States and acceptable to the Allies.

We can assume, I hope, that the Republicans will not insist that the arrogant and offensive tone of the Lodge reservations be carried over into the compromise reservations.

The Administration forces might then concede outright the third, seventh, eighth, ninth, eleventh, twelfth and thirteenth Lodge reservations, which provide that Congress shall decide what mandates we accept, provide laws for the appointment of our representatives in the League, approve the acts of the Reparation Commission with respect to trade between Germany and the United States, appropriate all funds for the League, permit the nationals of a Covenant breaking state to reside unmolested in the United States, and make provision for our participation in the Labor clauses of the Covenant.

THE Republicans should consent to the elimination of that part of the preamble which requires that three of the four principal powers, Great Britain, France, Italy and Japan, shall assent to the reservations before the United States enters the League. This is an invidious slap at the powers not mentioned, it is embarrassing to the four great powers, it will transfer from our hands to theirs the right of saying when the United States shall make peace, it will inevitably lead to delay and confusion, and it is not unlikely to result in more than one power refusing to accept the reservations. Besides, is it not funny to think of insisting that foreign nations should pass upon provisions in the reservations growing out of a domestic quarrel between President and Congress!

The sixth Lodge reservation deals with Shantung. If the Senate insists on it Japan will probably stay out of the League. As the purpose of the reservation is evidently to do justice to China this reservation should be so reworded as to accept it on the understanding that Japan will restore Shantung to China in accordance with the repeated affirmation of her official spokesmen. Thus the affront to Japan is removed and the rights of China are protected.

Reservation 10 is the one dealing with disarmament. It needs only to be changed by the elimination of the first four words of the phrase "threatened with invasion or engaged in war." There can be no objection for the United States

to have the right to increase her armaments without the consent of the League when "engaged in war." That will be done anyway, League or no League. But the United States should not claim the right to increase her armaments when merely "threatened" with war. If the joint agreement in regard to a limitation of armaments can be broken any time a nation is "threatened" with war it is difficult to see how there can ever be any real hope of disarmament. Any nation can claim it is threatened with war any time a yellow journalist waves the bloody shirt.

There remain the Lodge reservations 1, 2, 4, 5 and 14. These are the ones that are specifically matched by the five Hitchcock reservations.

Reservation 1 of both groups deals with the right of withdrawal from the League. There is no difference between them except that the Lodge resolution says that "notice of our withdrawal may be given by a concurrent resolution of Congress." This is probably unconstitutional, because any law passed by Congress except the motion to adjourn must be signed by the President. If the Lodge reservation has used the words "joint resolution" instead of "concurrent resolution" there would have been no difference of opinion. The Republicans should concede the change of one word.

THE second Lodge reservation deals with Article X of the Covenant. The fourth Hitchcock reservation does the same. The Lodge reservation flatly repudiates the "obligation" to preserve the territorial integrity and political independence of the members of the League as against external aggression. In other respects the two reservations are the same. Evidently there is no chance of real compromise here. Either the United States will or will not assume the obligations to put down a war of aggression. If the Republicans concede this point they will have ratified the one great provision that says that no nation shall start a war of aggression and enjoy the fruits thereof. The certainty that the nations will carry out this obligation will probably have more to do toward preventing an outbreak of war than anything else ever attempted by international concert. While the two points of view cannot absolutely be reconciled, the best approach to a compromise I have seen is the following, which I offer for what it may be worth to Senators Hitchcock and Lodge:

The United States does not bind itself to take any action in pursuance of the advice of the Council as provided in Article X, or to employ the military or naval forces of the United States under any article of the Treaty for any purpose, unless in any particular case the Congress shall by act or joint resolution so provide.

The fourth Lodge reservation is the second Hitchcock reservation. It deals with the right of the United States to decide what are the domestic questions which shall be declared within its jurisdiction. The point of difference is that the Lodge reservation says that such questions as labor, tariff, the suppression of the traffic in women and opium, etc., are in no wise either to be submitted to arbitration or any agency of the League. If taken literally our labor problems, tariff problems, even if they affected the peace of the world, could not be subject either to arbitration, discussion or inquiry under the League. Even the Secretariat of the League could not take any part in such congresses as those in which we have in past years so advantageously participated, dealing with such questions as the white slave traffic, opium, etc. The Repub- [Continued on page 74]

Contemporary Ancestors of Ours

By R. L. Garner

Prof. Garner probably knows more than any other authority about apes and their ways. He has spent a quarter of a century studying them in Central Africa, collecting data and specimens for the Smithsonian Institution, and he has from time to time adopted and partly educated twenty-seven chimpanzees and twelve gorillas. Susie is one of his favorite pupils.

THAT some form of speech exists between members of the same genus of Great Apes was strikingly illustrated by an occurrence in the Fernan Vaz country a decade ago. For the purpose of facilitating my study of animal life in general and that of apes in particular, I had forbidden my servants to harm any of the denizens of the jungle save beasts of prey in the vicinity of my house. The animals are quick to learn and accept a safety zone, and this fact aided me quite materially in carrying out my researches.

One day, however, my cook and the house-boy violated the neutrality of this zone. A family of chimpanzees were visiting my cane patch, and the temptation was too much for the two natives. Unbeknown to me they set the dog on them and chased the chimpanzees into the nearby swamp. When I rushed to the rescue the apes had disappeared, thoroly frightened, and the natives promptly blamed the whole affair upon the dog. This occurred in August, 1908, and during the remainder of my stay in that region, a period of fourteen months, not a single chimpanzee appeared near my house again, notwithstanding the attraction of the cane patch, although the section thereabouts abounded with them. Previous to that time five different families of chimpanzees had been coming to the cane patch not less than once or twice a week for a feast. There seems to be but one conclusion to this evidence—that the chimpanzees who experienced such rough treatment were able somehow to convey to their neighbors the information that danger lay in the vicinity of the house or cane patch. And this impression must have been very clear to the minds of the other chimpanzees, for they observed it as scrupulously as if they themselves had been chased away.

The apes are uncannily wary in their woodcraft. No one has ever known a gorilla or a chimpanzee to be successfully trapped. Altho in instincts they are no more blessed than man, they have developed—doubtless because of their bush training, remarkable powers of sight and hearing like the woodsmen of pioneer days, only far superior to human capacity. But in the sense of smell they have the same limitations as man himself, as their olfactory nerves are little, if any more acute. They cannot, like most wild animals, detect the approach or presence of danger by scent. This limitation proved of great advantage to me in making observations of them at close quarters from the clumps of banana plants I always grew for this purpose at intervals thruout my cane patch.

Coupled with their powers of sight and hearing the Great Apes employ methods more or less logical and

very similar to those of the trained woodsman. Many of their acts are strikingly like those of the most expert Indian hunters; and they do not come by these instinctively any more than the human being does. In retreating from a foe, the apes are the only animals which dodge from cover to cover in Indian fashion, looking back, and dashing to another quickly chosen place of concealment like a band of pioneer skirmishers.

When approaching something stealthily I have seen a gorilla actually reach down with his hand and carefully lift the loose leaves on the ground, thus exposing the bare earth, upon which he planted his foot. Then he made a step forward without the slightest perceptible noise. When intently listening to any suspicious sound an ape relaxes his mouth and lets his lower lip sag a bit exactly as a human being does. The expression of intentness is unmistakable. As he listens he slowly turns his ear toward the source of the sound, conscious of the fact that this is a better receptive position than the one in which he happened to be when the sound first attracted his attention.

When other animals attempt to look thru a knot hole or a crack of any kind, they invariably try to see thru with both eyes at once and succeed very poorly in getting a view of what lies beyond. A dog, however intelligent he may be, persists in this habit, and never learns to peep with one eye. But an ape will turn his head to the side and place one eye to the small aperture exactly as a logical human being would do. And he does it as naturally as tho it were a routine thing. He will put his ear to a hole if he wants to hear, in the same manner.

The plan of attack when a family of apes are bent upon a raid of some kind possesses features that are distinctly interesting and to my mind actually clever. The father of the family climbs to the top of a tree, obtaining a place of concealment from which he can look down on the entire field of operations. His duty is that of sentry, to warn the others of the approach of danger. The others go forward and commit their depredations, secure in their faith in the watchman in the tree-top. It seems to be part of the plan that the raiders keep the sentry in constant view, for when he sees danger which they cannot, he communicates the information to them and they take to flight, with him bringing up the rear. What secret sign he gives them no one has ever been able to determine; he makes no sound, yet he manages to give the alarm in some unmistakable way. If all goes well and the raiders are able to withdraw undisturbed they usually bring him his portion of the food.

Some patriarchs seem to have their families well

trained according to their own ideas that may or may not be regarded as human. The point of view, I venture, depends upon the sex of the person passing judgment. A priest at a mission told me an interesting story which I have no reason not to believe; he averred that he had twice seen a male gorilla comfortably seated in the shelter of a banana plant while his wives and children broke plantain stalks and brought them for him to eat!

To see baby apes in the wild state at play is like witnessing a romp of human children. They scuffle and wrestle with all the zest of little boys working off their high spirits. And they turn somersaults in the same way. They put their little heads to the ground and roll over like awkward babies. I have often seen a baby ape when playing turn a dozen somersaults in succession, apparently enjoying his acrobatics in the extreme.

In anger apes fight literally with tooth and nail. With their fingers they try to tear an enemy asunder. They put their main dependence, however, in an open-handed swing or slap, behind which they are able to put terrific force. Dinah, a gorilla I once brought from Africa, used to make bruises on the legs of her keepers with this blow when in play.

The gorilla and the chimpanzee, like all the big animals of a region, excepting the ungulates, appear to fear each other and to avoid meeting. But when they do come together in conflict the battle is a cruel one. The chimpanzee, weighing about

Susie, a docile young chimpanzee, was taught by Professor Garner to play games and wear clothes and do simple tasks

"The facial expression of an ape," says Professor Garner, "corresponds exactly to that of a human being in the portrayal of strong emotion"

His sense of humor may not be commensurate with yours, but he certainly can laugh

half as much as the gorilla, is much quicker in his movements and more agile than his big adversary. A gorilla generally finds the fight lacking in entertainment, for the chimpanzees combine on him, and three or four chimpanzees can usually make any gorilla lose interest in a fray.

It is often said that a chimpanzee will sometimes use a club in fighting. This has never been authentically verified. From Chief Rimpano, of the Nkomi tribe, I procured the skull of a gorilla which in the animal's lifetime had been crushed by a terrific blow, said by the natives to have been done by a club in the hand of a chimpanzee. The gorilla had survived the blow and the skull had healed, making it a remarkable pathological specimen as well. It is now in the Museum of the University of Toronto.

Susie, my chimpanzee, gave me further proof of how her wild kinsmen fight. One day while walking with her thru Bronx Park in New York City we encountered a peacock. Susie looked at him closely, with a critical expression on her face. Suddenly the peacock raised his great tail, and Susie, frightened, ran to me. She stood hugging my leg and peeping around it at the peacock with great caution. The bird's tail soon subsided again, and Susie grew bolder. Releasing her hold on my leg she stepped out, picked up a stone, and threw it with a stiff-armed movement at the peacock. Then she picked up a small stick and threw it in the same manner. So far as I know Susie had never seen any one throw a missile at an adversary, and I regard her act on this occasion as being more of a logical than of an imitative or instinctive nature. [Continued on page 77]

The Story of the Week

Dangerous Delays

THE year-end recess of Congress was filled with talk of revolt and of compromise, and there was some desultory negotiation among subordinates, but the new year opened with no agreement in the Senate whereby the treaty of peace can be ratified.

The middle-ground Republicans again became the center of discussion. They were represented as having delivered an ultimatum to Senator Lodge protesting against his "inaction" and threatening to bolt his leadership unless he made an early move for compromise. At the same time Democratic senators of the corresponding group were represented as being exasperated with Senator Hitchcock, feeling that he was deliberately delaying a settlement to improve his chances of being chosen minority leader at the caucus January 15. They, too, were supposed to be ready to rebel.

As a matter of plain fact, however, no considerable group has broken away from the established leadership on either side. While there is the possibility of ratification by rebellion, it lies in the somewhat distant future and would be attempted only as a last resort.

The mild-reservationists have informed Senator Lodge that they will not countenance the passage of the Knox resolution for ending the war without the treaty. He warned them when they did so that they were taking from him the one club with which he could force concessions from the Democrats. This has been the one concrete development of the recess.

There was no more apparent progress toward compromise than during the previous two weeks' recess between the Sixty-fifth and Sixty-sixth congresses. The positions of the two sides are unchanged: one is determined upon preserving every iota of American sovereignty and the other upon preserving the League. Even if every one were anxious for compromise—and there are many who are not—the writing of a compromise satisfactory to both sides still would be extremely difficult.

Conferees on the railroad legislation, whose business it is to adjust the differences between the two houses, may have as much difficulty in reaching a compromise agreement as is being experienced in the treaty contest. President Wilson's proclamation setting March 1 as the date upon which Federal control of the transportation systems shall be relaxed has eased the situation, but there is room for doubt that legislation for the return can be sent to the White House before that date.

The Senate conferees have taken the 39-24 vote against eliminating the labor provisions of the Cummins bill as a mandate for their retention. This in spite of the fact that it was understood at the time that they were merely to be "something to come down from" in negotiation with the House. In the lower body the anti-strike clauses as they stand would not command fifty votes.

The Senate defeated an amendment by Senator McCormick that would have made strikes illegal pending investigation and report on transportation disputes by some Federal agency and for a stated period thereafter. Senators were told at the time that this, nevertheless, would be the basis of the compromise ultimately reached in conference.

The apparent insistence of the Senate conferees on the inclusion of the labor sections of the Cummins bill has, therefore, come as something of a surprise. They have been strengthened in their position by the preliminary report of the President's second industrial conference, which, after asserting that some public utilities, such as railroads, are essential to the existence of the people, went on to say that "interruption in such essential public utilities is intolerable."

The House conferees, on the other hand, point to the vigorous declarations of the American Federation of Labor in opposition to anti-strike legislation and the danger that labor will organize to defeat House mem-

bers voting against its wishes if the Cummins clauses are accepted in any form.

No deadlock that develops over the labor clauses is expected to be prolonged, but all delay is dangerous from the point of view of the supporters of the Esch and Cummins bills. The irreconcilable opponents of private railroad operation will seize each opportunity presented for further delay and undoubtedly will conduct a filibuster against final adoption of the conference report.

The tentative report of the industrial conference, with its recommendations for the establishment of a national industrial tribunal and regional boards of inquiry and settlement for the adjustment of labor disputes, has met with fairly general approval in Congress. However, members are not giving their opinions for publication. They are beginning to realize that economic and industrial questions probably will become the principal issues of the next campaign and are awaiting direction from the leaders before giving comment upon them.

The Jackson Day dinner to be held by the Democratic National Committee January 8 will "shape up the issues" for that party and also will give the start to the race for the Democratic presidential nomination. Mr. Bryan, whose word will have great weight in the selection of the candidate, has been holding mysterious conferences in Washington for a month. He is expected to show his hand at the dinner by giving expression to his preferences as to candidates and issues. He is said to like none of the candidates already in the field and may seize the opportunity to speak for himself.

Secretary of the Navy Daniels, who at one time was spoken of as a presidential possibility, might have Mr. Bryan's support, but Mr. Daniels is regarded as a possibility no longer. The controversy over naval honors has been seized upon by Republican leaders as a source of campaign material to be used not only against Mr. Daniels but the whole Administration. Passage of a resolution authorizing an investigation by a joint congressional committee will be one of the first pieces of business transacted when Congress reconvenes.

This investigation will get underway simultaneously with the inquiry by the Foreign Relations Committee into activities of Bolshevik envoys in the United States. Each will vie with the other for public attention. "Ambassador" Martens has taken an unusual attitude toward the inquiry in recent conferences with senators at the capital. If the Senate wishes to know the facts and is not bent merely on fostering hysteria, he will willingly disclose all he knows. If, on the other hand, the purpose of the inquiry is to get newspaper headlines, he has said, he will decline to answer any question and will seek deportation to Russia for himself and his staff.

Other important hearings scheduled to open before Senate and House committees soon after the recess relate to budgetary legislation, immigration, regulation of the packers and a permanent maritime policy for the United States. Congress will have plenty to occupy its attention during the new year in the problems left over from 1919, not the least difficult of which is how to re-establish a state of peace.

R. M. B., Washington

Cutting Down Profits

FOLLOWING closely on the announcement of the agreement between the Department of Justice and the packers, with its startling disclosures and its promise of bringing down the cost of living, there came on December 22 another statement from Attorney General Palmer as to what the Government

Thomas in Detroit News

Somebody must help him stop

had been doing, and probably would be able to do in the future, to that same end, especially thru the amended Lever act. Mr. Palmer stated that a drop in the cost of living between January 1 and March 1 was indicated by the history of retail food costs, and that he was sanguine that the work of the Department of Justice would accelerate this usual course of prices. As concerns the former point Mr. Palmer stated that, considering the four years from 1911 to 1914, inclusive, retail prices show a slight upward trend from September 1 to October 1, a greater upward trend from October 1 to November 1, and a stationary condition from November 1 to December 1. During the four years from 1915 to 1918, inclusive, retail food prices show a decided upward trend from August 1 to September 1 and to October 1, and a slightly lessened but decided upward trend to November 1 and to December 1. This year, during September and October, an actual reduction in the general level of retail prices was effected as compared with August, while the figure for November, although slightly above that of October, shows no increase above the August returns.

In other words, the official data clearly show that the cost of living as indicated by retail prices was no greater in November of this year than it was in August, while during former years, extending back to 1911, the returns for November show a considerable increase over the August returns. A study of the official data also shows that a decided downward trend is indicated for the period January 1 to March 1.

The Government's efforts to control living costs date from last August when the President, in connection with the demands for increased wages by railroad shopmen, announced to the public the view that the cost of living would be lowered as soon as there were settled conditions in production and of commerce, as soon as the Treaty of Peace was ratified, and as soon as merchants, manufacturers, farmers and others had a certain basis of calculation.

In a statement to the shopmen themselves, the President then also declared that the primary step was to increase production and to facilitate transportation so

As the World Sees the Senate

Holland's comment on our Senate's consideration of the peace treaty is in the cartoon at the left, from *De Amsterdammer*. John Bull says to Jonathan—or Uncle Sam—"Come and play. Otherwise the other children over there can't." But Jonathan answers—"I don't know that I'll play. The stakes are too high."

"A Nation's Just a Family After All!" The cartoon above by Thomas in the *Detroit News* expresses admirably one phase of American opinion on the Senate's success in keeping us out of peace

London Opinion published the cartoon at the right on the United States' delay in ratifying the peace treaty. "Curfew Shall Not Ring If Uncle Sam Can Help It"

Norway does not seek to soften the opinion conveyed in the cartoon above from Hvepsen, Christiania. The Peace Angel is saying—"Gentlemen, be so kind as to sign this peace treaty." The American Senators reply—"No, indeed, my dear! We never do anything for nothing"

"Me, Too!" The caption of the cartoon at the left, drawn by Nelson Harding in the *Brooklyn Daily Eagle*, says a lot in two words

as to make up for the destruction wrought by the war and the terrible scarcities created. The President added that the Government had taken up with all possible vigor the task of bringing the profiteer to book.

But the Lever Food Control Act, under which the food administration operated, and through the enforcement of which the Department of Justice is now trying to reduce high prices, unfortunately did not then provide a penalty for certain acts declared to be unlawful, and therefore the Department of Justice was unable to deal effectively with many cases of profiteering which came to its attention. Realizing the gravity of this situation, the President appeared before Congress on August 8, and urged an immediate amendment of the Lever Act to extend its scope to all the necessities of life, and to provide a penalty for violation of that section which made profiteering unlawful, and to extend the life of the act into peace time. Not until October 22, however, did these amendments become a law, and only since that time has it been possible to deal effectively with all cases of profiteering and hoarding.

Since the Lever Act was amended, seventy-nine prosecutions have been instituted, and in all cases brought to trial thus far, convictions have been obtained. Fifty-three cases have already been disposed of by releasing the goods under bond or agreement to dispose of them within a specified time and at a reasonable price under the direction of the United States attorneys.

However, that the passing of laws and their enforcement by the Department of Justice, must, if the cost of living is to be brought down as far as possible, be supported by coöperation, was emphasized by Mr. Palmer. A very solemn duty rests, in his opinion, upon honest and responsible business men of all classes to assist in reducing the cost of living, and particularly to eliminate unfair profits. But to bring about this coöperation, the national organizations representing the different trade interests have been approached, and with very satisfactory results. As an outstanding example of such coöperation, there is the action of the National Retail Clothing Dealers' Association in recently establishing their pre-war margins of profit and of appointing the vigilance committee to hunt up profiteers within their membership, and to report to the United States attorneys in their respective districts violations of margins of profits as set up by their organization. The National Retail Shoe Dealers' Association has also appointed an executive committee to confer with the purpose of establishing a similar rule within their organization. And the National Retail Dry Goods Association, representing some 20,000 department stores in the United States, is coöperating in establishing "economy departments" during January and February. Quite as important, however, is the fact that the Department of Justice has instituted a thoro-going and nation-wide campaign, participated in by thousands of men and women, to bring about regulations in the cost of living thru education. This campaign is progressing actively in forty-four states, and is being directed from Washington.

Starving Austria

BISMARCK once called Austria "a house of bad Slav bricks held together by good German mortar." But now that the bricks have been taken away the mortar, whatever its quality, finds it hard to stand alone. The treaty of peace signed at St. Germain last October assigned to the neighboring states of Italy, Poland, Yugoslavia, Czechoslovakia and Rumania the major and richest portion of the Austrian Empire, leaving only Vienna and the circumjacent district, com-

Ledger Photo Service

And still they come. These troops, landed just in time for Christmas, 1919, at home, are members of the 15th Battalion, Marine Corps, who have been doing police duty in Schleswig-Holstein pending the plebiscite which is to be taken to determine the division of the territory between Denmark and Germany

prising about 6,500,000 souls, of whom 2,500,000 are in the capital city. The Poles have the oil and salt, the Czechs have the coal and factories, the Italians have the seaports, the Slovaks have the grain fields, the Yugoslavs have the live stock. Each of these nationalities has seized all the locomotives and cars it could get hold of, leaving Austria without the rolling stock necessary for such railroads as remain to her.

Thus encircled by enemies on all sides but one, Austria desires to unite herself with her companion in misfortune and kindred in race, Germany. But the Peace Conference held that the principle of self-determination should not be applied in this case, so it forbade the banns. The Germans were even required to eliminate from their new constitution the clause providing for the possible reception of Austria into the German republic at some future time.

Vienna, once one of the wealthiest and most luxurious cities of the world, is now left without sufficient tributary territory to even keep its present population alive. The new Austria must draw two-thirds of its food supply from outside. But it has no money to buy and its neighbors are not willing to sell. Over the border in Czechoslovakia, a few miles away, food is comparatively abundant, but none of it is allowed to be exported into Austria. No trains are run across the boundary and all travelers are searched. The Austrian bread ration for a year has been only four ounces per person a day, and even that is now lacking. Cabbage soup is the staple diet for rich and poor, old and young. The younger generation is a race of pigmies. Many of the children have not grown in the last three years because they have not had milk or other food containing the vitamins of growth. Many children of three or four years old are not able to walk. In Vienna there were about 5000 more deaths in 1919 than in 1913.

It was these circumstances that sent Dr. Renner, the Austrian Premier, to Paris in December with this message:

When I left Vienna we had only 9000 tons of flour for six and three quarter millions of people, a supply for six

days only. Children are dying of hunger and cold in Vienna, and 85 per cent of those between nine months and three years of age are suffering with rickets.

A heated house is a thing unknown and a hot meal a rarity. The coal ration is six pounds weekly a family, and there is a long wait in the street to get it.

We are now paying thirty prices for everything we buy. That is to say, the crown has depreciated to one-thirtieth of its normal value. At the same time we have exhausted our resources in securities, and we have nothing left but the resources which, according to Article 197 of the treaty of St. Germain, are mortgaged to the Allies for payment of reparations.

I am going to ask the Supreme Council to release from that mortgage a sufficient amount of our national wealth to form the basis of security for loans that are absolutely needed to insure the feeding of our people. What we need first is a long term credit abroad of \$100,000,000 with which to procure food until the end of October, 1920.

In the second place we need further credit for providing raw materials, and thirdly, exemption from mortgage of our national wealth, provided for by Article 107, that will enable us to furnish a basis for credits absolutely requisite to the reestablishment of our economic life—and that reestablishment, it should be noted, is primordial and essential to the payment by Austria of reparations to which she has agreed.

We are not seeking to escape any responsibility. Of course we who are in closest touch with the trials and needs of our own people, with an infant mortality of 60 per cent in Vienna, are confronted by an immediate object lesson which we cannot overlook.

Dr. Renner's address to the Peace Conference was most moving, and his picture of Austrian distress and danger was fully confirmed by the reports of Allied agents. He explained that he could not go back empty-handed, but would rather resign. No other party would assume control of the Government under such circum-

stances. Even the Bolsheviki would not undertake it.

The Supreme Council of the Allies consented to give what aid they could in this emergency. Arrangements were made for the immediate delivery of 30,000 tons of grain from Trieste, now an Italian port. A credit was extended to Yugoslavia for the further supply of grain.

The Government tobacco monopoly was released from the general pledge of all the Austrian assets to the Reparations Commission in order that the Austrian Government might mortgage it to Holland in negotiation for a loan of 30,000,000 guilders from that country. Chancellor Renner said that a loan of \$100,000,000 was necessary to carry the country over to harvest time and prevent its complete financial collapse. The Supreme Council cut this estimate down to \$70,000,000 and will urge the United States to advance it as the only country able to afford such a sum. It is suggested that the incomparable art treasures of Vienna be pledged for the loan.

Mr. Rockefeller's Largest Gift

ON Christmas morning there came the announcement that Mr. John D. Rockefeller had turned over the sum of \$100,000,000 to the General Education Board and the Rockefeller Foundation, therewith making the largest single philanthropic gift that has ever been made in the history of the world. Half of the sum goes to the General Education Board, itself a Rockefeller creation, to be disbursed, both principal and interest, in cooperating with institutions of higher learning in increasing the salaries of their teaching staffs. The other \$50,000,000 goes to the Rockefeller Foundation, chartered "to promote the well-being of mankind thruout the world." Of this sum \$5,000,000, in deference to a special request of the donor, is to be expended for the development and improvement of the leading medical schools of Canada, which are to be required to raise additional sums from other sources.

In transmitting his gift to the Foundation, the giver specifically authorized the trustees to utilize both principal and income for any of the corporate purposes of the institution. While he imposed no restriction upon their discretion, his letter expressed special interest "in the work being done thruout the world in combating disease thru the improvement of medical education, public health administration, and scientific research."

The letter alluded to the author's recent gift of \$20,000,000 to the General Education Board to promote medical education in the United States, and continued:

My attention has been called to the needs of some of the medical schools in Canada, but as the activities of the General Education Board are by its charter limited to the United States, I understand that gift may not be used for Canadian schools. The Canadian people are our near neighbors. They are closely bound to us by ties of race, language and international friendship; and they have without stint sacrificed themselves, their youth, and their resources, to the end that democracy might be saved and extended. For these reasons if your board should see fit to use any part of this new gift in promoting medical education in Canada, such action would meet with my cordial approval.

Commenting upon this most recent gift, which makes the total received by the Foundation from its founder \$182,000,000, of which \$5,000,000 from principal was appropriated for war work during 1917-18, Dr. George E. Vincent, its president, said:

In order to carry out Mr. Rockefeller's suggestion concerning Canadian medical schools, the Trustees of the Foundation will be asked by the officers to set aside approximately \$5,000,000 for the improvement and develop-

The man whose task it is to count the population of the United States—Samuel L. Rogers, director of the Census Bureau, which is to take the decennial census, a bigger job than ever, in 1920

ment of the leading medical schools of the Dominion. From this sum appropriations will be made by the Foundation to medical schools on condition that they raise additional funds from other sources. It is hoped that \$5,000,000 thus employed by the Foundation at this time will give a distinct impetus to the development of medical education in Canada.

The new gift will also enable the Foundation to extend work already in progress in medical education and public health in many parts of the world.

Prior to the receipt of this \$50,000,000 it had been estimated that the income of the Foundation for 1920 would amount to \$6,500,000, of which all but \$335,000 already had been appropriated.

As examples of such work, Dr. Vincent mentioned the efforts set in motion by the Foundation to eradicate yellow fever from the world; the studies and activities of the International Health Board in the cure and prevention of hookworm; the experiments and demonstrations in the control of malaria; the financing thru the China Medical Board of two large and thoroly equipped medical colleges in China; the promotion of higher standards in medicine and public health by the establishment of international fellowships, with the result that at the present time one hundred students of foreign countries are pursuing courses in the medical centers of the United States.

The \$50,000,000 to the General Education Board was accompanied by this memorandum of transmittal:

The attention of the American public has recently been drawn to the urgent and immediate necessity of providing more adequate salaries to members of the teaching profession. It is of the highest importance that those intrusted with the education of youth and the increase of knowledge should not be led to abandon their calling by reason of financial pressure or to cling to it amid discouragements due to financial limitations. It is of equal importance to our future welfare and progress that able and aspiring young men and women should not for similar reasons be deterred from devoting their lives to teaching.

While this gift is made for the general corporate purposes of the board, I should cordially indorse a decision to use the principal as well as the income as promptly and largely as may seem wise for the purpose of cooperating with the higher institutions of learning in raising sums specifically devoted to the increase of teachers' salaries.

Mr. Rockefeller's gifts to the General Education

Board since 1902, the year of its establishment, have amounted to \$102,000,000, including the new gift of \$50,000,000.

Of the \$32,000,000 given during the first seven years of its existence, the board distributes the interest currently and is empowered to distribute the principal within its discretion. Of the \$20,000,000 given earlier this year for the improvement of medical education, the interest was to be distributed currently and the principal within fifty years.

In reference to the present gift, Dr. Wallace Buttrick, president of the Board, said:

The general public is well aware that the salaries of instructors in colleges and universities have not thus far in general been sufficiently increased to meet the increased cost of living. The General Education Board has, since the close of the war, received applications for aid from colleges and universities, the sum total of which would practically exhaust the working capital of the board.

An emergency exists. It is urgently necessary to take steps to increase salaries in order that men in the teaching profession may be able and happy to remain there, in order that young men and young women who incline to teaching as a career may not be deterred from entering the teaching profession, and, finally, in order that it may not be necessary to raise tuition fees and thereby cut off from academic opportunity those who cannot afford to pay increased tuition.

The General Education Board holds its next meeting February 26, when a policy for the distribution of the fund doubtless will be adopted, it was announced.

Mr. John D. Rockefeller, Jr., estimated that his father had given for various philanthropic purposes up to 1915, \$250,000,000, and since that time to the General Education Board, the Rockefeller Foundation, the Rockefeller Institute and several religious and other benefactions, some of which have not been announced, another \$250,000,000.

Mr. Rockefeller's Christmas gift received warm praise from educators, medical men, editorial writers and public men in general.

If the arm is short make it longer

Straightening Out the Kinks in Industry

THE last few days of the year, more particularly the week beginning December 29, were marked by conferences and events the outcome of which will have a vital bearing on the industrial situation in the United States during 1920, and probably the years beyond that. Those few days saw the first meeting of the Commission appointed by President Wilson to investigate the coal strike; the railroad union leaders convened to decide as to their position with reference to anti-strike legislation in Congress, and to consider and outline their future plans as to demands for increased wages which they wish to have settled before the railroads are returned to private ownership on March 1; and the first report of the second Industrial Conference was made public.

The miners have been back at work for some time, and each one of us has doubtless often read in the papers that the coal strike is settled. But there are many in a position to know who are of the opinion that the "settlement" was only a truce, and that both miners and operators are restive and dissatisfied, so that another strike may come in the not distant future. President Wilson announced on December 20, the appointment of Rembrandt Peale, an independent coal operator; J. P. White, a former president of the United Mine Workers, and H. M. Robinson, "a member of the public," as the commission of three to investigate the bituminous coal industry to determine whether the 14 per cent wage increase should stand or not, and, if changed upward, whether a revision of prices to the public will be necessary. But both before and after this announcement, the situation was not without controversy, even tho the major controversy seems to have been settled for the time being. Before the announcement was made, the operators questioned the good faith of Attorney General Palmer, accusing him of having switched plans, so that the plan adopted at the Indianapolis Conference was not the one accepted by the operators in conference with the miners in Washington. Mr. Palmer replied to this accusation that he could see no essential difference between the proposal of Dr. Garfield for a consultative and advisory commission to investigate the industry and the one to be set up under the President's plan.

After the President had appointed the members of

the Commission and had sent a lengthy memorandum to each of them in which he outlined the history of the dispute, the main points of the controversy and certain fundamental recommendations—among these that their conclusions be reached by "unanimous action," and that these be the basis for a "new wage agreement"—the operators again balked. They issued a terse statement denying that they had agreed to or adopted any such memorandum as that sent by the President to the commission. They insisted that they wanted the Garfield wage settlement, and that they saw radical differences between this and the Government plan. This attitude of the operators led to still another controversy, this time with Attorney General Palmer. Mr. Palmer called the operators' denial the "merest quibble," and "unworthy of the representatives of a great industry."

The second important event of the week, the meeting of the heads of the Railroad Brotherhoods, was the sequel to the President's proclamation of December 24 restoring the railroads to private ownership on March 1, and the passage by the Senate of the Cummins railroad bill with its anti-strike provision, the Esch bill having been previously passed by the House of Representatives. The two bills have now gone to conference, and the decision of the conference committee on the anti-strike clause in the Cummins bill will have much to do with labor's stand. It is generally believed that if the anti-strike provision is eliminated as the House has demanded, labor will relax its hitherto bitter objections to the legislation, and may be appeased as regards wage demands. For months the Brotherhoods and labor in general have been urging the continuance of Government operation for at least two years, and one radical wing, the nucleus of which is the Plumb Plan League, has been asking for the nationalization of the country's railway systems. The Brotherhoods thru their leaders made a declaration of principles opposing legislation making strikes unlawful, and supporting Government control of the railroads for two years.

On December 29, the Industrial Conference also published the preliminary report concerning which it invites the strict criticism of the public. The chief feature of the report is a plan for preventing or retarding strikes and industrial conflicts by quite new methods. The plan provides in brief for the establishment of a National Industrial Tribunal and Regional Boards of Inquiry and Adjustment. The National Industrial Tribunal would consist of nine members to be appointed by the President and confirmed by the Sen-

A Bolshevik bonfire of many thousand barrels of tar from America, burned by spies at Archangel

"Children Are Never Enemies"

One of the thousands of undernourished children who are actually dying of starvation this winter in Vienna. The infant mortality there is 60 per cent and they give the hospitals, overcrowded with sick children, the name of "angel-factories"

These youngsters standing in a Vienna soup line are barefooted in spite of snow and winter weather. Clothes, as well as food and coal, are almost impossible to get. Shoes cost the equivalent of \$60 a pair

Photographs from Press Illustrating

By long waiting some of the families in Vienna can get a weekly ration of six pounds of coal. But only a fortunate part of the population can get even that much. Those who are able are going out into the famous Vienna forests and cutting wood for fuel. Industries in Austria are practically at a standstill. When Chancellor Renner went to Paris on December 11 to ask help of the Allies he said: "When I left Vienna we had only 9000 tons of flour for six and three quarter millions of people, a supply for six days only. Children are dying of hunger and cold. A heated house is a thing unknown and a hot meal is a rarity"

General Semenov has succeeded to the command of the Siberian troops since Admiral Kolchak has resigned. He is a Cossack Hetman (headman) only twenty-eight years old. His dictatorial ways and the cruelty of his troops have caused several dissensions with the American authorities. He is reputed to be pro-Japanese and to aim at making Siberia independent of Russia

ate, with headquarters in Washington, and to act as an appellate body. The United States would be divided into industrial regions, probably twelve, and there would be a Regional Board of Inquiry and Adjustment in each district. Besides submitting this plan for "new machinery of democratic representation to suit the conditions of present industry" the conference made a declaration of its views as to government employees. It takes a firm stand against "police strikes" and the affiliation of government public safety employees with any organization that uses the strike as a weapon. "No interferences by any group of government employees, or others, with the continuous operation of government functions thru concerted cessation of work, or threats," declares the commission, "can be permitted."

What Is Going On Inside Russia?

WE can mark on a map the fluctuating boundary of Soviet Russia, but on the more important question of its internal condition we are amazingly ignorant. A country about as large and populous as continental United States, in which the most radical experiments in sociology are being tried on a colossal scale has been for more than two years concealed from the view of the outside world by military blockade and a double barrage of prevarication. None of our sources of information are above suspicion. We are not allowed to receive Bolshevik papers and books, and we could not believe them if we did, for the Russians are not free to tell the truth if they would. The reports of refugees who escaped from Bolshevik tyranny a year or two ago can give us little light on present conditions. Flying visits of more or less biased journalists give us mere glimpses of one or two cities, no view of Russia as a whole. In fact, the country is so vast and local conditions so diverse that exception may be taken to any general statement about Russia. Nevertheless, when we piece together the fragmentary information that comes to us we can form a fairly consistent and probably fairly exact picture of the state of the Russian people.

We have now from a French scholar, himself anti-Bolshevist, a 600-page volume of the Soviet legislation,* so the system can be studied from a legal standpoint, but it is impossible to know in how far it has been carried out and how it works.

In its structure the Russian Socialist Federated Soviet Republic is more like French syndicalism than like the German state socialism of Marx or the Russian anarchist communism of Krapotkin. Its most novel feature, government by workingmen thru soviets, is strikingly like the plan devised and advocated years ago by Daniel De Leon, leader of the American Socialist Labor party. The resemblance may in part be explained by the fact that some of De Leon's lieutenants are now in the Russian Government. One of them, Bill Shatov, of New York, is commandant of Petrograd

The soviet is simply a council of representatives elected by the inhabitants of a village, the entire personnel of a manufacturing plant, or the membership of a trade or professional union. The local soviets send delegates to a higher body until finally the Pan-Russian Soviet of Soviets is reached, which corresponds to the parliament of European countries. This body selects the People's Commissars or commissioners, who really rule the country and of whom Lenin and Trotzky are best known and most powerful. Theoretically, the soviet system might be more democratic than any existing government, for all officials are removable at any time by popular will without waiting for their terms to expire or a general election to be ordered. Actually, in Russia it is not democratic at all. In the first place, it is confessedly a "dictatorship of the proletariat." Only working men and women can vote. Ministers of all religions and all who live on the income of investments, rent of land or employment of others are excluded from the franchise. More than this, the soviet elections are in many cases mere formalities. The voting is done at a public meeting by show of hands, and there is frequently only one candidate imposed from above. The Bolsheviks proper are only a small minority of the population, but, as they form a well organized and strictly disciplined body, the Communist party, they have so far been able to override any internal opposition. Of late, however, the Bolsheviks have seen the desirability or necessity of showing a more tolerant spirit toward the moderate parties, such as the Mensheviks and Social Revolutionists, and have to a greater extent secured their coöperation.

All the opposition parties except the Monarchist are now united in a Center party and they will doubtless succeed to power whenever the Bolsheviks are overthrown. But in their platform they accept in principle and propose to retain a great part of the Bolshevik legislation, namely, the separation of Church and State, the Soviet marriage law, the Soviet system of popular education, and the participation of workmen in the control of factories. The Centrists differ from the Bolsheviks chiefly in proposing to distribute all the land among the peasantry in small holdings instead of having it held in common, and in demanding the convocation of a constituent assembly to organize a republican form of government to take the place of the soviet system.

The change that has taken place during the recent months in the attitude of other classes to the Bolshevik régime is thus expressed by the Warsaw correspondent of the *London Times*:

It seems useless to close our eyes to the fact that what remains of the official classes in central Russia are serving

*Labry: *Une Législation communiste*. Paris: Payot, 1920. The Soviet constitution and earlier laws are published by American Association for International Conciliation, New York.

The Navy's Future

(Continued from page 52.)

bear in their hearts a resentment against the nation that joined them in the fight and gave them the victory, but when the burdens of the settlement came was unwilling to stay in the game and play the part of a man.

To take to our heels at such a time would not be very creditable to us. It would not give us many friends. A friendless nation—a nation that the free peoples of the world feel has not measured up to its promises—will need to be self-sustaining and able to defend itself against the peoples who believe it has broken faith.

From our place of leadership in idealism we will fail, if we now crawl back into our shell, to the place of a nation, rich, self-centered and strong, but despised of the world. If no nation loves us we will need guns, guns, guns, to make them respect us.

We are urged back by some who raise their voices among us to an antiquated and barbaric isolation—"splendid isolation" they call it. If we choose to follow that path we must pay the price. I would feel it incumbent upon me, if we are to play the part of quitters, to say to the people: "Having elected to stand alone we must stand—without the cruelty of Prussianism, but able, in any case, to defend ourselves against the world."

If we do this thing we must prepare to spend hundreds of millions of dollars on submarines, airplanes and fortifications. From end to end we must plant our coasts with mines so that they bristle with destruction. Our harbors must become potential hells, ready to let-go at the push of a button, and blow to pieces any invading fleet.

Our navy must be bigger by many fold than any that has been dreamed of by nations bent upon world conquest. It must surpass in strength and numbers of vessels the combined navies of the world, and our taxes must be levied accordingly.

From the pursuits of peace our engineers, chemists and experts must turn to fashioning devices of destruction. Manufacture of the things that make life easy must give way to production of the things that make life hard. Instead of tractors we must build tanks; instead of labor saving machinery, guns; instead of great canals, great fortifications.

In a word we must become a super-Prussia. Militarism and navalism must be interwoven with the warp and woof of our industrial life. It must dominate our education and to some extent our religion. We must be a national porcupine, so bristling with guns and so trained to use them, that no other nation dares to touch us.

It is not a pleasant prospect for a man who loves peace. To think of it is to shudder. Yet it is the only hope we have of preserving our peace, if we refuse to join in guaranteeing the peace of the world. Better militarism for America than defeat.

Washington, D. C.

Safety stamps— do you know what they are?

One rarely hears of an electrical fire nowadays.

Thank the safety stamps for this condition, remarkable when thousands of horsepower in electric current is carried over wires, through motors, lights and countless devices of all sorts.

But then, for a long time now electrical materials have passed before a wise censorship—the National Board of Fire Underwriters.

Originally a joint committee of insurance companies, they have outreached their first reason for being and have become a sort of inspirational bureau of standards for all manufactured electrical goods and for electrical construction practice.

They must approve every specialty device and circuit in your home or business property.

They personally inspect all installations so that your electrical work shall be safe from fire risk, and that insurance rates may be minimized.

The Underwriters' safety stamp or written approval is a basis for confidence in things electrical.

Twenty years ago electricity was a mysterious, untrusted, fearsome thing.

But who fears it today?

Not mother manipulating the morning toaster. Not the lineman on the pole. Not even the children around the Christmas tree with their electrical train.

The Underwriters have preached electrical safety—worked to make it practical and, as you will admit, have succeeded.

(Continued from page 70)

the Soviet Government loyally and have adopted the new régime as something which gives them not only a livelihood but as much power and authority as they ever possessed under the Czar. As they accepted the situation and accommodated themselves to new conditions, so order gradually succeeded anarchy, and the Red army from a revolutionary rabble became a disciplined fighting force, stronger now than was the Russian army before the revolution.

As in the army, discipline has gradually been introduced into the shops. As might have been expected the soviets or committees of workmen who at first undertook the management of industrial plants made a mess of them. They disregarded expert advice, ignored economic laws, spent their time in futile discussions, raised wages, cut down hours and slackened work until establishments that used to pay large dividends showed deficits instead and had to be kept running by constant subsidies from the central fund. But even a Soviet Government printing money in unlimited quantities cannot stand such a drain. It soon became evident to all that reform was necessary and the delinquent workmen were called to account by their peers. For instance, production in the Putilov steel works at Petrograd fell to 50 per cent or less of the normal, so the representatives of the shop men were summoned before the Petrograd Soviet to answer to the charges of consuming too much coal, turning out too few locomotives and wasting time during labor hours by holding meetings. After the hearing the Soviet passed the following resolutions:

1. That the proletariat of Petrograd will not permit the waste of state funds and fuel nor the transformation of the entire shop force into parasites of the state.

2. That the lack of locomotives constitutes a national misfortune, causing scarcity of products, and every agitator, who tends to stop work, is an enemy of the people who ought not to be pardoned.

Strikes have been put down by the Red Guards without scruple and the control of central power over the management of manufactures has constantly increased until now the workmen have but little more control over the factory they work in than a British shop-committee.

They are not allowed to interfere with technical questions of management. By such methods the Putilov works and a few others are said to have been brought up nearly to the normal, but other industries are working at a third or a tenth of their capacity and some are shut down altogether. By eliminating all profits and competition and bringing all industries under one general direction the Soviet Government is enabled to effect considerable economies, but these are more than counterbalanced by incompetence, corruption and confusion in the administration. Graft, laziness and drunkenness have always been the glaring evils of the Russian character. Of these three disgraces the new régime has eliminated the third, but has given even greater opportunity to the other two.

Russia has always been dependent upon the outside world for manufactured goods and these have been shut out for more than two years by the blockade. The petroleum of the Caucasus, the coal and iron of the Ukraine, the gold and platinum of the Urals, the cotton of Turkestan, have been most of the time in the hands of the anti-Soviet forces. Russia has an abundance of wood fuel and the crops last year were exceptionally large, but it is impossible to keep the cities from freezing and famine this winter because of lack of transportation facilities. The railroad system of Russia, never adequate to the needs of the country, had been badly demoralized by four years of war before the revolution and has grown worse ever since. It is estimated that sixty per cent of the transportation facilities of Soviet Russia have been monopolized by the military, for the Bolsheviki have had to carry on campaigns two thousand miles apart and on fronts aggregating five thousand miles.

The Communists aim to monopolize all the means of production and distribution and to leave no room for private buying and selling of goods or hiring of servants or workmen. All must work for the state and depend upon the state for their sustenance. But here as in many other cases the Soviet has been obliged to compromise its principles for the present. The bourgeoisie

The Young Turk party in Constantinople is protesting vigorously by parades and public demonstrations against the breaking up of Turkey by the Allies. This mass meeting outside the city gate is said to be indicative of the daily disturbances there

The German People Drift

(Continued from page 57.)

the most part have preferred to throw their money out of the windows to giving it in taxes. The poorer classes also have sought diversion. Their purses, however, have been a positive check. A large part of the people live from day to day blissfully unconcerned even in the most crying of the social needs about them. Berlin night life until the coal famine checked it gave an impression of greater lavishness than that of Paris. Champagne at seventy marks a bottle—and seventy marks are still seventy marks to the German and not so many pennies as to the outsider—still flows freely. The only two checks to popular excess seem to be poverty and the iron hand of the Noske Guard.

This want of control in Germany, so conspicuous on the street and in the dance-hall, shows itself again on the stage. The theater-going public in Germany was always patient and well informed. Now only the light-comedy, noisy and at high speed, is really welcomed. Plays must be short with a rapid succession of changing sets. The daughter of poor but honest parents could once think it over quietly on the stage thru three long acts, but now she must dash headlong thru a dozen scenes of temptation before making the momentous decision.

In the heavier Scandinavian drama, as for example Ibsen's "Peer Gynt," where an effect is forged in a slow development of character, and where one is inclined to look for symbolism of some sort between the lines, this new German tempo is out of place. I saw Ibsen given in one of the leading South German theaters recently. Only one of the actors had the necessary control. The undercurrent of the tragedy was lost on a sea of choppy nerves.

The vogue of Futurism and Expressionism in Germany also throws an interesting sidelight on the present German state of mind. There is an enormous demand for the new and the exotic. For the first time the young hopeful who boldly paints what he does not see in colors which defy nature can enjoy material appreciation in his immediate lifetime. Violent color contrasts have entirely replaced the muddy oils so dear to the romantic Germans of the past. Finding the range of colors too limited for their new emotion, the Futurists, called Dadaists in Berlin, now interpret themselves also in music and poetry. They have thrown themselves headlong into politics. Here there have been many developments recently which can best be explained as Dadaism. Politicians and courtiers have long meddled with German art, but this is the first time that artists seek to express themselves in politics. The result is equally disastrous.

The want of directive in German politics reflects the general unrest in Germany today. Delay in signing peace and in fixing on some working basis Germany's liabilities have only accen-

Surprises You Can Serve With Bubble Grains

Some morning serve Puffed Rice or Corn Puffs in this way:

After crisping, douse with melted butter. Then add your cream and sugar. It will taste like a dish of confections. And men enjoy it just as much as children.

Add Puffed Rice to your fruit dish—any fruit. Fruit tastes best with some flimsy crust. That's why we have pies, tarts and shortcakes.

These fragile, nut-like bubbles add that crust. After a test you will never omit them.

For supper, float Puffed Wheat in milk. These are whole-wheat bubbles toasted. They are four times as porous as bread.

Children need whole wheat. They need the minerals in the outer coats. Served in this way they will revel in it.

After school surprise the children with these tidbits:

Douse Corn Puffs or Puffed Rice with melted butter. Let them eat like popcorn. Children can eat these grain dainties to their hearts' content—they so easily digest.

Scatter Puffed Rice or Corn Puffs like nut-meats on ice cream. A famous restaurant in Chicago first suggested this.

Puffed Rice is also used like nut-meats in home candy making—to make the candy porous, light and nutty.

Puffed Wheat

Puffed Rice

Corn Puffs

Also Puffed Rice Pancake Flour

All steam exploded—puffed to eight times normal size. Every food cell blasted by Prof. Anderson's process, so digestion is easy and complete.

These are the greatest grain foods in existence and you should know them all.

Like Pancakes Made With Nuts

Now we make a pancake flour containing ground Puffed Rice. It makes the pancakes fluffy and gives a nut-like flavor. The flour is self-raising, so you simply add milk or water. You never tasted pancakes such as folks make with Puffed Rice Pancake Flour.

The Quaker Oats Company

Sole Makers

This is the biggest engine in the world, in the biggest power house, owned by the Interborough Rapid Transit in New York. The photograph shows the low-pressure cylinder of this 100,000 horse power triple compound turbine, which consists of one high-pressure and two low-pressure elements, each connected to a separate electric generator. All three elements are started and controlled as one, but in an emergency any one of the elements can be shut down without stopping the other two. The speed of the turbine is 1500 revolutions a minute

(Continued from page 72)

were too numerous and too able to be starved out or killed off. Their ration was cut down to a quarter or an eighth of a pound of bread a day, while the full ration of a pound or pound and a half was given to the first category, which includes Communist workmen and officials, soldiers of Red army, children of all classes, teachers, scientists, artists, etc. But even these, the aristocrats of the new régime, often have to piece out their official food supply by buying in the outlaw market as do the bourgeoisie.

The Soviet officials have been obliged to wink at this surreptitious sale of food smuggled in from the country, for it was necessary to supplement the inadequacy or failure of their system of food distribution. In this market sugar and butter when there is any sells for \$6 a pound, while the workmen can get it for 70 or 80 cents. Sometimes and somehow food from the Soviet storehouses gets into this market.

The Bolsheviks have confessedly failed to win over the mass of the peasantry. Having now got the land the peasants have become conservative and decline to adopt the communal system. They hold and hide their crops until they can sell for extortionate prices. The cities have little to exchange for food because of the closing down of the factories, while the rural communities, with their simple wants, are practically independent because self-supporting. Laws fixing maximum prices for agricultural products are unenforceable, and, as the Red Guards make raids on the country districts to commandeer provisions, the hostility of the peasantry is enhanced. The Soviet Government has virtually abandoned the attempt to force the peasantry into communism and is now depending upon education and object lessons, hoping that the sight of the superiority of communal farms with their labor-saving machinery over the small scale hand culture of the privately owned lands will convert the people to the new system.

The Russian Coöperative Unions, which were started

before the war, have developed rapidly since and now carry on manufacturing, selling, buying and banking for more than 20,000,000 consumers and producers in European Russia and Siberia. The Soviet was not strong enough either to crush or to absorb the coöperative associations, so it has come to terms with them and is utilizing to a large extent their manufacturing and commercial facilities.

Practically, then, the soviet system on the economic side has worked out as a gigantic state trust, strongly organized and centralized, and controlling under one management all branches of industry and commerce. Industrial service and military service are obligatory on all Communists and under strict discipline.

The reign of terror is officially over; in part because the most determined opponents of the soviet have been killed or cowed or starved or driven out, in part because they have become reconciled to the soviet system, or because they prefer it to foreign intervention. But undeniable tales of atrocities come from regions overrun by armies of the various factions and by predatory bands. It is useless to try to reconcile the widely varying estimates of the number of legalized executions by the soviet authorities because they do not at their largest cover the much more numerous cases where fanatical, criminal or ignorant men have found opportunity in the general chaos for indulging their passions of cruelty, lust and revenge. Nor can any one calculate the amount of misery suffered by all classes of the population in the wars and revolutions that have devastated the country since 1914. Soviet Russia is for the present freed from external military pressure, but has not yet solved its internal problems. Its condition reminds one of the words of Jefferson to Lafayette: "Liberty becomes, with an unprepared people, a tyranny still of the many, the few or the one."

Compromise

(Continued from page 59)

licans should be willing to have this redrawn so that it is clear that real domestic questions are without the jurisdiction of the League. This ought not to be a very difficult job.

The fifth Lodge reservation and third Hitchcock reservation deal with the Monroe Doctrine. There is so little difference between their respective points of view that either can accept the other, even tho the Lodge reservation declines to submit to the League anything that "relates to" the Monroe Doctrine. Taken literally that would enable us to reserve almost any American question from the jurisdiction of the League. But probably Congress would construe the matter rationally when the time comes. If necessary, either side could yield on this point.

The fourteenth Lodge reservation is the fifth Hitchcock reservation. Both refer to Great Britain's six votes in the Assembly. There is little difference between the two points of view except that the Lodge reservations say we will be bound by no decision of the League where the six British votes count for more than our one, whereas the Hitchcock reservation says that the six British votes are to be counted as one. There is evidently no irreconcilable difference here. A compromise can easily be drafted.

To sum up. Let the Democrats concede outright seven of the fourteen reservations.

Let the Republicans concede the preamble, part of the Shantung and four words of the Disarmament reservation. Let them accept some such compromise as is here suggested on Article X.

Then both sides will find they are so close together that there will be no difficulty in coming to an agreement in respect to the reservations dealing with internal questions, the Monroe Doctrine, and England's preponderant vote in the Assembly.

The way to compromise is to compromise.

The German People Drift

(Continued from page 73.)

tuated this. The Revolution came so abruptly that the Independent Socialists who fomented it were unprepared to exploit their victory. They were obliged to take the Majority Socialists in with them. After six weeks the Independents dropped out rather than participate in middle-class government. The Majority Socialists for similar reasons—inability to handle the situation—were forced to accept coalition with the moderate parties. The result was a Government which was neither socialistic nor republican, but a combination of a discredited old (the moderate parties) and of an inexperienced and partly discredited new (the Majority Socialists). As the Majority took in one middle-class party after another they abandoned the last fragments of their original party program. They have even begun to unsocialize some of the industries centralized in the state during the war.

All parties in Germany exclaim, "If only we had the leaders!" Maximilian Harden, ever a destructive but often a penetrating critic, remarked to me one afternoon:

"We have no one in office capable of representing the German people. Ebert has neither the experience nor the capacity. Rantau has gone to Versailles surrounded by the 'Old Guard.' As we cannot trust them here, how can we expect you to do so there?"

This search for a Frederick the Great, a Napoleon, or a Bismarck is joined in by all parties. Most Germans agree that it would require some one with the mastercraft of all three to pull Germany out of her present plight.

The entire energies of seventy million people had been directed toward the military achievement of victory. The collapse of their dream was a blow from which recovery is bound to be slow. Many Germans long before the end of hostilities felt the futility of their efforts. Their moral struggle was even a greater one. I know personally two Germans, both artists, who, with the conviction that they were staking their lives needlessly on a dangerous illusion, have both broken down nervously from the long strain.

The realization that Germany's enemies could not forgive and forget the day of the armistice was another rude shock, especially to the ill-informed Germans who were naive enough to imagine that this would take place from one day to the next. The political reasons why Germany is still hated abroad and why Germans will not for some time be welcome in many lands are only just becoming known in Germany. The myth was fostered by the new Government that Germany was innocent of responsibility for the war. Past German policy, especially as seen from without, has for the first time been brought before the public by the Erzberger-Helfferich disclosures and the discussions which have been evoked by these.

Paris

Makes Shaving Easier

A New Way to Soften the Beard

Trial Tube Free

Shavaid is a new scientific preparation which simplifies shaving. It saves time. It does away with hot towels, with all rubbing in. Instead of irritating the skin, it soothes it. Because it does these things, Shavaid is being welcomed by men the country over.

THE old way of preparing the face for shaving is all wrong. Hot towels and rubbing in draw the blood to the surface at the wrong time. They open the pores. They irritate the skin, make it tender.

These methods are unnecessary. Shavaid does instantly what they were intended to do. It keeps the skin in normal condition, soothes and cools it.

A Quick Shave

You coat the dry beard thinly with Shavaid. Then apply your favorite lather. Do not rub it in. Shavaid works better if the lather is merely spread on. Note the cooling, soothing effect.

The lather stays moist and creamy.

Now you are ready to shave. The blade "takes hold," because the hairs are properly softened. There is no "pull." The beard comes off easily, smoothly. No need for lotions or creams afterward. No injury has been done—no medicaments are needed. This way is quicker, it is more satisfactory. Yet it protects the skin. Harsh treatments bring wrinkles too soon.

Benefits the Skin

Men who shave close find Shavaid a revelation. There is no "drawn," smarting feeling. No need to soothe the skin with witch hazel or lotions. Shavaid keeps the skin firm and smooth. Wrinkles do not come as quickly. The natural oils are preserved.

Shavaid was perfected after long scientific study and countless experiments. It is the product of a company which for 25 years has been inventing new helps for mankind. It fills a real need which every man has felt.

Try It Yourself

Many men are using Shavaid. They would not

shave again without it. But you must find out for yourself. You must have your own evidence.

We want you to have a Free Trial Tube. Just fill out the coupon and mail it—now—before you forget it.

After you have used your Trial Tube all up, you can get it from your druggist at 50c a tube. Or, if he cannot supply you, we will be pleased to fill your order direct.

Shavaid

Softens the beard instantly

—apply to dry face before the lather.

Saves time and trouble

—no hot water, no "rubbing in" of the lather.

Protects the face

—skin remains firm and smooth.

Removes the razor "pull"

—harsh ways age the skin prematurely.

Replaces after-lotions

—Shavaid is a cooling, soothing balm.

B&B

Better than a mustard plaster

Once when grandma's joints commenced to ache and twinge, she used to go to the mustard pot and make a mustard plaster. Now she goes to Musterole and gets relief, but does without the blister and the plaster, too!

My, how good that Musterole feels when you rub it in gently over that lame back and those sore muscles. First you feel the gentle tingle, then the delightful, soothing coolness that reaches in the twinging joints or stiff, sore muscles.

It penetrates to the heart of the congestion. This is because it is made of oil of Mustard and other home simples. And the heat generated by Musterole will not blister.

On the contrary the peculiarity of Musterole lies in the fact that shortly it gives you such a cool, relieved feeling all about the twingey part.

And Musterole usually brings the relief while you are rubbing it on. Always keep a jar handy. Many doctors and nurses recommend Musterole.

30c and 60c jars—\$2.50 hospital size. The Musterole Co., Cleveland, Ohio
BETTER THAN A MUSTARD PLASTER

Too Many Bosses

(Continued from page 58.)

while standardizing out of existence the class which never should have been allowed to teach."

A gentleman who says he is one of the well nigh extinct species *Pedagogus Americanus* has this wisdom to contribute:

"It seems to me that a lot of the high-salaried superintendents and principals could either be eliminated or else have their salaries cut somewhere about the middle. I surely believe that in many instances a good efficient policeman with a club and some clerks to keep books, read themes and grade papers for the overworked teachers would be of greater service to the school than its high salaried superintendent. A school served in this manner and with a corps of well paid teachers who governed themselves in a democratic manner would be an experiment well worth trying."

Many correspondents generously tell the other side of the story and emphasize the difficulties that the conscientious executive with education and ability must face in his dealings with school boards and communities. According to some of our informants the best executives are being weeded out as ruthlessly as the best teachers. Says one teacher:

"A small town superintendent who endeavors to keep religion out of his school and to lay down a code of ethics for his faculty soon finds himself ostracized by many. Only a handful of the more progressive members of the community will support him."

Here is another story:

"In a fairly large high school a very competent principal is resigning as a result of bitter opposition caused by the expulsion of a number of boys for hazing when they knew what the penalty was to be. The principal merely obeyed the state law and followed the advice of the state superintendent, but the parents of some of the boys were offended. One wealthy mother employed an attorney who was also a member of the board to embarrass the principal by legal action. This is only one of thousands of cases where freedom of action and authority is insidiously curtailed. Many school administrators hesitate to act in the face of such intimidation when their best judgment tells them that they should take action. The students are quick to see this and the result is obvious."

One teacher sums up the whole matter of the qualifications and disqualifications of executives very fairly, telling how much is expected of them by the board, the community, the children and the teachers and she seems to think that, as things are now, we can hardly expect to have many good executives. The demands on them are many and of too many kinds and the rewards, altho larger than the rewards of class-room teachers (in a material sense) are not large in proportion to these demands. In conclusion she says:

"Of the ten superintendents I have known, four have gone out of school work and the one whom I consider most efficient may be forced to go out of the profession for this year because of the enemies he has made."

The consensus of opinion seems to be that, altho many school executives are inefficient, lazy, lax or autocratic, it happens that there are still a few good educators in executive positions. These executives find life about as complex and difficult as their teachers find it. Theoretically, of course, the school system is democratic, for school boards are either elected by the people or appointed by a public servant whom they have elected, and school boards choose executives and teachers. But as it works out in practice the system is anything but democratic for teachers. The board, as we have seen, frequently finds it necessary to cater to the mayor or the big man of the community or the political machine. The executives must cater to the board. The teachers must cater to the executives. A series of small autocracies piled one on top of another! And with all this thought about pleasing the man higher up how can the educational profession give itself up wholeheartedly and single-mindedly to the honest and vigorous service of the public and to seeking the best interests of little children? One teacher says, rather sadly:

"Under these circumstances, can it be wondered that not only dissatisfaction, but even bitterness has crept into the attitude of the teacher toward his work? He is in the position of the workman who knows his machine, and whose suggestions about methods of using it most economically are scorned. And his dissatisfaction is greater than that of a person in another class of work might be, because of the nature of the occupation. No teacher can be contented when his accumulating capital of ideas cannot be invested for the improvement of the work. See the result. The young teachers started out some years ago with high hopes of accomplishing something for the service of mankind. The work of teaching requires an idealistic attitude, a hope for the improvement of society, and many teachers of the past generation have fulfilled these requirements. But they have lived to see their ideals scorned, to find that society tolerated rather than welcomed them, and to find their fellows of fewer ideals and less educational vision secure the promotions that made living easier. They have been thrown back upon themselves when they sought to realize their intellectual ambitions for greater power and service, because they scorned to use the tools necessary for advancement; or, worse still, they have been forced to yield the homage of submission where they have been unable to yield their respect."

The next article in this series will offer readers the suggestions teachers have made for the betterment of conditions in the teaching profession.

Contemporary Ancestors of Ours

(Continued from page 61.)

A chimpanzee becomes a devoted pet. He even develops a fear of the forest. If you take him into the bush and walk away from him he will run after you screaming frantically. And if you don't stop and wait for him he will fall down and beat the back of his head against the ground and kick and scream for all the world like a bad or frightened child. When you stop he will come running into your arms, trembling and sobbing most pitifully.

As a pet the chimpanzee displays human characteristics superior to those of any other animal. He is the only animal I have ever known that will offer to share his food with his master or another chimpanzee.

He grows to have pets among the household animals and treats them with a great deal of devotion. Susie had four pets, a billy goat, a cat, a dog and a monkey. She loved Pete, the monkey, best. Pete had to be kept tied most of the time because he was forever into some sort of mischief when loose. Susie liked to pull him to her by his cord and hold him in her arms as a child holds a doll. She felt an obvious sense of proprietorship in all her pets which often led her to attempts to feed them with her surplus food. But her knowledge of dietetics was faulty. She would offer a banana to the cat. With the goat she was more successful; she never offered Billy anything to eat and had it refused. A real affection existed between these two. Susie learned to climb onto his back and ride him. With her prehensile foot she would grip his foreleg above the knee and throw her other leg over his back. The goat seemed to like to give Susie a ride, and would walk about the yard with her in a careful and decorous manner. Then Pete would spy the fun. Here he would come galloping, leap up on the goat's back, upsetting Susie from her comfortable seat. When Susie fell off Billy would stop and refuse to ride Pete unless Susie were on, too. Susie, however, after such a fall, lost her confidence.

Pete had a way of making Susie the butt of his mischief in another way which often tested Susie's good nature and her regard for him. He would sneak up near and suddenly pounce on her head with both feet and hands, throwing Susie down with a shock that must have been hard on her. Recovering herself as best she could she would utter the exclamation "Oh!" as perfectly as any human being can. The inflection was always that of astonishment and protest. "Oh!" she would say, and catching her breath, "Oh!" again, and a moment later at a longer interval she would again give voice to the same exclamation, each time with the most humanlike sound and inflection. This is the one case in which I have known an ape to give faultless pronunciation to a vowel sound that is a distinctive part of human speech.

New York

Why you should care for your Throat daily

YOU can now give the same daily attention to your throat as to your teeth; and throat care is even more important than tooth care. The throat is the great breeding place for infectious germs which lodge there when inhaled from the dusty air and often invade the body to cause influenza or other infectious fevers. Sometimes they attack their breeding ground itself and give rise to sore throat or tonsillitis.

Throat specialists, physicians and dentists recommend

Formamint

THE GERM-KILLING THROAT TABLET

on account of its simplicity and efficiency.

Formamint is a delicately flavored tablet, which is sucked like candy, setting free a powerful, yet harmless germicide turning the saliva into an antiseptic liquid which bathes the entire living membrane of mouth and throat.

To overcome sore throat and so forestall worse evils—or to prevent it altogether—you should use Formamint regularly. Its use is a pleasure, and the cleanliness produced is a safeguard and a source of personal satisfaction.

The Near West

New Books That Make Us Turn Toward the Pacific

By Edwin E. Slosson

UNCLE SAM is in the position of Bunyan's Mr. Facing-Both-Ways, or, to use a more polite simile, of ancient Janus. Unfortunately he has not fully availed himself of his ambispectral opportunity, but has kept his gaze turned too exclusively eastward. Even when he glanced toward Asia he has put on European spectacles instead of seeing things for himself with his own naked eyes. The Far East—as we absurdly call our western neighbor—offers more

Press Illustrating

This Chinese girl scout isn't conscious that her mother country and the United States have a problem in the Pacific

of interest and opportunity to Americans than old Europe. As the *London Times* of September 4 points out, "whereas the Atlantic is bordered by countries inhabited by 325 millions of people, the Pacific is bordered by countries with more than 630 millions."

The late unpleasantness was at first commonly called the "European" war, but now we can see more clearly that Europe was merely the battlefield. The causes of the conflict and the rewards of the victors lie in Asia, Africa and the Pacific. It is altogether proper that the Senate should talk more about Kiao-chau than about Fiume. The senators may not all see straight, but their eyes are turned in the right direction—at last. If they had thought more about the Pacific in the past they would not have to talk so much about it now. Easterners have opposed every step in the expansion of the United States to the Pacific coast and beyond. They are now less hostile, but still too indifferent toward this movement. Australians, having only one ocean to look to, have naturally given more thought to the problem of the Pacific than Americans have, and it is important that we should get their views. In this C. Brunson Fletcher, of Sydney, will help us with his two volumes, *The New Pacific* of two years ago and *The Problem of the Pacific*, just out.

The Pacific area includes nearly half the world, and it is the "pacific" half. It remained free from great wars until the present century, and even the Great War hardly touched it directly. The Pacific Ocean covers a span of 180 degrees of latitude from pole to pole and about 170 degrees of longitude from Ecuador to Borneo.

The two meridians cross between Samoa and Hawaii, which, according to the *London Times*, will be in ten years the commercial center of gravity of the world. So we hold the central position in this field as well as the two extremities of Alaska on the northeast and the Philippines on the southwest. The Panama Canal gives us access to the ocean in the middle. Mr. Fletcher gratefully acknowledges that it was due to Roosevelt's foresight and initiative that Germany did not secure Panama. If Roosevelt had failed to recognize the right of the Panamanians to self-determination in November, 1903, or if he had referred the question in advance to Congress "for action" the Panama Canal would in October, 1904, have passed into the hands of Germany. That is why the German agents in Bogota—and Washington—were playing for time; only eleven months more of time and the De Lesseps concession would have expired.

Mr. Fletcher is quite friendly toward America and not disposed to begrudge her a share in the Pacific, though naturally he cannot suppress a sigh of regret that Great Britain did not hold on to Samoa, the Philippines and Oregon when she had a chance. He tells a novel and curious anecdote of how the British lost Oregon:

Captain Gordon was commissioned to report upon that part of the North American coast round Puget Sound and comprised within the Oregon country, as it was then known. The British Government wished to know its real value; and Dr. Hoggan, who was medical officer on board at the time, told Sir Normand MacLaurin that the captain went ashore to make a supreme test. He wanted to see if the salmon in those waters would rise to his flies! They declined the British flies, and because they would not rise he reported against the country. He lost for the Dominion and for Great Britain a magnificent harbor.

So we have to thank the sportsman in the Englishman that we have Seattle! If Waterloo was won on the football field of Rugby, then we might say that Puget Sound was lost on the salmon streams of England.

The keynote of *The Problem of the Pacific* is struck in the first sentence: "Four empires have met in the mastery of the Pacific"—Great Britain, United States, Japan and Germany. Spain was put out twenty years ago. Germany was put out last year. Japan, the only ex-

Publishers BOSTON

than any other country. If we can accept this volume as evidence, there is little jealousy among the Australasians toward America as a Pacific power. The author is enthusiastic over our work in the Philippines, and Sir William MacGregor, who writes the introduction—and who had the honor of raising the British flag over Papua in 1888—expresses "deep regret" that the United States did not enter the Pacific earlier so as to save more of the lives of Hawaiian, Samoan and Philippine islanders. With this cordial spirit among the three remaining "empires" there is good prospect of solving "the problem of the Pacific" peacefully and sensibly.

One chapter in the history of the American Pacific is told by Dr. Herbert H. Gowen in *The Napoleon of the Pacific*, that is, King Kamehameha the Great, the centenary of whose death was celebrated in Hawaii last May. It was he who brought the eight islands of the archipelago under one head, and he who repelled the Russians when in 1816 they built a fort at Honolulu and attempted to annex the islands.

When we cross the Pacific and reach the other shore we are plunged into an antiquity that makes us gasp. E. T. C. Werner begins his *China of the Chinese* with the cool remark that the history of China may be divided into two equal periods, the Feudal and the Monarchical, each of which lasted 2136 years. The Republican period has just begun.

A people that has a continuous historical existence and permanency of civilization for that length of time can afford to view with imperturbable countenance the recent infringements of their borders. Mr. Werner's interest is chiefly sociological, so he compresses the political into one chapter and devotes the rest to what is to us also more interesting, the domestic, ceremonial, political and religious institutions, and the language, literature and natural products.

The Chinese, whatever their failings, have never lacked for good advice. Here are a few injunctions that are taken from a book on the subject of table etiquette dating from 500 B. C. quoted by Mr. Werner:

Do not roll the rice into a ball; do not bolt down the various dishes; do not swill down (the soup). Do not make a noise in eating; do not crunch the bones with the teeth; do not put back fish you have been eating; do not throw the bones to the dogs; do not snatch. Do not spread out the rice (to cool); do not use chopsticks (instead of a spoon) in eating millet. Do not gulp down soup with vegetables in it, nor add condiments to it; do not keep picking the teeth, nor swill down the sauces. If a guest add condiments, the host will apologize for not having had the soup prepared better.

It would be well to have the above rules hung on the walls of our chop sueys with an English translation, for neither the yellow nor white patrons follow them any too closely. Nor have we altogether eliminated the political misdemeanors for punishment was inflicted in the days of Confucius:

Advertising Advertising

This is an advertisement. Not a very long one, to be sure, but an advertisement.

It has a most unusual purpose—to advertise advertising. The message is this:—

Don't miss the advertisements.

They make good reading just from the news and educational standpoint alone.

But more than that:—

Advertisements keep you in touch with the world's progress.

They point the path to comforts that were unknown in the old days.

They help you to save.

They protect you from fraud.

Don't miss the advertisements.

They are guide-posts to better buying.

A Trainload of Books

What Clarkson is Doing for the Book Buyer

In several hundred thousand libraries, in the homes of people in every walk of life—from the day laborer to the college professor and high government official, from the persons who buy a few books of popular fiction to the persons who pride themselves on having the complete works of all standard authors in DeLuxe Sets artistically printed and bound—almost every book was bought from me. Why? Because I have no agents and sell you just the book you want—all new—many at a saving of from 50 to 90 per cent. You examine the books in your own home for five days before paying for them. If not satisfied, return them at my expense and owe me nothing.

I Supply Any Book in Print—Write Me

Here are DeLuxe Sets, Morocco Bound, complete works, many of them at less than 50 cents on the dollar. Hugo, Kipling, Poe, Eliot, Dickens, Thackeray, Stevenson and scores of others.

Get My Big New Catalogue

My new catalogue, sent free for the asking, tells you how to save 50 to 90 per cent on thousands of books. It is a course in literature, giving nationalities, date of birth and death of authors, author's life and standing in literature, etc. Hundreds of sets and thousands of single volumes listed. I sell more books direct to the booklover—the individual reader—the rich man—who insists upon his dollar's worth—the man who warbles his penicils—and sell them for less money than any other man in America. Every book is new, fresh and guaranteed to please you—you to be the judge. I do not quibble—would rather have a book or set of books returned at my expense than to have a dissatisfied customer.

DAVID B. CLARKSON, The Book Broker
103 Clarkson Building Chicago, Illinois

Are You a Blonde or a Brunette?

Do you know why one is eager, aggressive, dominating and changeable; while the other is calm, thoughtful, patient and constant?

Read "Why Opposites Attract" on inside back cover, and learn how to deal best with each type.

Splitting words so as to break (the force of) the laws, confounding names so as to change what had been definitely settled; practising corrupt ways to throw government into confusion: all guilty of these things were put to death. . . . Those who were persistent in hypocritical conduct and disputations in hypocritical speeches; who studied what was wrong and went on to do so more and more; and who ever increasingly followed what was wrong so as to bewilder the multitudes, these were put to death.

The Oriental Policy of the United States is criticized—chiefly on the ground of its inactivity and uncertainty—by Henry Chung, Korean Envoy to the Paris Conference. Altho a Korean, he is more concerned with the danger threatening China than with the troubles of his own country. He says:

The present Eastern question is far more menacing to the future peace of the world than was the Balkan problem ten years ago. And if the powers of the world do not solve it now by peaceful methods, then they must be prepared to solve it ten years hence on the field of battle. It must be remembered that China has one-fourth of the world's population and an unlimited supply of natural resources—especially in coal and iron—to be exploited for peace or war. If this reservoir of power is permitted to be dominated by one nation—especially by such an ambitious empire as Japan—then it is obvious that the world cannot be made "safe for democracy," that there will be a dagger drawn at the heart of the United States and of the British possessions in the Far East.

But, according to his map of the present partitioning of China, that country is not likely "to be dominated by one nation," for the "spheres of influence" ascribed to England, France and Russia are larger than those earmarked for Japan.

Mr. Chung calls attention to the fact that the opening of Korea, as of Japan, was due to the United States, and that in the Korean-American treaty of 1882 it was provided that:

If other powers deal unjustly or oppressively with either government, the other will exert their good offices, on being informed of the case, to bring about an amicable arrangement, thus showing their friendly feeling.

Yet when Korea was annexed by Japan in 1905 no attention was paid to her plea for protection, and even now, when the United States is being "informed" that the Koreans are being dealt with "unjustly or oppressively," our "good offices" are not being exerted.

Mr. Chung has fortified his volume with abundant citations and references to state documents and periodical literature.

India is no less important and even more puzzling than China. Here we have to aid us *The Oxford History of India*, by Vincent A. Smith, in a single handy volume, 800 pages of solid fact and solid type, thin paper and long lines. Few will want to read it thru, but many will find it useful, for there is nothing else like it for completeness and compactness and carefulness. The author picks a cautious way thru the mythology and wild speculation that clouds the first thousand years of India

history. The Hindu writers were not concerned with such mundane things as time and dates, so Mr. Smith does not feel that he is on chronological ground until he reaches 326 B. C., the date of Alexander's conquest.

It is encouraging to find a volume entitled *India's Silent Revolution*, for it has seemed that the revolution was very likely to become noisy if not explosive. But the author, Fred B. Fisher, shows how great has been the progress made by India under British rule and Christian influences, and he backs up his view with figures and photographs. A picture of an American tractor cultivating a field shows how the shoulders of the peasant may be relieved of its age-long burden. In one photograph we see a Hindu taking his wife and baby out for a ride on a motorcycle. Another snapshot shows us the returned soldier telling his native village of the wonders that he saw in France. The oppressive system of caste is breaking down under the combined influences of railroads, war and missionaries. The fifty-three millions of Untouchables, lower than the lowest caste, are being raised from their degradation. In the Christian communities the percentage of literacy is 22, while for India as a whole the literacy is only 6 per cent. As 80 per cent of the Christian converts come from the pariah class, this means that the outcasts are becoming better educated than the Brahmins!

Mr. Fisher sees in the adoption of the Montagu report "a complete reversal of the English policy toward India." A new era for India was entered in 1917, when the British Government made the following declaration:

The policy of His Majesty's Government, with which the Government of India are in complete accord, is that of increasing the association of Indians in every branch of the administration, and the gradual development of self-governing institutions, with a view of the progressive realization of responsible government of India as an integral part of the British Empire.

The opposite view is presented by the British Socialist leader, H. M. Hyndman, in *The Awakening of Asia*. He has been "forced to the conviction that European interference, European trade interests, European religious propaganda, European administration, and European domination has been almost wholly harmful." His solution for the Asiatic problem is:

1. The emancipation of India from foreign rule by peaceful agreements with its numerous peoples.
2. The cessation of attempts to force foreign capitalism and foreign trade upon Asiatic countries.
3. The recognition that Japanese and Chinese are entitled, in countries inhabited or controlled by Europeans, to rights equal with those of Europeans in China and Japan.
4. The granting of similar rights to Indians on the same basis.
5. The general acceptance by Europeans of the principle of "Asia for the Asiatics" as a rightful claim.

Mr. Hyndman does not believe that

under the present capitalistic system the European and American worker can compete with the Asiatic, or that Asiatic labor can long be excluded from Australia and America. This volume has been held up by the censor for more than two years, but it represents a point of view that cannot be ignored. Mr. Hyndman's extreme standpoint puts him in the position of a defender of the old régime in China and India. Even the failings of the Chinese were due to their virtues; for instance:

That so stubborn and well-organized a people, capable under vigorous leadership of amazing efforts, should have failed time after time to make head against their enemies was due to the fact that they were too civilized for their epoch in every sense. So completely moralized, also, were they by the teachings of Confucius and his predecessors that they abhorred war—even in self-defense. Save on very rare occasions, they regarded peaceful production and distribution for themselves and the community at large as the chief object in life. Everything else was secondary to this. The various grades of society were all superior to the soldier. The man who made the trade of arms his profession was regarded by them as a pariah.

The Chinese, in short, were Pacifists of Pacifists, unready and unwilling to make the preparations necessary to defend themselves even against the most unprovoked attacks. They were easily overcome and mastered, therefore, time after time, by tribes whose sole vocation was plunder and slaughter. The Chinese, that is to say not only accepted religions, the foundation of whose creed was peace and fraternity among all mankind, but, unfortunately for themselves, they acted up to their tenets for generations.

Charles M. Pepper devotes two chapters of his volume on *American Foreign Trade* to Japan, China and the Pacific, altho he personally is more interested in South America and the Caribbean. As Foreign Trade Adviser to the Department of State he became familiar with the problem of American commercial expansion in all fields, and he lays down its fundamental principles in a way that may be applied to any particular field with which the reader may be concerned.

Willis J. Abbot tells *The Story of Our Merchant Marine* with the purpose of "making America ship-minded" as she was in the days when her clipper led the world. The volume has been brought down to date by including the lessons of our shipbuilding experience during the war and our future prospects.

The Truth About China and Japan as seen by Putnam Weale, confidential adviser of the Chinese Government, is that Japan's aim is not colonization but the subjection of the Chinese, who by 1950 will number 600,000,000.

Be As Wise As the Squirrel

The squirrel eats nuts and thrives on them. Be as wise as the squirrel. Try the paper shell pecan, the finest of all nuts, "the most concentrated of all natural foods," as Dr. J. H. Kellogg, head of the famous Battle Creek Sanitarium, calls it. "Compared with round steak, it contains one twelfth as much water, two thirds as much protein, from four to six times as much fat, and has between three and four times as great fuel value," says the United States Congressional Record, January 12, 1917.

The squirrel provides for the future. You do the same. "We have now one pecan where we need a million," says Burbank, the Edison of Agriculture. Each year our supply is exhausted earlier.

Buy NOW the pecans you will want for this entire season. Investigate NOW the co-operative profit-sharing plan that assures you all the pecans you need for your own table in future years, and a handsome cash profit on the surplus yield, increasing every year.

Our FREE BOOK, "Paper Shell Pecans," tells the whole story. Send coupon TODAY for that book—it's full of vital, important facts, proved by best authorities.

Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents; annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

150-Page illustrated catalogue free. Please Address

New Novels

MR. STANDFAST, by John Buchan (G. H. Doran Co.). A war romance, with an absorbing description of the last German offensive as its climax.

OUT OF THE SHADOW, by Rose Cohen (G. H. Doran Co.). With charm of style a Russian immigrant tells of the poverty and political persecution at home that brought her family to America, and of their experiences here.

THE DREAM MAKER, by Helen Fitzgerald Sanders (Cornhill Co., Boston). Childhood memories in all their vividness are recounted against backgrounds of the after-the-war South, and the California gold boom.

THAT WHICH HATH WINGS, by Richard Dehan (G. P. Putnam's Sons). All the ingredients of a war novel go into this contrast of gay cosmopolitan England early in 1914 and the sobered, patriotic society after the outbreak of the war.

A GREY DREAM AND OTHER STORIES OF NEW ENGLAND LIFE, by Laura Wolcott (Yale University Press). Understanding stories of quiet, reserved people; of childhood in 1830; fleeting impressions of scenes gone by, told in a way "characteristically New England."

SCORE BY INNINGS, by Charles Van Loan (G. H. Doran Co.). Short stories of baseball men, baseball games, and baseball slang, full of truly American humor.

DEER GODCHILD, by Edith Serrell and Marguerite Bernard (Charles Scribner's Sons). Amusing letters of a 12 year old "benefactor" and his adopted French godchild, published to arouse interest in the fatherless children of France, but smacking not at all of propaganda.

BETTY MARCHAND, by Beatrice Darmby. (George H. Doran Co.) Pleasant story of a modern girl who decided to earn her own living in business instead of being dependent on a wealthy aunt. A happy ending is secured in the good old way.

GREEN VALLEY, by Katharine Reynolds. (Little, Brown & Co.) A simple chronicle of a "one-horse town," introducing "home folks" with their loves, joys, cares and problems.

GITANJALI AND FRUIT GATHERING, by Rabindranath Tagore. (Macmillan Co.) An illustrated edition in which are combined the Hindu philosopher's two most popular books.

History and Current Affairs

HOW THE WORLD VOTES, two volumes, by Charles Seymour and Donald Paige Frary. (C. A. Nichols Co., Springfield, Massachusetts.) Explanation and development of the various franchise systems from Rome and Athens to the present day, with special attention to France, British and American.

HISTORY OF THE JEWS IN RUSSIA AND POLAND, Vol. II, by S. M. Dubnow. (Jewish Publication Society.) An authoritative work, covering in Volume II the period from 1825-1894, with a background of general Russian history and progress.

THE IDEA OF A LEAGUE OF NATIONS, by H. G. Wells, in collaboration with Viscount Grey, Lionel Curtis, William Archer, H. W. Stead, E. A. Zimmern, J. A. Spender, Viscount Bryce and Gilbert Murray. (The Atlantic Monthly Press, Boston.) An historic-philosophical little volume of 44 pages in Mr. Wells's most suggestive and stimulating style on the greatest issue now before mankind.

THE ONE GREAT SOCIETY, by Frederick Lynch. (Fleming H. Revell Co.) Sketches from the author's reminiscences as preacher, editor and internationalist, of the world's prominent men in divinity, philanthropy, literature and reform.

DEPARTMENT COOPERATION IN STATE GOVERNMENT, by Albert R. Ellingwood. (Macmillan Co.) A scholarly study of the "advisory opinion" of the courts in this and other countries, and a plea for its more general adoption here.

NATIONAL IDEALS AND PROBLEMS, by Maurice Garland Fulton. (Macmillan Co.) Essays, addresses and state papers for use in "thought courses" in composition, giving an opportunity to student and teacher to use the writings of men of widely divergent points of view to reach independent conclusions.

THE REPUBLIC OF PLATO. (Charles H. Kerr, Chicago.) The veteran professor of Greek at the University of Wisconsin, Alexander Kerr, has completed the labor of love on which he has been engaged for some twenty years, and his translation of Plato's "Utopia" is, with double appropriateness, brought out in a single volume by his son, a socialist publisher.

SUCCESS THRU THOUGHT, by Benjamin Johnson. (Jamieson Pub. Co., Chicago.) Ways of developing and perceiving the beauties of constructive thought.

THE NEW AMERICA, by Frank Dilnot. (Macmillan Co.) American temperament, viewpoint and customs sketched in entertaining fashion and with a deft touch, letting us see ourselves as our British cousins see us.

PAX ECONOMICA. (International Free Trade League of Boston.) A new edition of the eloquent plea of the Belgian free trader, Henri Lambert.

WHY WE FOUGHT, by Captain Thomas G. Chamberlain, U. S. A. Foreword by William H. Taft (Macmillan Company). A collection of admirable essays and reprinted speeches favoring the Covenant of the League of Nations. Captain Chamberlain was one of those who fought in France for a lasting peace and he speaks with earnestness and conviction when he demands that the statesmen finish the job our soldiers began.

CHRISTIAN INTERNATIONALISM, by William Pierson Merrill (Macmillan Co.). Stresses the importance of the individual behind any political organization from the city to a world federation of nations.

MODERN STUDENTS' LIBRARY (Charles Scribner's Sons). Three new volumes, Essays by Robert Louis Stevenson, edited by William Lyon Phelps; The Pilgrim's Progress, by John Bunyan, with an introduction by Samuel Mechord Crothers; An Essay on Comedy, by George Meredith, introduced and annotated by Lane Cooper, bring the series up to sixteen volumes.

WESTWARD HO! by Charles Kingsley, edited by Sterling Andrus Leonard and Bryce on *American Democracy*, edited by Maurice Garland Fulton (Macmillan Co.). New editions to the "Pocket Series." English texts for elementary and secondary schools. *American Democracy* contains selections from "The American Commonwealth" and "Hindrances to Good Citizenship."

THE EVE OF ELECTION, by John B. Howe (Macmillan Co.). Traces the political power of the vote and the development of the chief political parties from the framing of the Constitution to the present day.

THE GREATER PATRIOTISM, by John Lewis Griffiths (John Lane Co.). The addresses of the former American consul to Liverpool, reflecting his work in bringing about a better understanding between the United States and England.

THE CONSCIENTIOUS OBJECTOR, by Major Walter G. Kellogg, J. A., with an introduction by Hon. Newton D. Baker (Boni & Liveright). Detailed from the office of Judge Advocate General to the Board of Inquiry that deals with the conscientious objector, the author of this volume has succeeded in presenting a very thorough and interesting analysis of the objector as he has found him. He sums him up as narrow and fanatical, but almost never a coward or shirker.

THE CITIZEN AND THE REPUBLIC, by J. A. Woodburn and T. F. Moran. (Longmans, Green & Co.) Well planned and comprehensive textbook for use in civil government courses in secondary schools, with attention to community interests.

RUSSIA, FROM THE VARANGIANS TO THE BOL-SHEVIKS, by R. Beazley, N. Forbes and G. A. Birkett. (Oxford University Press.) A compact and comprehensive history down to 1907 with a few pages of later events.

MEXICO FROM CORTES TO CARRANZA, by Louise S. Hasbrouck. (D. Appleton & Co.) Tells in popular form the general story of our stormy southern neighbor. Engagingly written and is welcome as a dependable reference book.

A POPULAR HISTORY OF FRANCE, by B. Van Vorst. (Frederick A. Stokes Co.) A brief summary of French history from the days of the Gauls and the Romans to the present time. Many interesting illustrations.

GREATER EUROPEAN GOVERNMENTS, by A. Lawrence Lowell. (Harvard Univ. Press.) Harvard's President tells how the governments of England, France, Italy, Germany and Austria-Hungary count Bryce. (Macmillan Co.) The author operates normally in time of peace.

DIRECT PRIMARIES, compiled by C. E. Fanning. (H. W. Wilson Co.) The fourth edition of this volume of the *Debaters' Handbook Series* contains criticisms of the subject by governors, and the legislation in the various states.

FROM ISOLATION TO LEADERSHIP, by John Holaday Latane. (Doubleday, Page & Co.) A most interesting discussion of the influence of the Monroe Doctrine on the diplomatic relations of the United States and the necessity for a modification of that doctrine.

THE NEW RATIONALISM, by Edward Gleason Spaulding. (Henry Holt & Co.) A new philosophical system worked out on the basis of comprehensive consideration and criticism of existing systems. An excellent introduction to philosophy for those who want the main outlines of the accepted systems.

THE REVOLUTION ABSOLUTE, by Charles Ferguson. (Dodd, Mead & Co.) A treatise advocating increased productive power by the social mobilization of all the forces engaged.

A LEAGUE OF NATIONS, compiled by Edith M. Phelps. (The Handbook Series, H. W. Wilson Co.) Articles for and against a league of nations, and a discussion of the difficulties that lie in the way of its realization.

SOCIAL PROCESS, by Charles Horton Cooley. (Scribner's.) A comprehensive and clear-cut textbook on social evolution. The author is professor of sociology in the University of Michigan.

Essays

THE VALLEY OF DEMOCRACY, by Meredith Nicholson. (Charles Scribner's Sons.) Pleasing but penetrating essays on the people of the Mississippi Valley, whose mind and actions are imbued with a spirit of "folksiness."

EMINENT VICTORIANS, by Lytton Strachey. (G. P. Putnam's Sons.) Sideights on the lives of noted men and women written with brilliant style, cynical wit and showing deep probings into character.

SUNSHINE AND AWEWARDNESS, by Strickland Gillilan. (Forbes & Co.) Strickland Gillilan's most popular lecture in book form. An opportunity for all to enjoy the wit and jollity of this great humorist.

AGENCIES OF BOOK COLLECTING, by A. Edward Newton. (Atlantic Monthly Press, Boston.) To be taken first at a gallop, then read with care, for use as reference, and later caught up for its charm. Filled with the lure of books, and well illustrated.

STUDIES AND LITERATURE, by Sir A. Quiller-Couch. (G. P. Putnam's Sons.) The work of England's greatest writers in every field of literature explained, with constructive backgrounds, in an engaging, sprightly manner.

New Poetry and Drama

FISHERMAN'S VERSE, by William Haynes and Joseph LeRoy Harrison. (Duffield & Co.) An anthology of selected verse on the sport of fishing, with an introduction by Henry Van Dyke.

VILLON'S POEMS, by Francois Villon. (The Modern Library, Boni & Liveright.) English translations of the ballads of the picturesque vagabond poet of France in the fifteenth century, with an intimate biographical introduction.

VIGNETTES OF ITALY (Oliver Ditson Co.). Charming lyrical songs for a high voice. The words are Sara Teasdale's love poems; the music is by Wintter Watts.

PASTOURELLES OF THE XV CENTURY. (Oliver Ditson Co.). Yvette Guilbert's songs of old France, harmonized by Maurice Eisner, with words in both English and French.

MARMION, by Sir Walter Scott, edited by Zelma E. Clark. (C. E. Merrill Co.). The newest addition to the "Merrill English Texts," with an explanation of the poem, and a brief biography of Scott.

A BOOK OF THE SEA, compiled by Lady Sybil Scott. (Oxford University Press). A discriminating anthology of sea poems chronologically arranged from the "Odyssey of Homer" to "Sea Fever" by John Masefield. Conforms in style to other Oxford Books of Verse.

EN REPOS AND ELSEWHERE OVER THERE, by Lansing Warren and Robert A. Donaldson. (Houghton Mifflin Co.). Vivid pictures of the war in verse. No heroics, but the truth told finely and clearly, with the humor of youth to sauce it.

THE LITTLE YANKEE COLLEGE AND THE RANDOM RHYMES OF DEACON STEBBINS, by Burges Johnson. (Haight Co., Poughkeepsie, N. Y.) A New England deacon talks out his philosophy to the men of Amherst. Verse written in the style and with the common sense and wit of the Bigelow Papers.

PATRIOTIC PAGEANTS OF TODAY, by Josephine Thorp and Rosamund Kimball. (Henry Holt & Co.) An attractive collection of four pageants, suitable for acting by children. Charming, poetic, idealistic, and patriotic in the best sense. An invaluable book for parents and teachers.

THE MESSAGE OF THE TREES, by Maud Cuney Hare. (Cornhill Co.) An anthology of leaves and branches of both prose and poetry written by tree lovers in many lands and times.

JAPANESE PRINTS, by John Gould Fletcher. (Four Seas Co., Boston.) Exquisitely fashioned poem impressions, reminiscent of the art of old Japan. "A poet's moods. Fluttering butterflies in the rain."

PATRIOTIC DRAMA IN YOUR TOWN, by Constance D'Arcy Mackay. (Henry Holt & Co.) Practical suggestions for the use of drama in creating and guiding community spirit, especially as an aid to Americanization.

Biography

WALTER JAMES DODD, by John Macy. (Houghton, Mifflin Co.) A biographical sketch of the leading X-ray expert by an intimate friend. A simple story of courage and achievement.

"—and then with just a few weeks more of Sanatogen"

ON the road to health at last! And yet how impatient you are to be up and going. But it is now, when the system is trying to rebuild its store of energy, that you will be most grateful for the reconstructive help of Sanatogen.

Sanatogen, you must know, is a natural food- tonic, combining purest albumen with organic phosphorus—thus conveying to the wasted system the vital elements to build up blood and tissues—and it is so remarkably easy of digestion that the most delicate— young and old—can take it, with nothing but beneficial effects.

It reawakens the appetite, assists digestion, and as a physician in "The Practitioner," a leading medical journal, says, "It seems to possess a wonderful effect in increasing the nutritive value of other food material."

When we tell you that Sanatogen is used by the medical profession all over the world as an aid to convalescence and as an upbuilder of strength and vitality, that more than 21,000 physicians have written letters commending it, you will understand that our confidence in recommending it to you is firm and sincere.

Won't you give Sanatogen the opportunity to help bring back you—or someone that is near and dear to you—to health and strength?

Sanatogen is sold by good druggists everywhere, in sizes from \$1.20 up.

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. The Near West. By Edwin E. Slosson.

1. What is unusual in the wording of the title? Why should a writer avoid a commonplace title?
2. How does the author emphasize the importance of the Pacific?
3. Explain what principle of arrangement the author followed in writing the article.
4. What is the principal point presented in the article?
5. Point out and explain at least three figures of speech.
6. In what book does "Mr. Facing-Both-Ways" appear as a character? Give an outline of the contents of that book.
7. In the form of a short story in which you make use of explanation, description and conversation, tell the anecdote of how the British lost Oregon. Make your story a strong presentation of character.
8. What does the article tell you concerning the literature of the Far East?
9. Which of the books mentioned do you think would interest you most? Give reasons for your selection.
10. Does the article have unity? Prove that your answer is correct.
11. Does the article have coherence? Prove that your answer is correct.
12. What does the article show you concerning the use of quotations? Would it have been better to give more quotations or fewer quotations?

II. The New Books.

1. Explain every one of the following expressions: (a) A war romance; (b) An authoritative work; (c) In collaboration; (d) An historico-philosophical volume; (e) Stimulating style; (f) A scholarly study; (g) Admirable essays; (h) Comprehensive history; (i) Penetrating essays; (j) cynical wit; (k) A discriminating anthology of sea poems.
2. Tell something concerning "Utopia".
3. Tell something concerning the following authors: H. G. Wells, John Bunyan, Charles Kingsley, Sir Walter Scott, Francois Villon.
4. Select from the list of books ten that you think would be suitable to present as prizes for composition work in your school. Give reasons for your selection.

III. A Message from the British Nation to the American People. By Charles A. McCurdy.

1. Read aloud the first paragraph of the article.
2. Draw from the article a proposition for an example of written argument.
3. Write a brief on the proposition that you have named.
4. Give a talk in which you explain what has been accomplished by the British in conquered Turkish territory.
5. What part can the United States play in the redemption of Turkey? Give a talk in which you endeavor to make your hearers believe as you do.
6. Prove that the article is well introduced and well concluded. Why is it important for a writer to pay great attention to introduction and to conclusion?

IV. Too Many Bosses. By Marguerite Wilkinson.

1. Write an original short story in which you give an example of over-supervision of work.
2. Explain what type of person should supervise educational work.
3. Put into the form of an original short story any one of the anecdotes presented in the article.
4. Tell something concerning school conditions of the past as presented in such stories as "Nicholas Nickleby", "Great Expectations", "The Hoozier School-Master", "Will Carleton's Poems", or other books that you have read.
5. Tell something about school conditions of the present as presented in such books as Kipling's "Stalky & Co.", H. G. Wells' "Joan and Peter", Gollomb's "That Year at Lincoln High", and in other books about schools of today.

V. Contemporary Ancestors of Ours. By R. L. Garner.

1. Explain in what respects the title is effective.
2. Summarize the points by which the author endeavors to prove his thesis.
3. Without immediate reference to the article, retell orally any one of the anecdotes given in the article.
4. Write an original article in which you present evidence of intelligence that you have noticed in any animal.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The League of Nations—"The Navy's Future," "Compromise," "Dangerous Delays," "As the World Sees the Senate."

1. Recount briefly the history of the Senate's consideration of the peace terms.
2. Does the fact that the United States will be the last of the great nations to accept the treaty seem to you due to the organization of our Government?
3. "The way to compromise is to compromise." Sum up the plan that Mr. Holt suggests to bring together the opposing parties on the question of the League of Nations.
4. "We arm because we must, not because we want to." What effect will our membership in the League of Nations have upon our plans for armament? What would be the effect upon our armament of our refusal to join the League?

II. Industrial Conditions—"Straightening Out the Kinks in Industry," "Cutting Down Profits."

1. What is the present status of the controversy between the soft coal miners and the operators? Give the specifications of the Government plan that brought about a truce in the coal strike. Show why there is the possibility of another strike in the near future.
2. What specifically were the respective powers of Mr. Garfield and Mr. Palmer in regard to the coal strike? Under what provisions of our Government are these powers granted?
3. President Wilson has proclaimed that the railroads will be restored to private ownership on March 1, 1920. Give the date on which they were taken over by the Government and sketch briefly the history of their management since that time.
4. Present as fully as possible the arguments either for or against Government ownership that you deduce from our experiment in railroad control.
5. In the anti-strike clause of the Cummins bill on railroads, and in the statement by Governor Coolidge on the Boston police strike representatives of the Government have advised that strikes under certain circumstances should be illegal. Have any other governments established precedents for this stand?
6. Outline the plan proposed by the Industrial Conference for settling disputes between capital and labor.
7. What has been in general the Government's attitude toward the packers during the last four administrations?
8. Explain the economic reasons for the great increases in the cost of living during the last six years. Do you think prices will ever return to their pre-war level? Why? Is the parallel between similar conditions after the Civil War and at present a fallacious one?

III. Austria—"Starving Austria," "Children Are Never Enemies."

1. "Bismarck once called Austria 'a house of bad Slav bricks held together by good German mortar.'" Explain the historical significance of this comparison.
2. To what nations did the Treaty of Peace assign portions of the former Austrian empire? What material advantages did each gain?
3. "Over the border in Czecho-Slovakia food is comparatively abundant, but none of it is allowed to be exported into Austria." Why?
4. Explain why it is difficult, if not impossible, for a country of six million population to support a city of two million population.

IV. Germany—"The German People Drift."

1. What is the present trend of the German Government? Does it seem to you to adequately meet the demands of the people?
2. "In many respects the German of today has become more Latin than the Latin." What change in national characteristics does this denote?

V. Turkey—"To Undo a Century of Turkish Rule."

1. "For eight hundred years the Turk has proved himself, in the words of Gladstone, 'the one great anti-human specimen of humanity.'" Give as many historical instances as you can in support of this statement.
2. In what war were Great Britain and Turkey allies?

WHAT I THINK OF PELMANISM - By George Creel

PELMANISM is the biggest thing that has come to the United States in many a year. With a record of 400,000 successes in England, this famous course in mind training has been Americanized at last, and is now operated by Americans in America for American men and women. Pelmanism is neither an experiment nor a theory. For twenty years it has been teaching people how to think; how to use fully the powers of which they are conscious; how to discover and to train the powers of which they have been unconscious. Pelmanism is merely the science of thinking; the science of putting right thought into successful action; the science of that mental team play that is the one true source of efficiency, the one master key that opens all doors to advancement.

I heard first of Pelmanism during a recent visit in London. Its matter filled pages in every paper and magazine and wherever one went there was talk of Pelmanism. "Are you a Pelmanist?" was a common question.

It was T. P. O'Connor who satisfied my curiosity and gave me facts. By 1918 there were 400,000 Pelmanists, figuring in every walk and condition of life. Lords and ladies of high degree, clerks and cooks, members of Parliament, laborers, clergymen and actors, farmers, lawyers, doctors, coal miners, soldiers and sailors, even generals and admirals, were all Pelmanizing and heads of great business houses were actually enrolling their entire staffs in the interest of larger efficiency.

Not a Mere Memory System

THE famous General Sir F. Maurice, describing it as a "system of mind drill based on scientific principles," urged its adoption by the army. General Sir Robert Baden-Powell and Admiral Lord Beresford indorsed it. In France, Flanders and Italy over 100,000 soldiers of the empire were taking Pelmanism in order to fit themselves for return to civil life, and many members of the American Expeditionary Force were following this example.

Well-known writers like Jerome K. Jerome, Sir Arthur Quiller-Couch, Max Pemberton, the Baroness Orczy and E. F. Benson were writing columns in interpretation of Pelmanism. Great editors like Sir William Robertson Nicoll and educators such as Sir James Yoxall were going so far as to suggest its inclusion in the British educational system.

As a matter of fact, the thing had all the force and sweep of a religion. It went deep into life, far down beneath all surface emotions, and bedded its roots in the very centers of individual being. A growing enthusiasm led me to study the plan in detail, and it is out of the deepest conviction that I make these flat statements:

Pelmanism *can, and does,* develop and strengthen such qualities as will-power, concentration, ambition, self-reliance, judgment and memory.

Pelmanism *can, and does,* substitute "I will" for "I wish" by curing mind-wandering and wool-gathering.

It is, and I say it advisedly, an important and necessary addition to American education, for it takes fundamental truths out of the back water and brings them back into real life and every-day use.

Pelmanism to-day is the *one* known course in applied psychology, the *one* course that builds mind as a physical instructor builds muscle. There is nothing really new in it. All of its truths are as old as the hills. But it reduces these truths to practical use. It puts them into harness for the doing of the day's work.

It teaches how to develop *personality*, how to build *character*, how to strengthen *individuality*. Instead of training memory alone, or will-power alone, or reasoning

GEORGE CREEL

power alone, it recognizes the absolute interdependency of these powers and trains them *together*.

It is not, however, an educational machine for grinding out standardized brains, for it realizes that there are wide differences in the minds and problems of men. It develops *individual* mentality to its highest power.

There is nothing arduous about the course, and it offers no great difficulties, but it does require *application*. Pelmanism has got to be *worked at*.

There is no "magic" or "mystery" about it. It is not "learned in an evening." Brains are not evolved by miracles. Just as the arms stay weak, or grow flabby, when not used, so does an unexercised mind stay weak or grow flabby.

You can take a pill for a sluggish liver but all the patent medicines in the world can't help a sluggish mind. Pelmanism is not a "pill" system. It proceeds upon the scientific theory that there is no law in nature that condemns the human mind to permanent limitations. It develops the mental faculties by regular exercise, just as the athlete develops his muscles. It gives the mind a gymnasium to work in; it prescribes the work scientifically and skilled educators superintend the work. The "Little Gray Books" are intellectual dumbbells.

The Science of "Get There"

IT is the science of Get There—getting there quickly, surely, finely! Not for men alone, but for women as well. Women in commercial pursuits have the same problems to overcome as men. Women in the home are operating a business, a highly specialized, complex business, requiring every ounce of judgment, energy, self-reliance and quick decision that it is possible to develop.

I say deliberately, and with the deepest conviction, that Pelmanism *will* do what it promises to do. Followed honestly, it *will* give greater power of self-realization and self-expression in word, thought and action. It *will* stop wool-gathering and mind-wandering. It *will* develop mind, character, personality, giving ambition, energy, concentration and self-reliance.

There are too many men who are "old at forty"; too many people who complain about their "luck" when they fail; too many people without ambition or who have "lost their nerve"; too many "job cowards" living under the daily fear of being "fired."

Original thinking is almost a lost art. We look at games instead of playing them. The less the mental demand the more popular the play. There is music in restaurants because it is too much trouble to talk intelligently. Life is cut to pieces by deep ruts, with the people in them never

looking over the sides. Greater driving force and higher powers of concentration will add to the nation's assets.

There is nothing more true than that success and failure are next-door neighbors. The success of today may be the failure of tomorrow, and the inefficient can rise to efficiency when he *wills* it. No one can mark time in modern life, much less stand still. We go forward or drop back.

Increased Incomes

TALK of quick and large salary raises suggests quackery, but I saw bundles of letters telling how Pelmanism had increased earning capacities from 20 to 200 per cent. With my own ears I heard the testimony of employers to this effect. Why not? Increased efficiency is *worth* more money. Aroused ambition, heightened energies refuse to let a man rest content with "well enough." Business demands ever-increasing efficiency and employers are quick to recognize it and reward it.

But Pelmanism is bigger than that. There's more to it than the making of money. It makes for a richer and more wholesome and more interesting life.

Too many people are mentally *lopsided*, knowing just the one thing or taking interest in only one thing. Of all living creatures they are the most deadly. I have seen eminent scholars who were the dullest of talkers; successful business men who knew nothing of literature, art or music; people of achievement sitting tongue-tied in a crowd while some fool held the floor; masters of industry ignorant of every social value; workers whose lives were drab because they did not know how to put color in them, and I have heard men and women of real intelligence forced to rely on anecdotes to keep up a conversation.

The emphasis of Pelmanism is on a *complete* personality. It does away with lopsided developments. It *points the way to cultural values as well as to material success*. It opens the windows of the mind to the voices of the world; it puts the stored wealth of memory at the service of the tongue; it burns away stupid diffidences by developing self-realization and self-expression; it makes unnecessary the stereotyped in speech and thought and action.

GEORGE CREEL.

NOTE:—As Mr. Creel has pointed out, Pelmanism is neither an experiment nor a theory. It has stood the test of twenty years. Its students are in every country in the world. Its benefits are attested by hundreds of thousands of men and women in all walks and conditions of life.

Pelmanism is taught entirely by correspondence. There are twelve lessons—twelve "Little Gray Books." The course can be completed in three to twelve months, depending entirely upon the amount of time devoted to study. Half an hour daily will enable the student to finish in three months.

An ordinary school education is necessary, but of prime importance are sincerity of purpose and willingness to work.

How to Become a Pelmanist

"MIND AND MEMORY" is the name of the booklet which describes Pelmanism down to the last detail. It is fascinating in itself with its wealth of original thought and incisive observation. It has benefits of its own that will make the reader keep it. Every reader of this page should send for "Mind and Memory"—*Now*.

It is free. Use the coupon or a postcard and send for it now—**TO-DAY**.

Fortune Teller: "You will discover a buried treasure."

Mr. Henpeck (resignedly): "Yes, I know; it's my wife's first husband."

Remarkable Remarks

EMMA GOLDMAN—I am coming back.

PREMIER LLOYD GEORGE—Russia is a quicksand.

J. P. MORGAN—When is there going to be peace?

GABRIELE D'ANNUNZIO—I love the American people.

COL. GEORGE HARVEY—We advise Mr. Tumulty to resign.

THE SULTAN OF TURKEY—The Turks are an honest, gifted people.

CHARLES M. SCHWAB—I don't know what the League of Nations is.

MARY GARRET HAY—I don't think there are women fit to be president.

CHRISTOBEL PANKHURST—Votes for women means a new heaven and a new earth.

VICE PRESIDENT MARSHALL—It is a long time between now and next November.

HAVELOCK ELLIS—Genius and idiocy are more closely related than we usually imagine.

ED. HOWE—Of all our public officials I have often thought mayors represent the lowest grade.

PROHIBITIONIST CLARENCE T. WILSON—Mr. Gompers is not the uncrowned king of this country.

REV. NEWELL DWIGHT HILLIS—Education has suddenly become the biggest word in our national vocabulary.

FLORENZ ZIEGFELD, JR.—The present popular type of girl is of medium height, slender but not too slender.

DR. AUGUSTA RUCKER—Tight stockings, short-toed stockings and stockings with tight garters or pulley garters are no credit to civilization.

JOHN KENDRICK BANGS—Suppose Lloyd George and Clemenceau and Wilson had sat at the peace table in their night shirts a la Socrates.

CHANCELLOR DAY—The greatest issue is not the Covenant, but whether the Senate shall be permitted to do its work without the violent epithets that have been hurled at it.

E. T. MEREDITH—In the Hawaiian Islands as a result of incessant pursuit by the mongoose the rats have taken to the tree tops where they live an abnormal life like squirrels.

New Plays

Irene, a musical comedy with more comedy than most, for Edith Day is a real actress as well as singer and dancer. (Vanderbilt Theater.)

Buddies, by George V. Hobart. Delightful and wholesome light comedy of a squad of American soldiers on the way home from the war amid the pretty French girls of Brittany. Music by B. C. Hilliam. (Selwyn Theater.)

Caesar's Wife is by one of the best of British playwrights, W. S. Maugham, and the leading role is taken by one of the most charming of American actresses, Billy Burke. A well-knit drama set in modern Cairo. (Liberty Theater.)

Forbidden. By Dorothy Donnelly. A sentimentally pathetic piece of the A. E. F. in occupied Germany. A young American officer and his beloved German Countess sorrowfully part after she learns he killed her brother in battle. (Manhattan Opera House.)

The third season of the *Society of American Singers* finds it continuing its excellent repertory of operas in English at popular prices. This company compares favorably with the best companies of the smaller European capitals and is worthy of the patronage of all genuine music lovers. (Park Theater.)

The Capitol, which has just been opened at Broadway and 51st Street, is the largest and undoubtedly most impressive moving picture theater in the world. With its continuous performance from 12:30 to 5:30 p. m. and 6 to 11:15, it furnishes an entertainment second to none in the whole city.

John Drinkwater's much heralded play, *Abraham Lincoln*, the sensation of last year's London season, will not disappoint America. The six great pictures of Lincoln's character are portrayed with insight, fidelity to the truth and real dramatic power. A play to be unqualifiedly recommended. (Cort Theater.)

The Theatre Parisien has been established for the purpose of presenting typical French plays to American audiences. So far this season its bills have included *Main Gauche*, *Chonchette*, *La Musique Adoucit les Coeurs* and *Les Bleus de l'Amour*. Everything from the ushers' caps to the actresses' shoes is straight from Paris.

CHANDLER SIX

Famous For Its Marvelous Motor

Spring'll Be Here 'fore You Know It

DESPITE conditions which greatly held back the production of automobiles in 1919, nearly twenty thousand discriminating motor car buyers were made happy and content by the possession of new Chandler cars.

Chandler dealers will, we hope, be able to fill their orders much more quickly this year than last, but as the first warm days of Spring come, and the country roads call, and everyone decides he wants his new car at once, there will be some waiting again.

If you want your new Chandler when you want it, place your order now. If you want

to be sure of getting the car of your choice, the greatest of all Sixes beyond question, drop in and see your Chandler dealer now, regardless of what the weather may be. For "Spring'll be here 'fore you know it."

All Chandler bodies are mounted on the one standard Chandler chassis, which has made the name famous. Simple, sturdy and dependable throughout, its features embrace, as for years past, the really marvelous Chandler motor, solid cast aluminum motor base, annular ball bearings, silent chain drive for the auxiliary motor shafts, and Bosch magneto ignition.

SIX SPLENDID BODY TYPES

Seven-Passenger Touring Car, \$1895

Four-Passenger Roadster, \$1895

Four-Passenger Dispatch Car, \$1975

Seven-Passenger Sedan, \$2895

Four-Passenger Coupe, \$2795

Limousine, \$3395

(All prices f. o. b. Cleveland)

There are Chandler dealers in more than a thousand towns and cities

One of the big Texas oil fields where new wells are continually being drilled

The Oil Age—And Its Needs

By Franklin K. Lane

Secretary of the Interior

SEVEN years ago I presented to Congress a picture of the nation's need for the further discovery and production of petroleum, and asked that relief be given by the passage of a leasing law under which our public lands could be opened to development. We then had several million acres of probable oil land under withdrawal—tied up, closed, sealed, useless. That land is still closed, and to it has been added until now we have over six million acres of such withdrawn oil lands. But before these lines are read it is probable that after this seven-year campaign a leasing bill will have passed Congress under which these lands can be made available to the oil developer, the Government receiving a royalty, in oil if it wishes it.

We have, however, no such supply of oil within the United States, so far as we now know, as will meet our national needs. Within a few days Judge Payne of the United States Shipping Board has called directly to the attention of the President the dependence of the Ameri-

can merchant marine upon an oil supply which in sufficient quantity this country cannot furnish. We have come into a petroleum age. As a lubricant, oil has become of such universal use that it has been called the barometer of industry, and no doubt after it has ceased to be a popular illuminant or a source of power it will still be valuable as the thing which makes the wheels go round. Its greatest popularity now arises out of its use in the internal-combustion engine, and of the making of these there is no end. It draws railroad trains and drives street cars. It pumps water, lifts heavy loads, has taken the place of millions of horses and in twenty years has become a farming, industrial, business and social necessity. The naval and the merchant ships of this country and of England are fitted and being fitted to use it either under steam boilers as fuel or directly in the Diesel engine. The aeroplane has been made possible by it. It propels that modern juggernaut, the tank. In the air it has no rival, while on land and sea

it threatens the supremacy of its rivals whenever it appears. There has been no such magician since the day of Aladdin as this drop of mineral oil. Medicines and dyes and high explosives are distilled from it. No one knows whence it cometh or whither it goeth. Men search for it with the passion of the early Argonauts and the promise now is that nations will yet fight to gain the fitful bed in which it lies.

In Persia and in Palestine, in Java and in China, in southern Russia and in Rumania we know that petroleum is, for it has been found there. How great these fields or others in Europe, Asia or Africa may be no one would dare to say. As yet, however, the petroleum of the world has come from this hemisphere.

The "oil spring" which George Washington found in western Virginia and by his last will called to the especial consideration of his trustees was the promise of a continental well which last year yielded 356,000,000 barrels. Each year has seen the prophecy unfulfilled that the peak of the possible yield had been reached.

From the mountains of western Pennsylvania into the very ocean bed of the Pacific and even beyond and into the broken strata of upturned Alaska, the oil prospector bored with his sharp tooth of steel, and found oil. Hardly has one field fallen into a decline when another has come rushing into service. Only three years ago and all hopes were centered in Oklahoma and then came Kansas and then the turn went south again to Texas, and now it looks toward Louisiana. Geologists have estimated and estimated, and they do not differ widely, for few give more than thirty years of life to the petroleum sands of this country if the present yield is insisted upon. And yet, there is so much of mystery in the hiding of this strange subterranean liquid that honest men will not say but that it will become a permanent factor in the world of light, heat and power. If this is not so we are a fatuous people, for with every fifth man in the country the owner of an automobile and the expenditure of hundreds of millions of dollars

© Western Newspaper Union

Secretary Lane at his desk in Washington

for roads fit only for their use, and with ships by the hundred specially constructed to burn oil, we have surely given a large fortune in pledge of our faith that our pools of petroleum will not soon be drained dry, or that others elsewhere will come to our help.

In 1908 the country's production of oil was 178,500,000 barrels, and there was a surplus above consumption of more than 20,000,000 barrels available to go into storage. In 1918, ten years later, the oil wells of the United States yielded 356,000,000 barrels—nearly twice the yield in 1908—but to meet the demands of the increased consumption more than 24,000,000 barrels had to be drawn from

storage. The annual fuel oil consumption of the railroads alone has increased from 16 $\frac{2}{3}$ to 36 $\frac{3}{4}$ million barrels; the annual gasoline production from 540,000,000 gallons in 1909 to 3,500,000,000 gallons in 1918. This reference to the record of the past may be taken not only as justifying the earlier appeal for Federal action, but as warranting deliberate attention to the oil problem of today.

Fuel oil, gasoline, lubricating oil, for these three essentials are there no practical substitutes or other adequate sources? The obvious answer is in terms of cost; the real answer is in terms of man power. Whether on land or sea, fuel oil is preferred to coal because it requires fewer firemen, and back of that, in the man power required in its mining, preparation, and transportation the advantage on the side of oil is even greater. So, too, the substitute for gasoline in internal-combustion engines, whether alcohol or benzol, means higher cost and larger expenditure of labor in its production.

The large bodies of public land now withdrawn will in all likelihood make a further rich contribution to the American supply.

And beyond these in point of time lie the vast deposits of oil shale which by a comparatively cheap refining process can be made to yield vastly more oil than has yet been found in pools or [Continued on page 121

This "gusher" in Louisiana has been producing 20,000 barrels of oil a day for four years

A Message from the French Provinces to the United States

The Things We Have in Common By Marcel Knecht

Director of the Official Bureau of French Information and Chairman of the Executive Committee of the Federation of the French Alliance in the United States and Canada

THIS great war has killed not only the flower of our youth, but also many institutions, several prejudices and some artificial creations of the past centuries. Governments have become less strong, old fashioned officials have lost prestige, red tape manufacturing bureaus have become the aim of our jokes and of our sharp criticisms.

Two enormous forces have emerged from this chaos: the peoples themselves, at last disgusted with leaders of artificial minds, and, next to the peoples, their loud and powerful voice, the press. The peoples and the press of the world are now leading humanity toward a broader civilization. As they represent youth, they must be guided. As they have destroyed many palaces of the past, they must not lose sight of the sound basis on which our ancestors have raised and maintained the resting places of humanity.

Too many statesmen, philosophers and professors preach the union of peoples with glowing words, but without practical conclusions. The International Bolsheviks form the only group that has endeavored to create a more practical understanding between men of various races in peace time; a union, however, working toward hate and destruction instead of love and construction.

I admit that religious organizations, intellectual institutions, inter-parliamentary conventions have constituted a first step toward an improvement of our worldly conditions, but, unhappily, with principles which have never appealed to the majority of men. As soon as an intellectual wished to organize international relations, he thought it necessary to lean toward a weakening of his own national peculiarities and toward new vague and dull characteristics.

It is impossible to take away from us the qualities,

© Committee on Public Information.

A doughboy furnishing entertainment for a French family tho he knows even less French than they do English

defects, features, which have been bestowed upon us by nature, by our ancestors, by our soil, by our local environment.

We must not lose the ground: the stars are very far from us, and there is more human capital and common sense in the little church or the ancient city hall of the native village or town than in the gigantic dreams of certain writers and speakers.

Peoples have always a new youth: the press is constantly progressing and modernizing its life and action.

No educator would ever dare to impose his theories upon young boys without having carefully adapted his ways and means to the minds of his pupils.

The peoples have a sincere desire for peace: they will only keep it, if they win it. As Andre Tardieu said of the Treaty, so peace, also, must be won each day.

Nations hardly know each other: our leading statesmen, at the recent

Peace Conference, often felt that interpreters and translators were not sufficient to explain fully their intimate thoughts.

Scientific discoveries have greatly improved our material happiness and comfort: international trains and ships transport us from one end of the globe to the other; Britishers and Americans are at home in every hotel of Europe, but they pass through our countries without having reached our real life any more than did the English or Russian aristocrats who visited, in the last centuries, the famous watering places of France or of Austria.

We have no time to examine the problem in full, but let us take as an example the relations between France and the United States. It is true that the little children of America love Lafayette, and have heard of the immortal defense of Verdun: it is true that the little chil-

dren of France have heard of Washington, and will always remember their beloved elder brothers, your soldiers of 1917 and 1918.

You have many dead who sleep in the graveyards of the French front, and the Statue of Liberty recalls to you the deep affection of France.

Are these sentiments, these symbols sufficient to keep up active, regular, broader Franco-American relations?

Before this war the French and British Governments established a kind of insurance contract against the German danger under the name of "Entente Cordiale"; there was not in 1904, either in England or in France, a very deep feeling of sympathy between the peoples. Some individuals realized that treaties or moral engagements between Governments are less valuable than love and sincere understanding between peoples.

Delegations of French cities, official envoys of Paris, Nancy, Lyons, Bordeaux, Le Havre visited London, Manchester, Liverpool, Edinburgh; representatives of the peoples of Great Britain were cheered for the first time in Lorraine, land of Joan of Arc, their former enemy. The visits of the Sokols of Prag to Paris and to Nancy did more to maintain the love of Bohemia and the hope of Czechoslovakia than all the private discussions of our historians and literary diplomats.

Never have the provinces of France been greater, more influential, more splendid than in this war, and after the armistice.

The heaviest sacrifices of France have been borne by our provinces of Picardie, of Flanders, of Artois, of Champagne, of Lorraine. The peasants of France, who are the typical provincial leaders and are deeply attached to the traditions and customs of their Anjou, or their Province, have been the constituting body of our French Infantry, without which the glorious name of Poilu would not have existed.

Many of those peasants, who had never left their fields or their villages, have been fighting on many European battlefields, in close touch with soldiers of other races. It has been an extraordinary education for them: they had waited many years before adopting American machinery for modern agriculture. A soldier peasant of France, who has saved Verdun, with the help of American motor trucks, will be happy to use every form of machinery to win the modern battles of agriculture.

Our recent elections have proved the huge and healthy influence of our provinces, of liberated Alsace-Lorraine, on the political destinies of the French Republic.

America has contributed to win the war when each state understood the meaning of the war, organized its National Guard, created enthusiasm for all the work of the various war

associations and for the loans: every State proved once more that the strength of America was not either in New York or in Washington, or in Boston, but was the result of the composite forces of all your continent.

The Paris press has a powerful international and intellectual influence; it has not a political influence as great as that of the French Provincial newspapers.

Many of your leading newspapers, which are read and admired all over the country and even in Europe have not politically the leadership of several dailies of your Western, Middle Western and Eastern States.

French provinces and American States are the real basis for a practical understanding between our peoples: friendship between cities of the different countries of the world must be encouraged more and more, if we wish to help our Governments and our diplomacy. It is not an easy task at first because of the difference of languages, but it means so little compared to the millions of dead, who have fallen, because the older generations had not prepared closer relations between individuals.

Many States have barely heard of France, the boys of those same States have been fighting on the French soil. But those boys, under the hard discipline of the Army, and amid a ravaged and stricken France, have not always had the proper impression.

We must prepare fraternal relations between American States and French Provinces, between our cities, between our religious and social groups. The City of Pittsburgh, capital of steel, is expected to send a delegation of prominent citizens to Nancy, French capital of steel, and to the iron mines of Lorraine. The State of Wisconsin and the city of Milwaukee have organized a committee which will

present on the 14th of July next, a commemorative and artistic tablet to the City of Strasbourg, in remembrance of the Marseillaise. Holyoke, the charming city of Massachusetts, under the generous leadership of Miss Belle Skinner, has adopted the martyred city of Apremont, and Chicago is helping Reims to live again. In September, 1920, a delegation from the United States will visit the city of Metz, to which the Knights of Columbus will soon present the beautiful statue of Lafayette, masterpiece of the great American sculptor, Paul Bartlett.

This is the only way to bring little by little our peoples, our Allies and later all the nations of the world to a higher understanding of their human duties. But let us choose as the agents of this inspiring task, the national, racial and provincial organizations which might be made splendidly disposed toward this work if shown that it would not interfere with their attachment to their own race.

New York

© Underwood & Underwood

A replica of this statue of Lafayette in the Louvre is to be set up in the city of Metz to commemorate the increasing friendship between France and the United States. The statue was designed by Paul V. Bartlett and is presented by the Knights of Columbus

The Plant That Made the Pickle Famous

Including an Interview in Which Mr. Heinz Gives His Own Recipe for Success

By Edward Earle Purinton

EVERY great institution is but the evolution of a great idea. All fiction pales beside the *real* romance of business.

From a horse-radish root in a Pennsylvania garden has grown the largest food preserving plant in the world. Some person in the audience here proceeds to rise and remark, "How on earth can you get romance out of horse-radish?" You can get romance out of anything, provided you have first put romance into it.

Henry J. Heinz fifty years ago was a young man starting out in business for himself. Looking squarely at the future, he made a resolve: "I will do the common thing uncommonly well."

He did not fool or inflate himself with a proud notion that he was a genius and could therefore dodge toil and trouble. Nor did he vainly sigh for distant worlds to conquer, and grumble that he "never had a chance" in his home town. He merely saw possibilities where other young fellows drowsed along content with limitations.

The commonest, and nearest, thing to do was to dig, prepare and sell horse-radish. Henry's problem therefore was to do this work in a better way.

Discarding the green bottles that other packers used

to blind customers to the doubtful character of the ingredients, young Heinz put his brand of horse-radish in bottles crystal clear, to show better the purity of his product. He packed only the select roots; and he mixed no turnips therewith to swell his profits unduly. He would not allow a speck of dirt to lie in a bottle that bore his name.

From the start, demand was greater than supply. As other staple products were added to the output the business of Heinz grew so enormously that the owner could not move to larger quarters fast enough to accommodate the flood of orders! The young man figured there is always a discriminating clientele that will gladly pay for a quality product. He figured right.

All over this country thousands of little shops, factories, offices and stores are just petering along, satisfying and paying nobody, for the simple reason that the owners and workers have not put quality first. I would recommend, to the man who never made his business pay and does not know what is wrong with it, a protracted visit to the House of Heinz and a thorough investigation of the principles and methods which have gained for this enterprize world leadership. Henry J.

Heinz was born with a passion for *doing everything right*. Any man who makes this the ruling passion of his life will reach the top as inevitably as two and two make four.

Let us join a party of visitors and make a tour of the Heinz plant. The amusement columns of the Pittsburgh daily papers carry a bold announcement

Henry J. Heinz, founder of the famous 57 of the fact that the Heinz plant welcomes visitors, and a statement of how to reach it. Every year more than 50,000 people accept this invitation.

Why are these guests wanted? A cynic would remark, "Just to advertise the products of Heinz to themselves and the folks back home." But a cynic is a congenital sufferer with moral astigmatism, he never sees a thing straight. Five good results are accomplished by the regular opening of the plant to visitors.

The employees know they are likely to be watched any minute, so are always on their mettle. The foremen, supervisors and department heads keep the factory looking better and working better, from pride. The natives of Pittsburgh who have gone through the plant are henceforth believers in home products. The foreign visitors return to their communities with a real quality standard by which to judge whatever they purchase in cans or bottles. And the business men, both employers and employees, go back to their jobs with a new conception of the dignity, the art, the science of work.

If I owned a restaurant, a boarding house, a bakery, a candy shop, a dairy, a packing house, or any other food dispensary, I would first make everything so clean, wholesome and attractive that visitors would be charmed; then I would open the entire place to crowds of sightseers, and by modern publicity methods keep them always coming. For better business? No, primarily for better character. You can trust the man who wants to be watched.

Riding out from the heart of Pittsburgh to the Heinz plant, we suppose we are on the way to a food factory. But the first employee who greets us proves we were misinformed—the whole place is a laboratory of experimental psychology, where folks have learned how to think as well as how to work. Everybody wears a smile, active or passive. And it wasn't manufactured for the occasion. A good rule is never to trade with a business concern whose employees look sad, mad, surly, saucy, fatigued, or otherwise ill-tempered. Such people cannot do their best work.

However, the young lady who looked so pleasant got herself into trouble—she had to tell me the reason for the smile. Asked if she really liked her work, her job and her employer, she answered with a will, "I should

say I do! We are just a big family here, with as much freedom as we have at home. Our president is like a father to us all, interested in our success, eager to promote our welfare, and always ready to listen to our problems or suggestions. There is no strain or pressure on employees. There is no boss in the place. Good fellowship, enjoyment of work, and reliance on personal honor and resourcefulness are habits with us all. Those of us who have worked elsewhere know how much better the conditions, surroundings and associates are in the Heinz Company, and of course we are glad to be here!"

If the head of a business wants a testimonial, the person to get it from is an employee. Why? Because the customer is going to value a product as the employee values the man who made it. Mutual respect and consideration is the keynote of the Heinz establishment. Heinz products taste right partly because the packers of them feel right.

More mental science we observed in the choice and training of the guides who took us through the plant. They were of pleasing personality and ready wit, courteous, gracious, well dressed, well mannered. The majority of Heinz visitors are women and girls. Now a man hears what you say but a woman hears how you say it. Men don't care much about the personality of the clerk who shows them goods, but if he sells to women he must be a gentleman. A first impression is often the final argument with a woman patron. All business men whose customers include women should

The original Heinz plant was in the basement of this little house remember this, and scrutinize first impressions that are made by employees, products and surroundings.

The imposing structure called the Administration Building, of the early Renaissance type of architecture, looks like a modern city bank edifice. The first room you enter is a noble court that would grace the palace of a king. Marble columns rise to a cream-and-gold ceiling. A fountain brought from Rome plays in the center of the room. A flood of light from a glass roof pours down steadily upon each floor by means of a broad rotunda. Fine statuary gleams in every corner. The very atmosphere conveys a new sense of the utility of beauty and the beauty of utility.

Perhaps the most remarkable feature of the inner court is a magnificent stretch of mural paintings done by an artist of national repute. These twelve panels represent notable scenes in the growing, gathering and preserving of Heinz products. One of these panels shows the little two-story building where, fifty years ago, in the basement, the Heinz industries were started, with no capital or equipment but the hands, head and heart of Henry J. Heinz. The first year's output was so small that it was delivered in a wheelbarrow; whereas, this year, the number of packages will run into the millions. The whole garden space then available was three-fourths of an acre. Now there are twenty-six Heinz factories, with forty-five acres of floor space at the main

Tomatoes—a small part of one day's supply—to be cooked and canned the same day they are picked

plant, fifty-five branch offices and warehouses, seventy-one foreign agencies, 172 raw product receiving stations. Six thousand and six hundred regular employees are in the pay of the company; and the produce from 100,000 acres of land, with 100,000 people to harvest and prepare crops in season, is required in the preparation of the "57 Varieties."

But size means nothing compared with quality. Whoever knows values will be impressed not so much by the international scope of organization as by the international proof of demonstration. When you observe thirty-nine diplomas and certificates, and 147 medals, awarded the Heinz products by various world's fairs and expositions, you begin to have the real respect for this concern that is based on character alone.

The buildings are grouped cozily and conveniently around a hollow square, that gives light and air to every department. Even the factory houses, of Romanesque architecture, please the eye of the visitor. Beautiful window boxes graced with flowering plants ornament the buildings that face the open court. A roof garden, where the women and girl employees may rest, read or exercise, makes the summer time a happy time. Under the courtyard a reservoir holding about 100,000 gallons of water is kept for use in case of fire. Thus every bit of space, from below the cellar to above the roof, is occupied to advantage.

We enter now the time office, where factory workers register their comings and goings. A time clock is

generally supposed to be a herald of oppression, forcing men to be machines against their will. But the Heinz workers don't get "fired" for being late or absent—they get rewarded for being prompt and regular! This fact changes the time clock from an instrument of torture to an agency of hope.

When a clean world success had crowned his efforts, Mr. Heinz had the little house where he began his work moved on barges down the Allegheny River from its location at Sharpsburg, five miles distant. Then he gave it the place of honor next the regal Administration Building, where all could see the humble start of a globe-encircling industry.

A visitor, chatting with me as we stood looking at the little house, remarked, "If all the kickers against big employers of labor could see a factory like this, they would have to go home and criticize their own offices and kitchens. The fellows who are down on capital don't know what capital is doing for the working man." This was after we had observed the hygienic, social, recreational and other modern features maintained for the benefit of employees.

How can preserved foods be made and kept scientifically pure—and unscientifically palatable? Does the vastness of a business preclude fine attention to detail? What lessons of one kind or another may be learned to advantage by employers and employees from a study of an organization of the magnitude of Heinz's? To what extent have the leaders [Continued on page 116

Teachers' Rights

A Platform of Constructive Suggestions Made by Teachers from All Sections of the United States in Answer to the Question, "What's the Matter with the Teacher's Job?"

By Marguerite Wilkinson

"GIVE us not only a living wage, but also a living life!" That is the way one teacher answers our question as to what can be done. She is one voice speaking for thousands. A living wage and a livable life are the two things that teachers want most, and in asserting the want they are only showing that they are of one kind with the rest of us and thoroly human.

But the reforms that are necessary if life is to be made livable for teachers are numerous. A southern correspondent has sent us a list of reforms for which teachers in his city are working and, since it includes most of those desired by our correspondents in all parts of the country, we are quoting it entire:

"The things our teachers want are these:

"1. First of all, increased pay.

"2. A committee of teachers to sit with the Board on all questions. This, in order to present the viewpoint of the teacher, which differs from that of the Superintendent and often from that of the Principal. This plan is already in operation in England and Germany. (See School Service.)

"3. A fair, definite, known-to-all method of promotion which shall exclude favoritism, political pull, etc., and which shall be strictly adhered to.

"4. Abandonment of the practice of creating positions for certain people. Let the position be created first and then choose the most competent person to fill it.

"5. The teachers to have a voice in everything that pertains to teaching, such as the arrangement of rooms, equipment, choice of textbooks, etc.

"6. Permanent tenure of office, that is, as long as the teacher is qualified, instead of year-to-year election.

"7. A grievance committee, so that when accusation is made against a teacher, he may go before the Board and justify himself if possible, instead of being ejected for the Board's own reason."

In addition to these, other teachers have suggested the following reforms:

1. Better living conditions must be provided in small communities where it is hard to find board and room. Perhaps a teacherage should be built and equipped for the use of teachers at the expense of the community.

2. A larger measure of personal liberty outside of the class-room should be accorded to teachers as it is freely accorded all other self-respecting professional men and women at the present time. A teacher should be free to belong to the church and political party in which he or she believes and to attend such social gatherings as he or she enjoys, provided, of course, that the teacher lives the life of a respectable citizen.

3. Everything possible should be done to prevent misfits from getting into the teaching profession, to keep out of it those who expect to teach only for a few years until something better turns up, and those who teach

Adequate Pay
Administrative Equality
Promotion
Freedom from Favoritism
Authority
Permanent Position
Fair Play
Better Living Conditions
Personal Liberty

only because the profession is considered "genteel" and because they want "genteel" work and are unable or unwilling to meet the competition in other professions.

4. Everything possible should be done to attract to the profession those who are fitted for the work by nature and training and who desire to continue and grow in it. Incentives of every kind should be offered to make people take up the profession for life and to show those willing to do so some reasonable prospect of happiness and advancement in it.

It is trite to say that the first and most important thing to do is to pay better salaries and that if this were done the supply of good teachers might, some day, come near to being equal to the demand for their services. It is no idle jest that newspapers tell stories of how Professor Smith, Principal of the High School in Pumpkinville, has resigned his position and secured a job as janitor in the High School at Roseville. But one of our correspondents says that it is not enough simply to pay teachers much more, that the desired results can best be attained by grading salaries progressively, so that, like medicine or literature or the law, teaching will offer very little to the person who stays in it for a few years only, but much to the devoted teacher who stays in it for life. This correspondent's suggestions seem very practical. He says:

"Let a college graduate, who wants to become a teacher, be placed on an equal footing with a doctor or a lawyer, having a maximum of say \$50 a month the first year. If he makes good, let him have a 50 per cent increase next year. Similarly give him a substantial raise next year. After five years of successful work he should be able to earn not less than \$2,500 per year, and after ten years, \$3,500 and up."

As to ways and means of securing more money to pay teachers two suggestions have been made. One teacher says we must exorcise the High Tax Bugaboo.

"The very rich may be expected to object to a heavy school tax, but the average person who objects to an increase of a few dollars when it means improved school facilities affecting the entire life of the community is showing ridiculous short-sightedness. Yet all over the country, and all the time, the few score big property owners use the thousands of virtually non-tax-paying voters to pull their chestnuts out of the fire with the cry, 'Down with high taxes.' Whatever the schools really need, whether in high wages, better equipment, or more land, it should be given them. The vast majority have everything to gain, and but a pittance to lose thru increased taxation for schools. Protests should be regarded as disgraceful quite as much as the objections of the slacker in war time."

Another correspondent suggests that better management of funds now available would provide for an increase in salaries. [Continued on page 119]

Maeterlinck, the Robust Mystic

An Interview with the Belgian Poet Whose "Blue Bird" We Know as a Play, a Book, a "Movie" and Now—an Opera

By Montrose J. Moses

Author of "Maurice Maeterlinck: a Study"

THERE is perhaps no more important literary figure in the world today than Maurice Maeterlinck, the Belgian poet, dramatist, and philosopher. The French Academy brushed aside its traditional customs, and appointed him—a Belgian—to membership in that august body. The Nobel Commission awarded him the Prize for Literature. France, Germany, Italy, Russia, England have all paid tribute to him personally. But the United States has never had an opportunity until now to give him welcome in the name of Emerson, whose disciple he is.

Three times did Maurice Maeterlinck threaten to tear up his passports and to give up the idea of lecturing in America. There was no particular reason other than stage fright, and perhaps discouragement over the slow progress of his English lessons. For, while Maeterlinck reads English well, and is thoroly versed in the Elizabethan drama, he has never spoken English until now.

I had the privilege of carrying his case of manuscripts from the boat to the dock. During the time of waiting for the ship to be securely berthed, I stood by him, talking now and again, and studying the man, whose mysticism has always appealed to me because it showed a man with a poetic sense and a scientific knowledge of the subjects he handled. "There's the bee man," I heard someone near me whisper. Broad-shouldered, vigorous, gentle and gracious—that was my first impression. Over the average hight, with hands that are capable (and fists that are expert), one would single him out from the crowd, not as the poet of filmy, moody, irregularly metered verses such as formed his first volume, in the years when he left Ghent and hastened to Paris. One would scarcely believe him to be more interested in abstract qualities than in business; rather did he strike me as an honest director of some Board of Trade—ruddy faced, firm jawed, with a tread which intimates that he is fond of walking (many are the stories told of his tramps with his dogs). It is only when one reaches the eyes that one meets the mystic; not that they are veiled to what is going on (he pointed out many people on board ship and characterized their behavior during the journey); but there is a light thru their pale coloring of blue that comes from within, as tho some spirit were always burning. His head, too, reveals the thinker. Once upon a time, during the Parnassian days, when Mallarmé was the fetish, and De l'Isle Adams was the inspiration, the Maeterlinck, who wrote for magazines that bloomed and died in a night, had a drooping moustache, which goes appropriately with drooping verse. But now he is clean shaven, which gives full play to a sensitive mouth. On the whole, therefore, our famous visitor strikes me—sometimes as delightfully boyish (how otherwise could the author of "The Blue Bird" be?), and at other times, with his shock of grey hair rather regularly brushed across a prominent brow, as the sage that he is.

During the first week Maeterlinck was in America, New York went Blue Bird mad—all in honor of the visitor, but partly for the sake of the Queen of Belgium's Fund, which will share in the proceeds from all

performances of the opera given in America. At quarantine, Maeterlinck was handed a box of lead pencils; they were blue and his name was stamped upon them. The small wife, who stood by his side, was presented with an enameled blue bird in the shape of a pin. Alas and alack—and here Maeterlinck shrugged his shoulders over the tragedy—no Blue Bird cocktail in a prohibition country, where the Blue Bird for Happiness has

M. and Madame Maeterlinck watching the skyscrapers of Manhattan from the steamer just before it docked in New York

alighted. But there was a Blue Bird Ball, which the Maeterlincks attended, when they saw New York's social set in rich costumes to personate characters from the fairy play. "I go wherever I am taken," this philosopher of silence said to me, a few days after he had landed. "There is no time to think."

Now, before I come to my short talk with Maeterlinck for *The Independent*, it is worth while remarking something about his attitude toward music. For "The Blue Bird," as an opera, is the topic of the hour. I have it from someone who ought to know, that Maeterlinck is tone deaf; that it is difficult for him to distinguish one piece from another.

"An amusing incident occurred in Nice," I was told. "The Master had been working among his bees, and came suddenly from the open into the music room, where a piece by Debussy was being played. 'Oh, stop that jazz noise,' exclaimed Maeterlinck, putting his hands to his ears." Maeterlinck is in the good company of Tenyson, the most musical of poets, who had no ear. But strange to say, many of the plays written by the Belgian dramatist have been excellently adapted to the musical form, and have been put into opera repertoires—plays like "Pelléas and Mélisande," "Ariane and Barbe-Bleue," "Monna Vanna," and now "The Blue Bird." With some of the composers, Maeterlinck has had difficulty; we remember how strongly he objected to Debussy's cutting of the text of "Pelléas and Mélisande." No wonder, therefore, that Albert Wolff, upon his own confession, would not touch "The Blue Bird" until Maeterlinck had arranged the scenes himself, and snipped the dialog to suit the exigencies of musical composition.

I called on Maeterlinck under quiet circumstances. He was able to smoke his pipe, to wear his leather slippers, to be the gracious host. When one considers that he is talking for publication the greater part of the day, it is enough to show why our conversation lighted here and there, without much time for consecutive following to a conclusive end. I think, from assiduous reading, one can get to know the main lines of Maeterlinck's development. You only have to read his so-called "marionette" dramas, with their half-articulate words and their pale, undertoned heroes and heroines, and then to pass to "Aglavaine and Sélysette" and "Monna Vanna" to understand that his attitude toward the theater has changed decidedly in theory. Whatever he has written on the theater in his essays indicates that theory is one thing and practise another, and that he now understands the difference. "With the shifting of artistic interest from naturalism to realism, from romance to social reflection, from verse to prose, back to a longing for verse again, what is your latest attitude toward the modern drama?" His answer was truly the Maeterlinck of later years: "I have no longer any attitude. I am ready to look into all the possibilities one is able to find. I have no theories. As one grows older one

believes less in theories." Some of us may be disappointed at this quiescent attitude toward the stage to which he has contributed so much that is psychologically valuable. Read "The Blind" and "The Intruder" and you will find a handling of unseen forces which need no externalizing in order to be felt. He once declared that the truest drama was not Desdemona strangled by Othello, but an old man seated by a lighted lamp, silent and alone, while the forces of destiny played around him. When I recalled this to him, he replied: "That is still true, but there is not much variety in it. One could not keep up that silent drama all the time, and satisfy an audience. It would finally weary the spectator. The drama of today must rouse one."

We touched upon Emerson, whom he reads assiduously. I recall how Dr. Slosson, of *The Independent*, found Maeterlinck at his chateau of St. Wandrille, with his copy of Emerson's "Essays" well thumbed and full of marginal notes. "Your Emerson," Maeterlinck said to me with enthusiasm, "is a very great spirit, one of the greatest masters of humanity; but there is a Puritan side to him which from time to time throws a shadow over this great man—certain binding limitations to his thought which are probably due to his Puritan education. He has been an inspiration to me right thru my development."

Maeterlinck's lectures deal with the Unknown Shore, for which he has

prepared us in his book, "Our Eternity," and in some of his later essays. He was emphatic to the reporters at the dock about his not being identified with spiritualism. "I am more interested in the survival of the soul's personality," he declares, every time he is approached. "Hypnotism has given me many evidences that there is a consciousness greater than our living consciousness, dependent on our removal from the distracting forces of life. Death, I am beginning to surmise, will let loose this unused store of memory, and by it our ego will persist."

I mentioned the fact that we were all striving to pierce the veil of mystery, and were talking in terms of infinity; I suggested that probably we would arrive at a point in our philosophic reflections when the human intelligence could go no further. "Our intelligence, such as it is," he replied, "is not capable of conceiving the infinite. We cannot conceive of infinite space or infinite time. I do not believe that, with the limitations of our brain, and of our earthly selves, we will ever be able to feel or to realize reality. Besides, the question of time and space, from the human point of view, is unsolvable; it probably does not exist in reality, but is for us only one of the many diseases of our brain."

We got on the subject of Ibsen's play, "Emperor and Galilean." You will recall that in this, one of Ibsen's greatest dramas, and likely to be among those few pieces which, in the future, [Continued on page 118

The Story of the Week

Raids on the Reds

THE Government of the United States has smashed its declared enemy the Communist Party as an insect might be smashed by the hammer of Thor. Perhaps never before in American history have such wholesale arrests and deportations been carried out by the Department of Justice. The "Buford," on which were deported some 300 revolutionary leaders, will be but the pioneer ship of an argosy destined for some port in Russia. In a single day's raids more than two thousand persons were held for examination and eventual deportation if found to be advocates of revolution in this country.

Arrests were made in practically every industrial center of the country under the direction of Attorney General Palmer and Superintendent Flynn of the Bureau of Investigation. Nearly all of the persons arrested in the raids were aliens; most of them being either Jews from Russia or Slavs from various parts of eastern Europe. The raids covered also revolutionary newspapers, such as the *Novy Mir*, and the headquarters of the Communist organizations. Propagandist literature, party membership records, red flags and other insignia, photographs of Russian leaders and other properties were seized as evidence for further prosecutions.

The alien revolutionists are being deported under provisions of the immigration laws relating to persons advocating the use of violence against the Government of the United States. Membership in either the Communist or Communist Labor Parties is considered, by the majority of prosecuting officers, as fully meeting the requirements of the law. These two parties are closely similar in doctrine and methods. They claim affiliation with the "Third International" at Moscow, which is a federation of the Socialist parties of various countries advocating immediate seizure of political power by the proletariat. These parties ought to be carefully distinguished from the "official" Socialist parties of western Europe and the United States, which advocate constitutional methods of attaining socialism and are therefore not under the ban of the law. The Communist and Communist Labor parties, however, have but recently broken away from official socialism and hold to the economic doctrines of Marx altho favoring the aggressive political policy of the Bolsheviks.

While the federal prosecutions are primarily directed against aliens belonging to the two Communist parties, the dragnet of the raids has included many other shades of "red." This has been especially the case where state or municipal authorities have attempted to outrival the zeal of the federal prosecutors. The Industrial Workers of the World, tho concerned with labor struggles rather than with politics as such, have been brought into close association with the Communists because of their belief in "direct action" and their emphasis on the class struggle. There are also anarchists who would prefer the abolition of all government to the creation even of a proletarian Government; some of these are advocates of assassination and others preach the doctrine of non-resistance. There are orthodox Socialists, such as Congressman Berger, who have come into conflict with war legislation. Finally

there are many persons whose only sin is a fondness for bad company. All of these more or less revolutionary groups are popularly lumped together as "Bolshevist" altho only the Communists really fit the name.

To combat all these groups of revolutionary radicalism the work of repression has been supplemented by counter-propaganda. The Governor of New Jersey has summoned a conference of civic leaders to discuss ways and means of fighting radicalism. In New York an association of "United Americans" has been formed and national committeemen selected for forty-one states. The purpose of this organization is "to preserve the Constitution of the United States, with the representative form of Government and the right of individual possession which the Constitution provides; to stand firm for law and order; to foster among our people high standards of individual and corporate conduct, and to advance the prosperity and happiness of all the people of the United States." The movement has the backing of a number of captains of industry, such as Daniel Willard, president of the Baltimore and Ohio Railroad; H. H. Westinghouse; Allen Walker, of the Guarantee Trust Company; Otto Kahn; John Kirby, president of the National Lumbermen's Association; Milo Campbell, president of the National Milk Producers' Federation, and M. L. Requa, of the Sinclair Oil Co.

As a part of the movement against the I. W. W., Judge Webster of the Superior Court in Spokane, Washington, has made permanent a temporary injunction forbidding membership in the Industrial Workers

Moonshine in New York lacks the picturesqueness of the old Kentucky days, but this still hidden in a barn up in the Bronx broke the efficiency record as well as the law, until it was raided and eighteen barrels of real whiskey confiscated. City Detective Pickett got the first clue of the still when automobile after automobile stopped at the unfashionable address—and then drove on

of the World, the use of the funds or the carrying on of the activities of the organization, or the advocacy of its principles. The importance of the decision lies in the fact that the I. W. W. has numerous adherents among the lumbermen and miners of the Northwest.

Anti-Bolshevik Laws

CONGRESS was one with the Attorney General in his resolution for 1920 to rid the country of dangerous radicals, but there are many members who fear he may have overplayed his hand in the first week's raids.

The Attorney General has said, and a majority of Congress agrees, that strengthening the deportation and sedition laws is necessary to permit the Government to deal adequately with the Red menace. A revolution in the country against dragnet raids, such as followed the slacker raids during the war, might seriously endanger the success of this legislation in the two houses.

There is in Congress perhaps a score of men ready to fight against the enactment of any further "repressive legislation." Senator Johnson, for instance, believes that a winning presidential issue can be made in a fight for "free speech." Until the full results of the raids are known it will not be clear whether the Department of Justice has taken from or provided them with additional material for their fight.

Attorney General Palmer has indicated that the deportation of Communist party members rounded up by his agents will be delayed because of the vagaries of the existing deportation laws. The House passed a bill strengthening these statutes some weeks ago, but it has not yet received the attention of the Senate. It was dur-

ing the last session that Mr. Palmer first called attention to the fact that his department was unable to proceed properly against native-born seditionists because of the lack of a statutory definition of sedition. He renewed his pressure for additional legislation when Congress reconvened after the holiday recess, expressing "the very earnest hope that Congress will enact into law a measure adequate to meet the grave situation now confronting us."

The definition of sedition desired by the Attorney General is given in the first section of the bill he prepared:

"Whoever, *with intent* to levy war against the United States, or *to cause the change, overthrow, or destruction of the government or any of the laws* or authority thereof, or to cause the overthrow or destruction of all forms of law or organized government, or to oppose, prevent, hinder or delay the execution of any law of the United States or the free performance by the United States government or any one of its officers, agents or employees of its or his public duty, commits, or attempts or threatens to commit, any act of force against any person or any property or any act of terrorism, hate, revenge or injury against the person or property of any officer, agent or employee of the United States, shall be deemed guilty of sedition."

The italics give a clue to the objection that will be brought against the Palmer definition, but it will be seen that, before there can be a conviction for sedition, there must be an *act of violence* or an attempt or threat to commit such an act. The section is perhaps unfortunately worded.

The bill also provides punishment for "promoting sedition." In addition to others, the bill outlaws "all acts tending to incite sedition." Its opponents will object that the revelation of any flagrant injustice might tend to incite sedition as defined by the bill, altho this might be farthest from its purpose.

Other provisions are for the deportation of aliens and the withdrawal of citizenship from naturalized aliens convicted of sedition after they have served their sentences. Many other bills for these purposes have been introduced. The hoppers of the Senate and House run over with the new alien and sedition bills presented daily.

The Senate now has before it a bill by Senator Sterling, which probably will be made into an omnibus measure, as were the first and second espionage acts passed during the war. The bill is very like the Palmer measure except that it declares non-mailable all written or printed matter advocating or advising violence "as a means toward the accomplishment of economic, industrial or political changes." The alleged misuse of somewhat similar powers conferred upon Postmaster General Burleson during the war will provide one of the principal avenues of attack against the bill.

Republican leaders of the House have agreed to push for quick passage a comprehensive sedition measure drawn by Representative Graham, of Pennsylvania, which provides a death penalty for acts of treason or the killing of any innocent person in movements to overthrow the government or to prevent the government from carrying out its laws. Action is expected in the House long in advance of the Senate, for the lower body has the more decided views on the subject of sedition.

Victor Berger, Socialist congressman-elect from the Milwaukee district, who previously had been barred from the House because of his conviction under the espionage act, did not claim his seat, as had been expected, when Congress reconvened. The action of former Republican Leader Mann in announcing that he would oppose the summary expulsion of Berger that

Dr. Albert Einstein, the Berlin professor, whose new law of gravitation has been confirmed by British astronomers. The startling deductions from Einstein's "Theory of Relativity" have been already discussed at some length in *The Independent* of November 29, December 13, December 20 and December 27

had been planned, may cause some delay, but is not likely to cause the House to reverse its decision.

The Senate investigation of the status and activities of Russian envoys in this country may be extended to include an investigation of the raids conducted by the Department of Justice as a result of the sensational charges of Santeri Nuorteva, secretary of the Russian Soviet Bureau in New York.

"We have conclusive evidence," Nuorteva said in a formal statement, "that agents of the Department of Justice have actively participated in the organization of the Communist party of America and that those very planks in the program of the party, which now form the basis of the persecution of thousands of people, have been drafted and inserted into that program by such government agents. We also are prepared to show before the Senate committee that some other radical activities, the instigation of which has been charged to the Russians, in reality were managed and inspired by secret service agents. We can prove that the chief figures in certain celebrated bomb plots were agents of a similar nature. In other words, some officials have been establishing in America the sinister institution which is known in Europe as the system of 'agent provocateur.' We are ready to bring out all facts concerning this charge, the gravity of which I fully realize."

Senators have refused to accept the Nuorteva statement, but will give him an opportunity to submit any proofs he may have when he takes the stand before the investigating committee. Since Nuorteva and Martens, self-styled "Bolshevik Ambassador," have said they will not contest deportation proceedings, the committee hopes to learn during the inquiry the real extent of Bolshevik activities in the United States and to be able to judge just how much unrest is due to them.

Secretary of State Lansing, in submitting to Senator Lodge a mass of evidence for use in the investigation, said it "showed conclusively that the purpose of the Bolsheviks is to subvert the existing principles of government and society the world over, including the countries in which democratic institutions are established." The soviet envoys will be asked to state whether this, in fact, is their purpose.

It is recognized that in passing new sedition bills

Congress will be dealing with the effects rather than the causes of current unrest. If the situation is as grave as the activities of the Department of Justice indicate it is necessary to deal with effects first and causes afterward.

One of the principal causes of world unrest, but one which the Senate refuses to recognize, is the delay in reestablishing a state of peace. This fact has been repeatedly pointed out, but the treaty continues to lie in the Senate deadlocked and may remain so long after the proposed sedition bills have been enacted.

R. M. B., Washington

Alcohol Poison Cases

THE drinking of wood alcohol, misbranded whisky, during the festivities of Christmas week killed more than a hundred persons and resulted in blindness or other serious injury to many more. There were several centers for the distribution of the poison, but the heaviest death toll was in the Connecticut valley. Several arrests of suspected persons followed the alcoholic massacre. In the Catskills a "moonshiner" bearing the alias of "Russo the Red" has been taken into custody. In Massachusetts sixteen suspects have been charged with murder. In Brooklyn eighteen barrels of denatured alcohol, containing as much as ten per cent of wood alcohol, were discovered in a garage. An Internal Revenue agent estimated that this supply of alcohol could cause the death of 20,000 men if sold in the retail whisky trade. The police are investigating a number of deaths from wood alcohol which occurred in Passaic, New Jersey.

The public has now been warned by the authorities, by men of science, by the press and by the nature of the cases themselves that wood alcohol, especially when mixed with ordinary grain alcohol or doctored with flavoring materials, cannot be told from ordinary beverages without a chemical analysis. The only safe rule, even for the most hardened opponent of prohibition, is to taste no alcoholic drink which comes from an un-

How Uncle Sam Hunts Icebergs

After the "Titanic" disaster in 1914 the United States undertook, at the request of other governments, to patrol the danger zones of icebergs. Coast guard cutters locate the icebergs that may menace the transatlantic steamship lines and send out broadcast warnings of them by wireless

Uncomfortably close to a dangerous iceberg in the North Atlantic. Part of the patrol's job is to estimate the extent of the submerged portion, which is far greater of course than the visible part of the iceberg

The United States steamship "Androskoggin," one of the cutters on iceberg patrol, from the deck of which several of these photographs were taken

The crew of the "Androskoggin" on shore for drill. Land, even as bleak as this, is a relief after weeks of looking only for icebergs. At the right is a sailing vessel which was rescued from dangerous ice fields and is being towed to safety by the United States patrol boat

known source. The danger of poison and the revelation of what some distillers will do for profit are powerful weapons for the advocate of prohibition, but friends of the saloon urge that the real moral of the wood alcohol cases is that the outlawing of the liquor trade has forced confirmed drinkers to satisfy their thirst outside of the law and in the risk of death.

The fight against constitutional prohibition now centers in New Jersey. Not only is the constitutionality of the eighteenth amendment to be tested in the courts, but a bill has been proposed, nominally for the local enforcement of the amendment by "the concurrent power reserved to the State," which makes it lawful to buy and sell beers and wines with an alcoholic content of not more than 26 per cent on the ground that such beverages are not "intoxicating liquors" within the meaning of the constitution. According to the *New York Times* "multitudes of signatures" have been obtained for a resolution not only to oppose constitutional prohibition but "to vote against any candidate for political office, regardless of party affiliations, who favors its enforcement" when law. This, of course, is as lawless and anarchistic a declaration as any deported Bolshevik has been guilty of making, as it is an open challenge to every public servant to violate his oath of office by refusing to enforce the existing law.

So far as the Volstead enforcement law is concerned the Supreme Court has decided that Congress, under its war powers, had the right to prohibit the sale of liquor containing more than one-half of one per cent alcohol. The Court limited the scope of this restriction to the period since the passing of the Volstead Act last October; which means that brewers who sold "non-intoxicating" beverages containing more alcohol than this minimum during the period of war-time prohibition but prior to the enactment of the Volstead law are exempt from prosecution. The Volstead law was upheld by Chief Justice White and Justices McKenna, Holmes, Pitney and Brandeis; dissenting opinions were given by Justices Day, Van Devanter, Clarke and McReynolds. This decision does not directly affect the legal questions involved in the eighteenth amendment, as the basis of the decision was the special powers of Congress during a state of war.

A Census de Luxe

DURING the fortnight beginning January 2 the United States has been reckoning with its hosts. The work is conducted by a veritable army of enumerators, whose reports as compiled by the supervisors will be turned over to a force of 4000 clerks to reduce to statistical form. Besides ascertaining the population of states and cities, the Federal Census Bureau will obtain information as to age distribution, literacy, place of birth, ownership of homes and occupation.

To reassure foreigners, unfamiliar with the methods and purposes of the American census, the Government has made use of every avenue of publicity to make known that information given to the census enumerator is strictly confidential and cannot be used as a basis for individual taxation or for any other purpose injurious to the person giving the information. In addition to the census of persons the Bureau will collect data on the industrial and agricultural resources of the nation.

Under the provisions of the constitution a census has been taken every tenth year since the foundation of the Government. The results for the present year should prove particularly interesting, as the five years of world war greatly checked immigration and our own participation in the war "uprooted" many Americans from

Knott in Dallas News

No fuel shortage here

their former homes either to seek employment in the munitions factories of the great industrial centers or to find new homes after a year or two of service in the army. The census is being taken unusually early this year in order that the statistics, at least of population, may be available before summer.

How the Candidate Crop Comes On

THE close approach of Presidential primaries in certain states, such as South Dakota, has forced persons cherishing secret hopes for next November to stand up and be counted. By New Year's day General Leonard Wood, Senator Hiram Johnson of California, Governor Lowden of Illinois and Senator Miles Poindexter of Washington avowed their candidacy for Republican indorsement in the South Dakota primaries. The Democratic Convention in the State offered to support President Wilson "if he decides to become a candidate," and ex-Ambassador Gerard has filed his petition as an independent candidate for the Democratic nomination. Governor Coolidge of Massachusetts refused an offer of indorsement for the Vice-Presidential nomination by the South Dakota Republicans. It is believed that this refusal implies that he desires to enter the race for the Presidency.

Among Republicans General Wood seems to have a slight lead over his competitors. Governor Allen of Kansas, mentioned for President by William Allen White of the same State, has refused to be a candidate for any office but the Governorship and has announced that he favors General Wood for President. Mr. Frederic R. Coudert, a prominent Democrat, has left his party for the sake of helping the Wood campaign.

The ill-health of President Wilson makes it most improbable that he will seek a third term, even if the vindication of his work at Paris should be one of the issues of the campaign. But the uncertainty on this point has somewhat retarded the announcement of Democratic candidacies and there are fewer well-launched "booms" among the Democrats than among the Republicans. Several members of the cabinet are mentioned for No-

vember, especially Attorney General Palmer, now particularly prominent because of his prosecution of revolutionary agitators, Secretary of War Baker and Mr. McAdoo, former Secretary of the Treasury. It is not certain, however, that Mr. McAdoo is willing to enter the race this year. Petitions are being circulated in Michigan in behalf of William Jennings Bryan, three times the Democratic nominee. There appears to be considerable sentiment in both parties in favor of Mr. Hoover, former Food Administrator, but he has not declared himself and it is even uncertain to which party his preference inclines.

Attempts are being made to compel the candidates to take a definite stand on issues of the day. Senator Borah has written an open letter to Governor Lowden of Illinois requesting him to declare himself against the League of Nations; pointing out, with considerable truth, that "party platforms are not quite so important as the views and convictions of the successful candidate." Governor Lowden replied that his objections to the League of Nations Covenant "have been removed by the reservations adopted by the Senate" and that he favored ratification of the Treaty subject to these reservations. Senator Borah and other uncompromizing enemies of the Peace Treaty have announced their intention of sending similar questionnaires to other Republicans seeking nomination. President Nicholas Murray

THE REPUBLICAN CANDIDATE

A composite photograph of the ten men mentioned oftenest for the Republican nomination for 1920: Gen. Leonard Wood, Senator Borah, Senator Hiram Johnson, Governor Lowden of Illinois, Governor Coolidge of Massachusetts, Senator Knox, Senator Poindexter, Senator Cummins and William Howard Taft. Herbert Hoover, since he is definitely identified with neither party, is included in both the Republican photograph and the Democratic one on the opposite page. One description sums up the characteristics of this composite Republican face as "that of an energetic, efficient, aggressive, peremptory realist"

© Reid.

This photograph of the capitol at night has interest, for the bright light in the wing points

Butler of Columbia University, who is a candidate for Republican indorsement, has been asked to state his views on the question of enforcing prohibition and he has replied unequivocally that, whatever his view of the merits of a law, he would sustain its most rigorous enforcement so long as it remained on the statute books.

Closing up the Peace Conference

ALL the necessary ratifications of the Treaty of Versailles were ready two months ago and the League of Nations might have been established any time since, but the negotiations with Germany over minor matters have been prolonged, possibly not so much on account of the difficulty of agreement as in the hope that America might become one of the charter members of the League. The aid and advice of America were needed in the work of reconstruction, and, besides this, each of the Allies, as well as Germany, trusted that the United States, being comparatively disinterested and having no territorial ambitions in Europe, might act as a neutral arbitrator on the various commissions and check the aspirations of its rivals. But the distress of Europe due to the continuation of the state of war is so great as to admit of no further dilatoriness and January 10 has been set as the date for the exchange of ratifications and the formal declaration of peace.

Owing to this unanticipated delay in the ratification of the document that was signed at Versailles on June 28 some of its provisions have become inappropriate. It is stated in Article 5 of the Covenant that "The first meeting of the Assembly and the first meeting of the Council shall be summoned by the President of the United States of America." But the United States is not yet a member of the League! It is stated in Article 304 that the President of the Mixed Arbitral Tribunal, which is a sort of Supreme Court of the League to determine the interpretations of the treaty, shall be chosen by M. Gustave Ador in case the Council of the League fails to agree. But M. Gustave Ador, then President of the Swiss Confederation, has since retired from office at the expiration of his term and is now a private individual! But probably the anomalous position of Mr. Wilson and Mr. Ador will not prevent them from acting in the capacity designated.

The treaty stipulates in Article 87 that a plebiscite or referendum of the inhabitants of Upper Silesia, to decide whether they shall be annexed to Poland or remain with Germany, shall be held within fifteen days

... historical significance as well as æsthetic
... Senate's midnight struggles with the treaty

from the coming into force of the treaty, and that this area, until its destination is determined, shall be under the authority of a commission of four men designated by the United States, France, Great Britain and Italy, and that troops of the Allied and Associated Powers shall occupy the disputed territory. The Supreme Council planned to send 20,000 troops into Silesia, 5000 from each of the four Powers. The German Government protested against such a large number as an unnecessary expense to be added to Germany's burdens, and asked that the force be reduced 25 per cent. Marshal Foch replied that the refusal of the United States to take part in the occupation would automatically cut down the force by the desired amount, but that Germany would have to continue to pay for the upkeep of American troops remaining on the Rhine.

The Fiume question is said to be in the way of settlement, but Italy is equally exercised over the disposition of Constantinople, especially since the arrival of the Bolsheviki on the Black Sea opens a prospect of renewing the important Italian trade with these ports. As a well informed Italian of the moderate party in touch with Premier Nitti, frankly put it:

Odessa, formerly the chief port for Italian shipping, was sealed thruout the war, and since the war the harbor is jammed with American and British shipping transporting ammunition supplies to General Denikin. As they already are in possession there is little doubt that one of these Powers will develop ultimately a claim to control Odessa and Italy will be left out in the cold.

As the time for the delivery of the Turkish treaty approaches the question of Constantinople becomes acute and is causing serious friction between France and England.

Using the Panama Canal

SECRETARY OF WAR BAKER, on returning to Washington recently after an inspection trip to Porto Rico and the Panama Canal, characterized the Canal as the greatest artificial thing ever made by man, and expressed the opinion that if world commerce should require another canal, the United States could build it thru Nicaragua, this government having acquired that right. He predicted that the commerce passing thru the Canal would continue to increase as it had done in the past. Mr. Baker said that up to the time of his visit, he had thought that the Canal was overmanned, that the construction forces there were too

large, and that the expense of maintenance was too high, but that he had changed his opinion as regards all this.

The usefulness of the Canal depends on things being certain, and this certainty—for example, the fact that a ship can pass thru the Canal any time of the day or night—stimulates commercial enterprise, such as the establishment of lines of steamers. The present route thru the Canal saves most of the ships from 5000 to 9000 miles, so that the net cargo time saved is incalculable.

The mechanical arrangements of the Canal are perfect, and the sanitation of the Canal Zone is one of the great triumphs of modern ingenuity and science.

America is building the most formidable air fort in the world to protect the Panama Canal. Recently 276 aeroplanes were shipped to the Isthmus to increase its air forces. The station known as French Field is located on the Atlantic side of the Canal. The situation is ideal for both naval and military machines which make up the defensive forces. The Canal is very vulnerable. An enemy could approach, launch its seaplanes and drop bombs, any one of which might put the locks out of commission. Many of the most skillful flyers in America are stationed at the Canal and the defensive air fleet will be powerful enough to repel any possible attack.

THE DEMOCRATIC CANDIDATE

A composite photograph of ten men prominently mentioned for the Democratic Presidential nomination: Secretary Daniels, Secretary Baker, Vice-President Marshall, Speaker Champ Clark, Senator Underwood, Senator Cox, Senator John W. Davis, William C. McAdoo and William Jennings Bryan. Herbert Hoover, because his politics are undeclared, is included in both this photograph and the Republican one on the opposite page. It is interesting to contrast the characteristics that come out in the two photographs. The Democratic face has been described as "that of a philosophic, serene, kindly, judicial intellectual."

The Waziri War

A minor war of unusual troublesomeness and persistence is occupying the British on the northwest frontier of India. The Waziris have always been notorious as among the boldest thieves and murderers of all the border tribes. Between 1852 and 1902 eight British expeditions were sent against them, and now for the last seven months they have been holding out against a larger and better armed force than has ever been brought to the border before. It is only the Mahsud branch of the Waziri tribe who are in revolt and their fighting strength is estimated at 10,500 to 14,000 fighting men, only partly supplied with rifles. On the other hand, the British force of Indian troops includes seven brigades of infantry, five cavalry regiments and three mountain batteries, which, with followers, number about 50,000. Most reliance, however, was placed upon the four squadrons of British airmen, who, it was expected, would overawe the superstitious tribesmen and speedily reduce them to submission. In this rocky mountainous region, cut by ravines and covered with scrub, the native who knew the paths and was accustomed to feudal fighting was often more than a match for the military trained in the conventional methods of massed maneuvers. But the airman, soaring above the woods and hills, can take a birdseye view of the whole, and he, while out of reach of harm, can drop high explosives on the native fastnesses. In fact, it was hoped, a year ago, that the difficult and dangerous task of guarding the frontier might mostly be taken over by this new arm of the service.

So last November, when 250 of the Mahsud headmen were summoned to a Jirgah or conference, Bristol fighting planes kept circling overhead during the ceremony in order to show the tribesmen what fate awaited them if they refused the terms imposed by the British ultimatum. General Climo, who has charge of the campaign, attended the Jirgah in state and every effort was made to impress the natives with the power and splendor of the British Raj.

But the Mahsud chiefs were insolent and defiant and the twenty-four hour ultimatum period was allowed to lapse without the delivery of the arms demanded by the British. So at the appointed time seventeen airplanes, carrying four tons of high explosives, left the British camp for the hills. Descending to 300 feet the aviators dropped their bombs on the Waziri villages and reduced them to heaps of dust. This punishment was repeated at intervals during the following month, but, instead of frightening the Waziris into submission, seems to have had the opposite effect, for they grew bolder and carried their raids almost to the Indus River. On December 19 the Waziris charged Sand Bag Hill, a strategic point essential to the safety of the British columns, and, after a fight of several hours, drove the British out with heavy casualties. The British recovered the position on the following day.

This is only one of several incidents which have severely shaken the prestige of the British on the fron-

tier. In another of the border raids the British lost a battery of mountain guns, the only case in history where the tribesmen have captured artillery. When General Eustace with 2000 men from Kohat marched against the Afridi he found himself surrounded at the border town of Thal by an Afghan force ten times his own and using guns that outranged his. The British force was kept invested, living on half rations and heavily bombarded for a week, before the siege was relieved. The *London Times* calls this "perhaps the most discreditable episode which has happened on the Indian frontier for the last fifty years."

These border troubles started last May with an invasion of India by the Afghans thru the Khyber and other passes. The invasion was checked, but several months of inconclusive fighting resulted in an inconclusive peace which left the Afghans still on the British side of the boundary and released them from the obligation of carrying on negotiations with foreign powers exclusively thru the British Government. And still, eight months after the Afghans crossed the border, there is an Afghan force in the city of Wana

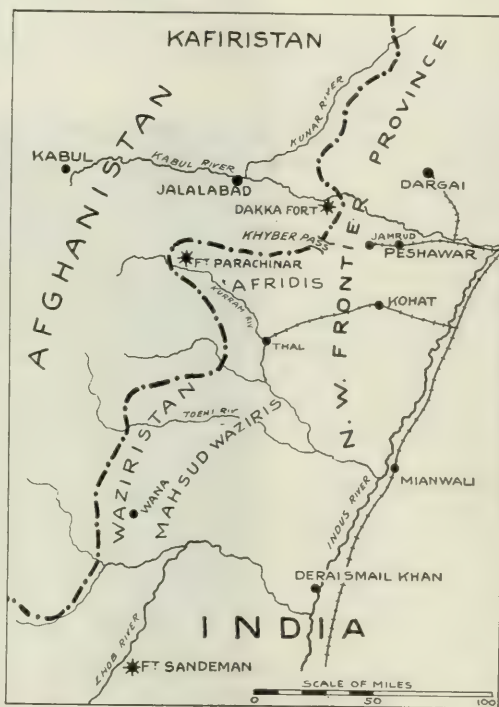

in Waziristan. On the opposite side of Afghanistan the Afghans have occupied the Merv oasis, which was long the bone of contention between the British and Russians. This brings them into direct contact with the Bolsheviki, who, by the collapse of the Kolchak front, have regained Turkestan. An Afghan ambassador has visited Moscow and the Soviet Government is said to be providing the Amir with the subsidies which the British have withdrawn.

The Collapse of Anti-Soviet Campaigns

THE Bolsheviki have made four great gains, two in war and one in peace. They have inflicted crushing defeats upon Denikin, Yudenitch and Kolchak and they have concluded an armistice with Esthonia. The last may prove to be the most important of the three, for altho Esthonia is a new-born nation, not yet strong enough to stand alone, it is the first to come to terms with Soviet Russia. And since all other

governments except the Soviet have so far refused to recognize the independence of Esthonia, gratitude and self interest will draw Esthonia closer to Soviet Russia and alienate her from the Allies. It was in fact in direct defiance of the Allies that Esthonia entered upon peace negotiations with the Soviet. According to rumor the Allies threatened to include Esthonia in their blockade of Soviet Russia if peace was made.

The Esthonians are said to have driven a hard bargain at the Dorpat conference, for they were able to get their own terms owing to the anxiety of the Bolsheviki to stop the war on this front and to secure an outlet to the sea. Joffé, the head of the Soviet delegation at the Dorpat conference, went farther than his instructions authorized in making concessions to the Esthonians. They secured not only the extreme frontiers they claimed but also that a neutral zone some seven miles wide be established on the eastern side of the

A NEW WAR ON AN OLD BATTLEFIELD
The Afghans and Waziris of the northwestern frontier of India are causing the British much trouble as they attack at strategic points

The Wayfarer

An impressive spectacle in which drama, opera and pageantry are combined to present the spiritual message of Christianity triumphant. "The Wayfarer" was first produced in Columbus, Ohio, for the Centenary Celebration of the Methodist Church and it has just been presented by the Inter-church World Movement on an even larger scale in New York, with a cast, including the choir, of over 2500 persons. The part of The Wayfarer, taken by Walter Hampden (center), symbolizes the average man torn between faith and doubt. At first he is oppressed by his fear of Christianity's failure in the war; then Understanding comes to him and shows him how, thru all the ages, faith in God has triumphed over mankind's darkest trials

Incidental to the production of "The Wayfarer" there has been wide discussion of the Methodist Church "amusement ban," still in force in the Methodist Book of Discipline, a paragraph of which directs the trial of a church member thus: "In cases of neglect of duties of any kind; imprudent conduct; indulging sinful tempers or words; dancing; playing at games of chance; attending theaters, horse-races, circuses, dancing parties, or patronizing dancing schools, etc. . . . On the third offense let him be brought to trial, and if found guilty and there is no sign of real humiliation, he shall be expelled." A few critics have disapproved "The Wayfarer" as going contrary to this old ban, but most of the discussion aroused has questioned the advisability of keeping a rule that puts church members today in the dilemma of a choice between common sense and conscience

"By the waters of Babylon"—the Jews in captivity lamenting their lost altars. This episode from "The Wayfarer" points out that the promise of the Messiah came when the Jews were in deepest despair and had least reason to hope for deliverance

"In a Flanders village"—The opening scene symbolic of the cruelty and horror of world war—in which The Wayfarer finds cause for his discouragement over world events and his doubt of the potency of Christianity to set things right

boundary, which shall be kept free from occupation by either party for two years. The Bolsheviki withdrew their demand that Esthonia expel the troops of General Yudenitch and all other anti-Soviet forces before the armistice was signed. On the other hand the Esthonians promise that their territory shall never again be used as a base of operations against Soviet Russia. The Gulf of Finland which gives access to Petrograd and is bordered on the southern side by Esthonia is to be perpetually neutralized by international agreement. Obviously such an agreement between Esthonia and Soviet Russia alone is of no effect at present for Finland holds the northern shore of the Gulf and the British fleet controls its waters.

The Bolsheviki are evidently willing to make almost any political and territorial concessions in return for economic advantages. The signing of the armistice with Esthonia is expected to make a breach in the blockade and open an avenue for trade. Two American fur-buyers have been waiting in London for such an opportunity, each of them with \$2,000,000 to spend on the immense stock of furs that has been locked in Russia for several years. Litvinov, of the Soviet Foreign Office, who is negotiating at Copenhagen with the British commissioner O'Grady over the exchange of prisoners, makes the following appeal for peace:

Russia's re-entry into economic intercourse with the rest of the world is of equal importance to Russia herself as to the Allies. Great Britain and America have large economic interests in Russia which can be made more secure by the Soviet Government than any other *régime*. A Soviet Government will have no political ax to grind in international entanglements and will not allow itself to be drawn into any political alliances and combinations as long as the capitalist system continues in the rest of the world, and will, therefore, discriminate between countries only according to their economic strength and their ability to provide for Russian needs in machinery. It will have to look, therefore, chiefly to Great Britain and America.

But whether the Bolsheviki succeed in getting an out-

let to the Baltic or not their advance southward has brought them again to the Black Sea. The Soviet Foreign Minister, Tchitcherin, has called the attention of Italy to the opening of the Black Sea ports and asked for the resumption of commercial relations with Italy.

It is less than a month since Denikin was expressing full confidence in his ability to overthrow the Bolsheviki. But now his army is cut in two and the two halves are flying to right and left. Denikin who expected to be in Moscow in August has removed his headquarters from Russian soil to the shelter of a warship on the Sea of Azov.

The campaign started last June by General Denikin was the most formidable attack that Soviet Russia has had to face. The British warships in the Black Sea bombarded the coast towns and the British tanks plunged thru the Bolshevik lines. He was also provided by the British Government with 277 airplanes and 100 officers and 300 airmen from the Royal Air Force volunteered for his service. A Cossack force under General Mamoutov got in behind the Soviet front and ravaged the country to within 175 miles of Moscow. The Bolshevik leaders recognized their danger and prepared for flight.

But Denikin in Ukrainia made the same fatal mistake as Yudenitch in Esthonia. He ignored the desire of the border peoples for independence. The Ukrainians considered the Cossacks scarcely less cruel and lustful than the Bolsheviki. Consequently when the tide turned Denikin found few friends in the country he had conquered. The Red drive southward cut his army in two; one part retreating southwest toward Odessa and the other southeast toward the mouth of the Don. Much of the munitions and supplies provided by the British for Denikin's troops have fallen into the hands of the Soviet forces. They have also by this southward movement gained possession of the Ukraine, which contains most of the iron, coal and grain of Russia.

In Siberia, Admiral Kolchak, former Supreme Ruler of the All Russian Government of Omsk, has disap-

Keeping the Wheels Turning with DAYLO

A LOOSENED connection on the power switchboard, a blown out main fuse on the lighting board or a worn brush on a motor—all mean production delays.

Even in the darkness of a complete electrical breakdown Daylo enables repairs and adjustments to be made instantly. And its brilliant white light guards against the dangers of fumbling among live connections or bus-bars.

Everywhere in the shop, the storerooms and office—Daylo shortens delays, re-

duces costs and increases production. It points its all-revealing beam to the quickly needed tool; it locates trouble in machines; it finds the right package on the stock shelves—it answers the hurry call for the "first aid" of light in any dark corner.

Your overhead expense for a five minute shut-down will pay ten times the cost of a Daylo that would have reduced the delay to one minute. And Daylo prevents breakdowns by making machine inspections more thorough.

There's a Daylo to solve your difficulties—one of the many different styles of light that point the way to efficiency. All leading electrical, hardware, drug, sporting goods, and auto accessory jobbers and dealers stock Daylo. Or write us.

Fishing for suckers

peared and General Semenov (Semyonov) has succeeded to whatever power and authority remained to him. Kolchak's concessions to liberal sentiment came too late to save him. The zemstvos (provincial legislatures) declined to trust him. The Social Revolutionists rose in revolt and are said to have captured Irkutsk, the city to which Kolchak removed his government when driven from Omsk. Japan, who has had more troops in Siberia than all the other Powers combined, is now said to be sending more with intent to hold back the Bolsheviki at Lake Baikal. Semenov has been supported by the Japanese in his opposition to Kolchak.

The Hungarian Government which succeeded the Soviet is executing so many Communists that the Supreme Council at Paris has been obliged to call a halt and intervene on behalf of some of the more moderate members of Bela-kun's régime. According to Austrian Socialists the number of victims of the Soviet did not exceed 500, while more than three times that number have already been executed by the present Government.

The cashier of d'Annunzio's administration at Fiume has decamped with \$200,000 from the treasury.

On the night of January 3 three hundred armed Sinn Feiners attacked the police barracks at Carrigtohill in Cork. After handcuffing the police and carrying off the arms and ammunition one end of the building was blown up by bombs.

Paderewski, who had announced his intention to resign the premiership of Poland and return to the piano, has been induced to reconsider and remain in office.

Bulgarian republicans are trying to overthrow the monarchy. At a demonstration in Sofia they attempted to rush the palace but were held in check by the troops. In the ensuing fight more than a hundred persons were killed or wounded.

That all disputes over wages do not lead to strikes, but that there is much quiet but effective work being done all the time by the Department of Labor, is shown by the weekly reports of the Department. For example, for the week ending December 20, the Department reports that it settled eleven labor disputes affecting 5,000 laborers, while there were before it for adjustment 76 controversies not yet in the strike stage, and 26 strikes. And for the week ending December 27, it was reported that three adjust-

ments had been made and that only two new conflicts had come to the attention of the Department, the smallest number in years.

Such results show that the machinery is at hand for adjusting, it would seem, disputes of larger proportions, such as the steel and coal strikes, were advantage only taken of the opportunity. But at least the success of the Department in dealing with small strikes may be an augury of similar success in the future in adjusting bigger disputes.

During the year 1918 Spain has had four totally different governments. There have been ten political crises and forty-four changes in the cabinet.

On January 1 the last of the American Expeditionary Forces, 300 officers and men under Brigadier General Conner, left France for America. Brest, the American port, was closed on the same date.

The Australian Government has decided to deport all persons of German birth with the exception of about fifty.

On January 3 ten Mexican States were shaken by an earthquake centering in the neighborhood of the volcano of Orizaba, about 70 miles west of Vera Cruz. Mexico City felt the shock but sustained no serious injury. The greatest damage was done within the State of Vera Cruz, where scores of persons were killed and entire villages wrecked.

Canada seems to have got ahead of us in bringing the war officially to a conclusion, at least if prohibition is to be taken as an index of the continuation of hostilities and its absence is to be identified with peace. Wartime restrictions including those on drinking and betting on horse races ended officially in Canada on January 1. The Government proclaimed this official conclusion of the war in an order which reads:

Existence of war can no longer be urged as a reason for maintaining these extraordinary regulations as necessary or admissible for the security, defense, peace, order and welfare of Canada.

The armistice which concluded hostilities became effective November 11, 1918. The expeditionary force has been since withdrawn and demobilized, and the country generally is devoting its energies to reestablishment of the ordinary avocations of peace.

In these circumstances it is considered that the time has arrived when the emergency government legislation should cease to operate.

Canada is, however, not entirely free from wartime restrictions, for these are still maintained on coal and sugar, pulp and paper, treating with the enemy and censorship.

President Wilson has signed the McNary Act continuing the United States Sugar Equalization Board thru 1920. This measure authorizes him to buy in the Cuban sugar crop for the benefit of the United States. A statement from the White House, however, makes clear that the President will not exercise the powers conferred on him by this provision of the law. Two reasons are given: that Cuba no longer maintains a unified selling agency and that the American Government would therefore have to buy in an open, competitive market which might drive prices higher, and secondly that such large crops are expected from Cuba and from Hawaii, Porto Rico and parts of the United States that the level of prices is almost certain to fall in the near future.

Cuba ought to have plenty of sugar, and plenty of money with which to buy other things, according to reports of the Island's prosperity, which depends of course largely upon the production of sugar cane. The Island has a population of 2,500,000, and the sugar crop this year with the high prices prevailing, will, it is estimated, bring in nearly \$800,000,000. In contrast with this, we have the southern states with a population of 25,000,000 raising as their chief crop cotton worth \$2,000,000. In Cuba, therefore, more than one-third of this sum will be distributed among a population only one-tenth as large. Every dollar of this sum is paid into Cuba from other countries. It is as tho the entire world production of gold for two years were dumped

into Cuba as measured by the world's production of gold and the Cuban sugar crop.

Henry Ford has announced a plan for the distribution of a ten million dollar bonus among the 90,000 workmen of the Ford plant. The bonus is varied according to income and length of service.

Treasury and State Department officials call the rumor that Great Britain intends to borrow thirteen billion dollars from the United States an absurdity. The British Treasury confirms this, saying that Great Britain "will not borrow a single dollar from the United States for the purpose of loaning in Europe."

Dr. Copeland, Health Commissioner for New York City, reports the lowest death rate ever recorded since the Board of Health was organized. In 1919 it was 12.39 per thousand as compared with 16.71 in 1918 and 13.94 as the average for the years 1913-1917. This improvement was due to the decrease in infant mortality and in tuberculosis.

The Department of Labor reports that during the months of war the number of children gainfully employed showed a marked increase in many parts of the United States. The recorded violations of state child labor laws were increasingly numerous, especially after the Federal law had been declared unconstitutional.

President Miller of the F. W. Dodge Company estimates that building contracts amounting to \$2,800,000,000 will be awarded during 1920 in the northern states east of the Missouri for residential and industrial purposes. This estimate represents a marked increase over the figures for last year and indicates a revival of the construction industries after the war.

Never before have the farms of the United States harvested crops to so great a value as in the past year. The total estimate is \$14,092,740,000, exceeding the previous year by a billion and a half dollars, and the acreage was 359,124,473, two and a half million acres more than the year before.

By January 1 the Construction Division of the U. S. Shipping Board had delivered 6,000,000 tons of shipping within the year 1919—a record several times greater than that of any previous year in our history.

Gambling even in a private club is prohibited by a new German law under penalty of both fine and imprisonment.

Paderewski, the pianist, has resigned as premier of Poland and has been succeeded by Skilski with a coalition cabinet.

Dr. Giuseppe Motta has been elected President of the Swiss Confederation. He is a leader of the Catholic Conservative party from the Italian section and was President in 1915.

Perpetual Inventory

Goods on hand can be known every minute of the day, no guess work and no delay, if a perpetual inventory is kept in plain sight by a Kardex System.

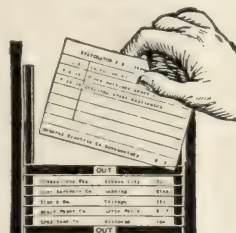

Then if there is urgent need for supplies, a quick glance at the Kardex tells the amount of material on hand. Every business that keeps materials in stock should find out how easy it is to convert their present system to

Kardex

CARDS IN SIGHT

Cards and holders can be removed or added, singly or in groups

No other system gives you as many advantages as Kardex. Steel cabinets—fifty cards or a million—Kardex holds every card in its own individual transoloid holder, protected from dust, dirt, or handling, yet with index item in plain sight.

Both sides of card are available without removal of card from holder. Transparent color guides, easily attached or removed, permit any desired classification. Cards and holders are removed or added quickly and easily, singly or in groups.

Any record cards in any business can be Kardexed—their efficiency increased, their cost of handling reduced. With Kardex one clerk does the work of four with old cards-in-boxes.

Kardex Service Means Prompt Deliveries

Free Kardex Book

An authority on cards-in-sight business systems. Find out how easily your card records can be changed over to Kardex, with resulting saving in clerk cost. Learn about exclusive features of Kardex. Enclose samples of your present cards, and tell how used.

This is the kind of road that the national and state legislatures are recommending

Spending Billions on Our Roads

By John R. Eustis

No wonder the mules balk at roads where the wagon is up to its axles in mud

IT seems the fate of these United States to run to extremes. Our war record is one example, in that we went from a state of almost total unpreparedness to the position of having one of the most completely equipped armies in the field. Our attitude toward highway improvement is another example. From an era of total neglect, nationally, of this important unit in the trinity of transportation—railways, waterways and highways—we have entered a period of tremendous expenditures and great activities in rebuilding and hard surfacing the important roadways of the nation.

The new order results largely from the national government's adopted policy of matching dollars with the various states; Federal Aid it is called. Over a quarter of a billion dollars was made available during this year from the Federal Treasury, and apportioned among the states. Each state can secure its apportionment by agreeing to add an equal amount and spend the entire sum on main highways. Under this stimulus state appropriations for highways have been doubled and tripled.

Prior to the year before last when this new governmental policy really became effective, the British Government was spending more money annually on the roads of the British Isles (which roughly have a mileage only ten per cent of that of the highways of the United States) than our government was expending on its own roads. Comparison with other European countries was even more disparaging to us. Today, or rather for the year 1919, there is being spent on highway construction and improvement in the United States, more money than has been utilized for the same purpose in any two or even three European countries during any similar period of time.

The amount of money being expended this year in the United States for highway improvement approximates a half billion dollars; the total for this year and next is likely to considerably more than double this impressive figure. Of the 1919 expenditure about \$125,000,000 is from the Federal Treasury, being allotted under the Federal Aid Act, and the balance appropriated by states and countries. Of course an effort has been made to coordinate this vast expenditure of public moneys, to have it devoted first to improving the main arteries of traffic and especially to completing needed systems, rather than to follow the customary practice in this country of "first improving the road by the commissioner's home." However, in the case of the national government there is no adequate arrangement to insure the needed coordination. The control is in the Bureau of Public Roads of the Department of Agriculture, but there is a bill pending before Congress which if en-

acted will provide a separate governmental department to take charge of the Federal Government's participation in highway improvement.

It is interesting to note the extent to which the various states are engaging in the great work of providing the United States with a comprehensive system of real highways. In the following table one column gives the amount of money each is spending in 1919 on its roads. The other column gives the mileage in each state of the system of main connecting arteries of travel:

	Dollars	Miles
Alabama	\$1,000,000	2,700
Arizona	6,250,000	1,600
Arkansas	4,297,398	3,000
California	20,000,000	3,000
Colorado	4,742,000	7,083
Connecticut	8,000,000	950

Picked By the Government Chosen By Big Business

*GMC ¾ to 1 Ton Truck, Through Reliability and
Endurance in War and Every-Day Commercial Use,
Wins First Place as High Grade All-Purpose Truck*

Since the very beginning of the motor truck industry the whole country has been looking for the all-around Truck.

Just as the ordinary, general-purpose wagon is the evolution into a standard design of many varying types, men have expected a standard all-purpose truck to some day be developed.

This long-expected product of experience in truck building and truck utility actually has arrived in the finished and proved design of Model 16, GMC ¾ to 1 Ton Truck.

Its makers, as happens in many a success, builded better than they knew. The ¾ ton GMC took hold and reached out away beyond even what its designers had set as its standard of utility.

When trouble broke out on the Mexican border it was put into strenuous ambulance service. When the United States joined the Allies in the World War the GMC ¾ Ton Model was put into active service both here and overseas with high credit.

When the War Department sought to classify the various motor trucks according to a

fixed number of standard models this GMC ¾ Ton Truck was picked as it stood for class AA in place of a design developed by Government engineers.

Again the GMC ¾ Ton Model had measured up to the need—it had done more, for its great margin of safety justified Government engineers in adopting it for both the ¾ ton and 1 ton classifications.

GMC Model 16 had speed and flexibility for the greatest range of action over roads of the most extreme character. It possessed the super-strength of chassis and developed motive power that enabled it to qualify in the one ton class.

The success of Model 16 is the outcome of a very definite principle—the principle that a truck will

yield in service only according to the quality in its construction.

GMC Trucks are made by the General Motors Truck Company, the exclusive truck making unit of the General Motors Corporation. Behind GMC Trucks, then, is the backing of the strongest and most important organization in the automotive industry.

What the Government Did

Adopted GMC Model 16 just as it stood; as the AA standard for all military purposes in both the ¾ ton and 1 ton classes. Its record can be told by any returned soldier.

What Big Business Is Doing

Selecting GMC Model 16 in larger and larger numbers for both ¾ ton and 1 ton requirements, in fleets and for single truck service, proving by experience the correctness of the Government's judgment.

Model 16 is only one of the GMC Family, every member of which has equally as good a record

The Thrift Week Diary

"My other piece of advice, Copperfield," said Mr. Micawber, "you know. Annual income twenty pounds, annual expenditure nineteen nineteen six, result happiness. Annual income twenty pounds, annual expenditure twenty pounds ought and six, result misery."

Saturday, January 17—National Thrift Day.

Benjamin Franklin celebrates his 214th birthday today. When we celebrate a great man's birthday it is only decent respect to do so in a way that would not displease him. Nobody would celebrate February 22 by telling lies. Nobody should celebrate January 17 by a visit to the paying teller's window at the bank.

Call on the receiving teller instead. It may be a long time since he has seen you. Call early and resolve to call often.

Money may be the root of all evil, but that is no reason for uprooting it all the while. Let your money lie in the bank. It will be working for you and bringing more money to keep it company. Birds of gold and silver plumage flock together from the eagle on the quarter to the eagle on the twenty-dollar gold piece.

Sunday, January 18—Share With Others Day.

It seems strange at first thought to insert a day for giving in a week consecrated to the importance of saving. But there is a reason; two reasons in fact.

If you do not save you cannot give. Do you go to the spendthrift when raising money for a good cause? The spendthrift may have a generous heart but his pocketbook is apt to be empty at the moment when giving counts for most. With a bank account to your credit you need never be embarrassed when called on to be generous. Be able to be benevolent.

The second reason for associating saving and giving is "to take the curse off" the practice of economy. Saving for saving's sake is miserly. Saving for your own needs in the future is sound common sense. Saving for the sake of human welfare is laying up treasures in Heaven.

Monday, January 19—National Life Insurance Day.

Are you a husband? If your wife outlives you will she face poverty?

Are you a father? Do you wish your death to cancel the chances of your children for education and a good start in life? Would you handicap them?

From the original painting in the possession of the Historical Society of Pennsylvania

"Make no expense but to do good to others or yourself."—Benjamin Franklin

Are you a soldier? Have you kept up your insurance after being demobilized? The Army gave you a good start on insurance; why give it up?

Even the bachelor without responsibilities may well take a look ahead and think what an endowment policy or an annuity may mean to him beyond the "dead line" of employment when age or ill health leaves him dependent on past earnings.

Tuesday, January 20—Own Your Own Home Day.

Of course, spend money now and then. That is what money is made for. But don't cheat yourself doing it. Buy some solid, lasting happiness so that even fifty years to come you will never regret the vanished dollars.

One investment in happiness that pays constant dividends is the buying of a home. Be your own landlord if possible.

Wednesday, January 21—Make a Will Day.

This somewhat unpleasant duty is often postponed like a visit to the den-

What Thrift Week Is

The United States Government, The American Bankers' Association, the United States League of Building and Loan Associations, The National Federation of Construction Industries, The National Association of Real Estate Boards, The National Association of Life Underwriters, The Canadian Life Underwriters' Association, The American Life Convention, The Retail Credit Men's National Association, The National Credit Men's Association (Wholesalers), The Retailers' Commercial Union, The Association of Life Agency Officers, The General Federation of Women's Clubs, are cooperating with the Young Men's Christian Association in promoting a National Thrift Week beginning January 17, 1920, for the purpose of teaching young men and boys to think straight about their money matters in the realms of earning, spending, saving, investing, and giving.

tist. Perhaps you haven't done it yet? Nothing like having such a duty "over with" and well forgotten, and your conscience will trouble you from time to time unless and until this little matter is attended to. Why not today?

The meaning of the will lies in the word. If you are indifferent as to the fate of your fortune you need not make a will. Some relative (or lawyer) will probably get it after others have taken the trouble to straighten out your estate. But if you have any *will* in the matter, if you *care*, you must make your will and do it now.

Another piece of real economy is to consult a *good* lawyer.

Thursday, January 22—Thrift in Industry Day.

Wealth can't be saved unless it is created; industry is the foundation of thrift. But thrift pays the debt by aiding industry. Take the thought to business with you today of being watchful for possible economies in connection with your occupation. Am I spending needlessly for equipment? Am I wasting money by not having the equipment which I need? Where can I save? What are the "leaks?" These are questions not only for the factory owner or merchant but for the farmer and housewife as well. Every occupation from poetry to pig raising has its possibilities of wise economy, which means simply thoughtfully directed expenditure.

Friday, January 23—Family Budget Day.

We all scold Congress and the President from time to time for not giving us a national budget. But budget making begins at home. If it is wise (as it most certainly is) for the Government to plan ahead the probable items of expense for the ensuing year it is equally wise for the little Republic of the Home to do the same.

Perhaps the family budget is even more essential than the national budget, for a thrifless Government can make ends meet by increasing taxes or borrowing money or inflating the currency. But the individual income is not so elastic. What you do not plan for in January you may have to do without in November. It is almost impossible to save unless you find out "where the money goes."

Take a look at the road before you start on the new year and plan your trip in advance.

Saturday, January 24—Pay Your Bills Promptly Day.

The advice to pay your bills promptly is good for any day. It seems almost insulting to label one day in the year in this fashion; just as "Go-to-Church Sunday" seems to imply that on fifty-one Sundays in the year one is playing golf! We will assume that as believers in the Golden Rule you pay your debts as promptly as you like them paid when you are creditor.

Even so, this day may be useful. Examine your accounts so carefully that you can say with certainty: "I owe no one anything save love, friendship and charity."

Food Up 85%

So statistics show at this writing, compared with pre-war cost. That's the average on common foods.

On this account, about 9 in 10 are underfed. So states a Chicago Board of Health authority.

That is, most men don't get what men must have—3,000 calories of nutriment per day. So the facts here stated are of paramount importance.

One Cent Per Dish

Buys the Supreme Food—Quaker Oats

Quaker Oats is prepared from the greatest food that grows.

It is almost a complete food—nearly the ideal food. In energy units it yields 1810 calories per pound, while round steak yields 890.

Yet Quaker Oats costs one cent per big dish. A whole dish costs you no more than a bite of meat.

Saves You 88%

Foods are compared by calories, the energy measure of food value. A man must have at least 3,000 calories per day, a boy at least 2,000.

At this writing, some necessary foods cost as follows on this basis:

Cost Per 1000 Calories

Quaker Oats	5½c
Average Meats	45c
Eggs about	70c
Average Fish	50c
Vegetables	11c to 75c

So Quaker Oats, per 1,000 calories, costs you 88 per cent less than meats, eggs and fish on the average.

Let Quaker Oats cut down your breakfast cost. Serve the costlier foods at dinner.

Quaker Oats

With That Matchless Flavor

When you buy oats get Quaker Oats for their exquisite flavor. They are flaked from queen grains only—just the rich, plump,

flavorful oats. We get but ten pounds from a bushel. Don't miss this extra flavor when it costs no extra price.

Master Workshops of America

(Continued from page 95)

in their own line found better, safer, quicker, cheaper, kinder ways of doing things? How was competition largely overcome and leadership attained?

Wanting answers to dozens of questions like these, I read the literature of the company; talked with the president and nine other officials, made a regular tour of the plant with a party of visitors, then a supplementary tour with a special guide and a stenographer to take notes; and finally made a study of the history of the organization by conferring with old-time helpers of the founder. Some of the main points of interest are condensed in the following paragraphs:

The company states, clearly and openly, the objects and ideals for which it stands. Among them: "To demand in all things purchased the best on the market; to supervise and raise personally as much as possible of the goods packed under the Heinz name; to discard everything in which the most rigid inspection detects the slightest flaw; to provide every known facility and equipment which can raise or maintain quality standards; to secure for every department and detail of the work the most capable and efficient men and women; to insure so far as possible the comfort, welfare and happiness of all employees; to consider at all times every thought and suggestion looking to the improvement of Heinz products, and their adaptability to the requirements of the public."

The first aid to purity and quality of production is cleanliness. Each bit of fruit or vegetable is washed clean by automatic sprinklers. The bottling tables are of white tile, scoured and polished every day. The kitchens are sanitary to the point of snowy freshness. The girls who fill cans or bottles wear white caps and uniforms; nurses and physicians retained by the company see to the health of the women workers. All cans are sterilized before being filled. The floors, of hard maple, do not catch dirt. Even the outside of the buildings, made of a washable kind of brick, must be regularly scrubbed. And the casual dust of the atmosphere is forbidden to intrude when the workers aren't around, for "the sun never sets upon an uncorked bottle or unsealed can."

The next notable feature is care, plus chemical science. Cherries and berries are picked and hulled by hand. Before the peanuts can go into peanut butter, the small "heart seed," bitter and indigestible, must be removed, also any burnt or discolored nuts. Baked beans are really baked, by old-fashioned dry oven heat—not boiled or steamed. Preserving kettles and sauce tubes are made of refined silver, to safeguard the food against possible corrosion of acid on tin. Fruit cans are lined with a golden enamel, baked on, which is said to form the best container ever devised, air-proof, light-proof, dust-proof, germ-proof. Each of the millions of tin cans turned out every year has the improved style of crimped ends, to keep

the solder from touching the contents. And each of the millions of glass bottles used every year is annealed by a special method to insure against breakage. An original pneumatic device tests the filled cans by atmospheric pressure, and automatically rejects the imperfect ones.

The system of chutes, conveyors and machines is a marvel of ingenuity and speed. You observe the raw tin going toward a machine—five minutes later you discover it completely transformed into a can of beans, filled, sealed, ready for shipment. The result of this kind of action means huge production. Thirty million bottles of ketchup have been put up in two months of preserving season; and in one day 45,000 quarts of strawberries have been received fresh from the garden, hulled, washed, preserved, sealed and packed. However, speed never destroys accuracy; the label on a bottle must be in the correct place to one-sixteenth of an inch.

This blended rule of science and conscience goes clear back to the kitchen. To prevent the chance of adulteration of spices, workers in charge of spice mills grind on the premises all seasonings like ginger, pepper and cloves, which are imported clean and whole, direct from the fields. No pure food inspector has yet been able to arrest a Heinz product.

Workers at the Heinz plant are never subjected to autocratic punishment—a wrong deed carries with it an automatic penalty. A girl who packs a bottle of pickles wrong has to do the same job right over; being paid by the piece for this work, she loses time and money from her carelessness; and she falls to disgrace in the opinion of her associates—a worse casualty here than the loss of money. A guide who misrepresents a fact, method or policy to any visitor thereby makes himself liable to immediate discharge. The rule, however, is to surround official firmness with such evidences of personal kindness that the firmness can hardly be felt. This explains in large measure the devotion, the constancy, of the Heinz workers, 494 of whom have enjoyed between five and ten years of continuous service, 204 others between ten and fifteen years, 105 others between fifteen and twenty years, and 122 over twenty years.

But, finally, the key to a great business lies in the wisdom of the presiding genius of the organization. A personal talk with Mr. Howard Heinz, eldest son of the founder, and now president, of the H. J. Heinz Company, revealed some of the principles and policies determining the conduct of the institution.

"First," he said, "there must be an impelling force in life, a dominant purpose and vital energy pushing the man forever on and up, over obstacles and thru barriers, till he attains the goal of his powers and his dreams. The impelling force may be the result of

want, poverty, hardship—or of a huge ambition—or of a deep affection for the loved ones who depend on a man's work for happiness—or of a limitation that spurs a fellow to show the stuff he is made of in spite of the handicap—or of a competition that keeps him on his mettle and up to his quality standard. We aim to rouse the energies and enthusiasms of our workers, then to guide these forces of achievement into proper channels.

"The round man must not be stationed in the square hole, nor the square man in the round hole. Our method is to try out each man in both places. If the man is neither square nor round, but oblong, we make an oblong position to fit the man. We study how to adapt the work to the worker. Few employees know that they are misfits, until their employer finds it out—and gives them a chance to make good in the work they like because they can do it well.

"Mutual confidence and pride are fundamental. We are as proud of our workers as they are proud of their work. The ancient idea that only a professional man could be a real artist has been exploded. Whoever holds a job in a business can be, should be, a great industrial artist, eager to make each bit of work as fine, as perfect in its own way, as the masterpiece of a painter, sculptor or musician.

"There must be no driving of employees. They want leading—not driving. We never say to one of our people, 'You must do this or that.' We tell them why a certain thing should be done, how it can be done; then we leave the matter to the conscience and intelligence of the employee.

"A merchant or manufacturer must be able to plan, work, and if necessary fight for the public he serves. Our company started the national fight for Pure Food laws. We spent fifteen years and hundreds of thousands of dollars in the battle to protect the public—even before the public wanted to be protected, or knew the peril in food adulteration.

"We carried the whole matter to President Roosevelt. He said the weakness of our position was that we were alone; the public was indifferent. We managed to find thirty food companies whose ideals were similar. They joined us—tho our natural competitors. Chiefly by their help, we won the fight. Now the public demands clean, pure, wholesome food in closed containers; and the unprecedented growth of our business may be traced to the fight we undertook for a principle.

"I should say that almost any man will make good if you turn over to him a hard enough task, a big enough responsibility, after you have trained him to handle it, and have supplied a real incentive. One of the great joys of our work is to see our workers measure up to our expectations. When you expect more of a man, you make more of him.

"The secret of a great success? An idea great enough and a principle good enough are bound to bring world leadership."

Fight Film To Save Your Teeth

All Statements Approved by High Dental Authorities

It is Film that Ruins Them

This is why brushed teeth discolor and decay. And why old methods of cleaning have proved so inadequate,

Your teeth are covered with a slimy film. It clings to them, enters crevices and stays. That film is the cause of most tooth troubles.

The tooth brush does not end it. The ordinary dentifrice does not dissolve it. So, month after month, that film remains and may do a ceaseless damage.

That film is what discolors—not the teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Also of many other troubles.

Dental science, after years of searching, has found a way to combat that film. Able authorities have proved the method by many careful tests. And now, after years of proving, leading dentists all over America are urging its daily use.

Now Sent for Home Tests

For home use this method is embodied in a dentifrice called Pepsodent. And a 10-Day Tube is sent without charge to anyone who asks.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to day by day combat it.

The way seems simple, but for long pepsin seemed impossible. It must be activated, and the usual agent is an acid harmful to the teeth. But science has discovered a harmless activating method. And millions of teeth are now cleaned daily in this efficient way.

Let a ten-day test show what this new way means. The results are important, both to you and yours. Compare them with results of old-time methods and you will then know what is best.

Cut out the coupon now so you won't forget.

Reading advertisements has helped to make this a united country

Jim Hawkins props his feet on the rose festooned porch railing in an Oregon suburb and reads the same motor car advertisement that Cousin Peter is studying as he rides home from work in the New York subway.

In Arizona you can buy the same tooth paste and tobacco that are used by the folks in Maine.

California fruit growers advertise their oranges and lemons to the people of the East. New Hampshire factories make ice cream freezers for Texas households.

There can be no division in a country so bound together by taste, habit and custom. You can meet up with anybody in the United States and quickly get on a conversational footing because you both read the same advertisements.

Advertising is the guide to what's good to buy. Advertisements give you the latest news from the front line of business progress.

Reading advertisements enables you to get more for your money because they tell you where, what and when to buy. And it is a well-known fact that advertised goods are more reliable and better value than the unadvertised kinds.

Spending Billions on Our Roads

(Continued from page 112)

The total road mileage in the United States is 2,750,000, of which less than ten per cent has any kind of surfacing, and less than two per cent is suited to heavy motor traffic. Records of the Department of Agriculture show that new roads are being opened in the United States at the rate of fifty thousand miles per annum, while prior to this year only fifteen thousand miles were improved each twelve months. One interesting fact in connection with the foregoing table is that with one or two exceptions the states where the proportion of motor vehicles to population is largest, the amount of money being expended for highway improvement is also largest.

Not a little of the credit for both the big scope of the highway improvement under way and the tendency to permanent construction must be given to the men who served in our army in France. There they had ample opportunity to study the finest system of highways in the world, and to note its economic value to that nation as a peace time institution as well as a military protection.

Maeterlinck, the Robust Mystic

(Continued from page 98)

will keep him famous, Emperor Julian is converted from heathenism to Christianity, and then back to heathenism. It has been often suggested that what modern civilization most needed was a healthy infusion of the pagan element, which we have so often thought incompatible with Christianity. I asked Maeterlinck about it.

"It seems to me," he said, "that our distinctly modern civilization, in its efforts to spiritualize itself, is returning to pantheism. The problems of one God and of pantheism are the same. They are in the same circle. God is all and all is God. There is no difference. So that the word pantheism, which one often takes in its most disadvantageous meaning, in its most absolute, its most profound sense refers to God. When one says, 'God is all,' one is able to say nothing more majestic, more all-embracing, or more true."

We smoked, and had some of the Christmas sweets, while in the dimly lighted studio there passed figures as tho they had stepped out of a Maeterlinck drama. Secretaries and stenographers were attending to a deluge of invitations coming by each mail; it looks as tho Maeterlinck were threatened with becoming a cult. I think he is sane enough, certainly he has enough humor, to keep himself separate from such misplaced adulation. I watched him as he gazed down upon the dancers at the Blue Bird Ball. A pair of shell-rimmed pince-nez were raised now and again, and a sad expression flitted across his face. "If this is the human race," he seemed to say, "take me back to the instinct of the hive and to the intelligence of flowers!"

New York

Teachers' Rights

(Continued from page 96)

"I am of the opinion that uniform systems of school accounting would result in a saving which might be applied to teachers' salaries. My observations lead me to the conclusion that the business management of schools could be greatly improved if competent men were held responsible for this work. School authorities might well avail themselves of the services of experienced secretaries, accountants and purchasing agents."

Here is a suggestion with regard to our mental attitude:

"In almost every city in the Middle West the best building is the high school building. To it every visitor is escorted. The local advertiser mentions it. All the citizens are proud of it. Within the walls of this triumph of architecture are men and women working on pitifully low wages. Their tenure of position is precarious. The public smiles at them as being 'only teachers,' and because of this the pupils listlessly go through the work without comprehension of the enormous economic waste they are indulging in."

With regard to their right to share in the democratic government of schools teachers have sent us statements just as positive. Nobody seems to be satisfied with conditions as they are at present. A few teachers think we should do away with school boards altogether. But most of our correspondents favor a middle course, suggesting that the powers of local boards be greatly curtailed, and that teachers have an equal share with local boards in the control of the schools. An executive writes as follows:

"The power to decide all matters, large and small, must be taken away from local authorities, and be rationally divided among three bodies, first the state central authority, made up of specialists and experts, second the local school board, and third the teachers. In other words, when the school board meets, the representatives of the teachers must sit in as equals, not as inconsequential servants."

Another teacher tells how executives should be chosen, in her opinion:

"School boards should be chosen by some system of proportional representation and should be supplemented by members elected by teachers from their own number. A body so selected should be capable of choosing a superintendent; i. e., an expert general manager wisely. On all committees working under this expert, members elected from the teaching force should serve. In some such fashion the responsibility for choice of teachers, principals, and other supervisors should be divided."

One correspondent points out several strong arguments for giving teachers a voice in the selection of executives:

"In the first place a committee selected by and from the faculty would be more competent to judge of the merits of a man professionally than the average school board. Under this

method the principal would be more apt to give the teachers credit for their work. The school would not be a one-man affair and all would hold the interests of the school closer to their hearts. If such a plan were adopted the principal need not be subservient to his teachers for fear he would lose his place. If the question of dismissal should come up the faculty as a whole would be fair. Lastly, the democratic method of electing the executive would be emphasized if this method were adopted. Of course there should be wise guidance but the democratic principle should be recognized and fostered. Also the teachers as a group would be recognized as a real part of the school and their place in the community would not be such a minus quantity."

It is perhaps just to remark that such a system would not only make teachers more contented but might relieve the best executives of the onus of facing many unpleasant situations alone and unsupported. The community may question the decision of Mr. Smith, Principal, who suspends Johnny Jones for bad behavior, if Johnny's father is a popular or influential citizen. But if the faculty as a whole, or the committee of teachers representing the faculty acts with Mr. Smith, the community may be led to see justice in the decision and Johnny may learn to toe the mark. Personal unpopularity as a result of such a necessary decision will not attach itself to one person, only.

In his very interesting book, "What Happened to Europe," Frank A. Vanderlip expresses the following opinions with regard to giving labor a voice in the management of industry:

"Perhaps there is no single mental effect of the war that is more significant than the changed attitude of European employers to the whole labor question. There is a disposition to examine the very fundamentals of labor's dissatisfaction and to accept as not only necessary, but probably as desirable, a quite new status of the workers, particularly in relation to giving them a really effective voice in the management of industry. This does not mean any tendency toward anarchy in industry. A larger voice in industrial management on the part of labor is not translated either by labor or employers to mean a voice that extends to commercial policy. More than anything else it seems to me to mean that labor shall be taken into the confidence of employers, shall be informed in regard to aims, advised with in respect to difficulties, listened to when it wishes to make suggestions in regard to shop practice, and conferred with about shop conditions, and particularly about shop foremen."

Surely if a capitalist be willing to grant such a measure of self-government as the right of laborers in industry, it is not extreme to ask for similar powers for one of the finest of professions.

This Smile Says "I HEAR CLEARLY"

If you are hard of hearing you have embarrassing moments—so do your friends. Is it not worth while to see if all this embarrassment can be avoided?

350,000 persons are now hearing clearly by aid of the Acousticon.

A New York physician says: "It is of great value to me. I should have been obliged to give up the practice of medicine long ago if I had not obtained this best of all devices for the aid of hearing."

WE OFFER YOU THE FAMOUS ACOUSTICON

For 10 Days' FREE TRIAL
NO DEPOSIT—NO EXPENSE

Just write, saying, "I am hard of hearing and will try the Acousticon." Give it a fair trial amid familiar surroundings—thus you can best tell what it will do for you.

Remember, however, that the Acousticon has patented features which cannot be duplicated. So no matter what your past experiences have been, send for your free trial today.

Most of the other reforms which teachers want need not be discussed to be understood. It is only necessary to state them, as we have stated them at the beginning of this article and to hope that a growing interest in teachers and in education will lead an enlightened and kindly public to demand these reforms with and for the teachers, for the sake of children. It remains, therefore, to consider ways and means of securing the chief reforms. The following methods of solving problems are suggested: a publicity campaign, organization of teachers for collective bargaining; a Department of Education in the Federal government with a Secretary of Education in the cabinet and getting the public to visit the schools and talk with teachers.

One teacher says we should begin work with

"Educational films full of school facts as they are in our movies, weekly; advertisement of needs and shortcomings through the American Press; bulletins from legislative presses stating educational conditions existing in each state; sermons from pulpits in each locality setting forth urgent needs. Educate the public and do it with the fastest, surest carriers, the willing-handed, eager-hearted (poorly taught) public school army of over 26,000,000 children."

Another gives this advice to the public:

"Learn to appreciate your employee by inspecting the quality and amount of service she is rendering you. It will be a joy to her to have you show your interest by visiting her work-room. Co-operate with her in her demand for obedience and good work from your children: she is fairly intelligent and usually truthful, so you may depend upon her judgment; she is not antagonistic to your children, she is in her profession to 'love them into light.' Therefore co-operate with her. Remember that the teacher is a human being and that outside of the school-house she holds equally with you a claim in fee simple to certain inalienable rights for which our forefathers fought, the right to life, liberty and the pursuit of happiness."

Here is the plea for organization as one man makes it:

"Better pay is the sole hope. Teachers should organize, not necessarily in the American Federation of Labor, but in some way to bring their influence to bear. No set of people need hope for betterment until they begin to fight for themselves. There is too much tommy-rot talked about the teacher's altruistic service. No matter how high the pay goes it will always be so low as to leave room for altruism."

It may be pertinent to remark that teachers have already begun to form unions in many large cities and that the movement for organization is spreading. Some leaders believe that these unions gain strength by affiliating with the A. F. of L. and others think that the profession should be organized to stand alone for the rights

of teachers. But the hope of a single teacher getting much by individual bargaining seems to have gone forever, and collective bargaining seems to be an issue very much in the minds of the progressives who are thinking of these matters.

Here are other suggestions:

Raise education to the dignity of war, navy, agriculture, by having a Secretary of Education in the President's cabinet; put teachers on committees for various public services, as well as bankers, brokers or manufacturers; pay them according to ability, experience and efficiency, as in commercial and industrial occupations; publish in weeklies and dailies articles and news which recognize the development of future citizens as important as the establishment of a new industry or a strike on a railroad; cease regarding them as a class apart from the progressive life of the community, a relic of medieval scholasticism. Compel by law school boards to attend educational conventions and associations."

And here is a job suggested for the not yet founded Department of Education in Washington:

"A farm paper wishing to sell tractor advertising has conducted a systematic and detailed investigation to find out what is the matter with the tractors on the market. They now have a well organized catalog of facts which they are turning to good account. Could not the Bureau of Education at Washington perform a national service by sending out detailed questionnaires to thousands of teachers, organizing the information gained, and advertising the results."

These letters and others show that the teachers still have faith in the American public, that they believe their case only needs to be stated and discussed and understood to secure a betterment of conditions. They believe that the American public wants the best things for American children and that it will take some means, sooner or later, to help teachers who make their demand for better conditions heard. They believe that the public will agree that happy teachers are better teachers than unhappy ones, and that the public, eventually will echo their demand and say:

"Give them a living wage and a living life!"

Five previous articles in this series on "What's the Matter with the Teacher's Job" have set forth the chief grievances as expressed by hundreds of teachers themselves—low pay, inefficient school board administration, lack of respect in the community, curtailment of personal rights, unwise choice of school executives.

The Oil Age—And Its Needs

(Continued from page 90)

sands. The value of this oil shale will depend upon the cheapness of its reduction and this must be greatly lessened by the value of by-products before it can compete with coal or the oil from wells. There is every reason to believe, however, that some day the production of oil from shale will be a great and a permanent industry. And the country could make no better immediate investment than to give a large appropriation for the development of an economical shale reducing plant.

Yet with all the optimism that can be justified I would urge a policy of saving as to petroleum that should be rigid in the extreme. If we are to long enjoy the benefits of a petroleum age, which we must frankly admit fits into the comfort-loving and the speed-loving side of the American nature, we must save this oil.

We must save it before it leaves the well; keep it from being lost; keep it from being flooded out, driven away by water. Thru the cementing of wells in the Cushing field, Oklahoma, the daily volume of water lifted from the wells was decreased from 7520 barrels to 628 barrels, while the daily volume of oil produced was increased from 412 barrels to 4716. This shows what can and should be done in all the oil fields of the United States.

We must save the oil after it leaves the well, save it from draining off and sinking into the soil, save it from leaking away at pipe-joinings, save it from the wastes of imperfect storage.

Then we come to the refining of the oil. How welcome now would be the knowledge that we could recover what was thrown away when kerosene was petroleum's one great fraction. (The loss in refineries is still startling, some 14,556,000 barrels last year; 4½ per cent of the crude run in the refineries.)

The self-interest of the American refiner, notably the Standard Oil Co., has done a work that probably no mere scientific or noncommercial impulse could have equaled, in torturing out of petroleum the secrets of its inmost nature. And yet one cannot help believing that in that residue which goes to the making of roads or to be burned in some crude way there may be things chemical that will work largely for man's betterment. It is the fact, too, that where the oil is produced by some small companies which have not the financial ability to make it yield its full riches there is a greater danger of loss of this kind.

Coming to the use of petroleum in its various forms we find a field of promise. The engine that doubles the number of miles that can be made on a gallon of gasoline doubles our supply. That is where we can apply the principle of true conservation—find how little you need; use what you must, but treat your resource with respect. Has the last word been said as to the carburetor? Mechanical engineers do not think so. Have all possible mixtures which will save oil and substitute

Building with Foresight in Canada

THIS building of the Gillette Safety Razor Company of Canada, Ltd., in Montreal is an example of the engineering service furnished by Lockwood, Greene & Co. of Canada, Ltd.

Industrial building in Canada requires Canadian engineering. The work must be planned and directed with a thorough knowledge of the ideals and problems of that country.

Lockwood, Greene & Co. of Canada, Ltd., is a Canadian organization, equipped with both technical knowledge and a thorough understanding of Canadian conditions. It offers an industrial engineering service of particular value to American industries which are planning to manufacture in Canada.

cheaper and less rare combustibles therefor been tried?

There are possible substitutes for some petroleum products, but not for the whole barrel of oil; furthermore, petroleum is the cheapest material, speaking quantitatively, from which liquid fuels and lubricants can be made; therefore, any substitutes obtained in quantity must cost more. Alcohol can be substituted for gasoline, but only in limited quantity and at increased cost. Benzol from by-product coking ovens also can be used, but quantitatively is totally inadequate. For kerosene no quantitative substitute is known. Lubricants can be obtained from animal and vegetable fats, but mostly are inferior in quality and there seems no hope of obtaining them in quantity. Fuel oil can be largely supplanted by coal, but for the internal combustion engine there is no quantitative substitute.

We have ventured on a great ship-building program. Our people are once again to respond to the call of the sea. On private ways and on Government ways, ships are being built to go round the world—ships that are to burn oil under boilers and produce steam. I presume that there is a justification for this policy, perhaps one that is as good, if not better, than can be made for the railroads of the West pursuing the same policy. I submit, however, that there should be justification shown for the construction of any oil-burning ship which does not use an engine of the Diesel type. To burn oil under a boiler and convert it into steam, releases but 10 per cent of the thermal units in the oil, whereas if this same fuel oil were used directly in a Diesel engine, 30 to 35 per cent of the power in the oil would be secured. Substitute the internal-combustion engine for the steam boiler and we multiply by three or three and one-half the supply of fuel oil in the United States. Instead of our fuel-oil supply being, let us say, 200,000,000 barrels, it would at once rise to 600,000,000 barrels or 700,000,000. I recognize that this is an impractical and unrealizable hope as applied to things as they are, but there is no reason why this should not be a very definite policy as to things that are to be. We are in the petroleum age, and how long it will last depends upon our own foresight, inventiveness, and wisdom.

Already we are importers of petroleum. We are to be larger importers year by year if we continue—and we will—to invent and build machines which will rely upon oil or its derivatives as fuel. Our business methods have been, and doubtless will continue to be, developed along lines that make a continuing oil supply a necessity. Some of that oil must come from abroad, as nearly 40,000,000 barrels did last year, and for that we must compete with the world. For while we are the discoverers of oil and of the methods of securing it, and refining it, piping it, and using it, our pioneering is but a service unto the world.

This situation calls for a policy prompt, determined, and looking many

years ahead. For the American Navy and the American merchant marine and American trade abroad must depend to some extent upon our being able to secure, not merely for today, but for tomorrow as well, an equal opportunity with other nations to gain petroleum from the fields of the world.

I have given much thought to this problem of adding to our petroleum supply and it has seemed to me but fair that we should first make every effort to increase the domestic supply through the methods that have been indicated: (1) The saving of that which is now wasted, below ground and above ground; (2) The more intensive use, through new machinery and devices of the supply which we have; (3) The development of oil fields on our withdrawn territory and in new areas such as the Philippines.

In addition, we must look abroad for a supplemental supply and this may be secured through American enterprise if we do these things:

(1) Assure American capital that if it goes into a foreign country and secures the right to drill for oil on a legal and fair basis (all of which must be shown to the State Department) that it will be protected against confiscation or discrimination. This should be a known published policy.

(2) Require every American corporation producing oil in a foreign country to take out a Federal charter for such enterprise under which whatever oil it produces should be subject to a preferential right on the part of this Government to take all of its supply or a percentage thereof at any time on payment of the market price.

(3) Sell no oil to a vessel carrying a charter from any foreign government either at an American port or at any American bunker when that government does not sell oil at a non-discriminatory price to our vessels at its bunkers or ports.

The oil industry is more distinctively American than any other of the great basic industries. It has been the creation of no one class or group but of many men of many kinds—the hardy keen-eyed prospector with a “nose for oil” who spent his months upon the desert and in the mountains searching for seepages and tracing them to their source; the rough and two-fisted driller, a man generally of unusual physical strength, who handled the great tools of his trade; the venturesome “wild-catter,” part prospector, part promoter, part operator, the “marine” of the industry, “soldier and sailor, too”; the geologist who through his study of the anatomy of the earth crust could map the pools and sands almost as if he saw them; the inventor; the chemist with still and furnace; the genius who found that oil would run in a pipe; these and many more, in most of the sciences and in nearly all of the crafts, have created this American industry. If they are permitted they will reveal the world supply of oil. And upon that supply the industries of our country will come to be increasingly dependent year by year.

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. The Oil Age—And Its Needs. By Franklin K. Lane.

1. The title is based on such expressions as "The Stone Age," "The Glacial Age," and "The Age of Chivalry." What is the advantage of using such a title? What is meant by the title and by the various expressions on which it is based?
2. Write five somewhat similar titles for articles on our own times.
3. By what methods does the writer emphasize his principal points?
4. By what methods does the writer maintain coherence?

II. A Message from the French Provinces to the United States. By Marcel Knecht.

1. Imagine that you are Marcel Knecht. Write a short letter to the editor of The Independent summarizing the points presented in the article.
2. Explain exactly what is meant by saying that the press of the world is one of the forces that is leading humanity towards a broader civilization.
3. Explain how your school paper may aid in making your school a better school.
4. In a single well-formed sentence present the principal thought contained in the article.

III. Anti-Bolshevik Laws.

1. What are the principles that govern the making of a logical definition?
2. Write a definition of "Bolshevik" as applied to people in Russia, and a second definition of "Bolshevik" as applied to people in the United States.
3. Analyze grammatically the sentence beginning: "Whoever, with intent to levy war against the United States."
4. Imagine that you have the opportunity to speak before a body of "Bolshevik" people in the United States. Explain to your hearers how people in the United States may remedy any existing evil without recourse to anything except legal means.

IV. Maeterlinck, the Robust Mystic. By Montrose J. Moses.

1. What has Maeterlinck done to deserve being called "The most important literary figure in the world today"?
2. What is the French Academy? What, in the United States, corresponds to the French Academy?
3. What is the Nobel Prize for Literature? What authors have won the prize? Tell about the works of any of these authors.
4. Who is "Emerson"? How can Maeterlinck be a disciple of Emerson?
5. What is meant by "the Elizabethan drama"? Why should Maeterlinck be interested in the Elizabethan drama? Name five Elizabethan plays not written by Shakespeare.
6. What is "a poetic sense"? How can it be cultivated?
7. Give an oral description of the appearance of Maeterlinck.
8. Tell the story of "The Blue Bird." What does "The Blue Bird" mean?
9. What characterizes Maeterlinck if he is worthy of the name, "sage"?
10. What characteristics of Tennyson's poetry are indicated by calling Tennyson "the most musical of poets"?
11. Explain the following literary terms: marionette drama, naturalism, realism, romance.
12. Tell the story of Desdemona and Othello.
13. What are the characteristics of Emerson's Essays?

V. The Plant That Made the Pickle Famous. By Edward Earle Purinton.

1. Write a paragraph explaining the sentence, "All fiction pales beside the real romance of business."
2. Draw from the article a set of rules for gaining success in business.
3. Tell the story of Mr. Heinz's "little house."
4. Give a talk explaining what the article says concerning present-day treatment of working people.
5. Endeavor to prove the proposition: "An idea great enough and a principle good enough are bound to bring world leadership."

VI. Teachers' Rights. By Marguerite Wilkinson

1. Endeavor to prove to a school board that it is good economy to pay salaries that will attract the best teachers.
2. Explain which suggestions in the article are most important and most practical.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Oil Age—And Its Needs.

1. Quote three or four passages from this article which justify Secretary Lane in calling the present "The Oil Age."
2. Consult the Encyclopedia Britannica or some other similar work. Write a brief history of the petroleum industry, paying especial attention to the development of the industry in the past ten years.
3. A century or more ago the development of the coal burning steam engine was one of the factors in the Industrial Revolution. How far is the internal combustion engine causing a second industrial revolution today?
4. Why does Secretary Lane urge a policy of saving as to petroleum? What savings does he suggest?
5. "... we should first make every effort to increase the domestic supply," etc. "In addition, we must look abroad for a supplemental supply." What methods for doing these two things are advocated?

II. The United States and France—"The Things We Have in Common."

1. "Nations hardly know each other." What evidences does the author furnish to prove this assertion? What remedies does he suggest?
2. How did the French and British Governments cement the agreement known as the "Entente Cordiale"? Show that the United States Government and the French Government are using similar methods now.
3. Can you see any weakness in the argument that: "French provinces and American states are the real basis for a practical understanding between our peoples"?

III. Presidential Candidates—"How the Candidate Crop Comes On."

1. When does President Wilson's term of office expire? In view of this fact why is there so much discussion of candidates at the present time?
2. Name some of the probable issues that will be factors in the election next November.
3. "Among Republicans, General Wood seems to have a slight lead over his competitors." How do you account for this?
4. Upon what grounds may each of the other candidates mentioned ask for the votes of the people of this country?
5. What steps will have to be taken between this and the final election of a new president?

IV. The Radicals and the Government—"Raids on the Reds," Anti-Bolshevik Laws."

1. What steps has the United States Government thus far taken in its attempt to suppress the revolutionary movement? What further steps are proposed?
2. Compare the present attitude of the Government with the attitude of the Federalists one hundred and twenty years ago.
3. Discuss this statement: "It is recognized that in passing new sedition bills Congress will be dealing with the effects rather than with the causes of current unrest."

V. The Treaty of Peace—"Closing Up the Peace Conference."

1. Why has the final ratification of the Peace Treaty been so long delayed?
2. What provisions of the Treaty will have to be modified as a result?
3. What effect will the fact that the United States has not yet ratified the Treaty have upon its enforcement?
4. Mention three or four questions which have grown out of the war which must be settled in the future.

VI. Factors in Industrial Efficiency—"The Plant That Made the Pickle Famous."

1. On the basis of this article enumerate four or five of the chief factors in industrial efficiency.
2. "Five good results are accomplished by the regular opening of the plant to visitors." Make this sentence the topic sentence of a paragraph on the benefits of publicity.
3. "The company states, clearly and openly, the objects and ideals for which it stands." What are these objects and ideals? How are they accomplished?
4. What are the evidences that the Heinz Company believes in democracy and humanity in dealing with its employees?

Remarkable Remarks

GERALDINE FARRAR—I believe in rouge.

HENRY T. FINCK—Why is pie disappearing?

MISS ANNE MORGAN—The League of Nations is a dream.

HERBERT C. HOOVER—I am perfectly contented with my present work.

THE POPE—Modern society is attempting to set itself above God.

PREMIER LLOYD GEORGE—Bolshevism cannot be suppressed by the sword.

W. J. BRYAN—The Republican platform is privilege supported by force.

MADAME PADEREWSKA—I seldom worry because I am so Americanized.

VICTOR L. BERGER—The American Federation of Labor is led by a rotten lot.

HERBERT N. CASSON—When the devil can't go himself he sends a lawyer.

FLORENZ ZIEGFELD, JR.—Blondes seem to be fewer today than they used to be.

E. C. GORDON—Secrets in business are merely the camouflage of inefficiency.

NIKOLAI LENIN—There will be Soviets in Berlin, Washington, Paris and London in 1920.

JESSE T. LASKY—The managerial attempt to create a movie star seldom if ever succeeds.

C. F. HINGHAM, M. P.—Ten thousand pounds a year men never write asking for a position.

THE SULTAN OF TURKEY—Thru religion we can best accomplish the emancipation of Turkish women.

MAURICE MAETERLINCK—If New York were as beautiful as its women I should want to linger here forever.

GABRIELE D'ANNUNZIO—We will carry the torch and spread the flame thruout the world where oppression exists.

HENRY FORD—The Standard Oil Company and the United States Steel Corporation are two big interests in this country that we have got to take our hats off to.

HEALTH COMMISSIONER R. S. COPELAND—I do not see that any serious harm has resulted from the use of cosmetics.

REPUBLICAN CHAIRMAN WILL N. HAYS—I would rather a woman join with our opponents than belong to no party.

SIR OLIVER LODGE—A radium atom firing off a particle of positive charged helium is like a two ton gun firing a 100 pound shot.

LORETTE C. LYNCH—One particularly efficient young housewife I know goes so far as to keep two or three guest towels and a bit of untouched soap on the shelf in case of emergency.

What the Teachers Say

The Independent series of articles on "What's the Matter with the Teacher's Job?", published in the issues from December 13 to January 17, not only showed an impressive unanimity of opinion on the part of teachers all over the United States as to the injustice of their position today, but also stimulated many more teachers to write us their corroboration of the grievances presented and to thank us for giving them a chance to tell the American people just what is the matter with the teacher's job today. The president of a normal school in Wisconsin writes:

I want to thank you for running the series of articles on "Are Teachers Underpaid" in your excellent magazine. You will be a great help to a needy cause. Would it be possible for you to run the articles as reprints in pamphlet form for more general distribution? I should like to put the articles into the hands of every mother and father in Wisconsin. If we are to get more pay for our teachers, we must get the taxpayers interested. In Wisconsin we have provided for two bonus funds for the soldiers of \$15,000,000 each, and the boys deserve every bit of it: we are voting from \$2,500,000 to \$5,000,000 in every county to build good roads, but we can't get a fair salary voted for teachers. We need just such help as you are giving us.

A man who has decided to leave the teaching profession, after sixteen years of success in it, endorses especially Mrs. Wilkinson's article, "Why Is a School Board?" He writes:

I cannot forego the opportunity of expressing my appreciation of the well directed "wallops" which Marguerite Wilkinson has been landing in the vital regions of "School Boards." Politics is the great handicap of all our public institutions.

A teacher in Ohio thanks us especially for bringing out the social aspect of the teacher's problem:

If you knew how bitter the best and sanest teachers are becoming you would indeed fear the danger that is threatening our schools today. The attitude taken by superintendents such as those written of in these articles, is the greatest menace to the teaching body of the United States. When initiative and freedom of opinion are denied to American teachers, then we may fear for the future of our country.

Mrs. Wilkinson is planning to include her articles published in The Independent in a book on "What's the Matter with the Teacher's Job?" and she would be glad to have any further material from the teachers themselves.

A Solution of Our Treaty Tangle

By Hayne Davis

Readers of The Independent of a decade ago will remember many illuminating articles by Mr. Hayne Davis on a federation of nations to establish peace on earth. The first of Mr. Davis's articles for The Independent, "The Outcome of the Declaration of Independence," may be justly considered the forerunner of the present day program of international cooperation. The following suggestions for compromise between the Hitchcock and Lodge reservations have the merit of stating general principles of compromise rather than specific points

WHEN President Wilson appeared before the Senate of the United States on January 8, 1918, and disclosed the lines along which his thoughts were running at that time, he explained that he did this because the Senate, under our Constitution, has a function to fulfil in our foreign affairs in cooperation with the Chief Executive.

In taking this course the President departed from the custom of our Chief Executives. Heretofore they have not taken the Senate into their confidence in advance of negotiating a treaty. The custom has been to conclude a treaty by reaching an agreement on its terms, between the chief executives of the nations concerned, and then to submit to the Senate this completed document, signed by the executives who negotiated it or the secretaries of state of the countries concerned. In two notable instances of recent occurrence, our Chief Executive refused even to resubmit to the other nations concerned a treaty which was amended by the Senate. The first instance was that of the general arbitration treaty negotiated under Roosevelt's instructions, and providing for the arbitration of all questions which do not affect the national honor or vital interests of the signatory powers. Provision was made for the signing of an additional document in each instance before the actual submission of any particular question to arbitration, under this general treaty. The Senate changed a few words of the proposed treaty so as to require this additional document in each case to receive the Senate's approval, before the controversy could actually go to a court of arbitration. This gave the Senate concurrent authority with the President to pass judgment upon the fact of whether any particular question at issue was one affecting vital interests or national honor, and therefore not to be arbitrated under the terms of the general treaty already agreed upon, or whether the question at issue did not affect this nation's honor or vital interest and therefore had to be submitted to arbitration, as agreed by the Roosevelt treaty. The President

Chapin in St. Louis Republic

This dirigible seems lost in the fog

was so displeased by this amendment made in the general arbitration treaty which he had negotiated, without any previous consultation with the Senate, that he pigeonholed the treaty as amended by the Senate, and would not permit the other nations concerned to decide whether they would prefer to approve the treaty in the amended form or to reject it. The Hague Conference of 1907 came along, and, after that conference, President Roosevelt got out the treaties as amended by the Senate, submitted them to the other powers concerned, and they were approved by all those powers (eight, I think) and are still in force.

When Mr. Taft became President he negotiated a general treaty of arbitration which he regarded as an improvement on the Roosevelt form. He did not consult the

Senate in advance. When the treaty had been signed by the authorized representatives of the other signatory powers, President Taft submitted it to the Senate. Again the Senate agreed upon an amendment. President Taft refused to permit the other countries concerned to pass upon the Senate's proposed amendment. Thus the Taft improvement of the Roosevelt general treaty of arbitration was killed—Mr. Taft might say by the Senate amendment; the Senate could say by Mr. Taft's refusal to let the other countries concerned form and express their opinion upon the Senate amendment. Certainly responsibility for the death of his own proposal falls upon Mr. Taft, as he declined to permit the other powers an opportunity to reject or to concur in the Senate amendment. Today we have therefore the Roosevelt general arbitration treaties in force, which are not nearly as good as the Taft proposal, even with the Senate amendment added, in my humble opinion.

The proposals made by both Mr. Roosevelt and Mr. Taft were important. Each marked a step forward upon the way toward the reign of law in place of war, in the affairs common to all nations. The proposal made by Mr. Wilson in his address to the Senate on January 8,

1918, contained some paragraphs which, taken together, constituted the most important political proposition ever put forward by a responsible statesman. These several paragraphs outlined in general principle the President's idea of a League or Union of Sovereign Nations to prevent a recurrence of such conflicts as the one then at its height, and to establish justice and peace among all nations as a permanent heritage for our children, and as a present benefit for ourselves, if such a thing be found in fact a present possibility. On this most important political proposal ever seriously made by a person occupying the highest political office of a great nation, the President did well to depart from the custom of his predecessors by taking the Senate and people of the United States, and of all the other nations concerned, into his confidence in the early stage of negotiation. This gave to statesmen and people of every country all the time from January 8, 1918, till January 18, 1919, when the Peace Plenipotentiaries first met in Paris to consider the momentous questions raised by the President in his address to the Senate in January, 1918. A number of the senators expressed themselves on these questions from their places on the floor of the Senate. Reverberating echoes were audible, even amid the din of war, from all parts of the world, to those who had attentive ears. Finally the President's proposal to the Senate of January 8, 1918, came back to the Senate in the closing months of 1919 in the form of the proposed Covenant for a League of Nations, as a part of the treaty of peace, to end the world war of 1914-1919. Be this proposal good or bad, be it a realization of America's mission among the nations—as some think—or a betrayal of American rights—as others assert and reiterate, the fact is the President took the Senate and the people of the whole world into his confidence on this momentous question, at the earliest possible moment, as fully as the stress of time and circumstance permitted, more freely than any other President ever did in the negotiation of any treaty heretofore entered

into by our nation with any other power. The founders of our nation were so anxious to secure practical unanimity among our trusted statesmen, before the taking of any important step in our foreign affairs, that they gave to one-third of the senators plus one the power to veto a step proposed by the President and approval by two-thirds of the senators less one. This same clause of the Constitution lays upon each

and every Senator a grave and individual duty, regardless of all personal and party considerations. He would be recreant to the highest duty of his office and to the trust his office stands for if he permitted any consideration to deprive this nation of his own individual and best judgment of what the nation's welfare and its people's rights demand. The fundamental principle of democratic government—majority rule—has been set aside in matters of this kind, and so the individual responsibility of each Senator has been magnified when the question is one which involves the determination of the nation's foreign policy.

Knott in Dallas News

After pushing her in

At Paris the President and his colleagues, whether of the American, British, French, Italian, Japanese or other national delegation, were so pressed by the multitude of questions to be decided, and by the exigency which demanded speed in bringing the war to an end, that none of them had time duly to consider all the grave questions that were before them, whether they concerned the peace treaty in general or the Covenant of the League of Nations in particular. They all recognized that much that was there and then decided would need to be reconsidered later and might need modification. In fact, the President so stated in express and unmistakable language. Working under the heavy pressure of circumstances and the demand for speedy action, they produced the best they could, in view of the ascertained state of mind actuating the assembled delegates and the nations they represented. So the completed work of their hurried but conscientious deliberations came in due course before the United States Senate for its judgment. I say judgment, not approval, because, under our Constitution, this nation cannot take a step, even a good step, altering or even advancing, in its foreign policy, till the President and two-thirds of the senators see that this step is desirable. The senators, or, rather, two-thirds of them, have to be satisfied that the proposed step is desirable, or they have no right to commit the nation to go along that road.

As the President and his colleagues at Paris were working under great pressure while formulating the treaty of peace and the Covenant of the League, so the senators have been considering this treaty and the Covenant under similar pressure. The war, tho actually ended, is still legally going on. International commercial and social, as well as political, readjustments cannot take place properly until the war is over legally. The reconversion of our nation from a warring and consuming power to a peaceable and productive power is taking place, with all the strain this places upon our legislators, as well as upon our citizens generally. Further-

Thomas in Detroit News

An appeal to reason

more, the nation is beginning already to suffer the pangs incident to the birth of another President for the nation. The political atmosphere is tense, the political duties immense beyond all precedent, the burden of the lawmakers greater than at any time in the history of our nation, even than when the decision for war had to be made and for the things that its prosecution required. For then there was no choice. Congress did not declare war. It simply recognized that war between Germany and the United States was a fact, due to Germany's act. The fact of war existing, all the other decisions came in due order and almost without serious differences of opinion. Now it is different. A breathing time has arrived, but still the pressure for settlement of the war is intense, and this settlement, according to the proposals before the Senate, includes constituting a League of Nations. Nobody can reasonably claim that consideration has been given, or can be given by the Senate, before action is taken on this treaty, commensurate with the gravity of the issues involved.

Acting under this pressure, a majority of the senators have approved various proposed amendments to the Treaty and to the Covenant of the League of Nations, as thus amended. But for the constitutional requirement of a two-thirds majority of the Senate in order to ratify a treaty the Senate's action taken in November last would have sent the Treaty back to the President with these amendments, and responsibility would then have fallen upon President Wilson, as it did upon Presidents Roosevelt and Taft when the Senate amended the general treaties of arbitration as negotiated by them with various Powers. But fortunately our Congress has reconvened in due course, and an opportunity is thus given for some further consideration of the subject by the Senate before the President again becomes primarily responsible for the final outcome. In these circumstances, our lawmakers, both the chief executive and

Westminster Gazette, England

President Wilson: "I thought I could trust you with it!"

the senators, are entitled to several things, first to the gratitude of the people for the manner in which they coöperated to win the war, to destroy the imminent danger which menaced all nations. The Chief Executive, the Senate, the House of Representatives, the people of the United States, all worked together nobly, heroically, victoriously in this great endeavor, and they cannot now be induced to engage in war with each other over the way to prevent a recurrence of similar dangers in the near or distant future. That is what error is endeavoring to accomplish, but that can and will be prevented, and an expression of mutual gratitude for the good already accomplished, by mutual consideration and coöperation of all concerned, is the beginning of this preventative.

The Chief Executive and the [Continued on page 15]

Men Say the War Is Over

By William E. Brooks

Men say the War is over: that the fields
Where earth lay red and wounded now are green,
All covered by the young and tender grain;
That swords in attic corners gather rust,
While hands that held them guide again the plough;
That distant marts of trade are thronged once more,
And troop-ships wallow laden deep with bales
Of stuffs like Hiram sent to David's son—
So far and so forgotten is the War.

Over? To-day I met her on the street
Dressed as she used to dress in colors fine;
The white garb laid aside, the scarlet cross,
That once on gleaming coif had been the sign
Of mercy and of cheer to wounded lads,
All folded now and also laid away.
Her hands I saw were soft and white again,
Not hard and brown as when she came from France—
But there was that strange look still in her eyes;
And as I watched I wondered if those eyes
Beheld the throng that passed us on the street,
Or . . . evermore . . . the long white lines of cots
Each with its broken weary lad—her lads—

Tossing in pain and whispering of home.
Was it again for her that midnight hour
When the boy who fought at Cantigny went West,
While over him she bends with soft caress
And kissed him as his mother would have done?
Or that dread time, when after San Mihiel,
She'd dressed and dressed until the light was gone,
And then, clean-spent, through the taperless night,
Had gone with bracing words to those who heard
The droning of the coward plane o'erhead,
Seeking its well-loved mark of helpless folk?
Or Meuse-et-Argonne—day succeeding day
When ambulances rolled in endless lines,
Till every nook was filled with animate pain,
And every day cut new lines on her face?
Never a word was said of all that lay,
Back of those eyes. We talked of the day,
How crisp it was, how blue the October skies,
How fine the woods must be all in the gold
And russet of the ripe old year's farewell,
Then she was gone. But can there come a day
When, as men say, for her the War is done?

Which Leader Will They Follow?

"We cannot rewrite this treaty. We must take it . . . or leave it. . . . The clear and single way is to submit it for determination at the next election."—President Wilson

"We must either secure such compromises as may be possible or present the issue to the country. . . . We cannot go before the country on the issue such an appeal would present."—Mr. Bryan

Democrats at Donnybrook

The Philosopher Errant Strolls About the Fair

By Harold Howland

THE double-barreled banquet with which the Democrats celebrated Jackson Day in Washington must have looked different to different observers. To the Wilsonite it must have been disheartening; to the Bryanite encouraging; to the "good" Democrat, with no factional attachments, disconcerting; to the thick-and-thin Republican with his eye peeled for joints in the opposition armor, cheering. To the wandering Philosopher, coolly but not cynically aloof from the dust and struggle of the arena, it looked diverting—and normal. If there were an Old Farmer's Political Almanac, the Philosopher would expect to find in it in the month of January of any Presidential year the note, "About this time look out for internal party squabbles." If it had been the Republicans at whose board the Philosopher sat as a detached and contemplative—and paying—guest the other night, he would have expected to find just about the same measure of harmony and agreement that prevailed among the Democrats. Harmony in party councils comes after the Presidential convention, not six months before.

There were two veterans among the twelve speakers who took a shot with one barrel at the 800 diners on the top floor of the Willard, and with the other at the 700 in the underground banquet room of the Washington. The Philosopher dined at the Washington, and he ventures by way of irrelevant parenthesis to declare that there never was a better ventilated banquet room than that one two stories below the level of Pennsylvania Avenue. The one veteran, Champ Clark, whose adherents eight years ago were more or less musically protesting that "you gotta quit kickin' my dog aroun'," has lost none of his characteristic dry and pungent humor. He took his text from "the greatest humorist that Missouri ever produced," as he quoted Mark Twain's

dictum, "Blessed is the man that bloweth his own horn, lest it be not blown!" In the spirit of that wise saying, "dauntless the slug-horn to his lips he set, and blew." It was a lusty blast. It was old-fashioned, as befitted a veteran. It ignored the present and was silent about the future; to the past it "pointed with pride."

"We stand proudly on our splendid and unimpeachable record in peace and in war. Any one save a stark idiot can successfully uphold that record from Alpha to Omega. It is wise, progressive and patriotic. . . . For years and years our Republican friends asserted that we did not have the capacity for constructive legislation. . . . Unfortunately for a long time the people believed this malicious gibberish, but in 1912 the American people gave the Democrats another opportunity, and under the leadership of Woodrow Wilson we swept the country from sea to sea. . . . It is only sober truth to say that during the six years in which we controlled both the executive and legislative branches we put more constructive legislation on the statute books than was put on the statute books in twenty-four years of Republican control. . . . The income tax law . . . election of United States senators by the people . . . admitted Arizona and New Mexico . . . bills for the prevention of corrupt use of money in elections . . . the trade commission . . . the war risk insurance bureau . . . the ship purchase bill—once more, thank Heaven, American ships will plow every sea and the American flag will float in every harbor in the world . . . the Clayton anti-trust law . . . a far better and more liberal Philippine bill . . . the Underwood tariff bill—the best tariff law ever put upon the statute books . . . a conservation bill . . . the land bank bill . . . the Federal Reserve Bank law. . . . A Democratic administration participated gloriously in the most colossal war of all time, and our

brave soldiers, acting under the directions of a Democratic administration, brought that war to a successful and glorious conclusion. . . . On the glorious record thus made we confidently appeal to the voters of the land."

Well blown, sir! The Philosopher found himself applauding with the best of them. If that had been all there was to it, the old lion of the House would have said it all and said it well. Several of his associates among the twelve evidently agreed with him that that was all or nearly all, for they rang the changes on the "splendid," "glorious," "unimpeachable" record. But that other veteran, who entered public life more than a quarter of a century ago and has always played the role of stormy petrel, had something else to say. When he was thru, the sticks were out, and the Donnybrook Fair was on.

The quondam Peerless Leader, the still more quondam Boy Orator of the Platte, has a "concern," as the Quakers have it, for leadership. He will always lead, whether anyone will follow or not. Jackson Day, in the year of Grace 1920, was no exception. But the Philosopher suddenly awakes to the fact that he was about to imitate Walter Scott's play-bill, which "announced the tragedy of Hamlet, the character of the Prince of Denmark being left out." For the President of the United States, in spite of his immurement, lo these many weeks, is still the protagonist of the Democratic party, and what he had to say to his fellow-Democrats in banquet assembled was not lightly to be ignored. Mr. Wilson's letter to the diners was a "one track" document. It dealt with neither the party's past nor the party's future, but with the very immediate present. The President recognized that there is but one issue before the country at this moment, the Treaty of Peace with Germany with the interwoven Covenant. He reiterated his demand for the ratification of the Treaty "without changes which alter its meaning." He declared again that "there can be no reasonable objection to interpretations accompanying the act of ratification itself," but insisted that "when the Treaty is acted upon, I must know whether it means that we have ratified or rejected it."

On such an issue, of the Treaty, the whole Treaty and nothing but the Treaty, Mr. Wilson portrayed himself as so determined that he is prepared to "go to the country on it." He wrote: "If there is any doubt as to what the people of the country think on this vital matter, the clear and single way out is to submit it for determination at the next election to the voters of the nation, to give the next election the form of a great and solemn referendum, a referendum as to the part the United States is to play in completing the settlements of the war and in the prevention in the future of such outrages as Germany attempted to perpetrate."

This was straight fighting stuff. The President's shillelagh was out and whirling. In a moment it had been met with a hearty crack by the cudgel of the Democrat who had done more than any other man to nominate Woodrow Wilson for the Presidency eight years ago. Mr. Bryan likes to fight too.

"We must face the situation as it is," said Mr. Bryan. "We must either secure such compromises as may be possible or present the issue to the country." But this latter course, the contemplation of which seemed to disturb the President so little, is not at all to Mr. Bryan's stomach. It would involve a delay of fourteen months, he pointed out, and then would mean success only in case the Democrats should secure a two-thirds majority in the Senate. He might have added, but did not, that even if every Republican senator whose term expires next March were to be replaced by a Democrat there would still be lacking some votes of that two-thirds Democratic majority.

Mr. Bryan elaborated further his disbelief in the proposal to carry the Treaty over as an issue into the campaign. He said:

We cannot afford, either as citizens or as members of the party, to share with the Republican party responsibility for further delay; we cannot go before the country on the issue that such an appeal would present. The Republicans have a majority in the Senate, and, therefore, can by right dictate the Senate's course. Being in the minority, we cannot demand the right to decide the terms upon which the Senate will consent to ratification. Our nation has spent 100,000 precious lives and more than \$20,000,000,000 to make the world safe for democracy, and the one fundamental principle of democracy is the right of the majority to rule. It applies to the Senate and to the House as well as to the people. According to the Constitution, a treaty is ratified by a two-thirds vote, but the Democratic party cannot afford to take advantage of the constitutional right of a minority to prevent ratification. A majority of Congress can declare war. Shall we make it more difficult to conclude a treaty than to enter a war?

So much for the general question. But Mr. Bryan did not confine himself to that. He had something to say about that sorest point of all, Article X:

Neither can we go before the country on the issue raised by Article X. If we do not intend to impair the right of Congress to decide the question of peace or war when the time for action arises, how can we insist upon a moral obligation to go to war which can have no force or value except as it does impair the independence of Congress? We owe it to the world to join in an honest effort to put an end to war forever, and that effort should be made at the earliest possible moment.

So the issue was straightly joined between two factions in the Democratic party. The one, led by President Wilson along the single track of committal to the Treaty as written and the Covenant without amendment or reservation, is all for resistance to the hilt and no compromise. The other, with Mr. Bryan bustling along at its head, is for immediate ratification by whatever road it is necessary to travel to reach that end. They

glare fiercely at each other—and the Republicans chuckle.

Among the twelve there were two uncompromising supporters of the President's position, Attorney General Palmer and Governor Cox of Ohio. Both hurled hot defiance at the Republicans, Palmer with a leaping flame of magnetic oratory, Cox with the cold heat of a merciless, darting rapier. [Continued on page 158]

Sounding the keynote for 1920

A Message from the United States Government Our Answer to the Reds

By Francis P. Garvan

Appointed by President Wilson Assistant Attorney-General to
Direct the Department of Justice Campaign Against the Reds

WHEN the people of the United States understand the Red movement in this country and thruout the world the present menace to our Government and our institutions will have passed. Until they understand, the danger will persist in spite of the efforts of the Department of Justice to stamp it out.

It is the duty of every loyal citizen to study this movement and its aims and to calculate the effects its triumph would have upon him, his family and his interests. It is the duty of every educator, every editor, every minister to tell again and again what this movement really means.

It is a movement for world domination in the interests of its corrupted leaders in Moscow and their confederates in other countries. Just as Germany went to war under such phrases as "freedom of the seas" and "a place in the sun," forgetting the rule of God in its desire to possess other peoples' property, so the Reds have gone to war, calling for the "dictatorship of the proletariat" and "all power to the workers," but bent upon the same objects. The war just closed and the war just opened are alike, in that both were started in the interests of the rulers and not of the peoples.

The Bolsheviks after more than two years of power

in Russia still promise the people "peace, bread and land," but they have been unable to satisfy the actual needs of the population except by wasteful use of previously accumulated stocks. Even the guarantees of their Soviet constitution have been suspended and the country is ruled by a military dictatorship of self-appointed Communist Commissioners.

Now from Russia the Bolsheviks turn to the other nations of the world, for they know very well that without new fields for action they cannot long continue in power, even in Russia. And in every country they find thousands ready to reach into the fire for their chestnuts.

The American people must understand that it is not the old time soap box orator we have always tolerated that we have to deal with today. It is a movement well financed and well organized, for so rich a prize as the United States is worthy of large investment and the most careful thought in organization.

During the war not much radical agitation was aimed against the government, for the people would not tolerate it, but with the signing of the armistice there came a relaxation of vigilance, and they were willing for anyone, native or alien, to say what was on his mind. At the same time the Department of Justice was, to some extent, disarmed, for the espionage acts under which it was given power to deal with the advocates of violence against the Government during the conflict were purely war legislation inapplicable in times of peace.

Agitators sprung up everywhere and set to work. The year 1919 will be remembered as a year of strikes, many of them fomented and seized upon by revolutionaries to further their ends. Radical newspapers, in English and in many foreign languages, came into being by scores in our larger cities, until now there are some 450 of various shades of radical views being circulated in this country. Many of them have no advertising to speak of, indicating that they are receiving money from outside sources to further their propaganda.

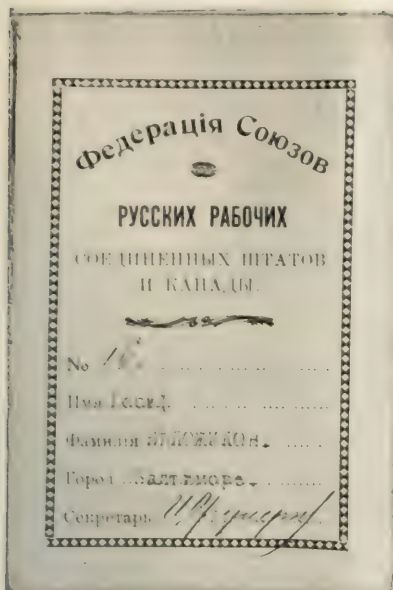

There were dozens of divisions of radicalism at the end of the war, each group holding different views, but now there are only two: the Anarchists and the Communists. The out-and-out anarchists are difficult to apprehend for they meet in secret and are without any records of organization. Frequently members of the various societies are unknown to each other. They are working for the destruction of all government and all law, but are few in number compared with the second group—the Communists.

The backbone of one anarchistic organization, the Union of Russian Workers, was broken by the Department of Justice raids last November and many of its leaders were deported on the transport "Buford." This

organization professed to believe in the Soviet form of government and to be working for its establishment in this country. In reality it was seeking the establishment of Soviets in the United States as a step toward no government at all—a step toward anarchy.

The Communist Party and the Communist Labor Party, against which the present activities of the Department of Justice are being directed, have grown by leaps and bounds since their organization. The Communist

Party was organized September 1, 1919, with an approximate membership of 55,000. Since that time its membership has doubled. It differs from the Communist Labor Party only in name. All the Socialists, except a comparatively small number in the right wing, and all other extremists, became the supporters, if not actual members, of the Communist Party. Recently there has come to light evidence that the two Communist parties were about to join hands in a desperate movement for the overthrow of the Government.

It requires only the reading of the Communist Party manifesto, which is patterned after the manifesto of the First Congress of the Communist International, held at Moscow in March, 1919, and the constitution of that party, to convince any loyal American that its existence is inimical to our institutions and our Government and that it should be stamped out. I wish these two documents might be read by every American citizen. There are thousands of sympathizers with the Communists and other radicals who do not know the doctrines for which they stand. This very sympathy is a stumbling block in the way of the Department of Justice in its present efforts. All misunderstanding as to the aims of the Communist Party should be cleared away.

Its manifesto clearly states:

"Communism does not propose to 'capture' the bourgeois parliamentary state, but to conquer and destroy it. As long as the bourgeois state prevails, the capitalist class can baffle the will of the people."

Again:

"The proletarian revolution comes at the moment of crisis in capitalism, of a collapse of the old order. Under the impulse of the crisis, the proletariat acts for the conquest of power, by means of mass action. Mass action concentrates and mobilizes the forces of the proletariat, organized and unorganized; it acts equally against the

bourgeois state and the conservative organizations of the working class. Strikes of protest develop into general political strikes and then into revolutionary mass action for the conquest of the power of the state. Mass action becomes political in purpose while extra-parliamentary in form; it is equally a process of revolution and the revolution itself in operation."

The program, altho it does not say so in so many words, is an expression of the desire of a group of the people to possess the property of others. To fulfil that purpose it is necessary that all government and all religion shall be destroyed.

Let us consider the property these revolutionaries desire to seize. It is the savings bank accounts of 11,000,000 people, the national bank deposits of 18,000,000 people, the houses of 3,838,000 home owners, the lands of 9,830,000 farm owners. The Liberty bonds held by 20,000,000 people, they would repudiate. To these seizures 100,000,000 honest, God-fearing people are asked to submit for the benefit of a small group of Lenins and Trotskys.

One of the most potent and far-reaching influences used by the Communists and other dangerous radicals in stirring up discontent, race prejudice and class hatred in the United States is the large number of radical newspapers and other publications which are given wide circulation. The overthrow of the Government is frankly urged in many of these publications. The editors of these newspapers and the authors of these books have a subtle method of placing their propaganda before the readers; but the reader understands what is meant.

These publications more than any other one thing are responsible for the spread of extreme doctrines in this country. All efforts are made to get them into the hands of men who will be swayed by their teachings. The subscriber to a radical paper uses it not only for his own information, but also to educate his fellow workers and inculcate them with the doctrines of anarchism, communism and radical socialism, thus enlisting their service for the revolution.

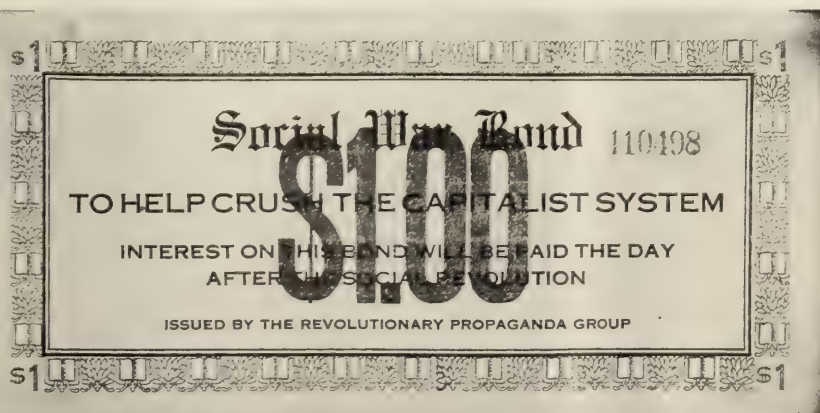

In New York City alone there are some twenty-five papers published in German, Hungarian, Russian, Yiddish, English and other languages that officially represent themselves as the organs of the Communist Party. Some of the statements in foreign languages of these newspapers, all of which are read in the Department of Justice, would be astounding to loyal American readers.

For instance, from an editorial in the *Elore Kepes Folyoirat* of March 16, 1919:

"... On the New Ides of [Continued on page 151]

A Message from the Government of Italy to the American People

Heavy Taxes, Increased Exports, and No Strikes

The Program of Italian Reconstruction

By Professor B. D. Attolico

Minister Plenipotentiary and Italian Commissioner General in
the United States for Financial and Economic Affairs

NOBODY who is familiar with Italy's economic position can fail to appreciate the exceptional nature of the financial strain which the war has placed upon her. The main features of Italian economic structure are such that the consequences of the war were bound to weigh more heavily on her than on any other country. All agricultural exports—a most important item in her foreign trade—had to be suppressed, as the food could not be spared from home. Her greater dependence upon the markets of Central Europe, the shortage of tonnage and shipping facilities, the deficiency of raw materials of every kind, the grave submarine menace to which the Mediterranean was exposed, these not only severely curtailed, but almost killed, her industrial export trade; while the tourist trade and emigration, which played in her trade budget a more important role than in that of any other country, were completely destroyed.

Italy suffered from all the economic disadvantages of the war, but she enjoyed none of the advantages which it brought. England, for instance, had to become a manufacturing emporium for the Allies, which implied an immediate economic benefit to her people. France had the tremendous advantage of the presence of the Allied armies on her soil, which meant a steady influx of fresh blood into her economic organism. Nothing of this kind occurred in Italy.

But it must be remembered that the greater the compression, as compared with other countries, of our export trade, the greater will necessarily be the margin of our recovery. The fewer the war industries Italy was put in a position to create during the war, the less complicated will be the difficulties of transformation. The higher the proportional cost of freight on our imports, the more noticeable will be the benefit which, in time, we shall derive from the lowering of the cost of transportation. The greater the disadvantage of the displacement of supplying or importing markets during the war, the more conspicuous, in due course, will be the benefit of the return to normal conditions. In other

words, Italy eventually will benefit from the severity of her past sacrifices. Then, again, Italy's future is assured, more perhaps than by any other factor, by the proportionately larger amount of labor which she has available, while the value of labor, as a factor in the general economy of nations, is certainly higher than it ever was before.

It is not possible to show in a few words how remarkably well Italy has done, and is doing, in the way of her economic recovery. For the moment, I wish to call attention to two conspicuous features of our situation: the steady increase of our export trade and the courage of our fiscal policy.

During the last few months not a single strike of any importance has taken place in Italy. The great mass of the country has been and is hard at work. In many instances, in several Italian industries, the workers, at their own request, are working more than eight hours daily, and production is at full speed. Increased exportation is of course resulting from increased production. This increase is relatively greater than in any other European country. From the monthly statistical bulletin of the Supreme Economic Council the following figures are taken showing in thousands of pounds sterling the exportation from the United Kingdom, France and Italy:

		United Kingdom.	France.	Italy.
1913	Monthly average	43,770	22,934	8,372
1914	Monthly average	35,893	16,229	7,368
1918	November	43,219	11,764	8,180
1919	January	47,343	12,028	9,026
1919	February	46,915	11,609	10,433
1919	March	53,109	16,364	12,234
1919	April	58,482	14,103	12,152
1919	May	64,345	17,101	11,746
1919	June	64,562	19,133	16,250
1919	July	65,315	24,735	15,067
1919	August	74,773	18,132
1919	September	66,500	27,760	22,540
1919	October	79,061	25,520

The foregoing data are all the more striking if reduced to relative figures. Taking 100 as representing the average monthly exportation of the United Kingdom,

France and Italy, in the two years preceding war, we obtain the following:

	United Kingdom.	France.	Italy.
1913 Monthly average	100	100	100
1914 Monthly average	81.98	70.96	88
1918 November	98.76	51.29	97.60
1919 January	108	52.44	107.80
1919 February	107.18	50.61	124.73
1919 March	122.24	71.35	146.12
1919 April	130.03	61.49	145.15
1919 May	147.00	74.43	140.30
1919 June	147.51	83.42	194.09
1919 July	149.22	107.83	180.20
1919 August	170.85	216.69
1919 September	152.09	121.05	269.23
1919 October	183.02	304.83

Only vague information has reached this country regarding the new financial measures adopted in Italy. Very few people realize that these represent a complete and most drastic reorganization of the old system of taxation. The existing system of taxation on land, buildings, and private income, has been replaced by a single tax "on normal revenue" on a flat maximum basis of 18 per cent, supplemented by a complementary tax of the same character, on a progressive basis, ranging from 1 to 25 per cent.

Extra war profits in Italy have all along been subject to a special war tax, rated progressively, from 24 to 66 per cent. This tax, being graduated according to the scale of income, represents an average levy of about 50 per cent on the total extra profit.

A further levy has now been added by a tax which hits increase of capital derived from the war, the aggregate of all extra profits drawn during the war—after deducting therefrom the amount paid in tax and war-tax. This new tribute is rated progressively, and is imposed on all such balance of war profit, on a graduated increasing scale, at a rate varying from 10 to 60 per cent, representing an average levy of about 45 per cent on the taxable amount. Considered in relation to the total war profit, this tax is to be reckoned as equivalent to 22½ per cent.

It therefore follows that about 72½ per cent of ascertained war profits (i. e., 50 per cent tax and war tax on profits, and 22½ per cent tax on increased capital) is forfeited to the Italian Treasury. It will be seen from this that Italy cannot be considered second to any nation in her dealings with war profits.

For some time past there has been an intention on the part of the Italian Government to issue a compulsory loan, at a nominal interest of say 1 per cent. This idea, however, was discarded in favor of a tax on capital, which has been put into force, beginning from the first of January, 1920, payable within a period of 30 years, and ranging from 5 per cent to 25 per cent.

The tax in question is not imposed on foreign capital, which includes the remittances of Italian emigrants deposited with Italian Credit Institutes or Italian Post Office Savings Banks.

Capitals up to 20,000 lire are exempted.

The various taxes on commercial transactions have been increased, and a tax of 10 per cent has been imposed on all luxury commodities, such as silk fabrics, silk stockings, gloves. At the same time all railroad fares have been increased from 18 to 48 per cent.

The additional revenue which is expected from the new taxation is reckoned at two billion lire per year, which will shortly enable the Italian Budget to balance.

In addition to the above, a free Loan has been issued, with a rate of interest of 5.71 per cent, Italian Treasury bonds being also accepted in payment. Ten billion lire have already been subscribed within the first week of January. A substantial portion of the proceeds of this new loan will be used for the absorption of paper currency, placing Italian circulation (already less inflated than in other European countries) on a sounder basis.

Altogether the financial measures which have been passed by the Italian Government are perhaps the boldest, the most far-reaching, and the most democratic in character yet enacted. The good-will and the discipline of the Italian taxpayer will do the rest.

How New Metals Are Made

Thank the Chemist Every Time You Turn on
the Lights or Listen to a Phonograph or Carve
the Sunday Roast or Go Motoring in Your Ford

By Edwin E. Slosson

THE primitive metallurgist could only make use of such metals as he found free in nature, that is, such as had not been attacked and corroded by the ubiquitous oxygen. These were primarily gold and copper, tho possibly some original genius may have happened upon a bit of meteoric iron and pounded it out into a sword. But when man found that the red ocher he had hitherto used only as a cosmetic could be made to yield iron by melting it with charcoal he opened a new era in civilization, tho doubtless the ocher artists of that day denounced him as a utilitarian and deplored the decadence of the times.

The value of iron lies in its versatility. It is a dozen metals in one. It can be made hard or soft, brittle or malleable, tough or weak, resistant or flexible, elastic or pliant, magnetic or non-magnetic, more or less conductive to electricity by slight changes of composition or mere differences of treatment. No wonder that the medieval mind ascribed these mysterious transformations to witchcraft. But the modern micrometallurgist, by etching the surface of steel and photographing it, shows it up as composite as a block of granite. He is then able to pick out its component minerals, ferrite, austenite, martensite, pearlite, graphite, cementite, and to show how their abundance, shape and arrangement contribute to the strength or weakness of the specimen. The last of these constituents, cementite, is a definite chemical compound, an iron carbide, Fe_3C , containing 6.6 per cent of carbon, so hard as to scratch glass, very brittle, and imparting these properties to hardened steel and cast iron.

With this knowledge at his disposal the iron-maker can work with his eyes open and so regulate his melt as to cause these various constituents to crystallize out as he wants them to. Besides, he is no longer confined to the alloys of iron and carbon. He has ransacked the chemical dictionary to find new elements to add to his alloys, and some of these rarities have proved to pos-

sulfur, any or all of them, and be spry about it, because if they do not get the report out within fifteen minutes while the steel is melting in the electrical furnace the whole batch of 75 tons may go wrong. I'm glad I quit the laboratory before they got to speeding up chemists so.

The quality of the steel depends upon the presence and the relative proportions of these ingredients, and a variation of a tenth of 1 per cent in certain of them will make a different metal out of it. For instance, the steel becomes stronger and tougher as the proportion of nickel is increased up to about 15 per cent. Raising the percentage to 25 we get an alloy that does not rust or corrode and is non-magnetic, altho both its component metals, iron and nickel, are by themselves attracted by the magnetic. With 36 per cent nickel and 5 per cent manganese we get the alloy known as "invar," because it expands and contracts very little with changes of temperature. A bar of the best form of invar will expand less than one-millionth part of its length for a

sess great practical value. Vanadium, for instance, used to be put into a fine print paragraph in the back of the chemistry book, where the class did not get to it until the term closed. Yet if it had not been for vanadium steel we should have no Ford cars. Tungsten, too, was relegated to the rear, and if the student remembered it at all it was because it bothered him to understand why its symbol should be W instead of T. But the student of today studies his lesson in the light of a tungsten wire and relieves his mind by listening to a phonograph record played with a "tungs-tone" stylus. When I was assistant in chemistry an "analysis" of steel consisted merely in the determination of its percentage of carbon, and I used to take Saturday for it so I could have time enough to complete the combustion. Now the chemists of a steel works laboratory may have to determine also the tungsten, chromium, vanadium, titanium, nickel, cobalt, phosphorus, molybdenum, manganese, silicon and

rise of one degree Centigrade at ordinary atmospheric temperature. For this reason it is used in watches and measuring instruments. The alloy of iron with 46 per cent nickel is called "platinite" because its rate of expansion and contraction is the same as platinum and glass, and so it can be used to replace the platinum wire passing through the glass of an electric light bulb.

A manganese steel of 11 to 14 per cent is too hard to be machined. It has to be cast or ground into shape and is used for burglar-proof safes and armor plate. Chrome steel is also hard and tough and finds use in files, ball bearings and projectiles. Titanium, which the iron-maker used to regard as his implacable enemy, has been drafted into service as an oxidizer, increasing the strength and elasticity of the steel. It is reported from France that the addition of three-tenths of 1 per cent of zirconium to nickel steel has made it more resistant to the German perforating bullets than any steel hitherto known.

With the introduction of harder steels came the need of tougher tools to work them. Now the virtue of a good tool steel is the same as of a good man. I' must be able to get hot without losing its temper. Steel of the old-fashioned sort, as everybody knows, gets its temper by being heated to redness and suddenly cooled by quenching or plunging it into water or oil. But when the point gets heated up again, as it does by friction in a lathe, it softens and loses its cutting edge. So the necessity of keeping the tool cool limited the speed of the machine.

But about 1868 a Sheffield metallurgist, Robert F. Mushet, found that a piece of steel he was working with did not require quenching to harden it. He had it analyzed to discover the meaning of this peculiarity and learned that it contained tungsten, a rare metal unrecognized in the metallurgy of that day. Further investigation showed

Microscopic photograph of a piece of metal that has been stressed showing how fractures develop as a plate cracks

the new tungsten tools will plow thru steel ten times as fast and can cut away a ton of the material in an hour. By means of these high-speed tools the United States was able to turn out five times the munitions that it could otherwise have done in the same time. On the other

hand, if Germany alone had possessed the secret of the modern steels no power could have withstood her. A slight superiority in metallurgy has been the deciding factor in many a battle. Those of my readers who have had the advantage of Sunday school training will recall the case described in I Samuel 13:19-22.

By means of these new metals armor plate has been made invulnerable—except to projectiles pointed with similar material. Flying has been made possible thru engines weighing no more than two pounds per horse power. The cylinders of combustion engines and the casing of cannon have been made to withstand the unprecedented pressure and corrosive action of the fiery gases evolved within. Castings are made so hard that they cannot be cut—save with tools of the same sort. In the high-speed tools now used 20 to 30 per cent of the iron is displaced by other ingredients; for example, tungsten from 14 to 25 per cent, chromium from 2 to 7 per cent, vanadium from $\frac{1}{2}$ to $1\frac{1}{2}$ per cent, carbon from .6 to .8 per cent, with perhaps cobalt up to 4 per cent. Molybde-

The Folly at Albany

It Is Time for American "Statesmen" to Begin to Be Grown Up

By Franklin H. Giddings

Professor of Sociology and the History of Civilization, in Columbia University

POLITICAL cleavage on the fundamental question of representative government in a democracy went down to bed rock when the Assembly at Albany suspended five regularly elected Socialist candidates from membership in that body, pending investigation of their loyalty and fidelity to

the Federal Constitution and the Constitution of the State of New York.

The incident was bound to happen, in this state or elsewhere. War necessitates ruthless curtailments of individual and political liberties jealously asserted and maintained in peace. Curtailment inevitably provokes resentments, and irritated men and women, radical by nature and often unbalanced, say and do things that border on criminality, or, in frequent instances, are defiantly criminal. And this abnormal war psychology does not immediately subside when peace is reestablished. It continues to make mischief. It never does or can subside until citizens of well balanced minds and practical wisdom take the initiative, and, as rapidly as possible, restore the ante-bellum conditions.

Viewed in the light of history and of sound political philosophy, the action at Albany was glaringly unwise; and that it was indefensible from the standpoint of American constitutional principles we are warned by Mr. Charles F. Hughes, a former justice of the Supreme Court of the United States, a recent candidate for the presidency, and a former Governor of the state of New York. In his temperate and carefully reasoned letter to the Speaker of the Assembly, Mr. Hughes performed a public service that was courageous, timely and of lasting value. That many of the strongest leaders of both political parties have taken the same stand is reassuring.

No other one thing came so near to undoing the work of the American Revolution and wrecking patriotic hopes of national unity and stability as the alien and sedition laws. Abraham Lincoln came perilously near defeat in his second presidential campaign because of the too free use of the executive power to suspend the privilege of the writ of habeas corpus as a device for keeping Copperheads locked up in jail during the period of the Civil War. These incidents were but repetitions

of the earlier history of civil liberty in England. The "short way with dissenters" works within limits and for a time, but it is a dangerous expedient. It blinds those who use it and insidiously impairs their judgment; and its reactions of resentment are cumulative.

Every defense that has been

made of the Assembly's action at Albany and of similar procedures in general breaks down. It is true that our American legislative bodies are tribunals of final jurisdiction upon all questions of qualification of members; but, as Mr. Hughes reminds us, this high prerogative should be exercised in accordance with the spirit of our institutions. In these institutions two principles are fundamental and imperative.

Our legislatures are representative bodies. The constituencies represented are local electorates. Their will and wish is, and must be accepted as, final, if we are to remain a democratic people. The instant we admit

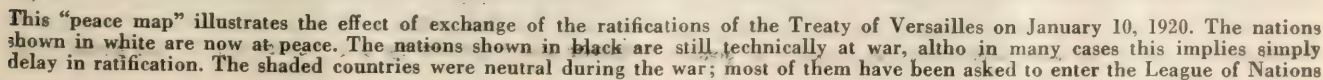

that any central governing body may say who shall and who shall not represent local electorates, we have gone completely over to the despotism of a Robespierre, of a Lenin and a Trotsky; for it was by precisely that method that the Terror governed in revolutionary France, and it is by that method that the central council governs Russia today. Very rarely indeed, if ever, should a legislative body, in the exercise of its prerogative, go further than to decide whether a presumptive member has, in fact, been duly elected and is, in fact, a qualified and loyal citizen.

If charges of disloyalty and unfaithfulness to the Constitution are made, a second fundamental principle of our institutions must be respected. An American citizen is presumed to be innocent of charges preferred against him until the charges are proven. Members of legislative bodies and all other offices of government must make oath that they will support the Constitution and the laws. The willingness of the Socialist members at Albany to take the oath was presumption of loyalty. On their taking that oath they should have been seated. If reasonable probability remained of disloyal activities and of perjury in taking the oath, proceedings should have been instituted, as Mr. Hughes remarks, against them individually, and a finding [Continued on page 159]

The End of the Great War

Also the treaty, supplementary protocol and arrangement regarding the occupation of the Rhine provinces which were signed at Versailles on June 28, 1919, included the name of the United States, no American representative was present at the ceremony of ratification. The American Ambassador to France, Hugh C. Wallace,

Baron von Lersner and Herr von Simson were the first to sign, next Premier Lloyd George, then followed Premier Clemenceau, Premier Nitti of Italy, Baron Matsui of Japan, Paul Hymans of Belgium, and the delegates of the other countries named above, in alphabetical order. Premier Clemenceau, as he passed the seats

of the German delegates after signing the document, informed them that the repatriation of the German prisoners in France would begin immediately and that the first trainload was about to start for the frontier.

After the exchange of ratifications Premier Clemenceau, in accordance with agreement, handed to Baron von Lersner a note stating that if on examination it is found that the Allied experts have overestimated the tonnage of floating docks available in German harbors, as the Germans claim, the amount demanded may be reduced by not more than 125,000 tons. The original demand in the Allied note of November 2 was for 400,000 tons of floating docks, cranes, tugs and dredgers to compensate for the loss of the German fleet interned at Scapa Flow and sunk by the German officers on the day the Treaty of Versailles was signed. The German commissioners contended that they did not have such a tonnage and that to surrender all their harbor appliances would ruin German commerce and prevent the regeneration of the country.

In an interview after the ratification ceremony Baron von Lersner said:

Execution of the Treaty of Versailles imposes upon Germany the heaviest sacrifices ever borne by a nation in modern times. We lost in the west and in the east territories that belonged to Prussia for many centuries. We have assumed enormous economic obligations. Nevertheless I am glad that peace is at last reestablished because it will give back to Germany her beloved sons still prisoners abroad.

My great regret is that the United States is the only country with which Germany is still in a state of war. I hope, however, that this situation soon will be changed.

We have already, even without being obliged by the terms of the treaty, delivered a considerable quantity of products, including 2,500,000 tons of coal, to France, and I can say that Germany will go to the utmost limit of possibility in fulfilling all the obligations she has incurred. It will mean hard times for Germany, but with the recovery of our ardor for labor and production we hope to meet every emergency.

Baron von Lersner stated further that he feared the effect on Germany and the peace of Europe generally if the Allies should insist upon carrying out literally the provision for the extradition of the large number of

The Peace Calendar

November 11, 1918—Armistice granted to Germany.

June 28, 1919—Treaty signed at Versailles.

January 10, 1920—Exchange of ratifications brings Treaty into effect.

January 16, 1920—Council of League of Nations opens.

January 20, 1920—Germans evacuate northern Schleswig.

January 25, 1920—Frontier Delimitation Commissions begin work. Germans evacuate Upper Silesia, Allenstein and Marienwerder regions.

February 10, 1920—Plebiscite in first Schleswig zone. Germans must surrender shipping.

March 10, 1920—Germany must demolish Rhine fortresses, surrender war material in excess of prescribed amount, reduce naval and aerial establishment, pay shipping indemnity in kind.

March 17, 1920—Plebiscite in second Schleswig zone.

March 31, 1920—German army reduced to 100,000 men.

July 10, 1920—Period for Malmédy and Eupen plebiscite closes.

July 25, 1920—Earliest date for Upper Silesia plebiscite.

May 21, 1921—Amount of reparations due by Germany to be announced; first installment of 20,000,000,000 marks due.

January 1, 1923—Termination of clauses on aerial navigation.

January 10, 1925—Allies evacuate Cologne district. Termination of minimum period of "most favored nation" treatment of Allies' trade by Germany.

January 10, 1930—Allies evacuate Coblenz district.

January 10, 1935—Allies complete evacuation of Germany.

Plebiscite in Saar Valley region.

May 1, 1951—Reparations payments supposed to be completed.

German officers accused of crimes committed in the war.

Your conviction must be the same as mine that the desire of the Entente is by no means to satisfy revenge, but to punish the guilty with equity and justice.

The Entente proposal for obtaining this object, however, far exceeds the demands made by Austria upon Serbia for the punishment of the assassins of the Archduke, demands which were rejected by Serbia with the approval of the Entente. I cannot believe that our former adversaries have any interest in compromising the reestablishment of normal life in Germany by insisting in this question of extradition upon availing themselves unsparingly of rights the real end of which might be attained otherwise.

As an alternative for the trial of the accused in a foreign court composed of their enemies, Baron von Lersner proposed that they be arraigned before the Supreme Court of Germany, with representatives of the Entente as public prosecutors, with the fullest rights of control. This proposition was rejected by the Peace Conference, but the German Government still has hopes of some such arrangement.

Disorders in Germany

THE long delay in the ratification of the treaty, the strong opposition to it in the American Senate, and the manifestations of disagreement among the Allies have hitherto kept alive among the Germans some faint hope that the terms of peace might be alleviated. But now that the treaty is definitely in force they are confronted by a crisis due to the appalling prospect of meeting their unparalleled obligations with a country reduced in resources, destituted by war and discouraged by defeat.

It was rumored on the day the treaty was finally signed that the German Government had been overthrown by an insurrection. This report proved to be untrue, or at least premature, but there have been serious riots in many German cities and it is evident that the Communists or Spartacists are trying to take advantage of the popular disaffection and depression to replace the republic by a dictatorship of the proletariat

International

German workmen tearing down the great German fortress of Kuestrin in Prussia in accordance with the terms of peace

as in Russia, by which Germany may escape all the penalties of the treaty. On the other hand, the monarchists are disposed to view such disorders with secret favor, hoping that if the present Socialist administration proves ineffective there will be a chance for the restoration of the old régime.

The Government is trying to compromise by introducing such a system of industrial management as shall satisfy the demand of the workers for shop control and yet increase production. The bill introduced into the Reichstag provides for councils of workmen in every factory or business employing twenty or more persons. These councils are to advise and assist the employer in running the establishment satisfactorily and efficiently. But this does not satisfy the Communists, who demand that the factory councils, or soviets as the Russians call them, should have unrestricted powers and complete control of the industry. *Die Freiheit*, a radical Socialist organ, called for popular demonstrations against the Government bill before the Reichstag building on the occasion of its second reading, January 13. In response to this appeal 100,000 men and women paraded the streets during the day, and toward evening a mob of about half that number collected in front of the Reichstag building and attempted to force an entrance. The police on the steps were driven in, but the troops fired from the windows with rifles and machine guns and so dispersed the demonstration. Forty-two of the mob were killed and more than a hundred wounded. All Germany has been put under martial law. *Die Freiheit* has been suppressed. All street parades and meetings are prohibited. Gustav Noske, Minister of Defense, has taken command of Berlin and his troops control the city and suburbs.

In Oberhausen, Hamborn and other towns of Rhenish Prussia mobs stormed the town halls, destroyed the archives, and looted the shops. Transportation and industry thruout Germany are disturbed partly by lack of coal and partly by strikes and walkouts. Cities are left without light or power and even food trains are stalled on the tracks. All the clerical staff of Government departments, numbering some 25,000 state employees, marched silently thru Unter den Linden in support of their demand for increase of pay. The cost of living rises continually and new taxes are being imposed. Those who have money, especially the war profiteers, fearing confiscation of their fortunes, are spending recklessly and plunge into all forms of dissipation, gambling and riotous living.

Drastic measures of economy and efficiency are proposed in order that Germany may support the heavy burdens laid upon her. These include the extension of the working day, sumptuary laws to curtail extravagance, compulsory labor of every able-bodied individual, national control of industry, curtailment of unnecessary traveling and commerce, etc. Dr. Walther Rathenau, one of the foremost German economists, maintains that the following measures are necessary to ward off ruin:

First, nothing must be exported except what is absolutely necessary for manufacture. Secondly, nothing must be imported that is not absolutely necessary. Thirdly, no luxuries should be manufactured for the home market; only necessities. Fourthly, the system of transportation must be thoroly reorganized; repair shops should, if no other way is possible, be turned over to workmen's coöperating organizations, which must see to a reasonable amount of labor being done. Fifthly, coal production must be increased no matter at what sacrifice. Mines should multiply the number of pits and provide housing for their workmen. Sixthly, all available waterpower must be harnessed immediately. Seventh, all coal devouring establishments not absolutely necessary should be immediately closed.

Clemenceau's Defeat

CLEMENCEAU, "The Tiger," once a teacher in a Connecticut girls' school, next a radical journalist who upset more cabinets than any other man ever did, later premier exercising almost autocratic powers during the greatest war in history and at last securing a triumphant place that makes France one of the five dominant powers of the world and gives her an increase of territory more than double the original size of the country—Clemenceau who has for more than fifty years been a leader in public life, has now at the age of 79 narrowly missed the goal of his ambition, the presidency of the French Republic. On January 16 the Senate and Chamber of Deputies met at Versailles in joint session to select a successor to President Raymond Poincaré, who has reached the end of his seven-year term and has been almost unanimously elected senator from the Department of the Meuse.

For weeks previous to the election Clemenceau's name was the only one prominently mentioned, but when the newly elected representatives of the people came to caucus Paul Deschanel had 408 votes to Clemenceau's 389 and the Tiger retired from the race. Deschanel is an enemy of Clemenceau's. Twenty-six years ago Clemenceau wrote an article for his journal, *La Justice*, criticizing Deschanel so harshly that he challenged Clemenceau to a duel in which Deschanel was severely wounded over the eye.

Owing to the suspension of elections during the war there were 240 seats out of 300 to be filled in the senatorial election of Sunday, January 11. One-third of the

The most powerful man in France—for fifty years a leader in public affairs—Premier Clemenceau now passes from the political field. But as he himself said, when he was proposed for president: "With a good pen and ink, and the paper on which to write down fine and strong ideas of justice and truth, one is, in a democracy like ours, king of the world"

Senate should have been elected in 1915, and another third in 1918 and there had been 24 deaths among the Senators. Besides this the restored provinces of Alsace and Lorraine had now the right to return 14 new Senators. French Senators are not elected directly by popular vote but by an electoral college for each department, composed of the Deputies and Councillors of the department and of delegates chosen by the municipal council of each commune.

The election of senators on January 11, like the election for deputies on November 16, showed a decided drift toward the Right. The Conservatives, Clericals and Royalists gained in the Chamber of Deputies and the Socialists of the extreme Left, the so-called "Bolsheviks," had their representation cut down from 105 to 54. In the senatorial election the first returns show the following figures: Conservatives, 11; Liberal Republicans, 8; Progressives, 11; Republican Left, 42; Radical Socialists, 66, and Republican Socialist, 1.

This indicates that both houses of the new parliament will continue under the control of the *blocc* or solid majority of radical republicans and moderate socialists who have for the last five years supported the Government in the prosecution of the war and the making of peace. The question is who shall take the place of Clemenceau as premier. Clemenceau's own choice is said to be André Tardieu. He was a member of the French Peace Commission and, altho comparatively young, has an exceptionally thoro knowledge of foreign affairs, including personal familiarity with the United States. If, however, the late premier should not retain the power to nominate his successor the post may go to his rival, Aristide Briand. He first came into politics as Socialist and joined with the late Jean Jaurès in founding the Socialist paper, *Humanité*. But he left the party to enter the cabinet in 1906 and carried thru with considerable skill the delicate and difficult task of separating church and state. He succeeded Clemenceau as premier in 1909 and distinguished himself by crushing a general strike on the state railroads by calling the men to the colors and then setting them at their old work under military command. Briand again became premier in 1916 but was not able long to hold the office.

One of the questions which will be brought before the new parliament is the proposal to renew relations between France and the Vatican and for such negotiations Briand would be more acceptable than such violent anti-clericals as Viviani.

Troubled Mexico

ALTHO the relations between the United States and Mexico are not, perhaps, as strained as they were a month ago, the Department of State is pressing the Mexican authorities to do justice with regard to a number of recent murder cases. Three more Americans have been shot in the Tampico oil district and representations have been made to the Carranza Government as to the disorderly conditions prevailing in this region. Several older controversies, such as the arrest of Consular Agent Jenkins and the murder of Mr. Wallace, an American citizen, last November, at the hands of a Mexican soldier, are still matters of diplomatic negotiation. It is estimated that eighteen Americans employed by the Tampico oil companies have been killed during the civil disturbances of the last few years.

In spite of these outrages, however, the general condition of Mexico seems to show improvement. The War Department announces that American army men are now permitted by the Mexican authorities to travel to points in the United States over Mexican railroads. The Carranza Government, which has already far outlasted any of the numerous régimes which Mexico has known since the deposition of Porfirio Diaz, controls a larger proportion of the country than at any previous time. Unfortunately the oil districts in which foreigners are most interested are just the parts of the country where the forces of law and order are weakest. Tampico suffers not only from bandit raids but from the lawless conduct of "regular" soldiers, who are more used to guerrilla warfare than to the dull routine of police work.

Three perils threaten the prosperity of the oil districts: the possibility of legislation hostile to foreign interests, the possibility of renewed civil war or at

AMERICAN THROUGH SERVICE

French, British and American troops united in this memorial service at Archangel for the Allied soldiers who died for Russia

least of increased banditry, and the recent volcanic disturbances. A technical expert of the Mexican Government has stated that the recent volcanic outbursts and earthquakes have altered the geological formation of the region affected and may have seriously injured the oil fields. Recent reports of the loss of life in the earthquake area indicate over 2000 deaths. A fresh eruption in the San Miguel district killed over 200 persons. Some 300 square miles in the state of Vera Cruz have been laid waste and the survivors of the earthquake are left without food or water. The city of Coutzlan has been wiped out with a death roll of more than one thousand. The Mexican Government is collecting funds for the relief of the earthquake sufferers. General Aguilar has sent a strong force from Cordoba to police the earthquake region, and, incidentally, to drive out the rebels under General Felix Diaz, who occupy many of the villages.

The Army in Transition

MUCH uncertainty surrounds the future military establishment of the United States as, indeed, of every other nation which must make the transition from a temporary war time basis to the permanent organization of peace. The army reorganization bill before the Senate provides a triple establishment: a regular army of 230,000 men and 18,000 officers; an army reserve, and the National Guard. The citizen reserve will contain volunteer veterans of the world war and young men who have received four months' compulsory service at the age of nineteen. It is open to men liable to compulsory service to choose either federal or National Guard training camps, but the latter must be maintained at federal standards of efficiency. Secretary of War Baker has requested Congress to authorize an army of 275,000 until July first in order to maintain the army of occupation in Germany.

As the Treaty of Versailles limits the German army to 100,000 and abolishes compulsory service it is evident that the United States is now a far more heavily armed nation than Germany and that in a future war with Germany (should such be possible) we would have no need of "Allies and Associates." Still even the new military establishment is much smaller than our army on its recent war footing and there has been inevitably wholesale "demotion" of officers holding temporary high rank. The War Department has issued the following order:

The Secretary wishes the discharge of emergency officers and the demotion of regular officers in all cases where the interests of the service will permit, and wishes changes in organization made where practicable, so that the num-

ber of emergency officers and regular army officers holding emergency rank may be reduced to an absolute minimum.

In every case in which an officer retains his temporary rank special cause must be shown. Partly as a result of this loss of rank more than two thousand officers of the regular army resigned from the service last year and retired to civil life.

General Pershing has confuted the charges made before a committee of investigation of the House of Representatives that the American army sacrificed the lives of its soldiers by needlessly continuing to attack the German lines on the day of the armistice. He said that he did not know until the morning of the armistice at what hour hostilities were to cease. As false rumors that the armistice had already been signed had for several days been current in the Allied armies Marshal Foch issued an order on November 9 urging all com-

"Most certainly super-normal," says Sir Arthur Conan Doyle of this photograph of himself taken by spiritualistic mediums. To avoid even a suspicion of fraud the author of "Sherlock Holmes" examined the camera, loaded it and after he had sat for the photograph took out the plate and developed it himself. It was then that he noticed an extra face on the plate behind his own, a face resembling that of his dead son. "It is very possible," he concludes, "that the whole picture was conveyed onto the plate from some existing picture. However that may be it was most certainly super-normal, and not due to manipulation or fraud."

Harding in Brooklyn Daily Eagle

Get to work!

manders to "maintain and hasten our action" and "secure decisive results." The French and British forces continued their attacks under this general order up to the time of the armistice and the American army did the same. It was untrue that at any time during the campaign the American army exposed or sacrificed its men unnecessarily.

The War Department announces that a notable feature of reorganization will be the increased attention paid to the education of the recruit for civil life. Instruction courses are being prepared in such vocational subjects as carpentry, blacksmithing, pharmacy, dentistry, mechanics, engineering, draughting, stenography, automobiling, telegraphy and wireless operation, and even gardening; and also in such general subjects as English, geography, mathematics, American history and modern languages. Not all of these subjects will be given at every training camp, but so far as possible each recruit will be placed where he can obtain the instruction which he desires. Congress has appropriated \$2,000,000 for educational work in the army during 1920.

Where the Money Goes

ONE last foreign loan to strengthen the European cordon against Bolshevism and to counter famine in Poland, Austria, Armenia and other destitute areas is under consideration by Congress. The recommendation of Secretary of the Treasury Glass that \$150,000,000 of the funds of the United States Grain Corporation be used to establish foreign credits in this country and that administration of the fund be left with that agency probably will be carried out.

Chairman Fordney of the House Ways and Means Committee had previously announced that no authorization for the establishment of additional credits would be made at this session, but a majority of his committee and of the Congress as a whole is convinced

that the loans proposed by Secretary Glass must be made to prevent infection of those nations whose resistance has been weakened, and the spread of social and economic disease thruout Europe and the whole world.

Herbert Hoover explained that the new loans would fit in with the program of economy in expenditure, since they would tend to build up security for the \$9,500,000,000 in American loans previously extended to foreign nations. Congress was greatly interested and much impressed by Mr. Hoover's testimony. He measured up well as a presidential possibility.

Europe as a whole was recovering from the war with unexpected rapidity, he said. But it was by no means past the possibility of a set-back. Most countries could carry thru the work of rehabilitation without outside assistance. New American loans in these cases would be a hindrance rather than a help. He recommended loans to Poland, Austria and Armenia only to carry them thru until the next harvest, because thousands might die in the meantime.

The situation in Austria, he thought, was very nearly hopeless. She had been stripped by the settlement of nine-tenths of her agricultural lands. She could feed herself not more than three months of the year and her industries would be unable for many years to produce the commodities needed to exchange for an adequate food supply. He indicated that the Austrian settlement was made over the protest of the American Commissioners and was emphatic in his statement that American dollars should not be used to maintain the conditions laid down by the Austrian treaty. This loan should be made as a humanitarian measure, but the European powers should be notified at the same time that they could not look to the United States to guarantee the Austrian settlement in the future.

MR. HOOVER said the previous starvation loan of \$100,000,000 which had been regarded by Congress as pure charity, would not be a total loss. He thought, in fact, that \$88,000,000 could be recovered. And of the contemplated loan a large part would be returned, for there is the basis of a sound economic system in all countries except Austria.

No additional tax burdens should be put upon the American people for feeding Europe, Mr. Hoover asserted. Since the \$150,000,000 would come from the funds of the Grain Corporation—"the only war agency that made money"—no new taxation would be required now.

Secretary Glass gave warning, however, that there could be no reductions in taxation. He impressed Congress with the necessity for economy when he said "should Congress embark upon new fields of large expenditure or further reduce taxes it will be necessary to call upon the country to finance the resulting deficit by the issue of a new liberty loan." Otherwise he promised the retirement of the floating debt out of taxes already provided and a general reduction of the funded war debt.

The House membership has been lectured almost daily since the session opened on the necessity for stringent curtailment of governmental expenditures by its leaders. The subject has been approached from a different angle each time a new appropriation bill was taken up, but always the conclusion has been the same, economy, economy, economy. But it is the habit of leaders, not always to follow even their most fervent preaching and they have joined their colleagues many times in voting increases in appropriations, where the necessity was not apparent.

The increase in the cost of living has led to agitation

Brave Tales of the Sea

© Underwood & Underwood

Mrs. Isabella Oram, of Bristol, Maine, is probably the only woman who has piloted a ship across the Atlantic. She had sailed with her husband, Captain William Oram, for sixteen years during his command of the four masted schooner at the right. When Captain William was taken sick just after they left the Canary Islands on a home voyage his wife took over the navigation of the vessel. The crew was short—both mate and cook had stayed ashore at Las Palmas; Captain Oram grew worse and died during the voyage; storms were unusually heavy all the way across—but Mrs. Oram brought the "Jean L. Somerville" safely to the Florida coast. A bad storm had carried away some of the rigging, so that the ship had to be towed into Mobile Bay

© Underwood & Underwood

The story of the boy who saved Holland by stopping up a hole in the dike with his arm has a grown-up counterpart now. When the "Glanee" (above) tore a hole in its hull on the rocks off Plymouth a Cornish fisherman in the crew, Ernest Brown (right), literally jumped into the breach. He wrapped himself in pieces of sail cloth and by forcing his body into the leak stopped it for four hours while the boat was towed into port

International

Anthony Cardon has had enough of sea life. Seven ships have been sunk under him, by torpedo or by a mine, and each time his escape has seemed miraculous. The last was on the "Liberty Glow," sunk recently in the North Sea

by Government employees for increases in salary, and in almost every case these increases have been granted. The increase in prices also affects Civil War veterans and so the House has appropriated \$64,000,000 for increasing pensions. Practising economy at this time is as difficult for Congress as for the rest of the country. There seems no necessity, however, for the omnibus public buildings and river and harbor bills now in preparation, for the first time in several years. Bills introduced for the erection of public buildings and for increases in pensions outnumber general legislative measures more than five to one.

ON the floor the Treaty of Peace has hardly been mentioned since Congress reconvened, but in the cloakrooms, lobbies and private offices it has been the subject of excited discussion. The Jackson Day split between President Wilson and William Jennings Bryan, in which the one declared for making the treaty a campaign issue, if it were not ratified without "nullifying reservations" and the other for immediate peace at any price, gave rise to a fairly general expectation that ratification by the Senate would be rather quickly achieved.

This was due to the expressions of Democratic senators who said they were "standing wholeheartedly by the President," but were inclined to favor the Bryan plan of taking the best bargain they could get to keep the treaty out of the campaign—a contradiction they did not attempt to explain. A revolt against the President's leadership seemed imminent. Scores of conferences were held and it was reported that Republicans and Democrats were very near an agreement on a schedule of reservations, differently worded, but accomplishing the purpose of those proposed by Senator Lodge.

When the air cleared, however, it appeared that the pieces had been well shaken up but had fallen back into the same places as before. The President still holds the whip hand in his power to deposit or to refuse to deposit the Senate's ratification. Democrats now believe

Harding in Brooklyn Daily Eagle

When the pie was opened—

Knott in Dallas News

If they're looking for suitable platform timber

it would be the height of political folly to send to the White House a resolution certain to be pigeonholed. Therefore they will not agree to any reservation that cannot be accepted by the President—and the Republicans will agree to no schedule of reservations that can be.

The present compromise efforts of the Democrats give little promise of early ratification. Their purpose is, if possible, to frame a set of reservations with the approval of the "mild reservationist" Republicans that will be rejected by the "strong reservationist" Republicans. Thus they would split the Republican forces in the Senate and the country and at the same time would put the onus of delaying peace squarely upon their political opponents.

Politics is the dominant motive in the present maneuvers. It is too early to assert that all attempts at ratification in advance of the election will fail. The exchange of ratifications, restoring peace in Europe, has brought renewed pressure for speedy and satisfactory action by the Senate from the country and the business interests. This pressure may at any time become so heavy as to outweigh all political considerations. Unless it does, however, the hope that the country will wake up some morning to find the treaty ratified is not likely soon to be fulfilled.

RICHARD BOECKEL, Washington

The New Plumb Plan

MR. GLENN B. PLUMB, whose proposal for public control of the railway systems of the country attracted such general attention a few months ago, has now announced a broader industrial program applicable to the whole range of industry. The importance of Mr. Plumb's proposals lies not only in the detail in which they are presented but also in the endorsement which his railroad proposals have already obtained from the Railroad Brotherhoods and other labor organizations.

Mr. Plumb recognizes four types of American industry: (1) those "individualistic in ownership and operation," such as farming; (2) those "which thru organization have so developed that ownership is separated from labor and concerns itself only in direction and

Thomas in Detroit News

The clean-up squad

supervision of production"; (3) those "based on a grant from society in the shape of a franchise, grant of privilege or monopoly," under which caption he includes the mining industries and others in monopolistic possession of natural resources; (4) all facilities for transportation and communication. In recognizing the first type of industry, still individualistically owned, Mr. Plumb parts company with orthodox socialism; the more so that he is willing to leave such industries in their present legal status and subject to "the law of supply and demand."

For the other three types of industry Mr. Plumb proposes a triple control, with equal division of management and income between the general public and the persons engaged in the industry, which latter half is again equally divided between capital and labor. This involves in the case of ordinary large scale industry legislative action requiring all concerns to grant labor, "as the investors of present human creative effort," equal share of the profits and an equal voice in management with capital, "the investors of past creative effort."

In the case of industries resting on franchises or on natural or legal monopolies, public ownership is demanded, together with "the adoption of a tripartite representation of the public, private capital employed and labor, in direction and control of such industries, with equal authority, and a division of the savings, of efficiency between the public on the one hand, and labor and capital, on the other hand."

It is evident that American labor has been thinking along lines analogous to those which led the Peace Conference at Paris so to draft its labor proposals in the treaty as to provide for participation in labor conferences and in the governing body of the International Labor Office of representatives of the general public, of capital and of labor. A similar type of organization is evident in the special conferences, arbitral boards and other agencies of industrial conciliation which the American Government has established since we entered the war, with the aim of averting strikes or increasing the intensity of production. If a separate labor party plays an active role in the political campaigns of this year, it is predicted that the "Plumb plan for industry" will be one of the leading issues.

Socialists Barred from New York Assembly

FIVE Socialists elected to the New York Assembly have been refused seats in that body pending an investigation of the political principles and forms of organization of their party. These five men constitute the entire Socialist representation in the legislature and all of them represent New York City constituencies: Samuel Dewitt and Samuel Orr from the Bronx, Charles Solomon from Brooklyn, and Louis Waldman and August Claessens from Manhattan. The Assembly voted by 140 to 6 in favor of an examination of the credentials of the Socialist assemblymen by the judiciary committee. On January 12 the Assembly refused by 71 votes to 33 to rescind its action. The minority, who had changed their minds on the question of excluding the Socialists, consisted mainly of Assemblymen from New York City; the "up-state" Republican majority standing by its guns. Many Assemblymen of both parties refused to take any part in the voting.

Speaker Sweet justified the exclusion on the ground that the assemblymen had "been elected on a platform that is absolutely inimical to the best interests of the State of New York and of the United States," and that as members of the Socialist party they were dependent on the instructions of a party organization which admitted aliens and even alien enemies to its membership. He later explained to critics of the Assembly's action that the five Socialists were not permanently excluded but simply debarred pending an inquiry, and that if it were found after investigation that the party which they represented did not favor revolutionary methods they would, as a matter of course, be reinstated.

The action of the Assembly aroused very general criticism. Even State Senator Lusk, who has been in charge of the investigation of "Red" propaganda, declared that membership in the Socialist party was not in itself an offense and that it would be necessary to prove individual advocacy of violent methods if the exclusion of the assemblymen was to be sustained. The pastors of twelve New York churches issued a protest against the "proposed infringement of representative popular government." The New York press, tho divided in opinion, was in general severely critical of the action

Looking thru the Boundary Tunnel on the San Diego & Arizona

The map at the right shows the route of the new link in our trans-continental railway system. Starting at San Diego it runs down thru Palm City into Mexico, follows the international boundary for a bit, comes up to Pueblo and follows the boundary on the United States side to El Centro, where connections are made with the Santa Fe. Then it turns south again, crosses the boundary where the towns on either side are named Calexico and Mexicali and goes on to Yuma on the Colorado River in Arizona

A Hundred Thousand Dollars a Mile

This link of San Diego and Arizona Railway, recently completed, is one of the triumphs of American engineering. Tho it is only 150 miles long the difficulties of construction brought its cost to \$17,000,000. "Balloon Curve" (above) suggests the problems the engineers had to solve

The man who has been called "the most experienced railroad builder in the world," John D. Spreckels, a California capitalist, and the president of the San Diego and Arizona Railway

of the Assembly. The New York City Board of Aldermen refused to take similar action with respect to Socialist aldermen, and Mr. La Guardia, president of the board, said that the Assembly "is playing into the hands of the Bolsheviki, who justify their lawlessness by asserting that the ballot is not adequate to correct abuses." Mayor Hylan expressed his "regret that such hasty action was taken." Many members of the New York Bar Association joined in a declaration that the action taken by the Assembly endangered "the very foundations of representative government."

Such citations of opinion from men of all parties might be multiplied almost indefinitely, but greatest interest attaches perhaps to the views of Governor Smith and former Governor Hughes. Governor Smith said that the Socialist assemblymen were "presumably innocent until proven guilty" and should have been allowed to retain their seats until "charges in due form should have been presented to the legislature and these men tried by orderly processes." Mr. Hughes wrote a public letter to Speaker Sweet on the legal aspects of the case which has made a deep impression both because it was the opinion of a former justice of the Supreme Court and because Mr. Hughes is one of the national leaders of the Republican party. He said in part:

It is not, as I view it, in accord with the spirit of our institutions, but on the contrary it is absolutely opposed to the fundamental principles of our Government for a majority to undertake to deny representation to a minority thru its representatives elected by ballots lawfully cast.

If there were anything against these men as individuals, if they were deemed to be guilty of criminal offenses, they should have been charged accordingly. But I understand that the action is not directed against these five elected members as individuals but that the proceeding is virtually an attempt to indict a political party and to deny it representation in the Legislature. That is not, in my judgment, American Government.

The opinion of the Socialists themselves is that they were excluded in order to prevent an inquiry into the activities of the Lusk committee. They claim to have evidence, which they desired to produce in the legislature, that the Lusk committee, in its raid on the "Soviet Bureau" and other radical headquarters, had made use of the British secret service. They predicted that the arbitrary action of the Assembly would give a great impetus to Socialism.

Even before the Assembly had taken its daring step, Governor Smith had sounded a general word of caution in his annual message to the legislature. While declaring that the anarchist "should receive no mercy at our hands," he added that we should "resent as sinister and

Cleveland Plain Dealer.

A FAIRY TALE THAT HAS YET TO COME TRUE
"Ma, here's your coal!"

as a new expression of the old Know Nothing spirit the attaching to all citizens of foreign birth the stigma of radicalism." To direct radicalism into safer channels he recommended compulsory health insurance for industrial workers, establishment of the eight-hour maximum day in all industries, the extension of the principle of the minimum wage and of workmen's compensation for those injured in industrial accidents. The most sensational recommendation in the Governor's message was of quite a different character. He expressed doubts as to the legality of the eighteenth amendment to the Federal Constitution, and urged that the question of prohibition be submitted to the voters of New York in a popular referendum, in spite of the fact that the legislature had previously acted on the amendment and that more than three-fourths of the states of the Union had already ratified it. He further recommended a resolution in favor of prompt ratification of the treaty with Germany.

On January 13 more than four hundred colleges and universities took part in a straw vote on the question of Treaty ratification. Four options were offered to students and members of the university faculties: ratification without

Spencer in Omaha World-Herald

THE LESSON

Ledge Photo Service

School rooms out-of-doors all the year round have worked so well as a cure for tuberculous children that their benefits are being extended to keep healthy children well. This class is one of several at Bryn Mawr (the town—not the college) where school keeps in the open air even thru a regular blizzard

reservations; rejection of the Treaty; ratification with the Lodge reservations; ratification by compromise between the Lodge reservations and those offered by the Democratic minority. Both Senators Lodge and Hitchcock approved the form of the questions and ballots and the presidents of Columbia, Harvard, Princeton and Yale acted on the advisory committee. Both men and women students voted and the votes of the faculties were separately recorded.

In the result the advocates of any compromise which would secure ratification obtained an overwhelming victory in nearly all the institutions polled, especially in the large eastern universities. A few southern universities gave a plurality to ratification without reservations, and Michigan and some other colleges and universities of the middle west supported the Lodge program. In almost every instance the advocates of rejection were a poor fourth. In most instances the faculty vote was distributed like that of the students in the same institution.

The Soviet armies continue to gain on the southern and eastern fronts. By the capture of Novo-Tcherkask and Rostov on the Don river they have cut Denikin's force in two and have reached the sea. Odessa, the chief port on the Black Sea, has been abandoned by Denikin and occupied by Ukrainian insurgents, apparently acting in sympathy with the Bolsheviks. The tanks, airplanes, cannon, machine guns and ammunition supplied to General Denikin by the British have largely fallen into the hands of the Bolsheviks.

News from Siberia has been conspicuously lacking during the week except for such fragments of the Soviet wireless dispatches from Moscow as are transmitted to America. According to these the Bolsheviks have captured Krasnoyarsk, the central Siberian city where it was hoped Kolchak could make a stand. At Krasnoyarsk the Bolsheviks, according to their own report, took 60,000 prisoners, including the Polish Legion, as well as 20,000 rifles and sixteen guns. The foreign missions have been withdrawn to the southern side of Lake Baikal and it is feared that Irkutsk, to which Kolchak had transferred his headquarters from Omsk, has fallen into the hands of the Reds. At any rate they are reported from Pekin to have entered

Kiakhta, on the Mongolian frontier, 170 miles southeast of Irkutsk.

It is announced from Washington that all the American troops will be withdrawn from Siberia as soon as the Czechoslovaks can be shipped away.

The United Mine Workers of America in convention at Columbus, Ohio, on January 7, affirmed the action of the officers of the union in calling off the coal strike and agreeing to accept the President's proposal for the arbitration of the Coal Commission. Acting President Lewis and Secretary Green convinced the miners that once the Federal Government had intervened the strike became a hopeless one and, if persisted in, would have wrecked the union. As things were, in the opinion of the labor leaders, the union emerged from the strike stronger than ever and could count on the good will of the public, especially since not a single life was lost during the forty days' strike.

On January 6, Rhode Island and Kentucky ratified the woman suffrage amendment to the federal constitution. In both Houses of both Legislatures the amendment was approved by very large majorities. When twelve other states have ratified woman suffrage the constitutional requirement will have been fulfilled and women will vote in all parts of the United States. Suffragists hope that this will be done before the November elections, but that is only possible if the governors of several western states, which are presumably favorable to the nineteenth amendment, will summon the Legislatures in special session to act on the matter.

The increased demand for steel is reflected in the statement of the United States Steel Corporation that their unfilled orders for the last month of the year amounted to 8,265,366 tons; an increase of more than a million tons since November. Still higher figures prevailed during the war, reaching a maximum of over twelve million tons in April, 1917, but since the cessation of active hostilities there has been relatively little future buying. The present increase of orders is all the more significant since it is based on the industrial needs of peace.

The Great American Pig is more prominent than ever in the markets of the world. The pork products exports for 1919 are estimated at \$850,000,000 as against little more than a hundred millions before the war. Some of this increase is an increase of value rather than quantity, the average price of pork per pound having increased from 12 to 32 cents in the course of five years; but the actual quantity exported has increased 150 per cent. The United States, it is estimated, now raises seven of every ten swine in the world.

Mr. Gifford Pinchot, President of the National Conservation Association, has made a public protest against the abandonment by the Government of 160,000 acres of oil land in California to the Southern Pacific Railway. In his opinion the case should have been carried into the Supreme Court. Attorney General Palmer had not pressed the case on the ground that the courts would probably give an adverse decision. The value of the lands in question is estimated at \$500,000,000 by Mr. Pinchot.

The Treasury Department announces that the United States imported nearly \$304,000,000 worth of goods from Japan in 1919. More than half of this value consisted in raw silk imports. During the same year our exports to Japan were over \$326,000,000. Trade with Japan has increased with great rapidity. Four or five years ago we imported only a third as much of the produce of Japan as we imported last year.

The Democratic National Committee has voted to hold the party convention at San Francisco on June 28. There was a division of opinion between the partisans of the city of the Pacific and the supporters of the claims of Kansas City, but the former made the better financial offer for the honor of the convention. The Republicans will meet at Chicago.

Our Answer to the Reds

(Continued from page 133)

March let us, torn proletariats, all understand that our world is but one—Slavery! There is but one opponent—Capital! And our aim is one—To build up in place of the land of misery, in place of the world of slaves, the free land of revolution!"

The *Novy Mir*, whose offices recently were raided by the Department of Justice, had this to say on March 4 in an editorial—"What Do European Workers Think About Our Democracy?":

"... The mask of liberalism has been torn off the face of American plutocracy. Henceforth the European proletarian knows that where the foot of American official justice treads, there dies out the very breath of lice and the 'grass ceases to grow.' The legend of a 'liberal' and 'freedom-loving' America is no more."

These quotations are selected at random and are typical of much of the matter that is being printed in the radical foreign language press.

But, it may be asked, has the Department of Justice no power to deal with agitation and organizations of the kind here set forth? Taking up and considering the various classes of radical activities, in the light of existing criminal statutes, the Department of Justice, after consultation with the leading criminal lawyers of the country is of the opinion that:

Those who have attempted to bring about the forcible overthrow of the Government have committed no crime unless their acts amount to treason, rebellion or seditious conspiracy.

The preaching of anarchy and sedition is not a crime under the general statutes of the United States.

Advising the defiance of law is not a crime under the general criminal laws whether the same be done by printing, circulating literature or the spoken word.

Nor is advising and openly advocating the obstruction of industry and the violent destruction of property a crime under the United States general statutes.

It is obvious that the laws of the United States dealing with sedition need amendment of the sort that is now under consideration in Congress.

But more than laws there is needed a full understanding on the part of the American people of the true meaning of the present Red movement.

When the people understand that this movement is dominated by Leon Bronstein, alias Trotsky, an East Side agitator who never did an honest day's work, and men of his ilk, they will begin to see it in its true light.

When they understand that sabotage, syndicalism and proletarian dictatorship are only new names for robbery and violence against the people, the red flame that has so suddenly burst forth in this country will just as suddenly die out, for it cannot live in an atmosphere in which it is understood.

Washington, D. C.

Long Division Blindfolded

The Monroe is error-proof. Its operation is purely mechanical. You can even do Long Division without looking at the machine.

TAKE, for example, $33180.84 \div 98.7525$. Depress the dividend, 33180.84, on the Monroe key board and turn the crank forward. The dividend appears in the lower dial. Then depress divisor, 98.7525, on the key board. Now—simply as a test—blindfold yourself. Turn the crank backward. The Monroe is dividing for you. You can't make a mistake. The moment you turn too far, the bell rings. A few quick shifts of the carriage—a few turns of the crank and—

Look! There in the upper proof dials is your answer, 336. Time, 6 to 9 seconds—more than 4 times as fast as the old pad and pencil method which never was sure.

To subtract, turn the crank backward just once and you have the correct answer. To multiply or add, turn the crank forward, that's all.

Monroe speed and accuracy will end your costly hours of overtime wherever figure-work is done.

Don't guess that your figuring is correct—"Monroe it" and *know* that your answers are correct—without rechecking.

A microscopic motion picture of animal life

How the Movies Show You Things You Can't See for Yourself

Showing the growth of invisible organisms

HISTORY is repeating itself in the field of cinematography. Long before this art came to be popularly known as moving pictures, all attempts on the part of the real pioneers were directed toward the analyzing of motion or action rather than toward the producing of animated photography. Thus one of the first attempts was when a gentleman, in order to settle a dispute as to how a horse gallops, erected a battery of cameras alongside the racetrack, each camera being actuated by the snapping of a fine thread stretching across the path of the horse. In this manner a succession of photographs, taken at slight intervals, was obtained, and the dispute settled in short order. Another pioneer employed cinematography in order to analyze the locomotion of animals. By taking numerous photographs at a fair rate of speed, it became possible to study the successive steps of any bit of action. Moving pictures were a natural development of the work of the pioneer scientists; and the moving picture dramas and comedies and travelogs and other features of today were a logical business growth. But of late the moving picture is going into new fields, or rather old fields; for these fields are nothing more than the elaboration of the work of those pioneers who worked with crude equipment and materials during the latter part of last century.

Some very interesting work has been done of late in the way of analyzing motion or action of all kinds. One American scientist has set to work making films for this purpose, which, apart from possessing a fair degree of entertainment value, are vital to the scientific world at large. His first attempts have been in the way of analyzing sports, such as baseball, football, golf, and tennis. Taking his pictures at the rate of 128 per second, and projecting them at the usual rate of 16 per second, it is obvious that the action is cut down to one-eighth its normal speed. Thus in the case of a tennis analysis, the player is seen to hit the ball in the most leisurely manner; and the ball, in turn, simply floats through the air with the grace of a spherical balloon.

But motion analysis does not stop with sports. True, it explains the fine points of all sports; for the secret of a pitcher's curved ball, or the antics of an expert tennis-player's balls are soon disclosed. It is in industrial work, however, that this class of cinematography is at its best, since any given method of doing a given job can be studied at length and improved upon. In

Gilltams

Making a motion picture of life under water—a film valuable for educational use

scopical motion picture, which has tremendous possibilities. Already, almost every well-known disease has been the subject of microscopic cinematography, so that doctors and students can now study the action and reaction of the tiny creatures that are responsible for our well or ill being. Still more recently, a professor in a Western college has set to work making motion pictures of metal stresses. That is to say, he makes microscopic motion pictures of a piece of metal being bent time after time until it snaps. Such motion pictures show the fractures of the metal, which spread out gradually in all directions very much like the roots of a growing tree; and engineers and mechanics and architects at last have definite data as to what does take place when metals are stressed for varying intervals.

Motion pictures are quite flexible, to be sure; so that, on the one hand, we have motion analysis by slowing down projection, and motion analysis by speeding up projection, on the other. For instance, a snail's leisurely stroll can readily be analyzed by making motion pictures at intervals of ten seconds for each image or frame. The same pictures, when projected at the regular rate of 16 per second, would show the snail galloping along with the speed, if not the grace, of a race horse. But such pictures are better adapted to the analyzing of plant life. Thus it is possible to take pictures of a growing plant at intervals of say every half hour, during the day and night. In this manner the growth of a flower, from seed to maturity, can be shortened from a month or more in actuality to five minutes in cinematography. The flower on the screen grows while one waits, as if by magic. Aside from the entertainment value, such pictures can be applied to real scientific work. It becomes possible to test the relative value of fertilizers, soils, agricultural treatments, and so on by means of such pictures.

Animal pictures will teach more about zoölogy than any textbook ever written. And the same can be said for travel pictures, which bring to us a sense of the vastness of the world and the difference in customs.

New York

A Solution Of Our Treaty Tangle

(Continued from page 129)

senators are next entitled to clear recognition from one another and from the people of their several rights and duties, in this problem of supreme and unprecedented importance. Each senator is entitled to and is bound in conscience to follow the road that his own judgment says is right regardless of who agrees or disagrees with this. So is the Chief Executive.

Both the President and the senators are next entitled to a square facing of the facts, without any partizan or personal coloring injected into the atmosphere to cloud or distort the situation, and lastly they are entitled to any aid their fellow citizens can give in bringing the true solution of the Treaty tangle into view and general acceptance. The solution seems simple and follows as a necessary consequence from the recognition of the rights of sovereignty possessed by the states entering the League.

1. The proposed League of Nations, whether acting through its council or assembly, or any other agency, has no inherent power. The only power the League can properly have or exercise is to be derived by grant from the sovereign states constituting the League.

2. The states composing the League, after it is formed, will continue in possession and in the free and unimpaird exercise of all the powers of sovereignty, except in so far as they may have expressly delegated power to the League and have expressly deprived themselves of the further exercise of sovereign power in the specific matter delegated to the League.

3. In no part of the League covenant do the constituent states grant to the League the right to decide what constitutes compliance by any state in the League, of the obligations assumed by the state thru ratification of the Covenant. It follows, therefore, that each constituent state is the judge of what constitutes compliance with the obligations it has assumed by becoming a member of the League, or under the terms of international law or other treaties.

4. Therefore, each member of the League has the sole right to judge when a state of facts has arisen which calls for its protection of another member of the League, in the possession of its territory and in the exercise of sovereign power therein, against aggression from without.

5. When a constituent state of the League decides this question it must act thru the agency which has authority to decide this question, under its own constitution.

6. By the terms of the Constitution of the United States this decision would have to be made by the Congress.

7. After deciding that a state of facts calling for action by the United States in compliance with Article 10, Congress would be the sole judge of what constitutes compliance with the

How large lawns are kept in fine condition

Cutting large plots of grass with hand mowers is a tedious, expensive job. Labor is scarce and its cost is high. As a consequence, many large fine lawns have deteriorated badly during the past two years.

Not so, however, with those who have an Ideal Power Lawn Mower to do the work. For one man with an Ideal can easily cut as much grass per day as five hard working men with hand mowers. And he will do the work better.

Advantages of the Ideal

The Ideal is a power mower and roller in one and the sod is rolled every time the grass is cut. This keeps it smooth, firm and free from bumps. The Ideal is scientifically designed to keep lawns in fine condition. The weight is just right for steady year around work.

The Mower has a thirty-inch cut and one man can easily mow four or five acres of grass per day at an operating expense of about fifty cents for fuel and oil.

Cuts Close to Walks, Trees, and Shrubbery

Machine turns easily and will cut close up to walks, trees, flower beds and shrubbery.

When running over walks, driveways, pavements, etc., the operator simply lifts the cutting mower from the ground by means of a conveniently placed lever. This fea-

ture is also important in the early spring when it is desired to use the machine for rolling only. Simply lift up the cutting mower, add more weight if required and you have the most convenient power roller imaginable.

The success of the Ideal is due to its sturdy and powerful, yet simple, construction. No clutches or complicated parts to wear and get out of order. The motor is built in our own shop and designed especially for the work.

Owners of large estates, public parks, golf clubs, country clubs, cemeteries, etc., are all using the Ideal Tractor Lawn Mower with great success.

Special Cutting Mower for Putting Greens

For work on golf courses we furnish, at slight additional cost, a special set of cutting blades for use on the putting greens. In less than five minutes the regular 30" blade can be substituted for cutting the fairway

When desired, we also furnish, as an extra, a riding trailer which fastens to the frame and permits the operator to ride and at the same time have the same easy control as when walking.

You can secure the Ideal through your dealer direct or from our factory. Write today for catalogue and further details

IDEAL POWER LAWN MOWER

Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein, for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

promise contained in Article 10. Neither the League of Nations, nor any one or more of its members, nor the President of the United States would have the right to decide this question for Congress. One Congress could not decide it for its successor. Even when Congress declares war it cannot bind a succeeding Congress to carry on the war. In fact Congress is expressly forbidden to appropriate money for the army for a longer period than two years. Why? Just so as to have each Congress free to go on with a war inaugurated by its predecessor, or to stop it at once, as its own free judgment may dictate as right.

8. Article 10 binds each constituent member of the League to respect, and also to defend against external aggression, the territorial and political independence of each member of the League. It follows, therefore, that the League itself has no right to do the very thing it is organized to prevent others from doing—that is to trespass upon the territory of another member of the League or to interfere with its free exercise of its sovereign power in said territory. Consequently the League would be under obligation not only to refrain from interfering in the internal affairs of its members, but also to prevent any of its members from interfering with any of the other members, in doing as they think proper in their internal affairs. Thus each constituent member acquires the promise of all other members to respect its own territory and its exercise of sovereign power therein, in return for its covenant to do as it would be done by in these most vital of all national matters.

Recognition of the foregoing political facts would remove the main differences it seems to me which divide the senators who favor ratification. Enumeration of some of these facts in the act of ratification would not only facilitate an agreement to ratify the Treaty by a two-thirds majority but would tend to secure harmonious operation under the Treaty. In fact express recognition of "State Rights" in the act ratifying the Covenant of the League and establishing the League as a political fact of the day, constitute the solution of the present tangle.

The right of withdrawal from the League is also an inherent part of the sovereign power possessed by the nations constituting the League. Express recognition of this right, in Article XXVI of the Covenant itself, will tend to prevent the recurrence of an international civil war from causes somewhat analogous to those which precipitated the war between the states of our Union, and certainly this recognition is a sufficient answer to many arguments against ratification of the Treaty of Peace with the League Covenant as part of the Treaty. If all the things that are apprehended should happen, or in fact any of them, cannot Congress pass an act withdrawing from the League? Yes. Then why argue as to whether these things will or will not happen. Let us try it and see. If they happen let us withdraw. If the

fears prove not well founded no harm has come from submitting the question to proof and demonstration instead of mere discussion. But two years' notice is required. Yes, for actual withdrawal, but as I understand the Covenant, the two years is for effectuating the withdrawal. After the notice is given, the country withdrawing would be under no obligation to embark upon new lines of action as a member of the League in consequence of events occurring after notice given, or even to continue along lines already initiated in consequence of previous occurrences. As I see it, the nation that has given notice of withdrawal would have to respect the territory and sovereignty of the other members during the two-year period, but would not have to defend them against others, because the two-year period is for effectuating withdrawal, not for continuing to assume obligations under the Covenant.

Provision for amendment having been made and the Covenant having been so hastily prepared, and with many nations not represented at all in the deliberations which produced the League, it is most natural to suppose that amendments will be proposed at once and adopted at an early date. Gladstone said the Constitution of the United States is the greatest product that ever emanated from the mind of man at any one time. It was produced upon due deliberation, without any pressure from war emergency as was this Covenant. And yet the first Congress held under that Constitution proposed, and the constituent states immediately adopted, ten very substantial amendments. Can it be hoped that the Covenant of this League will be found more perfect than was the Constitution of the United States as it came from the Philadelphia convention? But let us amend before ratifying the Covenant, some say. Certainly not, and for this reason. The proposal to amend would come before the small number of persons whose work produced the Covenant. They are naturally against amendment. Let amendments be proposed now, and approved by the Senate, too, if this seems a proper order of business, but let the amendments come for action before the assembly of the League, not before those who drew the Covenant in its present form. There the amendments will be duly considered by representatives of all the nations concerned, and without prejudice. Their chance of adoption would thus be greatly enhanced.

Therefore, ratify the Treaty with express recognition of "State Rights," and such interpretations as really conform to its true meaning, propose amendments, not to those who drew the Covenant, but to the first assembly of the League, give notice of withdrawal if necessary amendments are not agreed upon, or if apprehended evils actually come to pass. Let the issue taken to the country be upon proposed amendments, if such an issue has to be made, not upon ratification or rejection of the Covenant as it now stands.

New York

How I Ate Two Pounds A Day Off My Weight

An Amazing discovery in weight reduction, no starving, no medicines, no special foods, no course of baths, no exercises, no "mind cure."

"Aren't you heavier than you used to be?"

This would nearly always be the first remark I'd hear whenever I met an old friend or acquaintance. And they were right. No doubt about it. I was fast putting on weight to a noticeable extent.

At first I took it as a sure sign of vigorous health. I had always thought that the accumulation of fat was Nature's way of storing up health and energy—a sort of reserve to draw upon in time of need. So I revelled in my good fortune and felt genuinely sorry for my friends who were not so favored by Nature.

But soon my condition began to be serious. I was getting altogether too fat. My increasing stoutness began to be about all I could think of—it entirely occupied my mind. My friends began to mention it. I couldn't walk a block without puffing. My heart became affected.

I had always led an active life, being fond of athletics, horse-back riding and dancing. My increasing weight made it difficult for me to "go in" for these things. I simply couldn't get around as fast as the others—even my walk was different; and besides, any sort of physical exertion became unpleasant to me. I don't need to go into details, for anyone with a tendency to stoutness will well know what I mean.

This lack of exercise could lead to but one thing. I took on weight to an alarming extent, and I shall never forget the day when I realized that I was slowing down mentally as well as physically. I lost interest in my work and all social affairs. Anything requiring exertion was passed up. Understand me, please. I am not trying to praise my former self and figure; I am simply telling how my mental and physical powers and pleasures decreased as fat was increased.

You can probably guess my next move—nearly every "Fat" woman has taken it. I became a follower of the "simple life." I cut down on my diet—and felt hungry all the time. Then I took a course of baths. According to weights taken "before and after" the baths cut down my weight. But within a day or so the weight was back again.

The baths had only a temporary effect. And it seemed to me that they were sapping my vitality.

Then I tried the plan of going without liquids; of omitting certain foods from my all-too-meagre diet; of eating widely advertised "reducing foods," and finally of taking medicine.

By this time life had lost much of its joy for me. As my weight increased so did my distress. I simply had to do something. So I started to find out all I could about obesity. I questioned physicians, surgeons, army doctors, health specialists

and a lot of women and men who were similarly afflicted. Soon I became a walking encyclopedia of weight reduction. But still I continued to put on weight.

One day I experienced a shock. I was reading some health statistics by life insurance companies. These showed conclusively that in addition to causing mental and physical inefficiency, fatness brings on a serious chain of illnesses such as heart trouble, diabetes, stomach and intestinal trouble, apoplexy and the like. And then I read that fat people die young. No supposition about this. Plain, cold, hard facts, drawn from life insurance statistics, covering the experiences of tens of thousands of people and several generations.

My lucky star must have been working for me about this time, for I ran across just the kind of practical help I was looking for. A friend advised me to read "Weight Control, The Basis of Health," by the famous food specialist, Eugene Christian.

This course, in the form of simple little lessons, which the publishers offer to send on free trial, completely upset my own personal opinions and all that I had learned about obesity and health. It shows that when one starts to put on weight, it is not a sign of health, but of ill-health. Obesity is actually a disease. Then it showed that most of the tables of weights indicating what a person of a certain age and height should weigh are all wrong and why.

Then there were some startling new ideas about the maintenance of health, of mental and physical vigor. No theories, but hard practical facts, drawn from the experience of thousands of men and women in all conditions of life.

The remarkable part of it all was that there were no fads in Eugene Christian's methods. No special baths, no self-denying diet, no medicine, no exercises—nothing out of the ordinary. Simply go on living a normal life, eat appetizing, delicious foods, properly combined, do pretty much as you please. And still one could reduce her weight to normal in a very short time by entirely natural methods.

It all sounded too good to be true, but I decided to give the methods a fair test. Right from the start my former vigor and energy began to return. I reduced my weight by two pounds each day. Not the slightest hardship was involved—a most unusual thing in weight-reduction. I had always enjoyed my meals, but now my food tasted even more delicious than ever. Waking became a pleasure to me again, instead of a grind. I was bubbling over with life and energy. My flesh grew hard and firm. And, soon, very much to my surprise, I was able to wear fabrics and colors which my stoutness had forced me to abandon.

When I now look upon my former condition of stoutness it all seems like a horrible nightmare, for not only did I quickly regain my normal weight, but I've maintained it ever since. To look at me to-day no one would realize that not so long ago I was a "fat" woman. My quick reduction in weight—an average of two pounds a day—my vigorous health and active mind of

to-day I all owe to Eugene Christian. I only wish I had the means to distribute his remarkable Course to every woman afflicted with obesity, for I feel that Eugene Christian is rendering a great and genuine service to humanity through his wonderful work. I have recommended Eugene Christian's Course to many others and have had the satisfaction of seeing it produce results just as remarkable as in my case.

Alma Virginia Lee.

Much could be written about the cause and the remedy for excessive stoutness and Eugene Christian's methods. But that is unnecessary, for you can, without a penny of expense or the slightest obligation, test out in the privacy of your home the same methods that Miss Lee and thousands of others have used with such remarkable and satisfying results.

The publishers of Eugene Christian's 12 lesson course, "Weight Control, The Basis of Health," are so confident that it will produce the same results for you as it did for Miss Lee that they will gladly send the entire Course to you on approval. Then you can see for yourself, by actual results, the wonderful efficiency of Eugene Christian's methods. These methods are not new and untried theories, for more than 200,000 people in all walks of life have used and are using them and endorse them in the most enthusiastic terms.

Send no money, merely fill in and mail the coupon. The entire Course, "Weight Control, The Basis of Health," goes to you at once, all charges prepaid. Examine it thoroughly. Weigh yourself carefully before you begin to apply its teachings. Then weigh yourself daily. You'll be amazed at the satisfying reduction in weight you'll experience almost from day to day. And soon you'll say as Miss Lee said, and as thousands of other men and women have said, "To look at me to-day no one would realize that not so long ago I was a 'fat woman.'"

Then if you decide to keep the Course, as you surely will, remit only five dollars in full payment. And if for any reason you do not wish to keep the Course send it back within five days and you will owe us nothing. Obviously, an offer such as this could not be made unless the publishers were confident that Eugene Christian's methods will produce remarkable results for you.

As this special free-trial offer may be withdrawn at any time, it is suggested that you mail the coupon promptly.

How New Metals Are Made

(Continued from page 137)

num or uranium may replace part of the tungsten.

Since the war the secret has been revealed that the British Government had been using in its munition plants a new form of molybdenum steel invented by Professor Arnold of Sheffield University. Its composition is said to be: molybdenum, 5.75 per cent; chromium, 2.79 per cent; carbon, .75 per cent; vanadium, 1.29 per cent, but no tungsten. It is claimed that this "super-steel" used for cutting tools will take off metal faster and keep its edge longer than any other.

Some of the newer alloys for high-speed tools contain no iron at all. That which bears the poetic name of the star-stone, stellite, is composed of chromium, cobalt and tungsten in varying proportions. Stellite keeps a hard cutting edge and gets tougher as it gets hotter. It is very hard and as good for jewelry as platinum except that it is not so expensive. Cooperite, its rival, is an alloy of nickel and zirconium, stronger, lighter and cheaper than stellite.

Before the war nearly half of the world's supply of tungsten ore (wolframite) came from Burma. But altho Burma had belonged to the British for a hundred years they had not developed its mineral resources and the tungsten trade was monopolized by the Germans. All the ore was shipped to Germany and the British Admiralty was content to buy from the Germans what tungsten was needed for armor plate and heavy guns. When the war broke out the British had the ore supply, but were unable at first to work it because they were not familiar with the processes. Germany, being short of tungsten, had to sneak over a little from Baltimore in the submarine "Deutschland." In the United States before the war tungsten ore was selling at \$6.50 a unit, but by the beginning of 1916 it had jumped to \$85 a unit. A unit is 1 per cent of tungsten trioxide to the ton, that is, twenty pounds. Boulder County, Colorado, and San Bernardino, California, then had mining booms, reminding one of older times. Between May and December, 1918, there was manufactured in the United States more than 45,500,000 pounds of tungsten steel containing some 8,000,000 pounds of tungsten.

If tungsten ores were more abundant and the metal more easily manipulated, it would displace steel for many purposes. It is harder than steel or even quartz. It never rusts and is insoluble in acids. Its expansion by heat is one-third that of iron. It is more than twice as heavy as iron and its melting point is twice as high. Its electrical resistance is half that of iron and its tensile strength is a third greater than the strongest steel. It can be worked into wire .0002 of an inch in diameter, almost too thin to be seen, but as strong as copper wire ten times the size.

The tungsten wires in the electric lamps are about .03 of an inch in diam-

eter, and they give three times the light for the same consumption of electricity as the old carbon filament. The American manufacturers of the tungsten bulb have very appropriately named their lamp "Mazda" after the Light God of the Zoroastrians. To get the tungsten into wire form was a problem that long baffled the inventors of the world, for it was too refractory to be melted in mass and too brittle to be drawn. Dr. W. D. Coolidge succeeded in accomplishing the feat in 1912 by reducing the tungstic acid by hydrogen and molding the metallic powder into a bar by pressure. This is raised to a white heat in the electric furnace, taken out and rolled down, and the process repeated some fifty times, until the wire is small enough so it can be drawn at a red heat thru diamond dies of successively smaller apertures.

The German method of making the lamp filaments is to squirt a mixture of tungsten powder and thorium oxide thru a perforated diamond of the desired diameter. The filament so produced is drawn thru a chamber heated to 2500° C. at a velocity of eight feet an hour, which crystallizes the tungsten into a continuous thread.

The first metallic filament used in the electric light on a commercial scale was made of tantalum, the metal of Tantalus. In the period 1905-1911 over 100,000,000 tantalum lamps were sold, but tungsten displaced them as soon as that metal could be drawn into wire.

A recent rival of tungsten both as a filament for lamps and hardener for steel is molybdenum. One pound of this metal will impart more resiliency to steel than three or four pounds of tungsten. The molybdenum steel, because it does not easily crack, is said to be serviceable for armor-piercing shells, gun linings, airplane struts, automobile axles and propeller shafts. In combination with its rival as a tungsten-molybdenum alloy it is capable of taking the place of the intolerably expensive platinum, for it resists corrosion when used for spark plugs and tooth plugs. European steel men have taken to molybdenum more than Americans, for the salts of this metal can be used in dyeing and photography.

Calcium, magnesium and aluminum, common enough in their compounds, have only come into use as metals since the invention of the electric furnace. Now the photographer uses magnesium powder for his flashlight when he wants to take a picture of his friends inside the house, and the aviator uses it when he wants to take a picture of his enemies on the open field. The flares prepared by our Government for the war consist of a sheet iron cylinder, four feet long and six inches thick, containing a stick of magnesium attached to a tightly rolled silk parachute twenty feet in diameter when expanded. The whole weighed 32 pounds. On being dropped from the plane by pressing a button, the rush of air set spinning a pinwheel at the bottom which ignited the magnesium.

stick and detonated a charge of black powder sufficient to throw off the case and release the parachute. The burning flare gave off a light of 320,000 candle power lasting for ten minutes as the parachute slowly descended.

The addition of 5 or 10 per cent of magnesium to aluminum gives an alloy (magnalium) that is almost as light as aluminum and almost as strong as steel. An alloy of 90 per cent aluminum and 10 per cent calcium is lighter and harder than aluminum and more resistant to corrosion. The latest German airplane, the "Junker," was made entirely of duralumin. Even the wings were formed of corrugated sheets of this alloy instead of the usual doped cotton-cloth. Duralumin is composed of about 85 per cent of aluminum, 5 per cent of copper, 5 per cent of zinc and 2 per cent of tin.

When platinum was first discovered it was so cheap that ingots of it were gilded and sold as gold bricks, to unwary purchasers. The Russian Government used it as we use nickel, for making small coins. But this is an exception to the rule that the demand creates the supply. Platinum is really a "rare metal," not merely an unfamiliar one. Nowhere except in the Urals is it found in quantity, and since it seems indispensable in chemical and electrical appliances, the price has continually gone up. Russia collapsed into chaos just when the war work made the heaviest demand for platinum, so the governments had to put a stop to its use for jewelry and photography. The "gold brick" scheme would now have to be reversed, for gold is used as a cheaper metal to "adulterate" platinum. All the members of the platinum family, formerly ignored, were pressed into service, palladium, rhodium, osmium, iridium, and these, alloyed with gold or silver, were employed more or less satisfactorily by the dentist, chemist and electrician as substitutes for the platinum of which they had been deprived. One of these alloys, composed of 20 per cent palladium and 80 per cent gold, and bearing the telescoped name of "palau" (pal-ladium au-rum) makes very acceptable crucibles for the laboratory and only costs half as much as platinum. "Rhotanium" is a similar alloy recently introduced. The points of our gold pens are tipped with an osmium-iridium alloy. It is a pity that this family of noble metals is so restricted, for they are unsurpassed in tenacity and incorruptibility. They could be of great service to the world in war and peace. As the "Bad Child" says in his "Book of Beasts":

I shoot the hippopotamus with bullets made of platinum,
Because if I use leaden ones, his hide is sure to flatten 'em.

The modern metallurgist is possessed of a mania for order according to the copy-book rule, "Find a place for everything and put everything in its place." He searches the Urals and the Andes to unearth slacker metals and conscript them for the national service. He would have no leisure class among the elements.

Where Credit is Made

The National Bank of Commerce in New York is a manufacturer whose product is credit.

Knowledge is the raw material of which credit is made—knowledge of men and markets, commerce and finance, drawn from original sources, tested and woven into a fabric of mutual confidence which is national credit.

The vast resources of the National Bank of Commerce in New York insure a credit production which is adequate to the needs of expanding business.

THOUGHTS and THINGS

The business of living, when boiled down to its clearest essence and all the froth skimmed off, is just a matter of thinking.

Each of us is continually thinking ideas of our own and swapping them for the ideas of others. If there is a famine of outside ideas we shrivel up ourselves. Children with "nobody to play with" are unhappy and unmanageable.

From thinking with our heads to doing with our hands is but a little step and then our thoughts become things.

It is because men of America are so unfettered in their thinking and doing that this country is such a fine place to live in. It is also because these thoughts are freely radiated and spread broadcast, in the distribution of manufactured things and in the distribution of the facts about them (advertising), that this country is such a fine place to live in.

The originator of an idea is not much better off than before he originated it till he gets some one else to absorb it and enjoy it and benefit by it.

The man or woman surrounded by better thoughts and things, but who pays not the slightest attention to them, is not much better off than the one with "nobody to play with."

Advertisements are thoughts—telling you about the ideas that other men and women have thought out for your happiness. Read the ads. They are the voices from hundreds of thousands of looms, shops, foundries, studios, laboratories, where millions of minds are turning pleasant thoughts into worth while things for your comfort.

Democrats at Donnybrook

(Continued from page 131)

But there were others who were not so sure of the wisdom of a battle on the Treaty à l'outrance. Significantly, three United States senators who spoke were for compromise. Senator Owen counseled "immediate ratification," and proceeded to explain that in the position in which the President stood he *must* speak as he does uncompromisingly and firmly. Senator Pomerene urged ratification "without reservations if possible, with reservations if we must." Senator Hitchcock, the Democratic floor leader, declared that the Democrats were ready for an honorable compromise with their opponents, and confided to his hearers, in a kind of stage whisper, his belief that "the Treaty will be ratified." These expressions, from men who must do the actual voting on the Treaty and the Covenant, suggested little enthusiasm for the thought of carrying the issue over into the campaign. Take it for all in all, the good Wilsonians at the banquet—and the applause showed that they were in the majority—must, it seemed to the Philosopher, have found more gall than honey in the oratorical feast that was served to them.

There were other apples of discord in the goods that the perennial Mr. Bryan drew from his pack. He was the one speaker who seemed concerned about the campaign and the future policy of the Democracy. He set before the diners several planks for a possible platform, of more or less freshness and novelty. He "assumed" that the party would accept prohibition as the permanent policy of the country; and, when the men about the tables received the suggestion with silence or murmured jeers, he shouted, "If that does not suit the banqueters, I will appeal from Philip drunk to Philip sober, from them to the voters!" "That's just the trouble," mourned one of the Philosopher's table mates. "We're *not* drunk, and we wish we were." Mr. Bryan "assumed" that the party would accept woman's suffrage as an accomplished fact; and again he met with a chilling lack of response. Probably Washington is too near the South and too far from the West, meditated the Philosopher, to expect a Democratic gathering there to be enthusiastic about justice for women as distinguished from "chivalry."

Then Mr. Bryan produced three planks, two new, the third old. They were "a national peace way, running into every state, wide enough to accommodate both passengers and freight, and permanent, so that it will be a lasting tie binding together the forty-eight commonwealths"; "a national bulletin, under bi-partizan control, furnished to all who desire it at a nominal cost, a bulletin which will present to the people the issues upon which they must act, with editorials presenting the arguments for and against the action proposed;" and the initiative and referendum. These planks aroused, apparently, little in-

terest; they certainly provoked no comment. But one other declaration of the Commoner struck fire. It was this:

The Democratic party has for twenty years denounced private monopoly as indefensible and intolerable. It cannot surrender its position on the subject now when the beneficiaries of all the private monopolies are mobilizing under the banner of the Republican party for a united attack upon the right of the people to own and operate all necessary monopolies in the interest of the public.

Then he added his old time proposal that the trunk lines of the railroads should be owned by the Federal Government and the local and feeding lines by the states. It was Senator Pomerene that took fire first; and the vigor with which he denounced the government ownership proposal would have been balm to the most conservative Republican heart. Governor Cornwell of West Virginia followed him, and after announcing himself as a conservative, denounced the Adamson law, which raised the wages and shortened the hours of the railroad workers, the proposal for government ownership of railroads, the provision in the Clayton anti-trust act exempting labor and farmers' organizations from its provisions, and class legislation in general.

So the keynote for the campaign was sounded, as from a rifted lute. And the Republicans, listening greedily to the rattle of stick on stick, the thud of shillelagh on devoted pate, laughed a great guffaw. But just wait till the Republicans get together. It will be the other fellows' turn then.

"About this time look out for thunder, hail and sleet."

The Folly at Albany

(Continued from page 138)

of guilt by due process of law would have disposed of the whole matter.

Nothing could be weaker than the reply of Speaker Thaddeus C. Sweet, who has stultified himself. He and his followers, professing to fear revolution and revolutionary methods, and proclaiming their devotion to our American way of bringing about the desired social changes by due process of law, have undertaken to deny resort to that way by radicals whose ideas they abhor. Any action better calculated to spread the radical dogma that reform by parliamentary action is impossible and that the revolution, therefore, must be proclaimed and attempted, human ingenuity could not invent. The ideas and the purposes of socialism must be met and dealt with in the arena of debate and of legislation. Political socialism is a formidable fact and it must be taken seriously. Europe has learned this lesson and America will have to learn it. Given full opportunity to say its say, to expose its purposes, and to defend its policies in legislative bodies, socialism invariably becomes moderate, and its leaders, not infrequently, become strong upholders of social order.

5 GREAT NOVELTIES

20 cts. The glorious **Wool-flower** recently introduced by us has succeeded everywhere and proved to be the most showy garden annual. Nothing can surpass the mass of bloom which it shows all Summer and Fall. We now have three new colors—pink, yellow and scarlet, as well as crimson. All these colors mixed. **20 cts. per pkt.**

With each order we send 1 trial pkt. each of **Giant Kochia**, most decorative foliage annual.

Salvia Hybrids, white, pink, striped, scarlet, plumed, etc., mixed. **Japan Iris**, new hybrids, all colors. **Magnificent, Giant Cantarea**, superb for garden or vases.

And our Big Catalog, all for 20 cts. **Big Catalog, free.** All flower and vegetable seeds, bulbs, plants and new berries. We grow the finest Gladioli, Dahlias, Cannas, Irises, Peonies, Perennials, Shrubs, Vines, Ferns, Peas, Asters, Pansies, etc. All special prize strains, and many sterling novelties.

JOHN LEWIS CHILDS, Inc. Floral Park, N. Y.

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

Getting Ahead

is the story of Peter Perkins and how he accumulated \$10,000 in ten years by investing \$25 a month in high-grade listed stocks and bonds, on a novel plan. "Getting Ahead" is as interesting as anything you ever read. Thousands have read it and are now "getting ahead" financially on the same plan.

You will be fascinated with it. But better still, it will show you a new way to invest your savings month after month, interest, plus a PROFIT, on your money—without sacrificing safety. We send it free. **WRITE FOR IT TODAY.**

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. Our Answer to the Reds. By Francis P. Garvan.

1. Prove that the article emphasizes the importance of education.
2. Give logical definitions of the following terms: corrupt, government, anarchy, bourgeois, proletariat, sabotage, syndicalism, sedition, conspiracy, radical, communist, Soviet, conservative, liberal.
3. Give a clear, oral explanation of the writer's "answer" to the Reds.
4. Show in what way the program of the Reds is aimed at the prosperity and happiness of every member of your school.
5. Write a synopsis of laws that you think might be of benefit in maintaining American freedom and the public good.
6. Write a dialog or group scene in which you imagine the spirits of the soldiers who served with Washington at Valley Forge discussing the recent activities of the Reds in the United States.
7. Write a short, impassioned speech such as you might give before an audience in which you wished to arouse a spirit of patriotism for the United States.

II. Heavy Taxes, Increased Exports, and No Strikes. By Professor B. D. Attolico.

1. Define the following terms: reconstruction, penitentiary, tonnage, role, normal, fiscal, replenish, luxury.
2. Write a paragraph of contrast on the following topic: The effect of the war on England and on Italy.
3. Write a paragraph of negative statement on the following topic: The good will and discipline of the Italian taxpayer.
4. Imagine that you are the editor of a daily paper published in the United States. Draw from the article material for an editorial addressed to American workers.

III. A Solution of the Treaty Tangle. By Hayne Davis.

1. Write a brief of the entire article.
2. Point out the methods by which coherence is maintained in the article.
3. In a single paragraph write what the author believes to be the solution of the treaty tangle.
4. Point out the means by which the author gains emphasis.

IV. Democrats at Donnybrook. By Harold Howland.

1. Explain the significance of the title.
2. What is a "Philosopher Errant"?
3. Explain the following expressions: Joints in the opposition armor; Cynically aloof; The dust and struggle of the arena; Irrelevant parenthesis; From Alpha to Omega; Malicious gibberish; The quondam peerless leader; Walter Scott's play-bill; A one-track document; Apples of discord; From Philip drunk to Philip sober; From a rifted lute.
3. What is a rhetorical phrase?
5. What is an allusion?
6. Explain why the use of rhetorical phrases and of allusions in the article—or in any other writing—add materially to the effect the article—or other writing—produces.
7. What is the principal point the writer makes in the article?
8. Does the writer prove himself to be a "philosopher errant"?

V. The End of the Great War.

1. Write a graphic description of the closing scene of the Great War.

VI. The Folly at Albany. By Franklin H. Giddings.

1. Sum up, in the form of a brief, the proofs given by Professor Giddings in support of his belief that the action at Albany was unwise.

VII. Men Say the War Is Over. By William E. Brooks.

1. On what contrasts is the poem founded?
2. Tell the story of the woman whom the poet meets on the street.
3. What is the effect of the last sentence of the poem?
4. How does the poem, as a whole, affect you?
5. Explain the following words: marts, Hiram, David, garb, coif.
6. Point out lines that might be illustrated by the work of a painter of pictures.
7. Write a full description of an imaginary painting based on one of the lines just mentioned.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Politics and the Treaty of Peace—"A Solution of Our Treaty Tangle," "Democrats at Donnybrook."

1. Discuss the following proposition: In view of the history of our treaty negotiations, an amendment to Article II, Section 2, of the Constitution would seem to be necessary.
2. What is the chief reason for senatorial opposition to the Treaty of Versailles? What solution of the tangle does Mr. Davis suggest?
3. Read the extract from Champ Clark's speech quoted by Mr. Howland. Is the record of the party one of which the leaders may justly be proud? If so, why was so little made of it in the newspaper accounts of the Jackson dinner?
4. Set down side by side the President's pronouncements about the Treaty and those of Mr. Bryan. Show by comparison that "... the issue was straightly joined between two factions in the Democratic party."
5. In view of present activities in the Senate which of the two factions seems to be getting the upper hand?

II. Re-establishing Peace—"Heavy Taxes, Increased Exports, and No Strikes," "The End of the Great War," "Disorders in Germany," "Where the Money Goes."

1. Why were the consequences of the war "bound to weigh more heavily on her [Italy] than on any other country"? What is Italy doing to recover from these consequences?
2. Describe briefly the final steps in the ratification of the Treaty of Versailles. Show how, as a result of this ratification, the United States is at a disadvantage just now.
3. What connection is there between the ratification of the Treaty and the present disorders in Germany?
4. What measures of relief for Europe are proposed by Secretary Glass and Mr. Hoover? Show that these measures are advisable both from an economic and from an humanitarian point of view.

III. The Radicals and the Government—"Our Answer to the Reds," "New York Socialists Barred from Assembly," "The Folly at Albany."

1. Is there any connection between the attitude of the United States Department of Justice toward the extreme radicals and the action of the New York Assembly in suspending the five Socialist members?
2. Do you agree with Mr. Garvan that "New laws obviously are necessary"? If so, what form should these new laws take?
3. Upon what grounds did the Assembly bar its five Socialist members? Why does Mr. Hughes attack the action of the Assembly?
4. Why does Professor Giddings say: "The incident was bound to happen, in this state or elsewhere"?
5. Prove that, "Viewed in the light of history... the action at Albany was glaringly unwise."

IV. The Government of France—"Clemenceau for President."

1. Write a brief account of the method of election of (1) members of the Chamber of Deputies, (2) members of the Senate, (3) the President.
2. Compare the functions of these three branches of the French Government with those of the similar branches in Great Britain and the United States.
3. "The election of senators on January 11 showed a decided drift toward the Right." Explain this statement.
4. What difference will it make whether André Tardieu or Aristide Briand becomes premier?

V. Chemistry as a Factor in Modern Industry—"How New Metals Are Made."

1. Trace the history of the iron and steel industry from ancient times to the present day. Show that more progress has been made in the past thirty or forty years than in all the centuries that went before.
2. What are the present uses of tungsten and platinum?
3. What has been the result of the experiments of Baron Auer von Welsbach?
4. Do the facts given in this article justify the author's sub-title?

Remarkable Remarks

LOUIS GUYAN—Pretty girls are lazy.
PREMIER LLOYD GEORGE—Who is Russia?

SENATOR MOSES—Wood will win in a walk.

EDWARD BOK—I have merely done my best.

FATHER BERNHARD VAUGHAN—I would love to run a cinema.

LLOYD GEORGE—Nothing is gained by making statements in public.

THE PRINCE OF WALES—Travel opens one's eyes and clears one's brain.

ARTHUR WAUGH—What the public wants today is a new Wilkie Collins.

WILLIAM ALLEN WHITE—I don't believe in logical candidates, because politics is illogical.

THE SULTAN OF TURKEY—It is with satisfaction that we observe America adopting prohibition.

VICE PRESIDENT MARSHALL—The King of England does nothing but spend his time listening to the band play.

MAURICE MAETERLINCK—I should think the tall buildings in New York must be disturbing to the minds of the people.

BOLSHEVIK REPRESENTATIVE KLISHKE—Soviet Russia will not allow itself to be used as a dumping ground for agitators from America.

GERALDINE FARRAR—I bought a piece of Japanese fox fur the other day which I am morally certain was born on the Hudson river.

JUDGE GEORGE W. ANDERSON—I assert as my best judgment that more than 99 per cent of the advertised and reported pro-German plots never existed.

SIR OLIVER LODGE—I do not suppose our descendants will be using chemical energy. Instead of burning 1000 tons of coal they will take energy out of an ounce or two of matter.

MISS HELEN TAFT—The public will pay Babe Ruth \$20,000 for a half year and Jack Dempsey \$100,000 for a single fight, but they will not pay their college professors enough to live on.

C. F. HINGHAM, M. P.—The secret of how to obtain large incomes is to get others to work out your ideas and to have the courage of your convictions, to be able to say yes or no on the instant and to stick to your decision.

New Plays

For the Defense, murder mystery play, keeps you from drawing a long breath till the last scene. Then you sigh luxuriously. Richard Bennett is the engaging district attorney hero. (Morosco Theater.)

"I'm so bored, I've taken to card-indexing the hens," says one of the returned women war workers in *The Famous Mrs. Fair*, a comedy based on the problem of getting the war volunteer's interest back to home and family. (Henry Miller's Theater.)

Catchy songs, clever acting, exceptional dancing, and elaborate costumes and settings are several of the reasons why *The Magic Melody* at the Shubert Theater has proved such a successful musical play this season. (Shubert Theater.)

The Power of Darkness. The Theater Guild presents this Tolstoy play

with the same artistic finish and tragic power as it gave to *John Ferguson* last year. Tolstoy shows in this powerful drama his hatred of alcohol, interest, women and police and his confidence in the simple faith of the peasantry and in the saving power of open confession. (Garrick Theater.)

The "Theatre Parisien's" latest bill "achieves the impossible" by suiting both the true Parisian and the American schoolgirl beginning French. There is a tuneful operetta, *Le Poilu*, and a short comedy, *L'Anglais tel qu'on le parle*, in which Mr. Hogson struggles with a French interpreter who understands everything but English. (Theatre Parisien.)

The Profiteer

(TWENTY YEARS HENCE)

A little girl climbed on her granddaddy's knee,
And pleaded, "Oh, tell a true story to me!"
She wheedled and teased as a little girl can
To hear him live over the war days again.

So he told her of gallant and glorious fight,
Of the Nation's response to the call of the right,
Of brave mothers and sisters and sweet-hearts and wives,
Of the flower of young manhood who poured out their lives
That the world might be safe when the conflict was done,
And men keep the freedom their fathers had won.

Then she wistfully queried, "And what did you do?
I think that the man who was bravest was you."
The grandfather gazed 'round the beautiful room,
And its luxury seemed like a symbol of doom.
He regretted the past, for he felt he was old
And the fire of desire was expiring and cold.

He thought of his end in a deep narrow hole,
Too small for his body, too large for his soul,
And he made no reply, as he stifled a sigh,
But he lowered his head at the look in her eye,
For he knew in his heart that the arrow had hit—
He had done the poor people instead of his bit!

—Blanche F. Gile in the *New York Times*.

The Most American Thing in America

That is what Theodore Roosevelt called Chautauqua. Six words! Could greater praise be given in 6,000?

Perhaps Mr. Roosevelt was flattering his hosts? But insincerity was never named as one of the great American's faults!

Perhaps he spoke from enthusiasm unchecked by reflection? But he permitted the glorifying phrase to be quoted with frequency and promi-

nence! Mr. Roosevelt's sense of values and proportion endorsed, as his sense of quality had prompted, this most remarkable tribute.

He knew no higher praise to give a man or an institution than to call him or it "American"; and from his lips or pen "most American" was praise intentionally superlative.

Such was the praise he gave Chautauqua!

What Is Chautauqua?

The place is one of loveliness: a summer city on a wooded hillside, overlooking a twenty-mile lake in the southwest corner of the Empire State.

The Institution, physically quartered in this beautiful location, is an organization rooted in a hundred thousand American hearts bound together in a common aim and purpose by the

slender, steel-strong filament of intellectual and spiritual community.

Chautauqua, N. Y., is a summer resort. Chautauqua, America, is The People's College. Will you have fishing—or philosophy? Chautauqua will give you all that either stands for: wholesome physical recreation, and simple, genuine learning.

Work and Play at Chautauqua

In July and August more than 4,000 students attend the Summer Schools.

There are Academic courses, in language and literature, mathematics and science, psychology, pedagogy, historical and social science; and Professional courses, in library training, home economics, music, arts and crafts, expression, business training, stenography, commercial geography, physical education, health and self-expression.

To these classes come school teachers in quest of personal or professional development; persons whose schooling stopped short of completion, and college graduates who know that they have only learned how to learn.

Private tutoring may be had, and boys and girls preparing for college can combine summer sports with serious work.

Concerts and Lectures

While the Summer Schools are in session, Chautauqua offers also such a program of lectures and concerts as can be had nowhere else.

The most famous speakers and the finest mas-

ters of music present a brilliant program. Edification mates with entertainment; pleasure and profit go hand in hand.

Chautauqua Reading Courses

But Chautauqua is not a single-season educator. The Chautauqua Literary and Scientific Circle carries her work into thousands of homes all the year round.

Each year the C. L. S. C. offers a course of reading ("Don't read at random!" is the motto), for which four books of lively interest are selected. These four books are offered with a year's subscription to the Independent, and the Round Table, a monthly bulletin.

The reading is arranged in four-year cycles: an American year, a Modern European year, a Clas-

sical year, and a British year. Four years of reading lead to graduation.

In 1919, an American year, the books were "America Among the Nations," by H. H. Powers; "Brothers in Arms," by J. J. Jusserand; "A Mexican Journey," by E. H. Blichfeldt, and "The Old South," by Thomas Nelson Page.

For 1920 the course, soon to be announced, will be Modern European.

There are no examinations, unless desired. Certificate is given for each year's reading; diploma for the full course of four years. Write for Special Offer.

Vacation Time Is Coming

It is not too early now to begin planning for your summer playtime. Chautauqua is the place!

Comfortable accommodations, at a wide range of prices. All conveniences. A long list of land and water sports. Beautiful walks, rides or drives

in charming Western New York country. Come in your car, or come by rail—and have the best time ever. Write for detailed information, on Summer School work, Home Reading, or Summer Resort attractions. And do it *now*! Address

Just What Mr. Wilson Did at Paris

In Which Numerous Current Rumors Are Disproved by the First Hand Statements of a Man Who Saw the Peace Conference from the Inside

By Preston Slosson

Member of the Staff of the American Commission to Negotiate Peace

A LEGEND has arisen in the United States among both radical and reactionary critics of the Treaty of Versailles which has done much to injure the prospects of the Treaty before the Senate. Perhaps the common belief might be fairly summarized in this way:

Wilson met defeat at Paris. He was able to carry into effect his plan for the League of Nations, but at every other point he was vanquished by European "imperialists" who were as much superior to him in diplomatic skill as they were inferior in moral idealism. They offered such strenuous opposition to the Covenant that to save it he had to permit Clemenceau and Lloyd-George to impose extreme terms on Germany. In doing this he did not consult his colleagues or the many "experts" whom he had brought to Paris. As a result a large number of these specialists, headed by Mr. Bullitt, resigned in protest as soon as the Conditions of Peace were made public.

On one point only did Wilson stand out against the European diplomats; when he adopted the Yugoslav program for Fiume and Dalmatia and thus single-handedly defied Britain, France and Italy. To Japan, on the other hand, he surrendered without resistance the just claims of China. There is really nothing American in the Treaty, and even Wilson's Covenant was cleverly captured by the British Government to obtain six times our representation in the League of Nations.

The reader will admit that this is a just and even moderate paraphrase of scores of articles which have appeared under such titles as "The Inside Story of the Peace Conference," "What Really Happened at Paris" and the like. *In no single particular, however, does it conform to the facts* as known to those who, like myself, have seen the records of the Supreme Council and of the important Commissions which aided the Council to construct the Treaty. As these records are still diplomatic secrets (much to the disadvantage of President Wilson) I can only refer to such matters as have been made public either here or in Europe, but have not been given sufficient publicity to choke the lying rumors which fill Congress and the press.

In the first place President Wilson did not meet defeat at Paris, but on the contrary won the most notable series of diplomatic victories which have ever fallen to an American statesman. If the Treaty is good, the credit belongs to America. If the Treaty is bad, ours is the blame. It is true that on many occasions President Wilson was forced to compromise to meet the views of his European colleagues. It is equally true that they were continually forced to compromise to obtain

American assent. No Treaty would have been possible without such compromise. Fortunately, on most questions of principle the chief statesmen at Paris were quite agreed. I am fairly certain that if all the decisions of the Supreme Council were counted up President Wilson would be found voting with the majority two-thirds of the time. Very rarely was he forced into the romantic rôle of "Horatius at the Bridge." I cannot say too often or too emphatically that the Peace with Germany is an American Peace as truly as it is French or British.

Instead of finding hostility, the American Commissioners found an atmosphere of agreement. A few crises arose, and these have been correctly enumerated by Mr. Ray Stannard Baker, Mr. William Allen White and other well-informed chroniclers of the Conference, but as a rule the Supreme Council worked with harmony. Particularly notable was the cordial good will of the entire British delegation. Mr. Lloyd-George favored as moderate a peace as President Wilson, indeed on one point (the eastern frontier of Germany) he was more inclined to be "easy on" Germany than were the Americans. The French, it is true, would have imposed a more severe peace had they been free to write their own terms. But M. Clemenceau, unlike some of his French colleagues, was always ready to meet the British and American view more than half way.

THE resulting peace was no doubt severe from the German point of view and has provoked much criticism even from strong supporters of the Allied cause. General Smuts, the great South African liberal statesman, was not the only man who signed the Treaty with some misgivings as to its attitude toward the vanquished. But it is absurd to represent the Treaty as a victory for the Imperialists. Had these had their way a "buffer state" would have been created on the Rhine, Danzig would have been given outright to Poland and the full costs of the war would have been saddled on Germany. That this was not done is due to the liberalism of the British and American Commissioners and to the wisdom of one Frenchman, M. Clemenceau.

The true attitude of the various national delegations is better understood in Europe than in this country. Even the enemies of President Wilson admit his success and concede that his alliance with Lloyd-George was one of the factors which made it possible. The *Tory National Review*, for instance, deplors "the un-

wholesome ascendancy which—thanks mainly to the feebleness of Mr. Lloyd-George—Mr. Wilson was allowed to assume in Paris." Few people would call Mr. Lloyd-George "feeble," but the *National Review* version is closer to the facts than the pathetic accounts of the trampling down of Mr. Wilson's ideals by European Macchiavellis which have appeared so frequently in our press.

The Covenant was not, as so often represented, a personal "hobby" of President Wilson. The British were for it from the start, and the French, suspicious at first, came to favor a much more binding League than President Wilson could agree to accept. The French idea was an international "General Staff" which would enable the League to become an armed alliance at the instant any Power broke the peace of the world, together with an international inspection of armaments. The Italians, the Japanese and the lesser Allies were also unanimous for a League of Nations. President Wilson was one of the principal architects of the League as it now exists, but some sort of a League, or at least a permanent and organized alliance of the Great Powers must have been adopted in any case in order to make possible the enforcement of the Treaty.

In connection with the League it ought to be more widely known that the separate representation of the British Dominions was not a device of the British Government to secure additional votes but, just the contrary, a concession of the British Government to the Dominions who wished to be free to vote independently of the will of London. In rejecting the vote of such countries as Canada and Australia the United States is decreasing its own influence in the League by rejecting the support of potential political allies. In Paris the Dominion representatives, tho nominally dele-

gates of the British Empire, were quite independent of the delegates from Great Britain. Premier Hughes of Australia criticized the Treaty as too lenient with respect to reparations; General Smuts of South Africa regarded the same provisions as too severe; Premier Lloyd-George of Great Britain thought them about reasonable.

In the question of Fiume and Dalmatia it is true that President Wilson came into sharp conflict with one European delegation, but with *one alone*. France and Great Britain cordially supported President Wilson's general position on the Adriatic question. They could not and did not abandon their pledges to Italy embodied in the Pact of London and therefore President Wilson appeared to the world as tho he was standing alone. But in private conference M. Clemenceau and Mr. Lloyd-George used all their influence to moderate the extreme Italian claims.

It is altogether false to represent President Wilson

as having been "captured" by Yugoslav propaganda. The so-called "Wilson line" which gave Italy Trieste and western Istria to Pola was the work of American experts and specialists by whose unanimous advice the President was guided. This line favored Italy, inasmuch as it placed under Italian sovereignty a larger number of Slavs than the number of Italians still remaining on the eastern side of the proposed frontier. In fact, the American line was a compromise between the extreme claims of both sides, and would have been as strongly resented by the Yugoslavs had they been a Great Power as it actually was by the Italians. The Yugoslavs only accepted it because they were conscious of their military weakness and desired to win by moderation the good will of Great Britain, France and America. The recent elections in Italy, with the defeat of the imperialistic parties and the numerous Socialist victories, show that the second thought of Italy is nearer to the position of President Wilson than we dared to hope during the crisis of last Spring.

Italy's temporary withdrawal from the Conference in April was a cause of much sorrow and apprehension to the other Allied and Associated Powers, but it did not, as is so often stated, induce President Wilson to sur-

render to Japan on the Shantung issue. He supported what he believed to be the just claims of China with the same vigor as he had supported what he believed to be the just claims of the Yugoslavs, and if he was less successful it was because of the different circumstances surrounding the two cases. Italy was still only advancing a claim; Japan had enjoyed "nine points of the law" in Kiao-Chau for nearly five years. China had compromised her own case by agreeing, even tho under pressure, to Japanese economic demands during the Great War. Finally, some settlement of the Shantung

Photograph by U. S. Signal Corps.

The Big Four seem to form a quartet of close harmony in this photograph taken outside President Wilson's Paris residence, on the street named in our honor "Place des Etats-Unis." At the left Premier Lloyd George is listening to a good story of Premier Orlando's. At the extreme right President Wilson smiles, too. And even "the Tiger" in the doorway belies his name

question had to be decided immediately, as it was part of the German Treaty, whereas the Adriatic question could be (and was) postponed. So President Wilson decided it was better to put faith in the assurances of the Japanese Government that Kiao-Chau would be evacuated in due course of time than to hold up the Treaty indefinitely without any practical benefit to China.

President Wilson is also falsely represented as standing alone not only among foreign Powers but even within the American Delegation. It is true that on the Council of Four the responsibility for great decisions rested with him alone, but it is also true that he enjoyed the constant support and confidence of his colleagues and subordinates as did no other statesman in Paris. On all territorial and economic questions he consulted the ablest experts who were with him and was largely guided by their advice. Many specialists were dissatisfied with details in the [Continued on page 186]

A Message from the United States Government And Not a Drop to Drink!

By Daniel C. Roper
Commissioner of Internal Revenue

THE eighteenth Amendment—the national prohibition amendment to the Constitution—is now a part of American basic law. It became effective at midnight January 16, one year after it had been ratified by the thirty-sixth state. It is the duty of the Government of the United States and of the states to enforce it and of every citizen to obey it as scrupulously as he would any other law.

The amendment reads in part as follows:

Section 1. After one year from the ratification of this article the manufacture, sale or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.

Section 2. The Congress and the several states shall have concurrent power to enforce this article by appropriate legislation.

The third section required that the amendment to be effective should be ratified within seven years. The fact that ratification by three-fourths of the states was achieved in only a little more than one year gives proof that the sentiment of the American people is overwhelmingly in favor of this great reform. The completion of ratification was followed by the enactment of a comprehensive enforcement act by Congress in which it was stated that "all provisions of this act shall be liberally construed to the end that the use of intoxicating liquor as a beverage may be prevented." This act has stood the test of the courts and is now in full force and effect. The task of compelling its observance rests with the Bureau of Internal Revenue, backed up by the conscience and moral support of all law-abiding citizens.

When national prohibition went into effect there were in bonded warehouses in the United States approximately 62,000,000 gallons of whisky and 4,700,000 gallons of rum, gin, brandy and other beverage spirits. The largest amounts are in storage in Kentucky, Pennsylvania and Maryland. These storehouses are ammunition dumps loaded with high explosives in the midst of a peaceful and populous community.

Inside the warehouses this liquor is practically valueless, but it is a constant temptation to thieves who may profit thru dispensing it illegally, thereby defeating the higher purposes of the law. It is reported that bootleg-

Keystone View

Commissioner Roper coming from a conference at the Capitol

gers have obtained as high as \$15 a quart for stolen spirits—and even for cold tea. At this rate a barrel could be retailed for something like \$1500!

Five barrels of whisky recently were stolen from a warehouse in western Pennsylvania and dispensed at exceedingly high prices. An Italian suspected of the theft was traced to New York, where he had boarded a trans-Atlantic steamer. He was arrested in France on wirelessly instructions and held until taken into custody by our men. He is now back in the United States awaiting trial. No effort will be spared by the Bureau of Internal Revenue in bringing offenders against the prohibition law to justice.

It is only when liquor is removed from bonded warehouses that federal taxes must be paid upon it by the owner. Under the prohibition enforcement act it can be removed only for certain well-defined non-beverage purposes and the tax is \$2.20 a gallon. But liquor stolen must be regarded as "liquor removed for beverage purposes" and the owner is required to pay the beverage tax of \$6.40 a gallon, altho, in all probability, he had no hand in the theft.

Liquor in storage is not at present adequately guarded against thieves. There are 350 distillery bonded warehouses, sixteen general bonded warehouses and twenty special bonded warehouses. The amount of liquor in each case varies from a few hundred barrels to more than 40,000 barrels. Some of the warehouses are located in cities with police protection, but many

of them are in outlying districts. Before prohibition went into effect the joint interest and responsibility of the warehouse men and the Government resulted in a system of protection that was adequate under past conditions—but is adequate no longer.

To safeguard these supplies with prohibition in force it would seem necessary either to concentrate them in well-guarded warehouses with the Government exercising a monopoly over distribution for legitimate purpose, or to increase materially the number of guards at present employed. We now have only 450 guards. If we are to keep this liquor in warehouses scattered across the country we should have at least 2500 men. We have submitted to Congress a request for an appropriation of \$2,000,000 for guarding bonded warehouses during the remaining six months of the fiscal year.

When the warehouses are adequately guarded the difficulty of suppressing the bootlegging traffic will be materially reduced. Illicit stills conducted on a large scale will be rapidly wiped out. Brewing and distilling in the home are now much discussed, but I am convinced that it is a fad and that, like most other fads, will ultimately die out. In the first place it is dangerous, in the second place it is a great deal of trouble and in the third place I doubt whether the product ever measures up to expectations.

As to liquor in bond, upon which approximately \$20,000,000 has been loaned by the banks, its owners will sustain very heavy losses unless Congress interferes. It can be withdrawn, practically speaking, for none except medicinal purposes. While some physicians take the position that whisky is a valuable stimulant in certain cases of illness or debility, the majority opinion of the medical profession seems to be that it may be entirely dispensed with as a remedy. Withdrawals for medicinal purposes will, therefore, be relatively insignificant.

Wine-makers probably will not suffer such complete losses as the owners of distilled spirits. Wine may be dealcoholized and legally sold. This is now being done to some extent. Wines may also be sold for sacramental purposes and other non-beverage purposes. This will afford some outlet for the present stocks, but, of course, will not entirely take care of the situation.

As an indication of the volume and extent of wine manufacturing in the United States, it may be pointed out that during the last fiscal year a tax was collected on wines in the amount of \$10,520,609. The tax collected on beer during the same period amounted to \$117,839,602.

Under John F. Kramer, the first Prohibition Commissioner of the United States, there has been organized in the Bureau of Internal Revenue a force of some 1200 men for the administration of the prohibition enforcement act. There are two branches of this organization, the first dealing with the legal use and the second with the illegal use of intoxicating liquors. Congress has defined "intoxicating liquor" as any liquid capable of being used for beverage purposes that contains more than one-half of one per cent of alcohol. We have set up in Washington a large chemical laboratory for the analysis of all preparations we suspect are being sold in violation of the law.

For each state there has been appointed a Federal Prohibition Director and under him a number of officers known as Federal Prohibition Inspectors. The exact number of inspectors appointed in each state depends upon conditions prevailing and the work to be done there.

This branch is known as the "observance" branch as differentiated from the "enforcement" branch. It has under its supervision all persons and corporations permitted to use or handle intoxicating liquors in any way, including physicians, pharmacists, soft drink manufacturers and common carriers. The Federal Director issues the permits and the inspectors keep check on those to whom they are

given to see that they keep within the law. This branch has the still more important duty of supervising and coördinating all state and municipal activities connected with prohibition enforcement. If there happens to be a district in which officials refuse to enforce the law the Federal Director calls upon the other branch of the prohibition force, much as a state governor would call for federal troops if a situation in his state got out of hand.

The enforcement branch has the duty of detecting and prosecuting all persons engaged in illicit making, transportation and selling of intoxicating liquors. For this work the country has been divided into ten districts. In each there has been appointed a Supervising Federal Prohibition Agent, and under him a number of subordinate agents, the most of whom are experienced detectives. These men constitute a mobile force that can be moved to any part of a district in which there is reason to believe the law is being violated.

The legislation adopted by Congress specifically places the responsibility for prohibition enforcement on federal, state and local authorities alike. But all these officials, no matter how well they coöperate cannot make nation-wide prohibition effective without the assistance of all law-abiding citizens. This is so with every law. If it were not that the vast majority of the people themselves desire to obey—and that their neighbors obey—no law could be adequately enforced. The mere passage of a law does not make it effective.

National prohibition is no new idea in the United States. It has been discussed pro and con for decades. During the last year it has received more newspaper space than almost any other public question. But now the time for discussion is past. We discussed for three years the wisdom of joining the Allies, but when Congress declared war against Germany we left off discussion and got down to business. So it is with prohibition. The time for talk is past. The time for action is here.

Certainly not all of our people wanted prohibition. But neither were we unanimous for the war. Prohibition has become the law of the land by the regularly prescribed processes and it is our duty now to put aside any opinions that may conflict, and observe the law. We are an honest and law-abiding people. As the head of that branch of the Government that collected more

than \$6,000,000,000 in taxes during the last year I have had ample substantiation of that fact. Obedience to law is the cornerstone of our Americanism. To hold the prohibition law lightly would be to breed disrespect for the whole body of our law—and that we cannot afford.

Thousands of requests have come to the Bureau of Internal Revenue from individuals and organizations asking how they can assist the Government in making national prohibition effective. There are many ways. Citizens can organize in their local communities and work for the development of a strong and healthy public sentiment in favor of obedience to law in general and to the prohibition law in particular. That would be a

A Message from the Imperial Japanese Government to the American People

The national emblem of Korea is the tortoise, used in this case as the base of an old monument in a Korean graveyard

Home Rule in Korea?

By Baron Makoto Saito

Governor-General of Korea

FOR nearly ten years since Japan annexed Korea the latter has been the object of little attention by the world.

The annexation was peacefully accomplished by mutual consent of the governments of the two nations; due to that memorable event, Korea ceased to be the storm center of the Far East, which it had been for many years prior to it; and under the efficient government of Japan the Korean people rapidly advanced in civilization and enjoyed the blessings resulting from the development of productive industry, as well as from the spread of education. In fact, all seemed to be going well in this peninsula. Such was also the feeling of both the Government and people in Japan proper. It was, therefore, a cause of general surprise when last spring what is now known as "independence demonstrations" suddenly broke out in many parts of Korea. I shall not go into the genesis of these unfortunate occurrences; they have already been sufficiently ventilated by interested parties, in many instances Japan having been grossly and unjustly misrepresented. Local affairs of unfortunate nature have been represented as being general, and exaggerations and even fictitious stories have been assiduously disseminated at the expense of Japan. Nevertheless, we must admit that, for the serious situation presenting itself last spring in this peninsula, we must hold ourselves as principally responsible. In pursuing their administrative policies, my predecessors had no other desire than to improve the condition of the Korean people

Baron Saito, who has been Governor of Korea since September, 1919, announces that it is his plan "to grant the Korean people the administration of local affairs at some opportune time in the future"

and so make them happier. That they were eminently successful in this work has been attested by the late Colonel Roosevelt and many other eminent foreign observers and critics. But at the same time it cannot be denied that, in the hands of petty officials, their policies were often carried out in a tactless manner, and that the policies themselves, tho suiting the condition of the Korean people for some time after annexation, needed more or less revision so as to keep pace with the progress of the times and the intellectual and economic advancement made in the meantime by the Korean people. As a matter of fact, the Government was contemplating the introduction of reforms in its policies, but unfortunately this was not made known promptly enough and in time to prevent the outbreak of those demonstrations, which were nothing more or less than expressions of popular dissatisfaction with the existing régime.

The Government in Tokyo, thoroly aroused by those events, recognized the necessity of promptly introducing radical reforms in the administration of Korea, and at once set itself to the task of revising the organic regulations of the Government-General. This was completed in August, and the revised organic regulations were made public in the course of the same month. Among others, the most important reforms effected thereby were the abolition of the rule reserving the post of Governor-General exclusively for naval or military officers and the abolition of the policing of the country by gendarmeries. In other words, civil officials

were made eligible for the post of Governor-General, and the policing of the country was placed in the hands of the ordinary police. Of the latter reform more will be said later on. It should be clearly understood that according to the new regulations a Governor-General is appointed as such in a civil capacity, no matter whether he is a civilian or not.

On the resignation by Count Hasegawa of the Governor-Generalship, I was appointed his successor and arrived at my post in Seoul early in September. As Mr. Yamagata and several other high officials either resigned or were relieved of their duties, Dr. Midzuno, who was Minister of Home Affairs in a former Cabinet, was appointed chief assistant, while nearly all the bureau directors were chosen from among the ablest officials in the home service.

Since my arrival in Seoul I and my assistants have been working day and night to complete the projected reforms in administration, and it is a source of pleasure to be able to say that these reforms have either been already carried out or are on the eve of being carried out. The administrative policy is now based on the rescript granted by the Emperor on the occasion of the promulgation of the revised organic regulations for the Government-General. In this rescript, His Majesty was pleased to announce his desire that in all respects his Japanese and Korean subjects should be placed on a footing of equality. Accordingly, one of the first reform measures taken was the abolition of all discrimination between Japanese and Korean officials in respect to treatment. In other words, the rule was made that Korean officials should hereafter be paid according to the same scale of salary as that for their Japanese colleagues. Ways were also opened for Koreans of talent and ability to be raised to posts of responsibility and honor in the Government. For instance, the post of principal of common schools for Korean children, hitherto exclusively given to Japanese, will hereafter be given to Koreans, too. It is hoped that the Government will be able to secure many well educated and capable Korean young men for its service, tho, as a matter of fact, there are already many Koreans serving and occupying high posts in the Government, among whom,

it may be said, are five provincial governors, forty-four judges and public procurators, and 201 county magistrates.

I earnestly desire to hear the opinions of the Korean people, learn of their complaints and aspirations, and mold my policy so as to satisfy their reasonable desires. With this in view, soon after my arrival at my post I caused fifty-two representative Koreans, four from each of the thirteen provinces constituting this country, to come to Seoul for a conference, and, besides explaining to them the program of the new régime, had the satisfaction of hearing their opinions and views. The Central Council, an advisory body composed of leading Koreans, which formerly existed in name only, was also convened and consulted before putting into force certain revised regulations, and it is my intention to make the fullest use possible of this body. I daily receive many callers, Koreans, Japanese and foreigners,

A trial under the old Korean regime. The prisoners, surrounded by policemen in formal costume of white coats and tall hats, kneel before the judges, who stand on a raised platform

to ascertain their views, and find this very beneficial in the execution of my work. It is also my intention shortly to grant the people freedom of speech and press, which for political reasons has hitherto been denied

Government has already started investigation. It is hoped that, after the Korean people have shown themselves possessed of sufficient capabilities, they will be allowed to send their representatives to the Imperial Diet in Tokyo.

Among the old institutions not suiting the present condition of things in this peninsula, which it is intended shortly to abolish, is the method of punishment by flogging. This form of punishment had long been practised in Korea, and, as it was considered a measure suitable to the standard of the people and an effective preventive of minor offenses, the Japanese Government retained it as a penal measure for Koreans. It is, however, a method of punishment at variance with the modern idea aiming at the reformation of erring people. For this reason it is necessary shortly to abolish it, substituting for it fines or imprisonment with labor, so as to conform to the progress of the times.

The sanitary condition in Korea is still far from ideal; epidemics frequently break out and the people suffer from a dearth of competent medical practitioners and good hospitals. In order to remedy this shortcoming, the Government has established and maintains in Seoul a great central hospital equipped with all modern improvements and staffed by first class physicians. It also maintains nineteen charity hospitals in the provinces, besides stationing more than one hundred public doctors at different centers throughout the peninsula. In these hospitals Korean patients of poorer means are treated free. Those well knowing the sanitary condition that existed in this peninsula prior to annexation will not be chary in giving credit to the Japanese Government for the good work it has done in this branch of public work. The Government, however, is not satisfied with what has so far been achieved. On the contrary, it is determined to improve and complete medical relief work for the Korean people. With this idea in view, plans have been formed to establish more charity hospitals, appoint more public doctors, and increase the force of sanitary experts attached to provincial governments.

The spread of education among the Korean people has always been one of the tasks most earnestly carried on by the Government since it undertook the administration of this peninsula. Besides three colleges and several higher schools for boys, and two higher schools for girls, the Government has already established 460 common schools giving education to 87,000 Korean children. It has been recognized by the Government, however, that, in order to cope with the progress of the times, it is necessary to introduce some radical reforms into its educational system. Accordingly, the Government is now deliberating plans for lengthening the school course for Korean children, improving the school curricula, increasing the number of schools, and establishing new organs for higher education, as well as for the [Continued on page 191

The Korean court under Japanese jurisdiction resembles more closely the European method of administering justice. Two or three of the six judges on the bench are native Koreans

them to a large extent. Several applications asking for official permission to start new Korean and Japanese newspapers have already been received, and they are now being considered by the authorities concerned, and some of them, filed by men of good standing—if not all—will shortly be granted.

I aim at doing away with the evil of formality and red tape in the transaction of official business, for this has been one of the principal causes of popular dissatisfaction. With this purpose, several complicated regulations have been overhauled and tedious official procedure has been simplified. I hope that the reform in this direction will result in great benefit to the people at large. I also hope to establish a thoro understanding between the Government and the people. In order to attain this object, among other measures taken, a number of high officials have been dispatched to the provinces with the mission of explaining to the people the Government measures and plans, as well as of listening to their desires and complaints. I have also made arrangements for giving special liberal allowances to Japanese officials mastering the Korean language, so that they may directly hear what the Korean people have to say. But all these are preliminaries to the realization of a plan which I cherish, *i. e.*, to grant the Korean people the administration of local affairs at some opportune time in the future. In this connection the

The Abraham Lincoln We Love

Between the acts of an English poet's dramatization of Abraham Lincoln a sculptor famous for his statues of the Great Emancipator tells the dramatic critic what Lincoln means to him

By Montrose J. Moses

THERE was method in my asking Mr. Gutzon Borglum to go with me to see John Drinkwater's play, "Abraham Lincoln." We had both seen it once before; we were both eager to see it again. But in addition I had a feeling that from a sculptor, who had done a deal of study of Lincoln, I would get some interesting reactions which would enrich my first impressions of the play. I was not disappointed. From the moment we were comfortably seated in our chairs, I saw the sculptor chipping away at his impressions, as I imagine he chipped his head of Lincoln from the block of marble; in words he sketched his image of Lincoln for me, as I imagine he sketched his first design for the noble figure of Lincoln seated on a bench, waiting for the people to come and sit by him.

I REMEMBER once hearing a minister deliver a sermon on Abraham Lincoln to the children of his congregation; the first two rows of pews were lined with bobbing heads and restless bodies. Before the pulpit was placed one of the not too prepossessing likenesses of the martyred President. "You all think this is a picture of a very ugly man," suggested the minister. There was a roar of affirmation. "Well, now—look at his eyes—have they not compassion in them? See his mouth—is there not gentleness in the sensitive lines? Watch the eyes closely—are not kindness and humor there?" Thus, carefully, he sketched the essential humanity of Lincoln for these children, and then he put the question again, "Do you now think this is a picture of an ugly man?" And the answer again was, "Yes."

This story has a double moral—it points to the fact that our school children are woefully in need of having their imaginations cultivated, and it shows—which is to our purpose here—that the true inspiration of history lies, not in fact, but in character at supreme moments. The English poet, John Drinkwater, having all his life held Lincoln to his heart as a hero, has written a play which, in substance, is nothing more than a series of events contained in every school history, and yet which, in its effect, makes us see Lincoln as the minister would have had his children see him. This has been done by the simple adherence to simple speech, and with no effort to put more drama into the play than the events themselves actually held. Having seen Drinkwater's drama, "Abraham Lincoln," you have a living statue of Lincoln in your mind forever—a man of des-

A moment that reveals the essential nobility of Lincoln's character—when he pardons one of Grant's sentries, a mere boy, who is to be shot as he has been found asleep at his post

tiny amidst moving events—a man whose face showed, in every expression, the shaping of a soul which was helping to shape a nation. Drinkwater has modeled his conception of Lincoln in his play as a sculptor would cut it out of stone—conscious of how Lincoln felt at every hour he was called to act. What makes every scene in Drinkwater's "Abraham Lincoln" so effective is that *we* are made to feel that the playwright knows exactly what was stirring in Lincoln's mind when the committee calls on him to accept the nomination for the presidency; when, in his first cabinet meeting, he sees what opposition he has to face; when, at

the supreme height of determination, he announces his Emancipation Proclamation; and when, as a visitor to Grant, on the field of battle, he pardons the sentry, a mere boy, found asleep at his post.

These commonplaces of school history are beacon-lights in the character of Lincoln. By word and phrase, Drinkwater colors them with the spirit of a great man, and he gives us a Lincoln, which, in London and New York, has been unhesitatingly acclaimed and accepted. It is not always that we say, "This is our Lincoln." The camps are divided, for instance, in liking for the St. Gaudens statue of Lincoln, and for the ungainly figure of the Great American by Barnard, recently unveiled at Manchester, England. Others, to settle the question, brush the two aside, and declare that the only real Lincoln is the head by Gutzon Borglum, in the rotunda of the Capitol in Washington. We have nothing to do with the dispute here. I mention it because, in the stage production, as being given in New York at present, and likely to travel thru the country for many years, the actor who portrays Lincoln often stands as though he had studied the Barnard statue for every wrinkle of his coat; and in expression looks as tho he had selected material, now from the Lincoln life mask and then from Borglum's head. It was this constantly recurring similarity between Drinkwater's methods of sketching Lincoln and the sculptor's method of cutting his way to character that first suggested my asking Mr. Borglum to go with me to see "Abraham Lincoln." The evening was a revealing one, for I was with a man who doubtless knows more of the human make-up of the American leader than any other student of history. For fifteen years he fitted himself for his task before he put chisel to marble; for fifteen years he ferreted out every source of Lincoln's life, examining the wealth of photographs,

and explaining every expression by some shaping event. "To my mind," he said, "that is the only way to reach character thru photography—to reason out why the subject had the particular expression at the particular time."

We sat thru the play enthralled; each had seen it before. Borglum gave himself completely over to the living progress of events. I never saw a man more responsive to character, reveling in the phases of loyalty and disloyalty among the members of Lincoln's cabinet, which only served to sharpen the eyes of Lincoln, and to reveal how completely he knew the men conniving against him. "Lincoln had the keenness of a horse trader," Mr. Borglum said under his breath, as the Great Leader, in one of the scenes, faced Seward with his double dealing, and made him own up. "They couldn't put anything over on him." Then he sat up with the enthusiasm of a boy, as Lincoln, entering the fateful cabinet meeting when he presents the Emancipation Proclamation, sat him down and read to his impatient political family the latest thing by Artemus Ward. "There's the supreme moment. Lincoln is applying the acid test. It's a joy."

All thru the play he would grab my arm whenever the actor impersonating Lincoln approached nearest his conception. These moments were mostly when the head was down. But on the whole, the actor stood the sculptor's gaze admirably. To judge by Borglum's enthusiasm, I should say it was eighty per cent to the good. "Lincoln was not vain," the sculptor declared, "but he knew which side of his face was the best for pictures, and he seemed to know exactly at what angle to hold his head. This man on the stage appears to have studied very carefully the outward details, but where he is most successful is in the throwing of spiritual action on the face. I don't believe Lincoln ever wore such a short coat, nor do I believe that it is right to over-interpret the ungainliness of the man. Lincoln was not awkward; he was large and loosely hung together. He always sat in chairs too small for him, for he was an exceptionally tall man. He was careless of attire, but that is a different matter. Without putting Mr. Borglum in the position to criticize, I could glean what he considered to be the defects of the Barnard statue from his criticism of the actor on the stage. But he did not spare himself; he told me exactly how his own ideas changed while he worked on his marble head."

Here was a man, steeped in Lincoln lore, witnessing a very

simple play, yet boyishly touched in his interest over Lincoln's humanity; applauding the minor actors wherever it seemed they had made a study of their parts directly from history. "Watch Grant," he exclaimed, "It was just in that way he used to throw his cigar into his face, and wipe the ash end of it on the lapel of his coat." That the theater had a thoro grip of Borglum there was no gainsaying. In the play, when Lincoln, with Hay, visits Grant in camp, he stays the night, eager to learn if General Meade will bring news of Lee's willingness to surrender. Propped up in a chair, the Great Leader falls asleep. Grant passes, gets his army coat and tenderly covers the President with it. Before going out he pauses and looks into Lincoln's face. Borglum turned to me. "I know nothing greater," he said, "than to see two great men together."

I am not telling these actions and reactions in the spirit of spying on Mr. Borglum's emotion; but rather in justification of my claim that Drinkwater has somehow done the trick—he has given us a living statue of Lincoln, in a day when we need statues of living men! Of course, being a sculptor who has to deal with the physical proportions, there are things not necessary in a play that are necessary for the sculptor's art. I learned from Mr. Borglum the size of Lincoln's collar, the way his hair was brushed, and when he changed the parting of it, the character of his beard—points that Mr. Drinkwater did not have to concern himself with. But tho the sculptor must consider these details he must not be enslaved by them. He must be chiefly concerned with the spirit.

I was curious to find out exactly how certain liberties taken by Drinkwater with historical circumstances would affect Borglum. For instance, there is a new character introduced into the Lincoln cabinet. Drinkwater justifies his use by explaining that upon him are placed the opposing forces with which Lincoln had to contend; thus was Drinkwater relieved of clogging his other characters with elements that had nothing to do with their main value. I could see, by Borglum's ap-

proval of taking any liberties that did no harm to the essential truth of history, that he was being true to type as an artist himself: art is not the exact photograph of life, but the arrangement of those facts in life which will best depict it in its magnitude. If Drinkwater had set himself the task of writing an American play with Lincoln as the chief character, he might have fallen into gross errors of local col- [Continued on page 187]

"Did you know that Paderewski, Abraham Lincoln and John Keats have similarly shaped heads?" Gutzon Borglum, the sculptor, thinks so. And he ought to know for he did the head of Lincoln shown above, which is in the rotunda of the Capitol at Washington

The People and Their Servants

By Hamilton Holt

LAST week's overwhelming vote of the faculties and students of the American colleges and universities in favor of ratifying the Covenant without reservations, or only with such reservations as will honorably compromise the differences between the factions in the Senate favoring some kind of a League of Nations, must have given Senator Lodge and his Drastic Reservationists and Senator Borah and his Battalion of Death a severe jolt.

Of the 158,078 votes taken in 410 institutions 61,494 favored a compromise to permit immediate ratification; 48,232 favored the Treaty without change; 27,970 expressed themselves in accord with the Lodge program; 13,943 favored killing the Treaty and the League; and 6449 would negotiate a new treaty with Germany. In other words, less than one-tenth of the vote favored Borah and less than one-fifth favored Lodge. President Wilson's uncompromising stand evoked more support than the Lodge and Borah proposals combined. In fine, nine-tenths of the voters are in favor of ratification in some form and seven-tenths are for a League even more virile than the Foreign Relations Committee would have it.

The vote, in which the mature judgment of the faculties corresponds with the idealism of the students, has been confirmed by every other test so far taken in the country. The result of a postal card poll of returned soldiers and sailors from Southern Massachusetts made by Mr. Frank L. Andrews of Fall River, showed that 554 voted for the League unamended, five for reservations, and twelve were opposed.

THE American Federation of Labor at its annual meeting in July voted 29,000 in favor of the Covenant and 400 against it. At a meeting of the National and State officers at Washington on December 13, 1919, the vote was 240 to 3 in favor of ratification, two of the three dissenters being unredeemed Irishmen.

The Church Peace Union took a nation-wide poll of the ministers of the country, Protestant, Catholic and Jewish. The vote was 17,309 in favor and 816 against—most of those in opposition being Irish Catholics.

Fourteen daily newspapers from ten states have just taken a very significant poll of their readers. The total vote was 48 per cent for no reservations, 35 per cent for a compromise, 10 per cent for the Lodge reservations, 7 per cent for no League. Most of the papers were in Republican Congressional districts. The poll of the *Portland Oregonian*, which is not included in these percentages, was 11,096 for unamended ratification, 665 for compromise, 112 for the Lodge reservations

and 228 for no treaty at all. I have addressed thirty meetings in ten states in the last three months on the League of Nations—North, South, East and West. Before I presented my case I invariably called for a show of hands from the audience. With one exception (on the New York East Side) every assemblage voted about the same, not only those who came knowing they were to hear an address in favor of the League, but audiences such as composed the City Club of Cleveland, the Teachers' Association of Minnesota, and the Southern Commercial Congress, which came for the occasion and not for the speaker.

I found that about 60 per cent were in favor of the treaty as presented by the President, 30 per cent were for mild reservations and the remaining 10 per cent were scattered between the drastic reservationists and bitter enders.

IF all these straw votes were not sufficiently conclusive the last doubt of where the country stands on the Covenant must have been removed when the official representatives of twenty-six National Organizations waited on Senator Lodge and Senator Hitchcock last week and urged them in behalf of the majority and minority factions which they represent in the Senate, to get together to compromise their differences and to ratify the Treaty without delay. When practically all the official organizations of the land, representing among other classes, the Farmers, the Workers, the Churches, the Schools and Colleges, the Women, unite on a program of this kind it is the American people that is speaking.

From the above expressions of American sentiment it is evident that the present alignment of the country on the League of Nations differs radically from that of the Senate. In other words, the Senate does not represent the American people on this issue.

The Senators therefore have two imperative duties to perform if they are intent on satisfying the people whose servants they are.

First. They must compromise their differences so that sixty-four of the eighty Senators favoring some kind of a League of Nations will ratify the Treaty.

Second. They must agree upon such a compromise as will permit the President to transmit it to our allies for their acceptance rather than to project the issue into the next Presidential election.

If the Senate in ratifying the Treaty so emasculates it as to force the President to the latter course there can be little doubt as to what the people will do at the next election both to the party and the individual senators who are responsible for the delay.

I Had a Little House

In memoriam to my wife Mary Pyne

By Harry Kemp

I had a little house upon a hill,
A little house on loving kindness built;
Small windows over which the dawn was spilt
Shimmered with gold; across its gentle sill
Love hand in hand walked in and out; nor far
Seemed the soft influence of the evening star.
The pastoral voice of flutes hung in the air;
Familiar spirits blessed the sacred place
For the bright benediction of your face
Drew thither all things good and pure and fair. . . .
Gone is the loveliness you brought to me,
My little house is left a broken fane;
Its roof lies gaping for the void to see,
All, all my life is full of falling rain.

The Story of the Week

Opening the League of Nations

THE new régime of international coöperation was inaugurated by the organization of the Council of the League of Nations on January 16. The nine men who took their seats about the green table in the Clock Room of the French Foreign Ministry on the Quai d'Orsay at 10.30 in the morning were Léon Bourgeois, representing France; Earl Curzon, representing England; Ambassador Matsui, representing Japan; Carlo Ferraris, representing Italy; Ambassador Quinones de Leon, representing Spain; Dr. Eastoa da Cunha, representing Brazil; Premier Venizelos, representing Greece, and Paul Hymans, representing Belgium. The secretary of the League, Sir Eric Drummond, sat across the table from the chairman of the Council, M. Bourgeois.

In his opening address, M. Bourgeois said:

Today, gentlemen, we are holding the first meeting of the Council, convened by the President of the United States. The task of presiding at this meeting and of inaugurating this great international institution should have fallen to President Wilson. We respect the reasons which will delay the final decisions of our friends in Washington, but we may all express the hope that the difficulties will soon be overcome, and that a representative of the great American Republic will occupy the place which awaits him among us. The work of the Council will then assume that definite character and that particular force which should be associated with our work.

January 16, 1920, will go down in history as the date of the birth of a new world. Decisions to be reached today will be in the name of all nations adhering to the Covenant of the League. It will be the first decree of all free nations, leaguering themselves together, for the first time in the world to substitute right for might. But the organization of the League of Nations will not be complete until the assembly of all the states meets.

Lord Curzon, who followed, echoes the same wish:

While I am in entire accord with all that M. Bourgeois has said, I should wish especially to express my full concurrence in his observations regarding the United States of America. The decision must be her own, but if and when the United States elects to take her place in the new council chamber of nations a place is vacant for her and the warmest welcome will be hers.

The presiding officer at the first meeting of the League of Nations, held in Paris on January 16, was Léon Bourgeois, representative of France on the Council of the League of Nations and a member of the Allied commission which founded it

The League of Nations is an expression of the universal desire for saner methods of regulating affairs of mankind, and provides machinery by which practical effect may be given the principles of international friendship and good understanding. The success of the labor conference at Washington is a good augury for the future of the League of Nations.

For the first time an attempt was made to bring together under the auspices of the league representatives of governments, employers and labor, and an advance exceeding the results of the entire work of the previous quarter of a century has been made in the field of international action on industrial questions.

The Council voted to hold the next meeting in London, and, on Lord Curzon's suggestion, the date and program of business was left open until President Wilson could be consulted.

The only other business transacted at this session was the appointment of the members of the commission to trace the boundaries of the Sarre concession to France.

Raymond B. Fosdick, who had been selected by Sir Eric Drummond as Under Secretary General in order to have an American member in the secretarial staff of the League, has felt himself forced to resign because of the embarrassing position in which he is placed by the refusal of the United States to enter.

Minor Wars in Washington

CONCURRENTLY with the Supreme Council at Paris, the American Congress gave evidence of a new attitude toward Bolshevism. Congress wants no compromise with Bolshevism either in Russia or in the United States, but it is reaching out for new and effective weapons for the fight.

"You cannot fight an idea with bayonets. . . . Bolshevism is an idea," said General Tasker Bliss, member of the American Commission to Negotiate Peace, upon his return to this country. "Bolshevism must be fought with logic. To fight it with force is to spread it."

Herbert Hoover previously had said much the same thing. Since that time the blockade against Soviet Russia has been lifted; the withdrawal of American forces from Siberia has been begun and Allied support for

Knott in Dallas News

All set for the little game

the anti-Bolshevik forces has been greatly diminished. "The Soviet Government is being maintained by pressure from without," Lenin told a witness who will appear before the Senate committee investigating Bolshevik activities in this country. "All Russian elements are giving support to the Government in its efforts to repel invasion. Once Allied pressure is withdrawn they will go back to their own political theories. Russia will always remain a Socialist republic, but it is probable that the Soviet system will have to be modified."

The Supreme Council apparently has accepted this view. Congress was not far behind. Bolshevik "Ambassador" Martens was treated most considerately when he took the stand before the Senate committee. He appeared to be anxious to tell and the committee to learn the truth about Bolshevism and the activities of its representatives in the United States. There was nothing of the inquisitional methods employed in the Senate propaganda investigation just after the close of the war. To meet Bolshevism with logic, rather than force, Bolshevism must first be understood.

Martens has been given a new status in the eyes of American commercial interests by the lifting of the blockade. He has negotiated with them for millions of dollars worth of tentative contracts, and they see prospects of being able soon to deliver the goods. Some of their representatives have asked to be heard on Martens' behalf.

The attitude of the Department of Justice toward Martens, however, remains unchanged. A deportation warrant has been sworn out and six agents of the department have been in constant attendance at the hearings to arrest Martens as soon as he completes his testimony. The warrant was issued several weeks ago, but the sergeant-at-arms of the Senate reached Martens first with a Senate subpoena and he has since been under the Senate's protection.

Opposition to anti-sedition legislation asked by Attorney General Palmer to permit him to cope with Bolshevik agitation in his country has unexpectedly developed in the House. The fight to modify the drastic provisions of the Graham sedition bill is being led by

Simeon D. Fess, chairman of the Republican Congressional Committee. He has joined with Samuel Gompers in asserting that the utmost freedom of opinion and expression must be preserved in order that the arguments of Bolshevism may be brought out in the open and fought in the open with logic.

After it had been amended to permit an appeal to the courts by any publisher whose publication might be declared by the Postmaster General to be non-mailable, the Sterling sedition bill floated thru the Senate, practically without opposition. The House Judiciary Committee amended the Sterling bill by substituting the drastic Graham measure and then sought a special rule to limit debate and insure quick passage.

The refusal of the Rules Committee to grant the requested rule without comprehensive hearings came as a surprise. It was taken to mean that the Republican steering committee had decided the bill should not pass until it had been greatly modified. It now seems doubtful whether the Attorney General will be able to secure much more than a codification of the present laws against sedition, which many members hold are ample to meet any existing threat against the Government. Meanwhile new raids long planned by the Department of Justice on the basis of the expected legislation are being delayed.

Another proposal that was expected to be speedily approved by Congress, but which is encountering opposition, is that of Secretary Glass for the establishment of food credits in the amount of \$150,000,000 for Poland, Austria and Armenia. The opposition centers against granting aid to Poland, on whose behalf the most urgent recommendations had been made because it is the only remaining military barrier against Bolshevism. Congress has gained the impression that Poland, altho its people are starving, has embarked upon an imperialistic adventure, and it is reluctant to extend any aid that may be used to further such designs.

COMPETING with the Bolshevik and anti-sedition hearings for public attention is the Senate investigation of the conduct of the war at sea. Washington society has flocked to the hearings, at which Admiral Sims has been the principal witness. Like the House investigation of the War Department, the Senate inquiry into Secretary Daniels' administration of the Navy Department is likely to prove a disappointment to those who were most anxious for it.

Admiral Sims's charges of bungling during the war, launched without forewarning during a hearing on the medal awards' controversy, are serious, but impartial observers are loath to accept them until the other side of the story has been told. For his statement that he was told just before embarking for Europe in March, 1917, that "we would as soon fight the British as the Germans," Sims is being roundly criticized. If the statement was made—and he did not reveal who made it—repeating it in public was the height of impropriety.

Admiral Sims's charges are characterized by the friends of Secretary Daniels as a new manifestation of the jealousy of the professional fighter for the civilian head of a department who insists upon knowing all that is going on in his department and performing his duties for himself rather than having them performed by his professional advisers and occupying himself merely with speech-making and politics.

The interest in this and other current controversies has taken attention from the treaty contest. Two weeks ago the public pressure for quick ratification was very heavy. Something had to be done. Instead of appointing a formal conciliation commission to negotiate

a compromise, an informal commission was appointed and set at work. The difference is that a formal commission would have had to report to the Senate, either a compromise or that an absolute deadlock had been reached. The informal commission has no such obligation and serves equally well to convince the country that "something is being done." A compromise agreement in the informal commission is not impossible, but most unlikely.

The hand of the Administration in the treaty fight was weakened by the tie vote of the Democratic caucus on the selection of a permanent minority leader. It showed that the Democrats were equally divided, one-half supporting Senator Hitchcock in his efforts for interpretative reservations and the other favoring Senator Underwood's plan of surrender to the Republicans on the best terms obtainable, in order to achieve quick ratification. It is true that Senator Underwood said after the caucus that if elected he would not attempt to take the leadership in the treaty contest away from Senator Hitchcock. Had this statement been made before the conference the division of the Democrats on the treaty issue would have been less evident.

The Democratic split has served to fortify Senator Lodge in his determination to make no material concession, since he holds practically all of the Republicans solidly behind him. The outlook for an acceptable compromise is, therefore, even less encouraging than before, in spite of apparent progress in the conciliation commission.

RICHARD BOECKEL, *Washington.*

Bone Dry America

THE dominant topic of the week for many thousands of Americans is the enforcement of the eighteenth constitutional amendment which became effective on the sixteenth of January. The attitude of the Federal Government is thoroly satisfactory to prohibition sentiment. Attorney-General Palmer announces that the Department of Justice will enforce the law to the letter. For this purpose an organization of some 1500 men has been established under John F. Kramer, Federal Prohibition Commissioner. The United States is divided into districts, at the head of each of which is a district supervisor with the right to order investigations, raids and arrests. For each state there is a director charged with the administration of the permissive features of the law, such as the clauses allowing physicians and druggists to use intoxicants under certain conditions. Mr. Kramer's bureau has \$2,000,000 at its disposal by vote of Congress with which to conduct its work to the first of July.

The Federal Government is operating under the provisions of the Volstead Enforcement Act under which it is illegal not only to sell intoxicating liquor but to manufacture it for consumption, to export, import or transport it, or even to own it save in private dwellings or government bonded warehouses. It has been proposed to purchase the 60,000,000 gallons of liquor now in bond in order to prevent loss to the banks which have loaned money against this liquor. The Treasury, after purchase of this liquor, could gradually dispose of its stock and recoup its expenditure by sales for medicinal, scientific or industrial purposes. Complaint has been made of thefts from storage warehouses and Mr. Kramer's staff has been instructed to guard the stored liquor with special care.

Anti-prohibitionists are advancing to the attack from three directions. One policy is agitation for the repeal of the eighteenth amendment. At present this is admittedly a hopeless prospect, but it is believed that

in time the current of public sentiment can be reversed until three-fourths of the states are ready to consider repeal. To this end Governor Smith of New York recommended a popular referendum in his state. This could have no legal effect but it might result in a "moral victory" for the wets which would help their campaign. Much more reliance is placed on an alternative policy of reversing the eighteenth amendment in the courts, or at all events of nullifying the more stringent provisions of the Enforcement Act. To this end the State of Rhode Island is asking an injunction in the Federal courts against the local enforcement of the law; charging that the eighteenth amendment was irregularly put into effect and that it exceeds the competence of the Federal Government. Applications for similar injunctions brought by private persons have already been dismissed by the courts as beyond their competence, but the action of a "sovereign State" introduces a novel element.

The third, and most promising, line of attack is to accept the eighteenth amendment as it stands but weaken its force by unfriendly local legislation; just as the "personal liberty laws" of northern states before the Civil War virtually nullified the fugitive slave laws passed at Washington, and just as the complex franchise provisions of some southern states in recent years have destroyed the spirit, while respecting the letter, of the fifteenth amendment admitting negroes to the franchise. The second section of the eighteenth amendment gives the states "concurrent power" with Congress to enforce prohibition "by appropriate legislation." Taking advantage of this provision laws have been proposed in various states which are far less drastic than the Federal Enforcement Act.

New Jersey has been the leader in this movement. Legislation is proposed which will define "intoxicating liquors" by a high alcohol content. The Federal Enforcement Act places the limit of alcoholic content at one-half of one per cent. The prohibitionists are endeavoring to secure local legislation framed in conformity with this provision. Anti-prohibitionists claim that it is illegal and unconstitutional to fix a definite percentage, especially at so low a figure, and to

The earthquake in the United States

The first accomplished trip to the moon will probably be in the movies. These sketches show the rocket drawn by Max Fleischer for a picture to be sent out shortly from the Bray Pictograph Studios. In the interior of this movie rocket are (along the left side) dynamo, radium power tank, chairs, motorcycles on which to explore the moon, food compartment, berths, lockers, gyro-scope; (along the right side) more berths, heater, desk, water tank

A Trip to the Moon

"There is always room at the top" applies more truly to the atmosphere than to business. If we could run our elevated trains on a frictionless track at a height of 200 miles we would not need to hitch on an engine. A single shove-off at the station would send the train around the world. The Germans did something of the sort with their big gun which shot the shell so high that the air-resistance became negligible and the projectile had no difficulty in traveling 75 miles to Paris. If when the shell had reached the upper limit of its flight and was about to drop to the earth a second charge of powder had been exploded underneath it would have been

driven further upward and onw multiple-charge idea has been a Professor Goddard, of Clark Col rocket which he believes could above the limits of the atmosphe gradual discharge of ten pounds sive in the rear, if the instrumen weigh over one pound. A hund that charge would, according to culations, carry the rocket out of of the earth's attraction and u moon if pointed in that direc principle is a familiar one, for were children we used to set pinv works revolving by the reaction force of the gunpowder gases out of the rear of the pastebo. Even in a vacuum this would wo Newton said in his third law, "A reaction are equal and opposite kicks even when it is not loaded

The hot gases escaping from the driven so rapidly to the rear that the tum balances that of the heavier and slo ing rocket head. Readers of Jules Verne will ber that his voyagers to the moon used that getting back to earth. Of course ideal propelli would be the radium emanation that shoots out corpu a velocity approaching the speed of light. In our issue ber 27 we told of a French scientist who proposed by th to send a man to Venus. But Professor Goddard is more me proposes merely to use his invention for sending meteorologic ments into the upper atmosphere. We might then learn more about weather is going to be. Very light and compact recording instrum been devised for balloons used to explore the upper atmosphere. But never ascended as high as twenty miles and then they float around and oft be recovered. But Professor Goddard expects to send his rocket to a height of about the limit of the atmosphere, within six and one-half minutes and it would e like a stick in about the same time, altho it would be necessary to ease up the desm parachute to prevent smashing the instruments or hitting somebody. The recording would give the changes in air pressure going and coming. A thermometer would tell how temperature of empty space approaches absolute zero, which is 459 degrees below zero F. An automatic camera could take snapshots of the earth at a distance of 200 miles and of the from the disturbing influences of the air. A vacuum tube set to open at the proper height co

This is how the earth looks when you are on the moon, 240,000 miles or more away from home. These photographs of the moon's surface are authentic. The one at the left shows in its deep shadows the roughened surface and volcanic craters

The arrows above show the "spheres of gravitational influence" round the earth and moon. When the rocket reaches the lunar atmosphere its power must be reversed to overcome gravitation toward the moon. Below is one of the craters

samples of the air for chemical analysis to determine if it contained more of such light gases as hydrogen and helium and less of such heavy gases as oxygen and nitrogen. Professor Goddard suggests the possibility of sending his rocket to the moon, where its arrival could be signalized by the explosion of a gigantic flashlight on the dark side of our satellite. He does not propose to send up any passengers to explore the moon, tho various scientific romancers, not bound by his sense of practicality, have allowed free rein to their imaginations. Lucian, the Latin author; Jules Verne, the French romancer; H. G. Wells, the English novelist, and others have told of trips to the moon. The movie man has taken up the idea, as we show herewith

rule that all beverages containing more alcohol must be intoxicating. They demand that the intoxicating character of a beverage be judicially demonstrated in each case; or, failing that, the sale of beer and wines containing less than five per cent of alcohol be permitted as presumably "non-intoxicating."

All this hostile activity has not found the prohibitionists asleep. The Anti-Saloon League has announced that it "will stay in politics" so long as there is any danger of the nullification of prohibition. It pledges itself to the defeat of any person or party who opposes strict enforcement of the laws on the statute books or who seeks to change those laws so as to frustrate the intent of the eighteenth amendment. A separate organization, the Allied Citizens of America, has been founded to supplement the work of the League. Members are not required to believe in prohibition as a policy, but simply to support the constitution and the enforcement of the laws as they stand in the name of good citizenship and obedience to the will of the majority. The Federal Prohibition Commissioner has given his written endorsement to this organization.

The prohibition movement is an outgrowth of the temperance or abstinence movement which, in its organized form, dates back in the United States for more than a century. It was not, however, until Maine passed its first law in 1851 that a political character was given to the anti-saloon agitation, which previously had worked by the method of religious propaganda and individual pledges of abstinence. Kansas followed the example of Maine in 1880. Local option laws were passed in many states, but only a few state-wide laws were passed until Georgia and Oklahoma acted in 1907. The "solid south" once more lived up to its name and went over to prohibition almost as a unit. The active participation in politics of the Anti-Saloon League, founded in 1893, created something like a panic among "wet" politicians as election after election, in every

part of the nation, turned on the state prohibition issue. The Prohibition Party, organized in 1869, was less directly influential as it never became a serious rival to the two dominant political machines and did not, like the League, play off Republicans and Democrats against each other.

Federal action began with the Webb-Kenyon Law of 1913 which forbade the importation of liquor into "dry" territory. This was followed by war-time prohibition and the passing of the eighteenth amendment by a vote of 281 to 128 in the House of Representatives and of 65 to 20 in the Senate. The hostile votes were mainly provided by New York, New Jersey, Massachusetts, Connecticut and Pennsylvania; the Connecticut alone voted solidly against the amendment. The ratification of the thirty-sixth state legislature on January 16, 1919, made the amendment legally effective one year from that date. However, other legislatures continued to go on record in favor of ratification until at the time when the eighteenth amendment became effective only New Jersey, Connecticut and Rhode Island had failed to approve national prohibition. It is noteworthy that fourteen states approving national prohibition had not yet enacted state-wide prohibition within their own limits.

American prohibition differs from the movement in European countries in two important respects. Liquor dealers put out of business are rarely compensated for their losses, whether under national, state or local laws; whereas in Europe some compensation is generally paid to the holder of a license. Also no discrimination is made between distilled liquors on the one hand and light wines and beers on the other; whereas in Europe drastic prohibitory laws are directed only at strong intoxicants. Which policy is the wiser is legitimate matter of debate; but one thing is unquestionable, the strength of contemporary American sentiment thruout nearly the entire nation for complete, rigorous and uncompromising prohibition.

The Coal Truce

THE coal mines of the United States are still in a condition of armistice, the peace negotiations are in progress which it is hoped may result in a permanent industrial settlement. The decision of the operators to submit their case before the coal commission appointed by the President enabled the commission to begin its work on January 13. This commission consists of Chairman Henry Robinson, for the public, Rembrandt Peale for the mine operators and John P. White for the miners. The decisions of the commission must be unanimous and, even so, do not become directly binding on the mine owners but simply "serve as a basis upon which a new wage agreement can be made." The Government, however, by its power to control prices and stimulate production in the interests of the public can exercise great pressure to compel the acceptance of the verdict of the commission.

The miners are demanding a sixty per cent increase in pay and a basic thirty-hour week. They claim that the increase is justified by the rise in the cost of living and that the fourteen per cent already awarded to them by the Fuel Administration is the only increase of pay they have had since October, 1917. Frank Farrington of the Illinois Miners' Union estimated that the average annual earnings of miners in his state had increased only from \$700 in 1913 to \$1390 in 1918; the cost of living during the same period having much more than doubled. It is true that the additional sixty per cent proposed by the miners would more than overtake the rise in the cost of living, but John L. Lewis, acting President of the United Mine Workers of America,

defends the policy of increasing "real" as well as "nominal" wages on the ground that the standard of living for the coal miner is and has always been discredibly low.

The thirty hour week is certainly shorter than prevails in other branches of industry and, it might be added, is only about half the working week of the average professional man, business executive, housewife (without servants) or western farmer. But the miners point out with some force that what they desire is not so much to reduce their hours of labor as to distribute labor more evenly thruout the year. At present seasons of overwork alternate with seasons of unemployment. By the adoption of the six hour day and five day week there will, it is claimed, be employment the year around and production will not be decreased. For overtime the miners demand payment at "time and a half" rate; and payment at double rates for work on Sundays or legal holidays.

The coal operators replied that to accept the miners' demands would be to disturb, without adequate inquiry, the adjustment of wages to prices and mining conditions which have been established by decades of negotiation and collective bargaining. The increase of wages would be so great that the coal industry could not possibly absorb it by improving methods or by accepting diminished profits. The bulk of the cost would have to be passed on to the public in the form of higher prices. As soon as the Lever Act expires with the conclusion of peace, the mine owners insist, the price of coal will no longer be subject to regulation and increases will be necessary to cover any advance in wages which the commission might approve. The numerous minor demands presented to the commission, they contended, were in every case indirect methods of increasing wages and therefore the costs of production.

Pan-American Unity

THE Second Pan-American Financial Congress met at Washington on January 19 to discuss such problems of reconstruction as are common to the nations of the New World. Secretary Glass, of the Treasury Department, welcomed the delegates in the name of the United States, acting in place of President Wilson, who was unable to be present. The President, however, sent a letter of greeting in which he expounded his ideal of Pan-Americanism:

I rejoice with you that in these troubled times of world reconstruction the republics of the American continent should seek no selfish purpose but should be guided by a desire to serve one another and to serve the world to the utmost of their capacity. The great privileges that have been showered upon us, both by reason of our geographical position and because of the high political and social ideals that have determined the national development of every country of the American continent carry with them obligations the fulfilment of which must be regarded as a real privilege by every true American.

Secretary Lansing and John Barrett, director of the Pan-American Union, gave addresses of welcome, to which the Latin-American guests responded with the courtesy which is their heritage and tradition. The Financial Congress then resolved itself into discussion groups to consider definite problems of trade, credit and transportation.

The chief topic considered at the first day's session was that of steamship transportation. Dr. Du Puy, of Venezuela, expressed his belief that communication between his country and the United States was better a quarter of a century ago than it is today. Mr. Payne, chairman of the Shipping Board, explained how the needs of war and the repatriation of troops after the

Underwood & Underwood

The Edison medal this year "for meritorious achievement in electrical science, electrical engineering, or the electrical arts" has been awarded to William LeRoy Emmet, who designed the Curtis steam turbine and who first developed the principle of electric propulsion for ships, used notably in the newest United States warships, the "New Mexico" and the "California." The "New Mexico" was the first electrically driven battleship to be owned by any nation. Mr. Emmet is an Annapolis graduate; he served as a lieutenant in the navy in the Spanish-American War

war had withdrawn ships from the American steamship lines. He announced that the Shipping Board intended to use five formerly German steamships of fifteen knots speed on a southbound route to Rio de Janeiro and thence to Montevideo and Buenos Aires, thus maintaining fortnightly communication between New York and the chief South American cities of the Atlantic coast. In addition, the Shipping Board intends to establish a monthly service of cargo steamers, especially adapted to the transport of frozen beef, between Argentina and western Europe. Dr. Ricardo Aldao, of Argentina, said that even this shipping program would not prove adequate. At present mail frequently took more than two months to come from the United States to business houses in Argentina.

Dr. Carlos Sampaio, of Brazil, expressed his regret that the United States, unlike his own country, still stood outside the League of Nations, but he was glad that in the meantime the Americas were united in a league of friendship. He said that Brazil viewed the banking system of the United States as an example to be followed by other American countries. The United States was now the financial center of the world and the only place to which Latin-America could look for credits. Among the other delegates were Dr. Salaberry, Minister of Finance from Argentina; Dr. José Pejada, of Bolivia; Dr. Luis Izquierdo, of Chile; Dr. Enriquez Sobral, of Mexico, and Dr. Manuel de Cespedes, Cuban Minister to the United States.

The increasing strength of "Americanism," in a broader sense of the word than "United Statesism," is indicated in many ways. The most obvious, of course, is the growth of trade relationship in spite of the handicap imposed by our participation in the Great War and by the shipping crisis. From 1913 to 1919 our imports from Latin-American countries have increased from about \$442,000,000 to more than \$1,126,000,000; our exports to those countries from \$323,000,000 to \$866,-

000,000. Even if we halve the present figures, to make due allowance for the doubling of values during the Great War, a very important increase is still indicated.

Our political influence, or, better, our solidarity of sentiment on political issues with Latin-American countries, is sufficiently proved by the fact that of the twenty Latin-American republics only Mexico, Venezuela, Colombia, Argentina, Paraguay and Chile failed to align themselves with us against Germany, either by declaration of war or by breaking off diplomatic relations with our enemies or similar official action. Mexico alone of the six technically neutral nations of Latin-America failed to show general popular sympathy with the American cause.

In addition to the ties of trade and politics there is an educational bond among the American republics. From March, 1917, to March, 1919, the number of students of Spanish in the New York schools increased from 13,362 to 25,729, altho the total number of students taking modern languages had not increased at all. That German should have lost ground was, perhaps, natural but it is noteworthy that very little of this loss went to the advantage of French or any other ancient or modern language save Spanish; which within a twelvemonth overtook the lead of French, German and Latin to seize the first place in the language curriculum.

In similar fashion Latin Americans are turning to American education. Chile has arranged a system of exchange professorships thru the good offices of the University of California. The first United States representatives are Dr. Chapman, professor of Hispanic-American History in California University and Mr. Gregory of the San Francisco Polytechnic High School. Should the plan work as is hoped an exchange of normal school teachers will be added. In Cuba a fund has been established, under the patronage of President Menocal, to endow a professorship in Cornell University. Cornell has eighty-six graduates in Cuba and two of them, Estrada Palma and Menocal, have later filled the office of President of the island republic.

Sinn Feiners Win

IN the Irish elections of January 15 the republicans elected 70 per cent of their candidates and secured control of most of the municipal and local councils. Out of 80 seats in the Dublin corporation Sinn Fein won 42 and Labor 14. These two parties will vote together in opposition to the British administration and will constitute a majority. Opposing them are 14 Nationalists, 9 Municipal Reformers and 1 Unionist. The old corporation was composed of 51 Nationalists, 7 Sinn Feiners, 6 Unionists and 1 Laborite. Having a clear majority in the new corporation the Sinn Feiners are expected to elect as Lord Mayor of Dublin either Alderman Tom Kelly who is now in the Wormwood Scrubbs Prison in London or W. T. Cosgrove whom the Sinn Feiners elected to Parliament but who refuses to enter that body. The Dublin corporation will probably make formal recognition of the Irish Republic and refuse to recognize British authority. Two women were elected to the Dublin corporation; Mrs. Wyse Powers, one of the treasurers of the Sinn Fein organization, and Mrs. Sheehy Skeffington, whose husband, editor of *The Irish Citizen*, was killed in the Dublin rising of Easter, 1916.

Even in Ulster, the stronghold of Unionism, the republicans gained a large minority, and in some parts a majority representation. Nine-tenths of the southern townships of Ulster went republican. In Ulster County as a whole, excluding the Borough of Londonderry, for

The new Premier of France, Alexander Millerand, former Governor of Alsace, who was asked by President Poincaré to form a new cabinet upon the resignation of the Clemenceau ministry. M. Millerand has always been a special student of social and economic problems. It is expected that he will continue as Premier under the administration of President-elect Deschanel.

which the returns were not complete, the parties stood as follows: Unionist, 246; Labor, 90; Sinn Fein, 83; Nationalist, 79; Independent, 4; Reform, 5. In Belfast, the new corporation will consist of 37 Unionists, 13 Laborites, 5 Sinn Feiners and 5 Nationalists. The old corporation was composed of 52 Unionists and 8 Nationalists. In the Shankill district of Belfast, an Orange constituency, the highest vote was received by a Socialist and among the other seven members, one is a Socialist and one a Sinn Feiner. When the Sinn Fein member from Shankill was received at the Belfast City Hall he returned thanks for his election in a speech in the Irish language. When the Socialists appeared the crowd outside the City Hall sang "The Red Flag."

Two new and incalculable factors entered into this election; the women's vote and proportional representation. Under the system of balloting a minority can secure representation by bunching its votes for one or a few candidates. It was hoped by this means to prevent the Sinn Fein from getting exclusive control of the county councils in the south of Ireland but the chief result was to give the Sinn Feiners a greater chance in Ulster where they had hitherto been shut out by the old method of districting. Another reason for the Sinn Fein gains in Ulster is that early in the war the men in the shipyards volunteered for army service and their places were taken by Irish from the south. Conscription was never extended to Ireland for fear of trouble.

The British Labor party has sent a delegation, headed by Arthur Henderson, to investigate the Irish problem on the spot and recommend a party policy.

Mayor Hylan of New York City, acting, as he was careful to state, in his official capacity and by authority of the Board of Aldermen, received Eamon de Valera as "President of the Irish Republic" and conferred upon him the freedom of the city. Mr. de Valera was escorted to the City Hall by a band of Irish pipers and a detachment of the Sixty-ninth, the New York Irish regiment that did such distinguished service in

France. This reception was the opening of a drive to sell \$10,000,000 of bond certificates of the Irish Republic. The New York State Assembly has approved of this Irish "Liberty Loan."

Russian Blockade Raised

THE resumption of peace relations with Germany was promptly followed by the opening of commercial relations with Russia. On January 15 the Supreme Council at Paris took the following action:

With a view to remedying the unhappy situation of the population in the interior of Russia, which is now deprived of all manufactured products from outside of Russia, the Supreme Council, after taking note of the report of a committee appointed to consider the reopening of certain trade relations with the Russian people, has decided that it would permit the exchange of goods on the basis of reciprocity be-

tween the Russian people and allied and neutral countries. For this purpose it decided to give facilities to the Russian cooperative organizations which are in direct touch thruout Russia so that they may arrange for the import into Russia of clothing, medicines, agricultural machinery and the other necessities of which the Russian people are in sore need, in exchange for grain, flax, etc., of which there is a surplus supply.

These arrangements imply no change in the policies of the Allied Governments toward the Soviet Government.

This puts an end to the policy of isolation adopted by the Allies toward Russia on the accession of the Bolsheviks to power in November, 1917. It was officially denied until recently that it was a blockade and therefore it was not subject to the limitations and requirements imposed by international law upon a formal blockade. But being free from such regulations it could be made much more stringent and effective than a legal blockade so for more than two years the exchange of goods, passage of persons and intercommunication by papers has been almost completely prohibited. Altho technically the Allied Powers and the United States were not at war with Russia since they did not officially recognize the Soviet Government as in existence, yet their troops have been fighting on Russian soil against the Soviet forces. Scandinavian vessels carrying non-contraband goods bound for Petrograd have been stopped by the British fleet in the Baltic Sea. The United States, in accordance with its historic doctrine of the freedom of the seas, refused to acknowledge or support the blockade, but acquiesced in it by declining to give clearance papers to Soviet ports.

Doubts as to the advisability of the blockade policy have been increasing as it became evident that it did not effect its purpose of weakening the Soviet Government while it caused incalculable misery to the Russian people. The Soviet rationing system was so contrived that those who refused to work for the Soviet received the least food, so the anti-Bolsheviks suffered the most from the famine. In England, France and Italy there has been growing opposition to the maintenance of the blockade and military intervention from two diverse classes; first, from the labor and socialist organizations who regarded it as a capitalist attempt to crush a working class state; second, from the financial and manufacturing interests which saw in it money wasted and trade opportunities lost. The Big Five of the Paris Conference differed in their attitude toward Russia. The French and the Japanese favored joint military operations on a large scale for the overthrow of the Soviet. The Japanese are ready and willing to occupy eastern Siberia as far as Lake Baikal. The French sent an army into the Ukraine and, this being driven out by the Bolsheviks, Clemenceau proposed to back up the Poles and Letts in the invasion of Russia from the west. Lloyd George has secretly been in favor of opening up communications with Soviet Russia, but he has been held in check by Winston Churchill and the military party, who refused to listen to compromise. President Wilson has been openly opposed to intervention from the first. Premier Nitti has apparently been affected by the recent overtures of the Soviet to Italy and lately declared himself opposed to the continuance of the blockade.

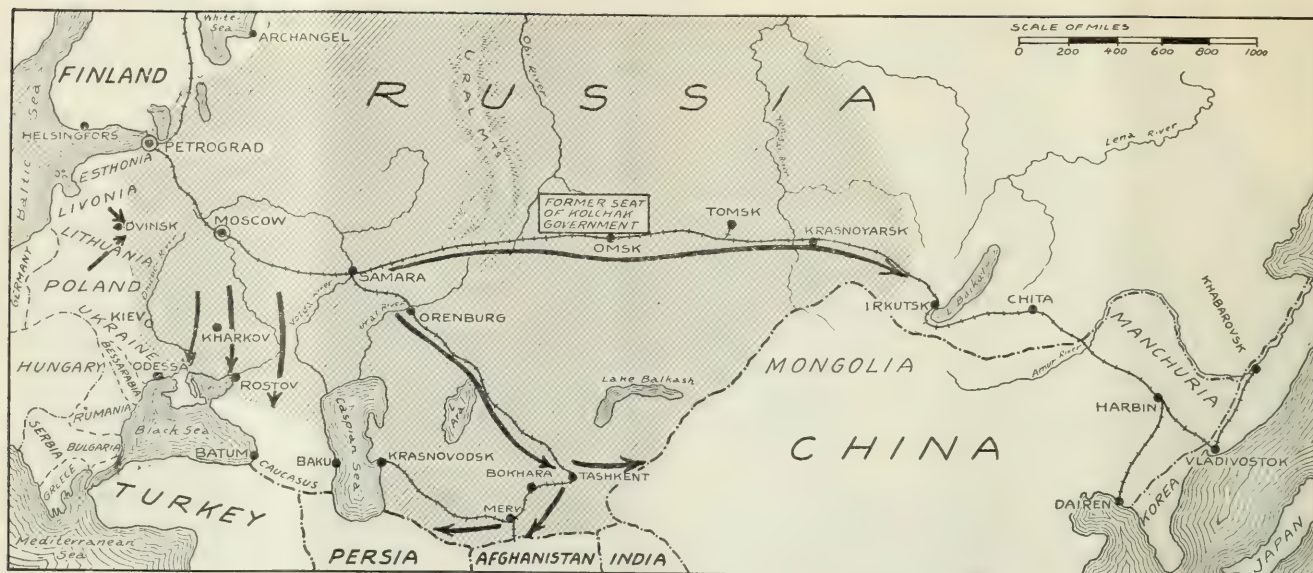

Now it appears that Lloyd George and Nitti have got their way in the Supreme Council. Clemenceau, who has been discredited by the late elections, withdrew his opposition on condition that a paragraph be added to the declaration that: "These arrangements imply no change in the policies of the Allied Governments toward the Soviet Government."

The day before the announcement of the lifting of the blockade by the Supreme Council the British mili-

© Kodel & Herbert

Under dramatic circumstances M. Paul Deschanel was elected, on January 17 by the Chamber of Deputies, to be the next President of France. The chief plank in his platform was the defeat of Premier Clemenceau, the "Tiger" who led the republic of France thru the long war to victory. The candidacy for president was forced upon Clemenceau against his will, but his political enemies were as bitter as his friends were enthusiastic, and when Deschanel's greater strength in the caucus became apparent Clemenceau withdrew his name from the nomination

THE NEW FIELD OF FOREIGN COMMERCE

By action of the Supreme Council of the Allied Powers at Paris a certain amount of strictly regulated commerce is to be permitted with Soviet Russia, the shaded area in the above map. The arrows show the gains made by the Bolsheviks and their present direction of attack. Kolchak, when driven out of Omsk, retired to Irkutsk, but this also he has lost and his whereabouts is unknown. The Japanese will attempt to hold that part of Siberia lying east of Lake Baikal. The American and Czech troops are being withdrawn from Vladivostok. The Bolsheviks have established at Tashkent a center of propaganda for Mohammedans which is causing disturbance in India, Afghanistan, Turkey and Persia. Mongolia has broken away from Russian control and reunited with China. Denikin's army has been broken and scattered and he is now trying, with the aid of the British, to prevent the Bolsheviks from reaching the Caucasus. They have captured his headquarters at Rostov and threaten now to take Odessa. Along the western region the Poles and the Letts (Livonians) have started a drive against the Bolshevik forces and have taken the city of Dvinsk

tary party made a final effort to forestall the anticipated action by sending out a big "scare-story" describing the alarming advances of the Bolsheviks in the direction of the Caucasus, Turkey, Afghanistan, India, Persia and China, and intimating that the Allied Powers were about to combine their forces in establishing a bulwark against Bolshevism. The British War Office in a long semi-official statement warned the British people that they must prepare for a new war to be waged against Russia on a large scale within the next three months. This statement created a sensation in the English and American press, but it was negated next morning by the announcement of the new commercial policy toward Soviet Russia.

This need not, however, involve any official recognition of the Soviet Government or condoning the crimes of the Bolsheviks. The coöperative societies, to whom is entrusted the distribution of the goods to be imported into Russia, are non-political and unofficial organizations, which have managed to survive and even to thrive under the Czar, under Lenin, and under Kolchak. They claim to have 65,000 local societies, comprising 20,000,000 members, and to supply the wants of five times that number. Last year they operated over 500 industrial plants with more than 50,000 employees. Their total turnover is said to be 8,000,000,000 rubles or about \$1,600,000,000. Representatives of the Russian coöperatives came to the United States last year and worked long and earnestly to open up trade with this country. But they were regarded here as Bolsheviks, altho some of them had been condemned to death by Soviet courts and had escaped from Soviet prisons. They complained that they could not get a hearing either from Washington officials or American business men, so they left in disgust for London to make the same offer to the British. There they have been successful, perhaps because British manufacturers felt more the need of the flax, hemp, lumber, hides, furs and platinum which they were accustomed to get from Russia. Large stocks of these have accumulated in the last five years and will be exchanged very cheaply for the

machinery and manufactures of which Russia is destitute. The British Food Controller, G. H. Roberts, estimates that there is a million tons of wheat in Russia ready for export, and that this would aid in relieving the shortage in England and other countries of western Europe. Russia in normal times produces a large surplus of food products, and the present destitution of the people is due to the disorganization of industry, the collapse of the financial system, the lack of agricultural machinery, the wearing out of the railroads, the incompetency of the Soviet administration and its preoccupation with the war.

Under the Soviet constitution all foreign commerce must be conducted by the Soviet Government, not by individuals. But the Soviet has been obliged to recognize and deal with the coöperatives and doubtless they will be entrusted with the handling of international trade. The coöperative officials when they were in the United States offered to give bonds that any American goods they were allowed to import into Russia should be distributed to the most needy without distinction of political party.

On account of the worthlessness of the Soviet paper currency, goods can only be interchanged by barter, and the question of credits will be hard to adjust. The Overseas Trade Department of the British Government has been planning to take immediate advantage of this anticipated opportunity and proposes to provide a fund of \$85,000,000 to insure British traders against commercial risks in Russia. It is expected that the House of Commons will authorize the increase of this guarantee fund to \$125,000,000. The opening of this new market of over a hundred million people to English woolen and cotton goods will bring a boom to the British mills, while the linen manufacturers will procure the flax that they need so much. Formerly Russia exported about \$50,000,000 of flax a year largely to England and Ireland.

The United States Government has announced its intention of withdrawing all its troops from Siberia as soon as the Czechoslovaks, whom the American forces

were sent there to protect, are shipped away. The evacuation of Vladivostok will begin February 1. No objection is made to the proposal of the Japanese to occupy eastern Siberia with their own troops and so prevent the advance of the Bolsheviki beyond Lake Baikal.

Senator Kenyon of Iowa has introduced a new issue into the campaign. He makes the ingenious suggestion that candidates for the Presidency make public shortly in advance of election the personnel of their intended cabinet. This would not only enable the voters to gain light on the policies of the Presidential candidate and his intentions with respect to appointments but would also establish a popular veto on unpopular appointments to cabinet office by withdrawing support from the candidate. He desires the Republican party to pledge its nominee to name his cabinet in advance of election. If platform pledges should not prove sufficient, the Senator will introduce a bill into Congress to make such action compulsory on all party nominees.

The shop councils bill, which has just passed the German National Assembly, provides that in any establishment where five or more men or women are employed, except newspaper offices, the employees shall elect one or more stewards who shall confer with the employer on the conduct of the business. They may attend directors' meetings and vote, tho not stockholders. Any foreman or department chief may be forced to quit on demand of the employees. The employers are prohibited from discharging women to give place to men. This legislation, tho radical beyond precedent, did not satisfy the Independent Socialists, who demand soviets and started riots in Berlin against the bill.

President Menocal of Cuba announces that 2,250,000 tons of Cuban sugar is now under engagement; a preponderance of which has been sold. He declares that "the Cuban Government put forth every effort to conclude by agreement with the American Government the disposition of the entire output of Cuban sugar for the year 1920" and expresses regret that the American Government has not availed itself of the Cuban offer.

Alexandre Millerand has succeeded Clemenceau as premier of France. His cabinet is composed of younger and comparatively unknown men. Millerand was the first Socialist to take office in the French Government, when he became Minister of Commerce in 1899. This violation of the rules of the Socialist party involved his separation from the party. He was Minister of War in the early part of the recent war.

Governor Lowden of Illinois has received official permit from the War Department for the construction of a waterway intended to improve river commerce thruout the Middle West. Besides connecting Chicago more adequately with the Gulf, it will provide a water route by way of the Illinois River from the Great Lakes to Minneapolis and St. Paul. The cost is estimated at \$20,000,000.

The French steamer "Afrique," bound from Bordeaux to Dakar on the west coast of Africa, sprang a leak in the Bay of Biscay, January 10, and sank three days later. The storm prevented rescue and out of 465 passengers and 100 crew only fifty-seven are known to have been saved. Many of the passengers were French colored troops returning to their homeland.

The Austrian Chancellor, Dr. Renner, announces that Austria and Czechoslovakia have formed an offensive and defensive alliance. Austria and Germany were anxious to unite but the Peace Conference would not permit it.

Colonel Russell, commanding United States marines stationed at Port-au-Prince in the Republic of Hayti, reports

that on January 15 three hundred armed bandits attacked the town. The American marines and Haytian gendarmes repulsed the attack and killed or captured half of the raiders. Two American privates were wounded.

Under the South Dakota primary law, which requires candidates to accept a challenge to debate on the issues of the campaign, Senator Poindexter of Washington has formally invited General Wood to discuss questions of national policy. State officials, however, have interpreted the law as to permit debate by proxy.

Both Houses of Congress have agreed on the appointment of a Congressional committee of investigation to visit the Virgin Islands, purchased from Denmark, and report as to the establishment of a civil government in the islands in place of the present temporary administration by American naval authorities.

Dr. José Luis Tamayo, former President of the Senate and candidate of the Liberal Party, has been elected President of the Republic of Ecuador. His Conservative opponent had withdrawn from the contest a few days before election and the day passed off very quietly.

The Indiana Legislature has ratified the equal suffrage amendment to the American Constitution by an almost unanimous vote. The Governor of Wyoming has summoned the Legislature in special session to act on the amendment and favorable action is assured.

In the Waziri war which we described last week the British have suffered severely. A column invading the Mahsud country was attacked and 385 casualties inflicted upon the British and Indian troops. The loss of the Mahsuds is supposed to be about the same.

To relieve the shortage of change due to the hoarding of small silver coins the Mexican Government has issued paper certificates for one peso and for fifty centavos. Paper currency for small denominations has not hitherto been in circulation since 1916.

Now that the German treaty is concluded Japan announces that she is ready to fulfil her promise to restore the Shantung territory to China and will open negotiations for the transfer.

Explaining the Einstein theory of time and space

Here Are Books—and Books

Booth Tarkington on Bolshevism

The Gibson Upright sounds like the title of an apartment house farce, but it is really a very entertaining satire on the labor question with more than a little truth in it. A play by Booth Tarkington and Harry Leon Wilson couldn't help being amusing, but it might manage to avoid a point. It doesn't, tho. It tells what happened when Gibson, in a state of despair over labor difficulties in his piano factory, took his workmen at their word and turned the whole plant over to them to run on shares with the wage system abolished and the tools be-

longing to the worker. It is a situation with possibilities and the playwrights make the most of them. Of course it is prejudiced and one-sided, but then there is much to be said on that one side and you really can't write a satire and be tolerant at the same time. Tho evidently written for the stage, it is a play more likely to be read than acted. One reason for that is the "love interest" which is apparently introduced simply for the sake of propriety and is quite unimportant. There is a very fair amount of action, and, for a play with a purpose, a remarkable freedom from long speeches. An amateur dramatic club with a sufficient number of masculine members could probably do effective work with it.

The Gibson Upright, by Booth Tarkington and Harry Leon Wilson. Doubleday, Page & Co.

The Young Visitors

"Mr. Salteena was an elderly man of forty-two and was fond of asking people to stay with him," starts off *The Young Visitors*, a book written by Daisy Ashford, an English child, when she was nine years old. According to J. M. Barrie, who wrote the preface, Miss Ashford, who is now grown up, at the time she wrote *The Young Visitors* was one of a small family who lived in the country, invented their own games, dodged the governess, and let the rest

of the world go hang. "Daisy adored writing and used to pray for bad weather so that she need not go out but could stay in and write."

The Young Visitors is an amusing combination of a precocity gained from reading grown-up novels and watching the visitors who occasionally came to her home, and the naiveté of an extremely innocent mind. Its characters, unchaperoned and acting in a peculiarly hair-lifting manner, go their blithe way thru the High Life of the time—to visits at a country house where "the hall was very big and hung round with guns and mats and ancestors giving it a gloomy and grand air," to parties at the "Crystal Palace" and to a levée at Buckingham Palace. It even introduces its readers to a Prince Edward grown weary of Court Life. "It upsets me said the prince lapping up his strawberry ice all I want is peace and quiet and a little fun and here I am tied down to this life he said taking off his crown being royal has many painful draw backs."

But why quote. You must read it. Every one else is reading it. London devoured four editions in a month. And every one who loves children shouldn't let this bit of child literature go by.

The Young Visitors comes in a funny little edition "complete" with a photograph of the author and a reproduction of a page of the stout two-penny notebook to which it was confided in pencil and where it has lain these many years.

The Young Visitors, by Daisy Ashford. G. H. Doran Co.

Modern Fables

Alvin Johnson's *John Stuyvesant Ancestor and Other People* is a collection of moral tales. It doesn't sound alluring when you say it that way but it is. Mr. Johnson doesn't point his morals, he just leaves them around in perfectly plain sight and goes away. These sketches or stories or conversations or whatever you want to call them, are keenly and skilfully written. Mr. Johnson has in a very high degree the art of being detailed and at the same time omitting the unessential.

John Stuyvesant Ancestor, by Alvin Johnson. Harcourt, Brace & Howe.

What England Did

You know that British recruiting poster which shows a small boy looking up into his father's face and asking, "Daddy, what did you do in the Great War?" Daddy is depicted with a look of utter misery, but not, as the artist would have you suppose, because he did nothing—on the contrary, he did a great deal, but he is British and hates the idea of talking about it. The British have said so little in comparison to what they did that it is a joy when an occasional inhabitant of the islands becomes sufficiently Americanized to tell us about it. Mrs. Humphry Ward and Philip Gibbs have each just added a volume to their stories of what England did in the Great War.

Mrs. Ward's *Fields of Victory*, like "England's Effort" and "Toward the Goal," is made up of letters to an American friend. Even if you don't like Mrs. Ward as a novelist, and it is very possible that you don't, you will probably like her exceedingly as a letter writer. She gives, of course, a brief but a comprehensive view of the last year of the war.

Parts of the book are just adequate, parts of it are thrilling. She makes an interesting summary of the roles played by the respective Allies: "The war was finally won under the supreme command of a great Frenchman, by the British Army, acting in concert with the French and American armies—and supported by the British naval blockade and the British, French and Serbian military successes in the East." To the United States she is more than generous:

Thank God, we did not win without America! The effects, the far-reaching effects, of America's intervention, of her comradeship in the field of suffering and sacrifice with the free nations of old Europe, are only now beginning to show themselves above the horizon. They will be actively and, as at least the men and women of faith among us believe, beneficently at work when this generation has long passed away.

"The Menace" and "The Repulse," the two volumes of Philip Gibbs's *The Way to Victory*, are collections of his

The authorship of *The Young Visitors* is a question of Who killed Cock Robin? Was it Daisy Ashford or was it Barrie? If the former, this is the way she looked when she penned (pencilled, to be more exact) that remarkable satire on English manners in her notebook

Daisy Ashford, grown up, gave a *Young Visitors* tea for charity in London the other day, but the reporter who covered it for the *London Times* failed to mention her deportment. Lacking other details, we can only assure you that this is how she looks

How Peter Perkins Got His Start

Peter Perkins is not a genius. He has only a limited education. Certainly he is not a financier. He never made a salary over \$150 a month.

He says he is just Peter Perkins, and confesses that he is only an ordinary fellow.

If you looked up his whole life's history you would probably find that he was born in Indiana or Kansas, worked on the farm and "done chores," then went to town to clerk in the store where his folks had always done their tradin', and played in the silver cornet band.

But we can't vouch for all of Peter's past history. As far back as we can trace him he has been a city man, but with rural tendencies, an honest plugger, and NOW he is on the high road to success.

The Greatest Game in the World

He says he is playing the greatest game in the world, and it is one that he devised himself. It is true, he did get some help from old Dave Roberts to put it through, but it was Peter's scheme.

He calls it "the game of getting ahead," and he says it is the most interesting and most fascinating of all sports. And he says that every man who loves his family will start playing the game just as soon as he finds out what it is.

Peter was never a gambler. He not only let the cards and races alone, but he shied away from gambling on the stock market and board of trade.

He never could see how a man could buy wheat without ever getting any wheat. And he couldn't quite see how it was strictly on the level to buy and sell stocks that were never delivered.

Peter Is Honest

There isn't a dishonest hair in Peter Perkin's head, but after being married

awhile and with the help of his good wife he began to develop the kind of thrift that they practice in Indiana and Kansas. The thrift fuse was there all the time, of course, but he hadn't touched a match to it.

He first wanted to save some money and then he wanted to put that money to work to make him as much more money as possible without risk.

He knew a lot of fellows who were gambling on the stock market, and while that was out of the question for Peter, he couldn't help thinking there was some legitimate way to make money on stocks and bonds. But the problem was to get the right plan and then get somebody to finance it. This is where Roberts came in—on the financing.

If ever there was a conservative old bird, it was Roberts. He held Peter back a little sometimes—that is he counseled going slow when Peter could just as well have speeded up a little and made more money.

But perhaps it is better as it is, for Peter played his game along for ten years, putting in only \$25 a month, and at the end of the ten year period his little \$25 monthly investment had grown to \$10,511.82.

Peter says he reckons that all thrifty people will admit he has done right well.

Peter Writes a Book

He has written down the story of these ten years, and after verifying his figures we have published it in book form.

Recalling that Peter is just an ordinary fellow, you will not expect his book to be a literary gem, but it is intensely interesting and you will probably enjoy it more than any literature you ever read.

You can read it through in half an hour if you have plenty of time, but if you are in a hurry you can hit the

high spots in half the time and still get Peter's big idea about saving and investing.

He claims—in fact he has demonstrated—that saving and investing are so closely related that they are inseparable.

Nearly all good investors are good savers, but a great many good savers are poor investors.

The plan which has worked out so well for Peter Perkins links up saving and investing in such a way that it literally forced him into a condition of financial independence.

Yes, he made it on listed stocks and bonds. But he didn't gamble. He didn't try to out-guess the stock market. He let margin trading severely alone.

He says he wishes everybody would stop thinking of gambling when they think of the stock market, and look for dividends plus genuine increases in value—the REAL profit.

Peter's story, which he calls "Getting Ahead," tells how to do this.

We Will Send You a Copy Free—On One Condition

We are going to distribute 10,000 copies of Peter Perkins' book, "Getting Ahead." It is free. We do not even ask you to pay the postage, but we DO name one condition: that you will write us if you like the plan, or send the book back if you don't.

Many who have read it say it has opened up an entirely new future for them. All say that the first line gripped them with an interest that grew more intense until they had finished.

Truly, it is a wonderful book that Peter Perkins has written.

You can almost hear his drawling voice as you read through his quaint philosophy and practical reasoning.

Your copy is ready. It is free and it entails no obligation. You only need to sign and mail the coupon—"Getting Ahead" will come by return mail.

RELIGIOUS BOOKS FOR MODERN MEN

The New Orthodoxy

By EDWARD S. AMES. \$1.00, postpaid \$1.10.
Every person dissatisfied with the scholastic faith of traditional Protestantism will find this volume exceedingly helpful.

The Religions of the World (Revised Edition)

By GEORGE A. BARTON. \$2.00, postpaid \$2.15.
A keen and sympathetic interpretation of all the great religions. Two new chapters have been added.

The Psychology of Religion

By GEORGE ALBERT COE. \$1.50, postpaid \$1.65 (after March 15, \$2.00, postpaid \$2.15).
It analyzes religious phenomena from the point of view of both the structural and functional methods.

Christian Faith for Men of Today

By E. ALBERT COOK. \$1.25, postpaid \$1.40.
Professor Cook treats such vital questions as Christianity, the Bible, Religion, What Shall We Believe about God?

Some Religious Implications of Pragmatism

By JOSEPH R. GEIGER. (Paper) 50 cents, postpaid 53 cents.

The author discusses the question, What are the general doctrines of pragmatism, and what contribution do they make to the interpretation of religion.

THREE BOOKS BY G. B. FOSTER:

The Finality of the Christian Religion

\$2.50, postpaid \$2.70.

The Function of Religion in Man's Struggle for Existence

\$1.00, postpaid \$1.15.

The Function of Death in Human Experience

25 cents, postpaid 27 cents.

The University of Chicago Sermons

By Members of the University Faculties. Edited by THEODORE G. SOARES. \$1.50, postpaid \$1.65.

Contains a contribution of one sermon from each of eighteen members of the Faculties of the University of Chicago—eighteen sermons worthy of a high place in the world's homiletic literature.

dispatches from November, 1917, to the end. They are first-hand history of the most fascinating kind, written by a man whose business was to see things as a whole so far as any human being could see them, but who has also the gift of seeing and painting the little concrete, typical incident that makes the huge whole vivid and personal and real. He is the British correspondent whom Americans know best. In fact he has written and spoken so much in and about the United States that we feel as if he more than half belonged to us and so are doubly interested in what he has to say about the British army.

Fields of Victory, by Mrs. Humphrey Ward. Charles Scribner's Sons. *The Way to Victory*, by Philip Gibbs. G. H. Doran & Co.

O You Chemistry!

Dr. Slosson's "Creative Chemistry" as a Sophomore Would See It

This book looks like a text-book, but is interesting to read. Text-books tell you what you ought to know, "Creative Chemistry" tells you what you want to know. Jules Verne also wrote interesting scientific books, but he had the future to draw on and could put in a lie whenever he felt the need of it, while Dr. Slosson has handicapped himself by sticking to the past, the present and the truth. So it seems to me that he has done mighty well to make Sunday reading of a subject you used to think only stuff fit to be digested into college credits. He is a literary catalyst, an agent which transforms dry facts into a palatable substance, and, like the chemical catalysts, he does not lose anything of himself in doing it—at least the last chapter is as good as the first. I could not have thought up a comparison like this—of a writer and an enzyme—before I read this book.

The author not only enlivens chemical discoveries, but he humanizes the discoverers. I have always thought of a great scientist as a sort of disembodied spirit hovering around books and test-tubes, and only coming to long enough to have its picture taken. But Dr. Slosson's chemists are real human

beings, people that get sore fingers and probably swear sometimes and go out to lunch with you. That Britisher who worked ten years to make billiard balls out of gun cotton, castor oil and camphor, I'll wager said something stronger than "My word" when he found out that somebody had beaten him to it by just leaving out the castor oil.

I think the jokes in this book are better than the illustrations, maybe because the writer made up the jokes himself.

As minor criticisms, I noted "cannot only" in place of "can not only" in one place, although I could not find the page afterward. Also in some of the munition pictures the munitionettes are plainer than the chemistry, but maybe the author meant it that way.

I cannot understand why, and this is a major criticism, the author feels the way he does about Nature. To improve on Nature is all right, but I do not see why this should give a man a grudge against her. Probably one reason Nature is unpopular with the chemists is because she likes to tear down what they are trying to build up, but I gather from this book that her chief offense is foisting on the public some of her cruder things in place of pure chemical syntheses. I was brought up to regard Nature as a model, but I believe that if somebody gave this author a mirror to hold up to Nature he would try to hit her over the head with it.

One thing which makes this book interesting is the large sums of money it tells about. In most college scientific books the only dollar sign you see is in the book advertisements on the cover. The large sums quoted by our author were created by Chemistry, but before the war seemed to have been mostly collected by Germany. We hope they will be more evenly divided from now on. Anyway, after you have read page after page telling of the millions Chemistry has saved and will save in the future, a sum like the price of this book seems such a mere bagatelle!

Creative Chemistry, by Edwin E. Slosson. The Century Co.

Just What Mr. Wilson Did at Paris

(Continued from page 164)

Treaty and spoke their minds freely, for a man of science has an incurable habit of candor. But nearly all agreed with the President and the other American Commissioners that the Treaty of Versailles, imperfect tho it was, contained more sound statesmanship than any other general political settlement in human history.

The famous "exodus" of disgruntled "experts" is a pure myth. To my certain knowledge not a single member of the Division of Political, Territorial and Economic Intelligence, headed by Dr. Mezes and Dr. Bowman, resigned because of the character of the peace. Mr. Bullitt, who resigned with such clangor, was not one of the "experts." He was a journalist who had made a brief trip to Russia and had returned to Paris to take an administrative position ("current intelligence sum-

maries") with the American Commission. The fact that his resignation coincided with the return to their homes of many specialists on the completion of the work in connection with the German Treaty gave rise to the mischievous and utterly baseless rumor that Mr. Bullitt was the spokesman of a large secessionist movement within the American Commission staff.

It is a pity to destroy the romantic legend of the defeat of President Wilson by the Wicked Powers of Europe and his isolation within the American Commission. But facts are facts; and the simple truth is that President Wilson was the honest spokesman for the common sense democracy of both America and Europe and that we who worked under him in Paris know that he was the very heart and center of the Peace Conference.

The Abraham Lincoln We Love

(Continued from page 171)

or; as it is, he has, now and again, in the printed play, phrased his talk as only an Englishman would speak. But that is easily changed for the stage. Drinkwater has lifted Lincoln out of his locale, and has dealt with him as any poet might deal with Dante. An artist has to lay the foundation of historical study in tracing character. After that the fuse-pipe of his genius is what counts. There is much in common between the Borglum and Drinkwater methods.

After the play, we sat long into the night talking about Lincoln. That is to the credit of the Drinkwater play; it has set many people thinking and talking of Lincoln. I heard new stories of Lincoln's mother whom he helped bury on a hillside where he might see the spot every day; of his early love, from which, Borglum says, marking a line in his face, he never quite recovered. But perhaps the most interesting comment of the evening came apropos of nothing except that we were talking of the proportions of Lincoln's head. "Did you know," he volunteered, "that John Keats, Abraham Lincoln, and Paderewski have similarly shaped heads?" Which is thought-stirring, even though it is another story!

Drinkwater tells us that as a student in England, at the Birmingham University, he first came to know and love Lincoln, taking him as his ideal. It is appropriate that Lincoln should serve the young manhood of the Anglo-Saxon race. When the time came to write the play, the poet found it all but on paper. He used the chronicle play form, each scene preceded by a poetic interlude delivered by a herald, dressed as a man of the hour, and descriptive of the spiritual stuff from which the scene is evolved; also narrating the intermediate events, with which the play has nothing to do, but which helped to shape the weary soul of the Great Leader. From the descriptions I have read of the English production, I fear the actor playing Lincoln has made him theatrical; certainly the Irish brogue of his speech must serve to destroy the illusion. But it is my impression, from the evening spent with Gutzon Borglum at "Abraham Lincoln" as given in New York, that the excellence of the American production lies in its maintenance of untheatrical simplicity. One sits down before it, not caring if the soldiers click their heels together quite in the regulation fashion, not worried as to whether Lincoln drank tea in the White House at 4 o'clock, English fashion—but touched, deeply touched, over the burden, almost too great a burden for one man's shoulders to bear. There is not one moment that you are allowed to forget Lincoln's stupendous coping with events. And that is the spirit one has while looking at the head done by Gutzon Borglum. Here are two examples, therefore, of art making history live—the one in a play—the other in marble which speaks volumes, tho it is silent.

New York

If you could see the Germs in your Throat—

THE sight would more than convince you of the vital necessity of throat protection. The throat is the natural gateway for germs to enter the body. The many folds and crevices back of the teeth and tongue offer an ideal breeding ground for germs of all kinds. There they wait for the first favorable chance to invade the system and that chance comes whenever the body happens to be a trifle below par, provided always the germs are sufficiently numerous to overcome the body's natural defense.

Our first duty, therefore, is to reduce germ-life in the throat to a safe minimum and a trustworthy means of doing this lies in the regular use of Formamint Tablets.

Little tablets, handy, pleasing in taste, they free in the saliva a most effective, yet harmless, germicide that searches out and destroys germs in the most secluded corners of the throat. Taken regularly, they not only soothe away irritation, but help prevent serious infection, such as tonsillitis, influenza, etc.

More than 5000 American physicians have endorsed them in writing.

20 cents, at all druggists.

Safeguarding the Investor

By Luigi Criscuolo

THERE is a great deal of money in circulation these days. A large part of the floating wealth has been created by higher wages and a great deal of it is being spent for luxuries. Working men will no longer buy two-dollar cotton shirts; they buy silk ones at ten dollars. So for their benefit, large issues of fraudulent oil stocks have been created and reports have it that half a billion dollars in fraudulent or questionable securities have been sold to investors recently. What does this mean? That no adequate safeguards are thrown around the sale of securities and that the saying *Caveat emptor* is still in vogue.

The sale of fraudulent securities received such an impetus in the western states among the rural population some years ago that legislation had to be enacted to place the creation and sale of securities under state supervision. The law regulating the sale of securities, known under the term of "Blue Sky Law," was first inaugurated in one of the western states and was followed by legislation in Kansas, Wisconsin, Minnesota, Idaho, Illinois, Michigan, Ohio, Indiana and other states, principally in the West. In view of the recent statement by a public official that a great part of the fraudulent securities originate in the New York market, it is interesting to note that there is no regulation in New York State which may be termed "Blue Sky" legislation—although such legislation has been under discussion.

THE laws of those states having "Blue Sky Laws" require that before any securities can be offered in any particular state, a statement must be filed with a securities commission and its approval obtained. The requirements vary, but all demand complete historical and statistical data regarding the company, its earnings, its financial condition, as evidenced by a detailed balance sheet, the personnel of its management and other pertinent information. In some states the requirements are very elaborate with the result that permits to offer securities are often delayed for many weeks, due to the time required to examine all data. This has been the principal objection made by reputable investment dealers who must be guided by market conditions in the purchase or sale of securities and must act quickly.

The Governor of New York State recently named a committee to investigate the question of frauds in the sale of securities, the personnel of the committee being composed largely of lawyers and investment bankers. While the majority report advised against any legislation with respect to the issuance of securities, a minority report was offered by Mr. A. Barton Hepburn, Chairman of the Board of the Chase National Bank, and three other members of the committee of twelve. In this report Mr. Hepburn not only

recommended the filing of pertinent statistical data regarding the company offering securities, but proposed to license every investment dealer and security salesman before either could conduct business in this state.

The Governor of New York State, in appointing the committee, stated that New York was the financial center of the world and that other states were looking to it for guidance along financial lines; he also said that he believed there should be proper supervision of the issuance of new securities and a prevention of the evil of offering worthless securities for sale to investors. The majority report set forth that there were two methods that had been suggested for dealing with the problem: (a) conferring jurisdiction upon state officials to supervise commercial transactions and investigate frauds, and a revision of the penal laws; (b) requiring full information regarding the securities to be filed under oath with penalties for any false statements made; (c) the licensing by a state official of all persons dealing in securities.

The report of the majority set forth that for the good of the State, which contained the financial center of the world today, it was of prime importance that legitimate business should be safeguarded in order that the State could maintain its financial supremacy; that it could not afford to adopt experimental legislation of the character adopted in our western states. They felt that experience had taught them that it was unwise to place drastic regulations upon enterprise as a whole merely to exclude possible frauds and that the State should preserve as much freedom for business enterprises as was possible. The majority report said that a distinction should be made among losses caused by ignorance, by cupidity and by fraud, and that they were concerned more with the latter than with the others; that it was impossible to prevent unwise investment by legislation and that the ingenuity of the crook can never be wholly circumvented by statute. The report recommended more stringent laws to punish persons guilty of fraud in connection with the sale of securities but goes on record as opposing licenses for dealers or the filing of statistical data.

OF course, legislation in the western states has not driven the crook out of business—an enormous amount of money is being lost in fraudulent securities. But—as the *Wall Street Journal* says—"intelligent inquiry is the public's great safeguard." The careful investor, whether he has a hundred dollars or a hundred thousand to invest, has many avenues of inquiry. He can ask his local bank for advice or he can ask a member of the New York Stock Exchange or an investment firm that is known to be reputable. Some investors begin to learn for

themselves just what factors make a good investment.

If the circular thru which securities are offered is issued by a reputable investment banker, it will contain a full description of the security, the business, past history, management, labor conditions, earnings over a period of years, conservative estimates for the future and a balance sheet. With this information at hand, assuming that the figures have the approval of a well-known firm of auditors, the investor can easily judge whether the earnings warrant a continuance of interest or dividend payments and whether there is any value—tangible or potential—back of the security. In the case of bonds, notes, or preferred stocks, only net tangible values count. In the case of common stocks, there is usually little tangible value but mostly prospective earning capacity as a basis.

THE public's real safeguards are:

(1) Deal with reputable investment bankers only, or their representatives; (2) Shun the high pressure salesman who has a "good thing" to offer or who promises big dividends or to double your money; (3) Always ask for a circular describing the securities and study it before buying; if you cannot analyze the few points, ask your banker to help you; (4) Do not expect that a speculation is a "sure thing;" you may lose every cent you put into it; (5) If the salesman makes it clear that you are taking a chance—as many do—you should not blame him or his house if the proposition falls flat.

Aside from some intelligent discrimination on the part of the investing public, there is no reason why it could not be made compulsory for every broker in New York State offering securities to file with some official a complete circular such as he intends to use in offering the securities to the public, before he will be authorized to make the offering. Neither is there any sound objection to licensing brokers or salesmen. There should be a simple, workable securities law; or, at least, a record of every man offering securities could be kept on file and be accessible to the public at any time for its information.

A national "Blue Sky Law" has been introduced in Congress by Senator Kenyon of Iowa, who has declared that hundreds of stock salesmen are circulating thru his state, taking Liberty Bonds from farmers, widows and working girls, in exchange for fancy engraved oil stock which is absolutely worthless. The chances are the proposition will be delayed for some time.

If New York, the financial center of the country, can work out some plan whereby the investor can be safeguarded without throwing obstructions around legitimate business, perhaps those western states which have wound red tape about their "Blue Sky" laws will follow New York's lead.

What the country needs is a standard "Blue Sky" law which will not obstruct enterprise and yet will protect the investor in every way possible from cupidity and fraud.

Underwriting Americanism The Part Insurance Plays in Reconstruction

THE Association of Life Insurance Presidents at its annual convention, held at New York in December, 1919, took as its general subject, "The Part of Life Insurance in the Problems of Reconstruction." Two resolutions were unanimously adopted; one urging all soldiers and sailors to retain their Government insurance, the other, expressing the views of insurance men on economic reconstruction, in the following terms:

Resolved, that life insurance men throughout the nation should respond to the present imperative demand for high national service by giving, and by urging upon policyholders to give, effective support, directly or thru appropriately constituted organizations, to the promotion of the following objects:

I. The rehabilitation of the railroads and establishment by law of rates adequate to provide for the present and future demands of our growing commerce and to stabilize the credit and securities of the roads;

II. The adoption of a national budget system and the general curtailment of Government expenditures and consequent reduction in taxes;

III. The exertion of special and vigorous efforts to encourage the saving habit and generally to inculcate the principles of thrift.

THE Hon. William A. Day, president of the Equitable Life Assurance Society, summarized the progress made in the life insurance business during the year following the armistice with Germany and based on it an optimistic forecast of accelerated progress in the near future:

In round millions, the volume of new insurance which life insurance companies have induced the people to take during the year 1919 promises to reach the enormous total of \$7,712,000,000. This is \$3,010,000,000, or 64 per cent more than was written last year. It is nearly \$4,613,000,000 more than was written in the year 1914, or an increase of 149 per cent. When did any institution in the public service ever receive such a significant vote of confidence as the public has given life insurance companies in this stupendous volume of new insurance? In amount it exceeds all the insurance outstanding in all the companies twenty years ago, and it equals over one-fourth of the entire insurance in force in all companies at the beginning of the present year.

It appears that every walk of life contributed to this increase in life insurance protection, and it seems to have included all of the standard plans issued by the companies.

The gain in the popularity of insuring employees, thru the employer, on the group plan, is indicated by an increase of over 100 per cent in this new business over last year. It is estimated that the dependents of over one million workmen are now protected with life insurance without cost to themselves as a result of the recent adoption of this progressive idea.

The part played by the insurance companies in affording aid to the development of American agriculture is often overlooked. Mr. Louis Breiling of the Union Central Life Insurance Co. pointed out the importance of this

contribution to the common welfare in the United States:

In the phenomenal growth of the life insurance business in America the enormous assets of the companies have exercised a tremendous influence upon the country's development—particularly agricultural development.

This is evidenced by the increasingly large volume of life insurance money invested in farm loans.

The percentage of total assets invested in farm loans is not known because official statistics group city loans and farm loans under the single head, "Real Estate Mortgage Loans," but original statistics contributed by the companies do show that life insurance companies in the two-year period ending December 31, 1916, increased their farm mortgage investments from \$655,000,000 to \$845,000,000, and for the two-year period ending December 31, 1918, the companies increased their farm mortgage holdings to more than a billion dollars.

The increase for the two-year period last mentioned would doubtless have been exceeded to the extent that life insurance companies financed the war thru purchase of Liberty and Victory Bonds. A reliable estimate shows that life insurance companies collectively purchased over half a billion of United States Government Bonds.

Life insurance companies which either in whole or in part invest their annual increase of assets in farm loans are not only true to the interests of their policyholders, but also are of inestimable service to the country at large in contributing to the agricultural development by stimulating increased production of the necessities of life.

MR. J. Stanley Edwards, president of the National Association of Life Underwriters, cited the estimate of the Bankers' Trust Company placing the per capita war debt of the nation at \$228, or nearly \$1,200 to each household. He offered the ingenious suggestion of underwriting the war debt of the nation with life insurance:

If every American family would see to it that they had \$1200 of protection that family would have done two things: First, it would have provided its share of the national debt, and in the second place it would have made one more satisfied family in the community—and a dissatisfied nation, a nation of discontent is nothing more than an aggregation of discontented individuals. If this debt was equal upon you and me and everyone else it could actually be performed. That is to say, life insurance could pay the funded debt of this Government in twenty-five years. And I will say further that the agent who puts out such a thought serves a double purpose and performs a double duty: not only increases his own protection but helps particularly to solve his own individual problem and lifts a little more than his share of the national debt that is upon us.

Many of the speakers, including the Hon. Edward D. Duffield, vice-president of the Prudential Insurance Company, emphasized rather the indirect gain to national productive power from the inculcation of habits of thrift and foresight which, it was feared, would be less stimulated by systems of state or compulsory insurance.

Home Rule in Korea?

(Continued from page 169)

improvement of those already existing. It was formerly planned to establish four hundred new common schools in the course of the next eight years at the rate of fifty a year, but this scheme has now been changed to the establishment of one hundred new schools a year, so that the four hundred may be completed in four years to come.

Finally, in regard to the reform of the police system, it may be explained that it has been made both in method and in spirit. Formerly the administration of police affairs was virtually in the hands of military men. The Commander-in-Chief of the Garrison Gendarmerie was *ex-officio* the Director-General of Police Affairs and had entire command and supervision of all the police forces and gendarmeries. The Chiefs of the Divisional Gendarmeries under him were also *ex-officio* the Directors of Police Affairs in all the provinces, Provincial Governors having little power with regard to the policing of the country. This was an anomaly necessitated for some time by the state of things existing in this peninsula after annexation. By the reform introduced in the police system, this anomaly has been done away with. The Police Headquarters have been abolished, and a Police Affairs Bureau has been created in the Government-General itself. All the military officers hitherto in charge of police affairs have been relieved of their duty and replaced by civil officials, the administration of the police affairs in the Government-General being now in the hands of the Director of the Police Affairs Bureau under myself, and in the Provincial Government in the hands of the Chiefs of the Police Departments under the Provincial Governors. In this way, the policing of this country is now entirely done by civil officials, as in Japan proper.

These are the more important of the many reforms that have been introduced in the administration of Korea since I was appointed Governor-General. It is still less than two months since I arrived at my post to take up the onerous duty of governing this country, entrusted to me by the Imperial Master, so I cannot as yet claim that I have achieved any marked success. I have, however, great hope that sooner or later the Korean people will understand and appreciate the new policy of the Government, which has no other aim than the promotion of their interests and happiness. Things are gradually settling down in this peninsula, but the bad effects of the independence demonstrations of last spring are still in evidence at many places. Not only that, Korea has this year had the misfortune of having been invaded from Manchuria by Asiatic cholera, which has already claimed thousands of victims. In addition, a severe drought prevailed in the north-western part of the country during last summer, practically ruining all agricultural crops. To fight and suppress the

cholera epidemic, the Government has already spent more than one million yen, and to relieve the hundreds of thousands of poor starving Korean people suffering from the drought is also doing all it can, being prepared to defray ten million yen for the work, so that not a single Korean shall die this winter from hunger and cold. My task is heavy and difficult, but I shall do my best to accomplish it, so as to requite the confidence reposed in me by the Emperor and by the people.

Seoul, Korea

And Not a Drop to Drink

(Continued from page 166)

most valuable service, paying returns in more ways than one.

They can, and should, strongly support local authorities in the performance of their duties under the prohibition law. These officials should be advised that all good citizens are looking to them for effective and impartial enforcement. Failing to perform their duties properly, they should be removed from office.

In a letter sent a few days ago to all clergymen in the United States I strongly urged "that a committee on law enforcement be appointed to receive all complaints of violations of the law and to lodge such complaints, together with the evidence obtained, with the proper authorities." Church members, I added, will be a principal influence in creating the right public spirit in each community.

One letter I received from a clergyman in a New England city illustrates the mistaken attitude being taken by a small fraction of our people, and among them some of those who worked most vigorously for this great national reform.

The situation calls for no jacking up of public opinion, he said. It does call for officials who believe that they have but one duty—to enforce the law without fear or favor. The circumstances surrounding the frequent cases of drunkenness on the streets lead me to suspect that this is largely due not to bad public opinion but to official laxness. I have no wish to condemn public officials simply because they are public officials, but I cannot escape the conviction that it is less important for the churches to appoint law enforcing committees than it is to have public officials who will enforce the law.

There is justification for this criticism as applied to some communities. During the war, prohibition enforcement was in the hands of Collectors of Internal Revenue, whose other work took up most of their time and interest. Our new forces, now in the field, have but one duty—to enforce the prohibition law—and they will do it to the very best of their ability.

However, the prohibition law cannot be enforced as this clergyman would like to have it enforced, without his active coöperation and that of all other good citizens. He offers us passive support. What we need is active support. Granted that, we will have little difficulty in the work of enforcement.

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. The Abraham Lincoln We Love. By Montrose J. Moses.

1. What type of play is John Drinkwater's "Abraham Lincoln"?
2. Name any of Shakespeare's plays that are of similar type.
3. Explain the sentence: "The true inspiration of history lies, not in fact, but in character at supreme moments."
4. From any of Shakespeare's plays draw an illustration that will tend to prove the truth of the sentence.
5. Explain the sentence: "Drinkwater has modeled his conception of Lincoln in his play as a sculptor would cut it out of stone."
6. Did Shakespeare model his conception of Henry V. or of Brutus, in the same way?
7. Drinkwater introduces a new character into the Lincoln cabinet. Is it proper, in a novel or play based on history, to depart from the truth of history?
8. "He might have fallen into gross errors of local color." What are such errors? How would the dramatist have written the play if he had fallen into such errors?
9. John Keats and Abraham Lincoln had similarly shaped heads. Were Keats and Lincoln like or unlike in character?
10. As a student Drinkwater took Lincoln as his ideal. Give a talk in which you explain why Lincoln is a fit ideal for any student.
11. "He used the chronicle play form." What is that form? What are its advantages? What are its disadvantages?
12. Why was the chronicle play popular in the Elizabethan period?
13. What is "a poetic interlude"? What is the purpose of an interlude? What do the interludes in Shakespeare's "Henry V" do for that play?

II. I Had a Little House. By Harry Kemp.

1. Is the poem like or unlike Longfellow's "The Rainy Day"? Explain in full.
2. Explain how the poem differs from Milton's "Lycidas," from Browning's "Evelyn Hope," from Burns' "Highland Mary," or any section of Tennyson's "In Memoriam."
3. What does the poem say concerning character?
4. Why does the poem produce such a pleasing effect?
5. Explain the following expressions: "The pastoral voice of flutes"; "A broken fane."

III. Here Are Books—and Books.

1. Is it true that "you really can't read a satire and be tolerant at the same time"?
2. Name some famous English satires. For what purposes were they written?
3. Read aloud the review of "Creative Chemistry." What characteristic of style is most evident in the review?

IV. Just What Mr. Wilson Did at Paris. By Preston Slosson.

1. What proposition does the writer set forth at the beginning of the article?
2. Name the points by which the writer supports his belief concerning the proposition.
3. Is the article more noteworthy for argument or for exposition?

V. A Message from the United States Government. By Daniel C. Roper.

1. Explain the significance of the cartoon that accompanies the article.
2. Summarize in one sentence the particular message that the article conveys.
3. Give a talk on the theme, "Obedience to law is the cornerstone of our Americanism."

VI. A Message from the Imperial Japanese Government. By Baron Makoto Salto.

1. Point out the topic sentence of every paragraph in the article.
2. Does the article have a satisfactory introduction, and a satisfactory conclusion?
3. Draw from the article material for a short talk on Korea.
4. Summarize the reforms that have been attempted in Korea.
5. Does the article indicate that Korea is capable of home rule?

VII. The News of the Week.

1. Prepare to talk before your class on any of the following topics: (a) The Opening of the League of Nations; (b) The Opening of Commercial Relations with Russia; (c) The Eighteenth Constitutional Amendment; (d) The Irish Elections; (e) Demands of American Coal Miners; (f) The United States and South America.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Reestablishing Peace—"Just What Mr. Wilson Did at Paris," "First Meeting of the League of Nations," "Russian Blockade Raised," "The People and Their Servants."

1. What is the basis for the "legend" that: "Wilson met defeat at Paris"?
2. Summarize Mr. Slosson's rebuttal of the legend under the following topics: (a) The League of Nations; (b) The Question of Fiume and Dalmatia; (c) The Shantung Issue; (d) The Unity of the American Delegation.
3. What thought was evidently in the minds of Leon Bourgeois and Earl Curzon at the first meeting of the League of Nations on January 10?
4. What was the underlying purpose of the informal blockade of Russia? Why is the blockade now being lifted?
5. Summarize Mr. Holt's reasons for believing that "the Senate does not represent the American people on this issue [ratifying the Treaty]."

II. Japanese Policy in the Far East—"Home Rule in Korea."

1. Review the history of the Chinese-Japanese war and the Russo-Japanese war. Does your history give you the impression that "The annexation [of Korea] was peacefully accomplished by mutual consent"?
2. What was the purpose of the "independence demonstrations" referred to by Baron Salto? How is Japan meeting the avowed desire of the Koreans for home rule?
3. Is Japan carrying on a policy of peaceful assimilation in any other part of the continent of Asia?

III. The Eighteenth Amendment—"And Not a Drop to Drink!" "Bone Dry America."

1. "The prohibition movement is an outgrowth of the temperance or abstinence movement which . . . dates back in the United States for more than a century." Trace this movement from its inception down to January 16, 1920.
2. What measures has the United States Government adopted for the enforcement of the Amendment? What will probably be done with the existing stock of whisky and other beverage spirits?
3. What were the "personal liberty laws" in the fourth paragraph of the second article? The "complex franchise provisions of some Southern states"?

IV. Latin-American Trade—"Pan-American Union."

1. What, in general, are the purposes of the Pan-American Financial Congress? Why should the chief topic considered at the first day's session be that of steamship transportation?
2. "The increasing strength of 'Americanism' . . . is indicated in many ways." What are they?

V. The Irish Question—"Sinn Feiners Win."

1. Review the history of the Irish Question (a) down to 1913, (b) in 1913-1914, (c) during the war.
2. What is the present attitude of the Government toward Ireland? The attitude of the following parties: (a) Unionists, (b) Nationalists, (c) Sinn Feiners?
3. "Even in Ulster . . . the republicans gained a large minority, and in some parts a majority representation." What is the significance of this?

VI. The Coal Truce.

1. Write a brief history of the controversy between the operators and the miners.
2. Make a brief statement of the demands of the miners and the reasons given for these demands. What is the answer of the operators?
3. In the light of the settlement of the great anthracite coal strike of 1902, what decision will the present commission probably render?

VII. Safeguarding the Investor.

1. Why does a period of national prosperity offer a golden opportunity to the promoters of fraudulent stock companies?
2. What is the purpose of the "Blue Sky Laws" referred to by Mr. Criscuolo?
3. What are the advantages and the disadvantages of such laws?
4. What recommendations for curbing fraudulent stock deals does Mr. Criscuolo make?

Just a Word

There are—we admit it in all confidence—some unusually fine articles crowding to get into The Independent in the next few weeks. The series of Messages from the United States Government, for instance, will present in the issue of February 14 an article by Secretary Baker on the tremendous commercial significance of the Panama Canal, particularly in relation to our program of world trade. Also in The Independent of February 14 will be a Message from the French Republic to the Republic of the United States, in which M. Deschanel, just elected President of France, writes inspiringly on "What the World Needs."

Whether you live in a big city or on the outskirts of a country town, you will be interested to read an article soon to appear in The Independent by Chester Crowell on "Why the Young Folks Leave the Farm." Mr. Crowell sees into the situation with rare insight and discusses it with true Texan frankness enlivened by an irresistible sense of humor. You'll chuckle as you read his article, but you'll find it productive of serious after-thought.

"The Republics of Great Britain" is the startling title of an article that we have scheduled for an early issue. The proposal to break the British Empire up into "a band of free republics" comes from a member of the British Parliament—Colonel Arthur Lynch, "an Australian who studied medicine in London, philosophy in Berlin and engineering in Paris," who fought as a colonel in the Boer army in the South African war and as a colonel in the British army in the Great War. You will find his suggestions stimulating, to say the least.

Have you been wondering lately whether The Independent had forgotten all about that excellent manuscript of yours, submitted in our contest on The Best Man or Woman in Your Town? We haven't forgotten, but we were considerably delayed by the fact that the printers' strike cut into our original plans for publishing the winning articles. But several of them are in type now and we hope to start within a week or two publishing a series of the best articles and photographs thru several issues of The In-

dependent. Announcement of the winners will come in due course, but we won't wait till then to tell you that there's one story about a grocery man that's great!

Remarkable Remarks

MARSHAL FOCH—Facts alone count.

GABRIELE D'ANNUNZIO—There is no death.

W. J. BRYAN—The Republican party is an authority on splits.

EDWARD N. CLOPPER, PH. D.—Kentucky neglects her children.

AMY LOWELL—No American newspaper should dare discuss literature.

SENATOR JOHNSON—I am a candidate and I want everybody to know it.

THE MIKADO OF JAPAN—We enjoin upon our loyal subjects to fulfil our wishes.

BISHOP BURCH—I object to the use of the church for the airing of radical opinions.

"KID" MCCOY—I think that Shakespeare must have been a pretty good man in the ring.

MAYOR THOMPSON—The League of Nations is a hellish scheme to deprive us of our freedom.

ROY K. MOULTON—When a man announces that he is out for the presidency, "out" is generally right.

SARAH BERNHARDT—Don't tell me you've got to go to surgeons and chemists to find the fountain of youth.

MARY GARRET HAY—A Republican will be the next President of the United States and the women will elect him.

CYRUS MEED—Feeble minded girls more nearly approximate to normal girls than feeble-minded boys to normal boys.

CARDINAL GIBBONS—I do not know what would become of the church and society at large if it were not for the female sex.

SENATOR JOHN SHARP WILLIAMS—People of this country are gradually rising to the point where they demand the abolition of the Senate.

ED. HOWE—Instead of collecting millions to build a useless memorial to Theodore Roosevelt why should we not build a good road in his honor.

BILLY SUNDAY—I would stand every one of the ornery, wild-eyed I. W. W.'s, anarchists, crazy Socialists, and other types of Reds up before a firing squad and save space on our ships.

MISS HELEN TAFT—When elected to office we women should not allow ourselves to be shoved off into separate committees merely for the purpose of blowing off steam.

"HIS MASTER'S VOICE"

REG. U.S. PAT. OFF.

The trademark of supreme musical quality which identifies the world's largest and greatest musical industry

Twenty years ago the talking machine was a triviality. Today the Victrola is an instrument of Art. The exclusive Victor processes have lifted the making and the playing of musical records into the realm of the fine arts and rendered them delightful to the most keenly sensitive ear. Opera singers and musicians of world-wide fame are glad to be enrolled as Victor artists.

Every important improvement that has transformed this "plaything" into an exquisite and eloquent instrument of the musical arts originated with the Victor. The Victor plant, the largest and oldest of its type in the world, is the world-center of great music.

No other organization in the world is so

qualified by experience, by resources, and by artistic equipment to produce *supreme quality* as the Victor Company. Its products convey more great music by great artists to more people throughout the world than all other makes combined.

The pioneer in its field the Victor Talking Machine Company today remains the pre-eminent leader. The famous trademark "His Master's Voice," with the little dog, is on every Victrola (look inside the lid) and on the label of every Victor Record. It is your guarantee of the highest musical quality. Look for it. Insist upon finding it. If you wish the best, buy nothing which does not contain this trademark.

New Victor Records on sale at all dealers on the 1st of each month

One Day in a Coal Mine

The graphic story of an editor who volunteered as emergency miner during the coal strike

By Leigh Harris

Leigh Harris, editor

Leigh Harris, miner

HOW hard is the lot of a coal miner? Is he paid enough? Is he a skilled mechanic or can a greenhorn mine coal? Not having an inverted periscope two hundred feet long, I decided to go down into the "innards" of the earth and learn about mining first-hand.

"We can use you Tuesday morning," said "Red" Waple, the mine boss at Nicholson's, a union mine that ran without interruption thru the strike. "Bring along a shovel. I'll lend you a pick and a lamp."

The day opened with a

much on me in the matter of clothes when, carbide lamp and cap in place I stepped on the cage and—down, down, down. Farewell, old world, daylight and friends.

Splash! The bottom of the shaft.

"Just a minute, Mr. Waple," said I. "Give me a little time to swallow my heart and push down my stomach."

Before me, in one of the segments of gloom, uncertainly broken by the sizzling carbide, loomed two gigantic ears. Beyond those ears was Mary, the faithful little

strike. The alarm clock struck the silence of my bedroom about the time the old rooster in our poultry yard was clearing his throat. Then breakfast. The orange and cereal, sleepily served by Friend Wife, did not promise to furnish sufficient elbow grease for a man who was going to relieve this winter's coal shortage. Why hadn't I arranged for a two-story beefsteak and fried potatoes? But one cannot think of everything.

"Get rid of that flannel shirt, and you had better shed your B. V. D's, too," said Boss Waple when I reported at the dressing room near the tippie. "Any clothes at all will be too many when you get down there." Therefore a Mack Sennett movie bathing girl did not have

© Underwood & Underwood

"Pick, crowbar, shovel, dust, and gloom—Would the day ever end?"

"jinny" mule that had stood between our town and a coal famine; Mary, life sentenced to involuntary servitude in rayless and noisome entries; modest little Mary, curly haired and much in need of a bath.

Into an empty coal car we piled, headed for the new work.

"Giddap, Mary, for the love of Mike," said Johnny Repp, the driver. "Get a move on. It's worse'n six o'clock and not a damn car of coal." Johnny would like to keep his religion untainted by violent language and take his time driving Mary; but Johnny must make time.

"Duck or you'll get your block knocked off," Johnny warned me. I ducked. It's a low bridge all the way in the Nicholson mine. Rumble, jerk,

bump, down the winding entries, Johnny must have a flat tire.

"Here's a buddy for you, Cheatham," said Boss Waple as we halted at a new entry. The roof of the mine is only four and a half feet from the fire clay floor, and in that space, necessitating a stooping position, the regular miner and his buddy mine coal. Yesterday evenin' (we are in the South, you know) the machine had cut the vein of coal at the bottom. Cheatham had bored three deep holes into the mass of coal and filled these holes with powder grains about the size of coffee beans—about a quart in each hole, tamped in and with a fuse hanging. After all the miners had left the mine, along came the shot firer, lighting the end of the fuse and then getting far enough away to be safe from a possible "windy" shot. The powder blasts loosened the coal from the slate, leaving it ready for the pick, crowbar and shovel when the miners came down the shaft in the morning.

"For goodness sake, Johnny, couldn't you bring us a real car?" asked Cheatham. "That must have been one of the pair Noey saved in the ark. Well, here are some long pieces with which we can build up the sides."

Coal to the right of you. Coal at the left of you. Coal all around you. You have been playing miser with your little coal pile in the basement. Why not fill your pockets down here when nobody's looking? But then you have no pockets—that is, none worth mentioning—as you left most of your clothes up on top of the earth.

We shovel coal into the little 1492 model car until it is level full, then build up the sides and ends with long chunks of coal as big as we can possibly lift, fill the center with finer coal, and round out the top with egg lump until it almost touches the roof.

"Well, buddy," said Cheatham, "we got a ton in that little old cracker box."

A rumble in the distance, a dim light growing rapidly brighter as the noise gets louder.

"Get up, Mary. For the love of Mike, get up!" It is Johnny Repp coming with an empty to trade for our loaded car—the loaded car that is to be rushed up shaft and grabbed greedily by one of the long line of wagons or trucks that had begun to arrive before sunrise, or perhaps whisked away to one of the big tobacco stemmeries which bought half a million pounds of leaf yesterday and "must have coal or the weed will rot."

"That's a real car," said Cheatham, as we finished the one Johnny had just brought us. This car had flanked sides. "That," continued Cheatham, "ought to be good for twenty-two hundred pounds."

Pick, crowbar, shovel, dust, gloom. The little carbide lamp on one's cap lights only a small circle, now the vein as you use your pick, now a little of the floor as you stoop to shovel. You cannot see your companion's face. He is a sooty ghost. Three, four, five cars. I was getting pretty hungry. That orange and cereal seemed to have been eaten years ago.

© Underwood & Underwood

A group of miners on the cage at the bottom of the shaft

"Isn't it nearly noon, Mr. Cheatham?" I inquired rather meekly.

"Nine o'clock."

What had become of John and Mary? We had waited full twenty minutes for an empty car. Here they came, rags, fur and profanity, rumbling in the gloom, apparently headed for us. But they were not headed for us.

"Hell," said Cheatham, "they've turned down another entry."

Fifteen minutes later we got the empty we needed. Pick, crowbar, shovel, backache, gloom. Funny how much faster our coal pile in the

basement goes down than these cars fill up.

I asked Cheatham how much money he earned per day.

"I made about \$6.30 yesterday," he replied. "You take from that the five cents I pay for carbide, and seventy-five cents for powder and fuse. The fourteen per cent increase agreed to pending the settlement of the trouble between the union and the operators would bring that to about \$6.20. The thirty-one per cent suggested by Secretary of Labor Wilson would increase the net to \$7.10."

"Then miners must pull down pretty good money?"

"Yes—when they want to work and *can* work. Some days we don't get cars enough. Some days the shots go wrong and we don't get coal."

"Don't you take a good many holidays?"

"Oh, just the regular holidays. Some of the boys take John Mitchell Day, and rabbit day (November 15, the day the game law is lifted), and Joe Bell, one of our colored miners, takes two emancipation days—August 4 and September 22. The negroes got mixed a long time ago on the date of Lincoln's Proclamation. They refuse to give up the wrong date, so they celebrate both days. And then the colored boys take many Saturday afternoons, and circus day, and buryin's. Aside from that the miners work pretty steady."

"I've been mining twenty years," continued Cheatham. "I believe I saved more money back in the days when I could buy a 24-pound sack of flour for fifty cents. In those times pay was pretty low, but the cost of living was only about one-fourth as high as now. I don't think I get enough pay, and I hope the Government's commission will hurry up and fix decent wage standards. Arbitration by the right kind of men will always beat striking."

The dust was very bad. My nose and throat felt dry and gritty.

"I should think," I remarked to Cheatham, "that you'd have to lay off every third day and get your lungs dry-cleaned."

"Oh, no; we don't mind the dust much. Used to it. Ever hear of many miners having tuberculosis? Germs can't live in a miner's throat."

"Cut out that conversation!" commanded Johnny Repp as he and Mary came up with another empty. "Y'all don't seem to understand [Continued on page 224]

If He Were President

The Independent Series of Articles on Some Likely Candidates for 1920, Presenting the Views of Leading Republicans and Democrats on the Vital Issues of Today

General Leonard Wood

Including an Interview

By Donald Wilhelm

THE revolving door spun. A sturdy figure in army uniform bulked big in the large room. He wore the two stars of a major general, his aide followed at his heels. Deep-chested, heavy for a man of his height, he came up the marble steps, his left foot always forward. You are interested in that hitch in his gait. It links itself with the contention you hear, that he, General Wood, is not well physically; but you know, on good authority, that the nervous affliction that crippled his right leg is negligible now.

He peels off his overcoat, displaying a Sam Browne belt about a heavy body with short legs and neck, and greets one man after another: "How de do"—this conclusively, not by way of question.

You look him over again. No, he does not look in the least like Colonel Roosevelt!

Nor does he resound so; his voice is heavier, slower, he hasn't so many words to his tongue, hasn't the infectiousness that the Colonel had.

An hour later he is the center of a small group. You can hear his low resonant voice. He is reciting experiences, it seems, and those about him relish, much, what he says.

At last his aide leads you over and introduces you. Unlike Colonel Roosevelt of old, the General does not recall you tho you've met before, and accepts you rather submissively. And he waits for you to begin!

You recite who and of what vast importance you are!

He nods, but his face does not light up. Colonel Roosevelt was quite different—he was apt to sit on the edge of his chair, hear you a moment, plunge in and do all the talking.

You speak at last of preparedness. The General answers at length, feelingly.

You mention social questions; he has nothing to say—this was months back—he has since expressed himself with vehemence concerning the "reds." You mention economic questions; he has nothing to say.

You mention the fact that you once upon a time wrote a book about Colonel Roosevelt, and the acquaintance that fact suggests interests him a little, but in an habitual sort of way, as if ninety-nine of a hundred men prefaced all they said to him by some reference or other to the Colonel.

You then mention, again, certain pressing issues. At last he remarks, conclusively, "If you want to know how I feel about these subjects, read the last articles written by Colonel Roosevelt."

This statement rather smites you, for those who knew Colonel Roosevelt best are agreed, it seems, that he had an amazing aptitude for change, such that it may be presumed even the last articles he wrote would not express his ideas if he were living now. One man who knew the Colonel most intimately, who was with him as a companion as many hours, probably, as any other man, remarks, "To me it is an imposition to say that General Wood is at all like Colonel Roosevelt. They were friends; but so were the Colonel and

Mr. Taft." To be sure, Colonel Roosevelt held endearingly to General Wood: "We had the same ideals and the same way of looking at life," he says, in his *Autobiography*; but this explanation is descriptive of why they came to be such good friends and applies to their first contacts. "We were fond of the same sports," he goes on, "and, last but not least, being men with families, we liked to enjoy, where possible, these sports in company with our small children." Still, in many, the insistence that the General shall inherit the tradition of the Colonel holds. "He is of the Roosevelt tradition," Senator Moses, of the General's native state, New Hampshire—the first public man to come forward in favor of General Wood for the presidency—told me.

"But," I ventured, "what is the Roosevelt tradition?"

"I mean," he said, "that he has Roosevelt's outlook on public affairs, not the cold, hard, practical, economic and political view of things; his judgment is tempered with a certain sense of humanity. Of course, you cannot condense

Wood into a phrase. I would say that Wood, in view of the work he has already done, would carry out a larger part of the Roosevelt legend than anybody else."

The Senator goes further: "There is," he says, "more sentiment of the kind that elects Presidents surrounding General Wood than any other who has been mentioned as a possible Republican nominee in 1920. The only question is whether this kind of sentiment which elects Presidents can be transmitted, in General Wood's case, into the kind of sentiment that produces delegates

Ex-President Roosevelt and General Wood talking together at Plattsburg on the historic occasion of Mr. Roosevelt's address there urging national preparedness. To General Wood belongs credit not only for the Plattsburg idea, but for most of the early efforts to rouse the United States into readiness for her part in war

and nominates Presidential candidates. The people are turning away from Wilson. . . . In turning away from such a figure, the inevitable tendency of the public mind is to seek its antithesis. Colonel Roosevelt embodied this ideal to the last degree, and, had he lived, I think he would have been our candidate, named, perhaps, by acclamation. As he is gone, there is a demand for an inheritor of the Roosevelt legend. To many minds, Leonard Wood seems the rightful heir. With Roosevelt he sought to serve overseas and was refused that privilege; with Roosevelt he accepted the fate which jealous politicians meted out to him and did his full duty at home like the good soldier that he is. Like Roosevelt, he has an infectious personality which has baffled all the plans of the administration to pocket him. Exiled to Charleston by the War Department, he infected the South—and nowhere has he more ardent admirers than in that solidly Democratic section. Sent then to the pacifist plains of Kansas, he inoculated that whole region and now the prairies are enthusiastic about him. Transferred to cosmopolitan Chicago, he seems to have repeated there his experiences in the Democratic South and the pacifist Middle West. His thought is always for his country, and the controverted questions of acute momentary interest have not diverted him from the central idea that the United States must depend upon itself in the future, no matter how massive may be the international machinery which inventive minds are trying to set up for the manufacture of a millennium. This soldier, administrator and statesman has no illusions; and the constructive period which delayed peace will usher in, will find him ready to help solve its problems. . . . He will go to the convention, like Grant, supported by a nation-wide circle of friends, and, if nominated, will be elected."

Paul Thompson

"Soldier, administrator, statesman"—the man whom many Americans acclaim to carry on the ideals and work of Theodore Roosevelt

It is to be conjectured that President Wood surely would make a better President than did General Grant, whom both parties wanted as a candidate. Army officers point out that for years preceding the war the Pershing and the Wood followings in the Army were at gentlemanly grapple with one another, that General Pershing was

responsible for the return to America of General Wood, and it is to be remembered that the Secretary of War—Garrison, not Baker—publicly reprimanded General Wood for permitting Colonel Roosevelt to address the officers in training at Plattsburg in denunciation of their Commander in Chief, the President. Then, they contend, all told, General Wood got as good assignments on his return from Europe as any other major officer and a squarer deal than most administrations would have given him. Some go further—go back to San Juan Hill; but that's a story this writer does not care to tell. For the points essentially to be made are two: First, it will be a sorry thing if, with the future critical years at stake, prejudice is the arbiter in the coming campaign. Even, presuming for the sake of discussion that the present Administration gave General Wood the worst deal imaginable, why in the world does it follow that such a bad deal qualifies General Wood to be a great President? Any more truly than that the ruthless withdrawal of a lieutenant or top sergeant from the front line trenches by General Pershing, qualifies of itself the said lieutenant or sergeant to displace General Pershing. Second, granting that the general is better qualified to carry out the Roosevelt legend than any other man, would the responsibility for the continuance of that legend help President Wood, or, for want of coincidence of promise and fulfillment, thwart him?

At best, it seems, we may conclude that, if nominated and elected, President Wood of necessity must stand on his own merits.

The question, therefore, boils down to this: What are his merits?

They are greater, indubitably, than this poor pen can scratch.

But, before the Presidency, comes the election!

As to that, then, three questions raised as to other candidates described in this series are in order:

I. By what stretch of fancy can it be conjectured that the labor group, which is organizing politically on a national plan and in every state, would support General Wood, or even any other soldier?

II. Why should the farmers, doubly strong now because of the enfranchisement of women, vote for him?

III. Why should women generally vote for him, tho everyone from the two national chairmen up and down the line recognizes that women are to dominate the next election, when they look on [Continued on page 227

Making Alcohol Our Benefactor

Civilization consists in finding a place for everything and putting everything in its place. One of the worst mistakes ever made was in the childhood of the race when man came across alcohol and put it in his mouth

By Edwin E. Slosson

CIVILIZATION consists in finding a place for everything and putting everything in its place. Dirt is misplaced matter. Weeds are misplaced plants. Vices are misplaced virtues. To get anything—or any man—out of place causes as much trouble in the world as is caused in a business office when a careless filing clerk sticks a letter into the wrong envelope.

One of the worst mistakes of this sort was made in the childhood of the race when man in tidying up the earth that he had inherited came across alcohol and, not knowing what else to do with it, put it into his mouth. You know how children are always putting things in their mouths that do not belong there, thumbs, and buttons, and pins, all sorts of trash. Generally they outgrow the habit, but mankind is a slow growing creature, slower than an elephant, and even now, several thousand years later, he is only beginning to leave off the bad habit of storing alcohol in his stomach, the worst possible place for it. If old Noah had only known better he would have been saved from making a disgraceful exhibition of himself and selling his sons into slavery. He should have put the alcohol he made into an internal combustion engine and used it to run the ark. Then he might have avoided a year's voyage for Mount Everest and Pike's Peak must have appeared above the face of the waters long before Mount Ararat. And think of the sufferings of his passengers. Figure it out for yourself. Multiply 525 feet long by 87 feet broad by 52 feet high and divide by the number of animals in the world, two or seven of each, and you will see that they must have been packed in tighter than doughboys on a transport bound for France.

The medieval chemists who invented distillation and first got alcohol in a concentrated form made the mistake of not labeling it right. They reached into the wrong drawer and pasted on the bottle such names as Aqua Vitae, Eau de Vie and Elixir of Life, and got the stuff into circulation in this disguise, as vicious a case of misbranding as the world has ever seen.

THE modern temperance movement is essentially an attempt to correct this medieval blunder and get alcohol correctly labeled: "For External Use Only." It is a mistake to suppose that the prohibitionists are enemies of alcohol and want to close up all the distilleries. On the contrary they would like to see a still set up on every farm, the tax removed and alcohol as free as water, provided only nobody was allowed to waste the precious fluid by drinking it.

The time has come when the conservation movement must be extended to alcohol for we are likely soon to have to depend upon it for the salvation of society. Our Bureau of Mines gives us only about twenty years more to run on gasoline. Then we shall have to give up our automobiles, and airplanes, and submarines and combustion engines unless we can find some fluid fuel as a substitute and alcohol is the only thing in sight. Gasoline and alcohol are both useful as fuels and both have been abused as beverages. In the good old days of the Czar motor tourists in Russia used to get stuck in out

of the way villages because their gasoline had been secretly drawn off for drink. When kerosene was used for street lamps the ports at which the Russian warships put in were likely to be left in darkness because the Russian sailors would climb the lamp posts and drink up the coal oil. But while such petroleum beverages went down with the Russians, for they were stronger and more palatable than vodka, we Americans cannot stomach them so there is no reason for restricting their manufacture and sale. Just as soon as people get over their taste for alcohol as a beverage the alcohol business will have such a boom as it has never known and distilleries will be subsidized by the Government instead of being taxed. Brewers will then be recognized as public benefactors instead of being regarded as public enemies.

SO it is amusing to see the alarm manifested in the sensational press over the advent of prohibition as ruinous to the country. This is the way it is generally put:

LOSSES DUE TO PROHIBITION

U. S. Government taxes.....	\$600,000,000
Whisky owners	250,000,000
Other spirits owners	200,000,000
Wine dealers	150,000,000
Brewers	100,000,000
Total	\$1,300,000,000

The only fault of this, assuming that the figures are correct, is the heading. It should read "Gains Due to Prohibition." For it means that nearly a billion and a half dollars which otherwise would have been wasted for liquor by the American people, many of whom could ill afford it, will now be saved for better purposes. Those who got stuck on these stocks, the distillers, brewers, wholesalers, hotel men, and banks loaning money to them, do not deserve any sympathy because they had plenty of time to get into other businesses. Any one who has watched the course of events during the last fifty years must have foreseen that prohibition was coming. The war has merely accelerated the movement, whose culmination in national prohibition was in any case irresistible. None knew this better than the liquor men and it was because they realized that their time was short that they rushed their business. The figures at which the wet goods are estimated in the above statement are not the cost of production or customary prices, but the exorbitant prices at which the liquor dealers expected to sell out their stock between the end of the war and the beginning of prohibition. This anticipated surplus profit belongs therefore by right to the Anti-Saloon League for it is due to its efforts that the price of liquor has gone up. Fortunately the Supreme Court decision put a stop to this scheme for mulcting the American people of several hundred million dollars. The \$600,000,000 calmly counted in as loss to the liquor dealers is obviously fictitious because it has not been paid for the stocks are still in bond. Nor is it a real loss to the Government for the Government, which has been a partner in the liquor [Continued on page 226]

A Message from the British Nation to the American People

"It's Not Our Funeral!"

To which easy error Premier Lloyd George replies: "There can be no peace for the world until there is peace in Russia"

By C. A. McCurdy, K. C., M. P.

THE world appears singularly hopeless with regard to the Russian problem. There is a marked tendency here to leave affairs in Russia to be settled by the Russian people and Providence, without assistance or interference from outside. This is a mental attitude quite inconsistent, as it seems to me, with the ideals of a League of Nations. Lord Grey has spoken in clear and decisive terms of the duty of interference by other nations in case of an outbreak of war. Lord Parker, the eminent English lawyer whose recent death was a great loss to the League of Nations' movement, has compared the duty of Governments faced with an outbreak of war in any part of the world with the responsibility of the law abiding citizen who sees murder being attempted under his very eyes. The root idea of the League of Nations is the belief that war is a crime and that in the presence of crime no honest man can desire to remain neutral.

And there can be no doubt that war is raging in Russia at the present time. Bolsheviks and anti-Bolsheviks have enrolled armies, with at least a million men engaged in open conflict, and the reign of violence in Russia, if any credence at all is to be given to eye-witnesses, is by no means confined to the operations of the military forces. To the long list of the victims of the civil war must be added even a longer list of those who have perished by order of the revolutionary tribunals or from the famine which revolutionary conditions have created in a country richly stocked with food. If the League of Nations idea means anything it ought to be the business of the whole world to intervene, to decide on which side of the conflict lies the balance of justice, and to use all its energies and resources to secure that right shall prevail and peace be re-established.

At present the civilized world, including probably a large majority of the British people, does not see things in this light. There is a widespread feeling that we have not sufficient information about what is going on in Russia to make it safe to take sides, that it is the funeral of the Russian people and not our funeral and there is no reason to interfere. The British Government is certainly under no illusions on the latter point. It

recognizes fully that in the world impoverishment brought about by the war the restoration of industry and normal life in Russia is of vital importance to all the other peoples of the world. It knows what the man in the street is apt to forget, how vast are the natural resources of Russia in timber and foodstuffs, in minerals and in all the raw materials for which the world is hungry today. Mr. Lloyd George has expressed the view of the British Government quite clearly when he says, "There can be no peace for the world until there is peace in Russia."

As regards the common belief that we have not sufficient reliable information to enable us properly to understand what is taking place in Russia at the present time—this is, I think, a delusion which reflects no credit upon the governments of the world, which have failed to explain to their peoples the entirely authentic and reliable information which is in fact available. The basic facts about Bolshevism can be ascertained from the official statements of the Bolshevik leaders themselves. It is not necessary to enter into any controversy as to the value of the impressions derived by week-end visitors to that great expanse of territory.

The present Bolshevik Government was established as a permanent government on the 31st of January, 1918. Its rule extends over about one hundred million people who formerly owed allegiance to the Tzar. It is a Republic possessing neither President nor Parliament, of a kind hitherto undreamed of. It represents an experiment in a new form

of government based on new economic doctrines, the success or failure of which must be of the utmost interest to the rest of the world. The great majority of the Russian people are unable to read or write, and are quite unable to appreciate or understand the new economic doctrines and the new political principles which are embodied in the Bolshevik state. The Bolsheviks by conviction, the teachers and disciples of the new gospel, are said by the Bolsheviks themselves to amount to about three hundred thousand: there are probably a large number of Russians who by conviction are anti-Bolshevik. Round these two groups

Whitclaw in London Passing Show

THE HOUSE NEXT DOOR

Civilization: "Help! That house is blazing so fiercely it will bring down the whole street! Can't you fight the flames?"

The Entente Fireman: "Nothin' to do with me, mum. It ain't my job. I done my bit."

are ranged the divided Russian people.

The essential principles of the Bolshevik Republic are set out in a Constitutional Charter which declares the chief object of the republic to be the establishment of a Dictatorship, the complete suppression of the bourgeoisie, and the establishment of Socialism. The Dictatorship is to be exercised by the proletariat and the poorest peasantry, who are to exercise authority to the exclusion of all other classes. On the 27th of April, 1918, the Bolshevik Government by a decree of that date imposed compulsory military service upon the Russian people, on the surprising ground that one of the fundamental tasks of Socialism is the liberation of mankind from the burden of militarism and "from the barbarism of bloody conflicts." This aim, however, the Bolshevik Government declares can be realized only "when the power in all countries passes to the working classes, who will wrest from the exploiters the means of production, transfer them to the toiling masses for their common use, and establish collectivism as the immutable foundation of the solidarity of the Peoples." The Russian Soviet Republic therefore creates its own powerful army; military training is compulsory for males and optional for females. The conscientious objector is to be trained to military duties not connected with the use of arms. As the object of the Bolshevik Government is complete suppression of the middle and upper classes, those classes are not included in the scheme for military training. The right to carry arms is limited to the proletariat. The Law Courts are abolished; Revolutionary Tribunals and Extraordinary Commissions have been created in their place. In the Revolutionary Tribunal the jury chooses the punishments, and if the Judge does not meet with the jury's approval it may at any stage of the proceedings remove him. A curious feature of the new criminal procedure is the right given to selected members of the audience to speak both for the prosecution and for the defense in addition to the speeches delivered by the representatives of the parties concerned. The object of the Revolutionary Tribunals appears to be mainly the suppression of what are called counter-revolutionary movements, which include any movement hostile to or critical of the proceedings of the Bolshevik Government. The Extraordinary Commissions are a more powerful imitation of the old Russian Secret Police. They have uncontrolled powers over life and death. The death sentence, once declared to be inconsistent with Bolshevik ideals, has been restored, and thousands of people have been put to death without even the semblance of a trial. The Church has been disestablished, and the teaching of religion in schools is forbidden. Marriage is effected by a declaration before a Registrar, and divorce can be obtained at any time at the request of either party. No further ground for divorce than the wish of one or other of the parties is required. With a view to ensuring to the workers true freedom of expression of opinion the Government has arrogated to itself the power of suppressing all newspapers "which sow con-

Wilson Training in Brooklyn Daily Eagle

THE POISONED PEN

fusion by means of an obviously calumnious perversion of facts." Furthermore "the publication of false or perverted information relating to the events of public life, so far as it appears to be an attempt against the rights and interests of the revolutionary masses" is an offense which entails suppression. Anti-Bolshevik newspapers have consequently disappeared in Bolshevik Russia. All the land has been confiscated; former owners of land, if unable to work, are allowed the same pension as a disabled soldier. Foreign trade, both export and import, is entirely nationalized; no one may sell goods to or buy goods from a foreigner except through a Government Department created for that purpose. The sale of foodstuffs, cloth, various minerals and agricultural machinery, is a State monopoly. The banking business has been nationalized. Committees for the control of prices have been formed in towns to inspect tradesmen's books, define expenses, fix prices and profits and distribute the latter among shopkeepers. Commercial and

industrial concerns which employ labor are controlled by the workers.

According to the *Frankfurter Zeitung*, the effect of Soviet rule upon the textile industry has been that the working efficiency of all branches shows a decline of 80 to 95 per cent from peace production, whilst expenses and wages have risen by 3,000 to 5,000 per cent. Cloth factories employ 30 per cent more workers, produce 30 per cent less, and prices are raised by 4,000 per cent.

The essence of the Bolshevik State is a dictatorship of labor and the denial of the right of private property, but the aims of Bolshevism are by no means limited to the ambition of the Bolshevik State. Bucharin, one of the leading Bolsheviks, in his book, *The Program of the Bolshevik Communists*, [Continued on page 222

Russians who sacrificed everything to fight against the Bolsheviks. They enlisted under Admiral Kolchak and in spite of lack of proper clothes and fighting equipment offered stubborn resistance to the Bolshevik advance

A Message from the United States Government

Stories of State

By Breckinridge Long

Third Assistant Secretary of State

IN the history of the past few years the Department of State has played a part the scope and importance of which have hardly been guessed by the American people. During this time it has, of course, performed its usual functions in our foreign intercourse, maintaining and fostering our relations with other governments—a stupendous task in itself because of the importance of the subjects requiring negotiation and the complexity of the questions involved. This, however, is generally known.

But there were other activities that grew out of the war, numberless activities with which the Department was intimately connected and for which it was directly responsible, of which the public knows almost nothing—and the whole of which cannot yet be revealed.

The Department of State “carries the policy of the Government.” The President has authority to direct and control our foreign policy, and in these matters the Secretary of State is his adviser and his agent in the execution of plans. Consequently the State Department becomes the agency thru which all foreign activities and all domestic activities having any connections abroad must be conducted. In carrying the policy of the Government it has the duty of requiring that all other departments conform to that policy in all activities outside the strict field of domestic affairs.

International activities of the regular departments, particularly the War, Navy, Commerce and Treasury Departments, were enormously increased upon our entrance into the war. Many extraordinary boards with extraordinary functions, practically all of which had foreign dealings, were created for the emergency. The most active of these were the War Trade Board, the War Industries Board, the Shipping Board, the Food Administration and the Alien Property Custodian.

Under the War Trade Board there were formulated import and export embargo lists and enemy trading lists, commonly called “Black Lists.” Growing out of these there was a constant routine of business and negotiation, even after the initial controversies to which they gave rise had been settled by diplomacy.

Constant protests came from neutrals against the inclusion of their nationals in the “black lists.” They complained that their citizens were being discriminated against and the business of their countries adversely affected. Many of the “black listed” persons and firms had powerful political influence and their governments would consume a great deal of time on their behalf. There was always good reason for the inclusion of any name on the “black list” and in almost every instance

the name stayed, but further investigation was required and there was much argument with the accredited representatives of the protesting governments.

The embargo lists also made trouble for the Department—even with some of the Allied and Associated Powers. These lists were designed to give additional shipping space for essential traffic by releasing tonnage carrying non-essentials. If there were, for instance, 100,000 tons of shipping on a given route and if, by declaring certain commodities non-essential and prohibiting their importation, 40,000 tons of that shipping could be deprived of cargoes and left with nothing to carry, that tonnage probably could be chartered for carrying war essentials on another route.

In operations of this sort the War Trade Board, with its planned embargo, and the Shipping Board, with its proposed new charters, concentrated in the Department of State expecting, first, that we would have the government whose commodities were to be ruled out smilingly accepting our restrictions on its export trade and that

we would induce it thereafter to hand over the ships desired for *our* war purposes and at *our* rate.

There was an urgent, a most urgent need for ships. We had not nearly enough tonnage to transport 2,000,000 soldiers with their ammunition, supplies and equipment. We had to *get* ships. There were enemy ships in our ports. That was easy. There were enemy ships in the ports of some of the smaller belligerents. That was fairly easy. These ships were appropriated by the authorities of those countries and it became necessary to negotiate for them. Various of the allies began to negotiate for them at the same time, and some of the situations became quite complicated. The Department of State was the agency thru which these ships were secured for the United States.

The Treasury was vested with a certain amount of authority to negotiate regarding loans to other governments, but all its negotiations abroad were carried on under the supervision and thru the agency of the State Department. There was no other way. All matters with any foreign contact had to be coordinated. When the Navy Department wanted to establish a base in foreign waters permission to do so was secured thru the Department of State. When ships were sunk by submarine the testimony of witnesses, reports of the disaster, estimates of loss of cargo, reports on injuries and deaths among American seamen and all such matters were attended to by the agents of this Department.

All thru Japan and China there were “necessaries” to be secured for the War Industries Board, oils from

In this inside information of the State Department's work in war and peace you can read between the lines stories more absorbing than any fiction thriller

certain beans, mineral products and many ingredients for high explosives. The same was true of South America. Platinum, for instance, was chased around the world and discovered in the most out-of-the-way places. It was the Department of State in each case that directed the chasing.

The foregoing gives some idea of the extraordinary war work of the State Department. Its ordinary work continued, but manifold in quantity and intensified in importance.

For this work it became necessary largely to increase the staffs of our embassies, legations and consulates. To secure persons fitted for the tasks to be undertaken was not easy. All able-bodied men were subject to military duty and were not available for the diplomatic service. It became our object to find men disqualified for fighting, who spoke a foreign language, had a higher education but still were willing to serve as "clerks" for they could be given no higher office. They were found and they did their work well, pocketing their pride and going in any capacity to be of service.

The consular organization came to number thousands scattered all over the world in some of the most hazardous and out of the way places, and often in constant danger. In this connection can be recalled the experience of Mr. Treadwell, who was captured in Tashkent, Russian Turkestan, and held for months in captivity, not knowing what his fate was to be.

The diplomatic establishment outgrew all its old bounds. The personnel of the embassies in London and Paris numbered hundreds of men. Staffs at Copenhagen and Berne, consisting before the war of two or three persons, suddenly became most important because of their strategic situation and were increased to scores. Far eastern posts became important and busy.

Mr. Long (left) and the King of Belgium. Taken on board one of the ships of the United States Navy, during King Albert's recent visit to this country

Each addition to a staff abroad increased the amount of work that could be done there and also the amount of work that had to be done in Washington. Cablegrams came constantly to the Department. Only important matters were cabled, but important matters developed hourly. Our telegraph office worked twenty-four hours a day,

receiving and deciphering the 250 and more cables received daily and enciphering and sending an even greater number of outgoing cables.

It was a tremendous executive undertaking to dispose of even the routine business of the Department during the war. Policies had to be considered, decisions made and instructions sent forward as quickly as possible. Beneath its placid surface, behind its tranquil composure there was in the State Department a nervous energy and feverish toil known only to those present.

The secrets of enemy movements, of enemy diplomatic intrigues, of advance information on our own military activities—awful fear and fondest hopes lay in those cablegrams. Information for which the enemy would have paid fabulous prices or committed any crime to obtain was a part of the daily routine in the State Department. Plots whose scope was world wide, plots whose tangled skein appeared in the far corners of the earth, were daily unfolded to its scrutiny. The responsibility of the Department drove each individual to his maximum exertion.

Even when the armistice came, there was little relaxation. Preparations for the peace conference, long since begun in the Department, were rapidly consummated. Then the opening of the conference itself intensified labors which, altho not always in the public eye, were intimately [Continued on page 225]

Spring Comes—

By Clement Wood

Is there a poet who doubts that Spring
Comes only at his signaling?

That hidden grasses crouch and tremble
Till he has bidden them assemble?

That willows wait until his call,
And trees would show no green at all

Unless he blew his reveille,
To rouse and cheer the company?

Until he speaks, peach buds stay curled;
And purple garden flags are furled.

But at his word, the eye can see
The green and gorgeous tapestry,

The violet, the clustered daisies,
The rose that reddens till it blazes!

Thus poets order in the May.
All men are poets, some will say

Is there a man who does not know
Spring comes when he will have it so?

A great deal of money was lost by Prohibitionists who had conscientious scruples against gambling. If they had accepted the odds which would have been offered them ten years ago against nation-wide aridity they would all be millionaires today.

* * *

Do you believe in education? Do you believe that it takes brains and training to teach? Do you expect, in your own business, to buy brains and training without paying adequately for them? What are you going to do about the miserable salaries your own town pays its teachers? Or don't you care whether the teachers who teach your children have brains and training or not?

* * *

It is amazing how the authorities permit the law to be openly violated. Only the other day, on one of the chief streets of our city, we saw a group of proletarians—some of them obviously aliens—waving red flags in our very face. Shortly afterward there was a dynamite explosion; doubtless another anarchist outrage. And yet when we complained to a policeman he refused to interfere, alleging that these men were engaged in blasting for a building corporation and that their red flag was a warning signal to passersby.

* * *

The well known—tho little understood—human race is an amusing animal. The price of food goes up and we shout lustily, "Down with the middleman!" So a group of skilful business men—called generally the "packers"—organize the business of providing food with the middleman left out. The price of food does not come down.

Then we shout raucously, "Down with Monopoly!" Our Government takes the packers firmly by the appropriate parts of their anatomy and compels them to restore the middleman. The price of food stays up! The human race scratches its head, looks around for something else to shout "down with"—and continues to pay! For shouting and paying are easier than thinking.

* * *

This is the argument of the supersensitive radicals who advise the rejection of the Treaty of Versailles as "too hard on Germany":

We object to the terms imposed on Germany as too harsh; therefore we will leave their execution in the hands of those who made them harsh.

We object to the way in which the Allies treated Austria; therefore we will look the other way while they do what they please to Hungary, Bulgaria, Turkey and Russia.

We object to the Shantung stipulations; therefore we will let armed Japan and unarmed China settle the question between them.

We deplore the fact that America had so little influence in the peace settlement; therefore we will take good care that she will have none in the future.

* * *

In the Spanish bull-fight the attention of the bull is distracted from his real enemy by the waving of red flags. The bull charges ahead blindly at the infuriating color while his enemy nimbly steps to one side and strikes the fatal blow from an unsuspected point of vantage.

We fear that something similar may happen to the nation. Too zealously engaged in hunting down a few silly parlor reds whose delight is to tease the authorities and get "martyred" all over the front page of the daily papers, we may overlook public enemies of a more dangerous sort. The criminal who advertises is the least dangerous; like a rattlesnake the poison of his bite is partly offset by the warning in his tail. A real conspirator, whether a wealthy profiteer or a radical dynamiter, will seldom seek publicity until his aims are attained. It is only in grand opera that people plot at the top of their voices, and it is only in melodrama that the villain clearly looks the part.

* * *

The appointment of a Congressional commission to visit the Virgin Islands should result in greater interest in our latest acquisition. For fifty years the people of the Danish West Indies have been longing to join Uncle Sam's family, but since their wish was granted two years ago they have found him more of a stepfather than an uncle. Doubtless their unbounded expectations of immediate prosperity were impossible of fulfilment, but it is a pity to disappoint them for it will have a bad influence upon other islanders who are looking our way. We should remember that the Germans promised to make St. Thomas "the Hongkong of America" and were in the way of doing so when the war came. The population of the islands declined between 1835 and 1917 from 43,000 to 26,000. This decrease is due in part to emigration and in part to the high death rate among infants. These causes may be corrected by industrial and sanitary education. The fact that three-fifths of the couples living together are not married and that nearly 70 per cent of the births are illegitimate, and that drunkenness is the prevailing vice, shows that American influence can be beneficial in other directions as well. The Virgin Islands need a Booker Washington.

The Story of the Week

A Panic of Economy

A MONTH ago Majority Leader Mondell told the House that governmental expenditures during the next fiscal year threatened to reach the enormous total of \$9,086,358,574.62. He reached this figure by adding to the \$4,865,410,031.62 total of the Treasury book of estimates certain necessary expenditures such as those connected with the return of the railroads to private operation and for increasing pensions and the salaries of Government employees, which had not been included.

At the time Mr. Mondell's statement had little effect. Later he added that receipts from all sources would not amount to more than \$6,035,850,000, leaving an apparent deficit at the end of the year of \$3,050,508,574.62. This last figure has been reiterated again and again in both houses until Congress has been thrown into a practical panic of economy—"economy even to the point of parsimony."

Even the Senate, which does not easily frighten at such statements, has paused in making appropriations to consider the effects of a \$3,000,000,000 deficit. Neither house has been greatly reassured by Secretary Glass's assertion that the way seemed clear ahead unless Congress reduced taxes or embarked upon new and large fields of expenditure.

The fault in Mr. Mondell's calculation was that he included in his list of expenditures the full total of the Book of Estimates. The Book of Estimates represents the maximum of what the executive bureau chiefs think they can get—by no means what they will get. The Secretary of the Treasury is without authority to alter these estimates. He merely transmits them to Congress. The principal purpose of the budgetary legislation passed by the House and now awaiting action by the Senate is to give someone in the Executive branch authority to cut the estimates to the necessity level and prevent duplication, instead of leaving this task to the committees of Congress. It is safe to assume that the total of the Book of Estimates will be pared down something like one-half.

How long the spell of economy based on the fear of a deficit will last no one can tell, but considerable savings have already been effected. The House Public Buildings and Grounds Committee heroically sacrificed on the altar of economy the \$70,000,000 omnibus public buildings bill it had planned and the House passed a "porkless" river and harbor bill after cutting the estimates from \$43,000,000 to \$12,000,000 in the face of strong opposition from commercial bodies.

The Republican Steering Committee sought two weeks for some ground upon which the \$150,000,000 famine loan to Poland, Austria and Armenia could be refused, but has now about reached the conclusion that this is a "necessary expenditure" which cannot be avoided.

Practically the only increases in appropriations made by the House have been those for increasing the pay of civilian employees of the Government unable to meet the increased cost of living on their old salaries. Some increases were granted to minor diplomatic and consular officials, but the House refused Secretary Lan-

sing's urgent request that the salaries of Ministers and Ambassadors be raised.

The appropriation for continuing the air mail service was stricken from the Post Office Appropriation bill by the House and the Senate cut the appropriation of the Americanization bill from \$42,000,000 to be expended in the next four years to \$6,500,000 to be available until July 1, 1921.

The Americanization money is to be shared among states enacting legislation that requires all persons between sixteen and twenty-one, whether citizens or aliens, to devote 200 hours of study annually to the English language, and in other ways coöperating with the Federal Government.

When Secretary Glass warned against new and large fields of expenditure he had in mind the various proposals that have been made for giving money bonuses to those who fought in the war. He believed that with an election coming on these proposals might seem particularly appealing to the majority in Congress. The deficit scare has made it certain that no bonus legislation will be enacted and even the soldiers' settlement bill, which bears Mr. Mondell's name, probably will be ruled out.

In reporting the army reorganization bill from the Military Affairs Committee, Senator Wadsworth point-

Illustration in Brooklyn Daily Eagle

The modern Humpty-Dumpty doesn't fall so easily

Spencer in the Omaha World-Herald

Some place to go, but not dressed up!

ed out that it would require appropriations of only \$500,000,000 annually, whereas the War Department scheme would have called for expenditures of \$1,100,000,000.

The committee sought to avoid the expense of a large standing army by providing a system of universal military training for youths between eighteen and twenty-one. The period of training would be four months and the citizen army could be called to the colors only in case of war. There was stiff opposition to the military training features in the committee and a strong fight against them will be made on the floor of both the House and the Senate.

A split over universal military training in the Republican ranks in the House was averted when Representative Herrald, an out-and-out opponent of the system, relinquished his claim to membership on the Military Affairs Committee, for which he had been selected by the Committee on Committees over the opposition of Julius Kahn. Sentiment in the committee was so evenly divided that Herrald's vote would have meant an unfavorable report from the committee on the citizen army plan.

It would cost the Government \$618,000,000, Mr. Mondell estimated, to turn back the railways under the Esch bill and \$615,000,000 under the Cummins bill. To continue Government control he believed would be even more expensive. Nevertheless, the conferees on legislation for the return have reached so complete a deadlock that a temporary extension of government operation may prove the only way out.

Members of the House, all of whom come up for reelection in the fall, have been made aware of the uncompromizing opposition of organized labor to the anti-strike and guarantee-of-earnings provisions of the Cummins bill, and have been threatened with retaliation at the polls if these provisions are accepted by the House. Senate conferees have indicated a willingness to drop the labor clauses if the House will accept the guarantee provisions, but it is unlikely that the lower

body will accept either. The time is growing short, and unless some way is found to break the deadlock, no legislation will have been enacted by March 1, the date set by the President for relaxing Federal control.

The deadlock on the peace treaty seemed on the point of vanishing in the bi-partizan conference headed by Senators Hitchcock and Lodge when an ultimatum from the "irreconcilables," threatening to bolt Lodge's leadership if an agreement was reached, interrupted the negotiations. An agreement had already been reached on all reservations save those relating to Article X and the Monroe Doctrine, and Senator Hitchcock said a compromise on Article X was on the point of being perfected.

Senator Lodge notified the Democrats that he would accept no changes in the principles of the Article X and Monroe Doctrine reservations, and Senator Hitchcock replied with a threat to call the treaty up and resume open warfare on the floor if the Republicans refused to resume negotiations in a conciliatory spirit.

The situation is confused and there is no way of knowing just what the next moves will be, but there is a growing belief among Washington observers that if the treaty is again called up on the floor, with or without a prior agreement, it will not again be rejected.

RICHARD BOECKEL, *Washington*

Railway Perplexities

THE continued deadlock in Congress on the conditions which should surround the return of the railroads of the country to private control calls attention to the difficulties of the transportation situation. Just at this time of transition the railways are operating under exceptional pressure of business. According to Walker Hines, Director General of Railroads, the number of cars of revenue freight loaded during the first week of the new year was 162,228 in excess of the number loaded twelve months earlier. The Director General assures shippers that "the railroad administration proposes until the last day of Federal control to make every effort to meet this extraordinary demand as fully as possible."

Revenue has considerably increased under Government control, but not so rapidly as operating costs due to the general rise in wages and prices. The average revenue per ton mile for the first nine months of 1919 was 33.8 per cent in excess of that for the year ending June 30, 1914; the revenue per passenger mile increased during the same period by 27.9 per cent. It is pointed out that an increase in the average cost of freight transportation amounting to about one-third over the cost in 1914 cannot be compared with the rise in the price of other goods or services; for example, the increase of retail food prices by about four-fifths for the same period.

As a result of the different rates of increase for income and costs the railways have been unable to expand their equipment to meet the increasing demands of the nation's business. According to an estimate by *The Railway Age*, 3319 miles of line were abandoned during the three years from 1917-1919, inclusive, and only 2386 miles were constructed. Thus there has been a net decrease of 933 in the mileage of railways operated in the United States since 1916. Yet traffic has expanded enormously. During the year 1919 the railroads of the eastern states transported to the seaboard twice the annual volume of freight handled on these routes before the Great War and over 7 per cent more than in 1918. The volume of passenger traffic also showed marked increase. The eastern railroads during the first nine months of last year made more than 8,530,000,000 "pas-

senger miles," which is equivalent to carrying practically the entire population of the United States from New York to Philadelphia.

The Brotherhood of Railroad Trainmen will press its demands for increased wage scales at a conference in Washington during the first week in February. The wage increases demanded range from 35 to 47 per cent and were put forward as long ago as last July.

The Mystery Candidate

THE most interesting of the presidential boomlets which have thus far entered practical politics is that of Herbert Hoover. His is the only candidacy which finds favor with both political parties; not to mention the many suggestions which have been made that Mr. Hoover may head a third party movement if both the Republican and Democratic nominees appear "reactionary" to his supporters. Mr. Julius H. Barnes, associated with Mr. Hoover in the Federal Food Administration, launched the Hoover candidacy in the Republican party. He declared that Mr. Hoover's political affiliations were with the progressive Republicans and that he had been intimately associated with the policies of the late President Roosevelt. Mr. Hoover was for eight years a member of the Republican Club and has always called himself a Republican. If he decides to enter the Republican primaries he will probably have his first contest in California against Senator Johnson.

On the other hand, the *New York World*, a strong supporter of the Wilson administration, has openly come out in favor of Mr. Hoover as Democratic nominee for the presidency. Mr. Gerard, former Ambassador to Germany and himself frequently mentioned for the Democratic nomination, is quoted as saying that Hoover "is the type of business man who, if he was in control, would give the country an economical administration." Colonel House is believed to view the Hoover boom with favor, Senator Hitchcock of Nebraska and Senator Phelan of California, without committing themselves to his candidacy, have expressed the opinion that Mr. Hoover would make a splendid President. On the other hand, Senator Reed of Missouri and Senator Smith of Georgia accuse him of being an "Englishman" because of his long residence abroad, and many southern members of Congress say that they "won't vote for a Republican."

The failure of Mr. Hoover to declare which nomination he would prefer has injured his chances with both party machines; for to the professional politician party regularity is the one indispensable virtue in a candidate. But even if Mr. Hoover chances to "fall between two stools" the use of his name has not been without effect in raising the character of the presidential campaign and the type of men put forward. As one of his supporters put the matter, "If Hoover is not the standard bearer he is at least likely to prove the standard setter."

The only other "neutral" mentioned for President, General Pershing, has publicly announced that he will not run. This punctures a military boom which might have figured in either party convention. General Wood is the only military man now prominently mentioned for President, and his support is confined to the Republican party. General Wood has refused to resign from the army at this time to conduct his campaign, but Norman J. Gould, of New York, has been selected as eastern manager of the Leonard Wood National Campaign Committee, and the supporters of the General are actively at work in his behalf in every state.

The prominence of the Wood candidacy, which is still easily in the lead in the Republican race for the nomination, has attracted the fire of rival candidates. Sen-

ator Harding of Ohio has challenged the General to a contest in the primaries of the state. Senator Poindexter of Washington has challenged him to debate the issues of the campaign in South Dakota. Senator Borah of Idaho has sent General Wood an open letter asking his views on the League of Nations Covenant, as phrased in the letter, "whether we, as a people or nation, shall abandon the long-established and heretofore unquestioned foreign policy of no entangling alliances or leagues with foreign powers—whether we shall enter upon a course which will devolve upon us the duty of having a part in all the conflicts and disturbances of the Old World, or whether we shall adhere to our foreign policy so long and so consistently followed."

Headquarters for Governor Lowden of Illinois have been opened in Washington. He is giving General Wood a close contest in the states of the Middle West, where his strength is concentrated. Senator Johnson of California has carried the war into the East, which may or may not prove to be "the enemy's country." In a Brooklyn speech he emphasized two issues; opposition to the League of Nations Covenant and defense of free speech. He condemned the exclusion of the Socialist members of the New York Assembly and approved the stand of ex-Justice Hughes on that question.

One of the most prominent of the Republican candidates, Governor Coolidge of Massachusetts, has refused to make a campaign for the nomination. He will not enter the contest for the Massachusetts delegation to the Republican National Convention and that delegation will probably go uninstructed. Governor Coolidge said: "My paramount obligation is not to expose the great office of Governor but to guard and protect it. The people are entitled to know that their office is to be administered not for my benefit but for their benefit, and that I am not placing myself in any position where any other object could be inferred." This decision is not so phrased as to put Governor Coolidge out of the running altogether in case the Republican convention should

© New York Tribune, Inc.

He'd make a good center rush for somebody

wish to nominate him as a compromise candidate, but it does eliminate him from the early stages of the race in the primaries and has given much encouragement to rival candidates who happen to have friends in Massachusetts.

The Democratic campaign is far less active; in fact, the probable reason why Mr. Hoover seems to have more strength among the Democrats than among the Republicans is that in the Democratic campaign he meets less competition from "regular" politicians. The choice of the party seems in great measure to depend on two unanswered questions: "Whom does the President favor?" and "Whom does Mr. Bryan favor?" Ever since the Jackson Day dinner, when Mr. Bryan spoke for that wing of the party which desires reservations to the League of Nations Covenant, the man who thrice led the Democratic party to battle, if not to victory, is once more an active party leader. Few believe that either President Wilson or Mr. Bryan will contest the nomination in person, but it is thought that the successful candidate must either have the support of the administration or lead a revolt against the administration with the support of Mr. Bryan.

Our Shipping Situation

THE Shipping Board reports a year of expansion and success. The gross profits of operation are now averaging \$110,000,000 a year. Nevertheless the board seems to feel that private ownership of commercial shipping is a policy preferable to Government operation. Judge Payne, chairman of the board, announces that several of the great trans-Atlantic steamers acquired from Germany are on the market, but only American interests would be permitted to join the bidding and all ships sold must continue to fly the American flag. Steel ships constructed for the Government have been on sale at the cost price of \$210 a ton, but it is possible that this price may be reduced in view of the relatively cheap construction bids offered by private building yards. Three hundred wooden ships of about 3500 tons each are also to be disposed of; the Shipping Board hopes to realize at least \$90,000,000 by their sale.

The American Steamship Owners' Association has made public protest against proposed congressional legislation, favored by Secretary of War Baker, placing army transports in competition with private lines in the carriage of passengers and cargo. The association contends that the emergency conditions of wartime have passed. "Tonnage has increased more rapidly than commerce. Some ships are going eastward without full freights. Many are returning empty." The proposed measure might, it is conceded, lessen the net cost of maintaining army transports, but it would do so at the expense of the Shipping Board and of the private shipping companies which are striving to make the American flag once more a familiar emblem on the commercial routes of the Atlantic.

The Government is investigating shipbuilding frauds in connection with contracts granted to Pacific Coast shipyards. It is alleged that at least seven large companies had filed false vouchers of costs in order to obtain profits in excess of the 10 per cent above cost permitted in their contracts. Claims approximating \$37,000,000 have been held up to await the result of the investigations.

The result of a referendum of trade and commercial organizations affiliated with the American Chamber of Commerce gave 1235 votes in favor of the sale of all wooden and steel vessels of less than 6000 tons to private owners against 235 votes for continued public

ownership. The referendum also favored sale at less than cost whenever present values were below wartime costs of construction, freedom from regulation as to routes and rates, and private ownership of shipbuilding yards. In every respect the current of business sentiment seems to be running strongly against public ownership, operation or control of marine transportation.

Canada Faces Reconstruction

OUR Lady of the Snows is once more a civilian, confronted, like her cousin Samuel, with all the problems of civil life. The first problems are, of course, those arising out of the war itself. War service gratuities paid by the Dominion amounted to nearly \$150,000,000 by the end of 1919 and are expected eventually to reach some twenty millions more. More than 82,000 Canadians are in receipt of pensions. Of the 338,000 soldiers returned from overseas nearly 10 per cent are settled on the land and in receipt of agricultural loans from the Dominion Government. The public debt of Canada stands now at about \$2,000,000,000, and the annual sum to be raised by taxation is twice what it was before the Great War.

Nevertheless the Dominion is in many ways more prosperous than ever before. The Government has constructed sixty steel freight ships, with a total tonnage of 360,000, and has enacted legislation bringing the railways of the country into a unified system under national control. For the twelve months ending November 30, 1919, more than 114,000 immigrants entered Canada; more than 52,000 from the United States and a larger number from Great Britain and Ireland.

Labor is making its influence strongly felt. The Canadian Trades and Labor Council has put forth a request for legislation establishing a minimum wage and a maximum working week of forty-four hours and for a more exclusive immigration policy, especially as regards Orientals. A 14 per cent increase has been granted to Alberta coal miners by agreement between the Western Coal Operators' Association and the United Mine Workers of America. The teachers of the same province were less successful in their demands for a higher scale of salaries, \$1000 a year being fixed as the

minimum in place of the \$1200 demanded by the Alberta Teachers' Alliance.

The partial embargo on the export of news print paper and the difficulties of price control have caused a printing crisis in western Canada and in some parts of the United States. The three daily papers of Winnipeg, Manitoba, have temporarily suspended publication be-

Press Illustrating

Secretary Houston has been transferred from the Department of Agriculture to head the Treasury Department, a post, it is said, that he has been for some time willing to accept

cause the mills were sending all their output across the boundary to the United States, where higher prices prevailed. The Canadian Government, acting under its Embargo act, stopped all exports by the Fort Frances Pulp and Paper Company, the chief offending concern, until the local Canadian demand had been fully satisfied. This suddenly deprived newspapers in Chicago and Minneapolis of their expected paper supply and led to diplomatic representations to the Canadian Government by Secretary Lansing. The Canadian paper controller, Mr. Pringle, has resigned.

The Great War wrought great changes in the political life of Canada. The suffrage has been doubled by the abolition of the sex disqualification. The traditional two-party system, as also in Great Britain and Australia, has been replaced by a coalition Government composed of the most ardent supporters of the war and still holding office on its war-time record. At the Peace Conference Canada received the full confirmation of her nationhood, in common with the other self-governing dominions, by obtaining separate diplomatic recognition. The Hon. N. W. Rowell, president of the Privy Council, summed up the achievements of Canada at Paris as six in number: (1) direct representation at the Peace Conference; (2) membership in the League of Nations; (3) right to election in the League Council and the Governing Body of the International Labor Office; (4) the execution of the treaty with respect to Canada by Canadian plenipotentiaries; (5) the submission of the treaty to the Canadian Parliament before ratification; (6) the proclamation of ratification with respect to Canada "on the advice of Canadian ministers." Some of these gains to Canadian nationhood are threatened by the faction in the United States Senate which begrudges the Dominion any separate representation in the League of Nations.

Hungary Balks

HUNGARY refuses to sign the Peace Treaty in its present form. That is the reply that Count Albert Apponyi brings back to Paris from Budapest.

The Hungarian treaty was delivered to the delegation headed by Count Apponyi on January 15 at the French Foreign Office in the presence of the representatives of the Big Five, Premiers Clemenceau, Nitti and Lloyd George, Baron Matsui and Ambassador Wallace. Hungary was given a fortnight for reply.

The Hungarian treaty is similar to the Austrian. It also contains the Covenant for the League of Nations and it provides for the protection of minor nationalities. Hungary is required to waive all claims to Fiume and to the territories awarded to Italy, Yugoslavia, Rumania and Czechoslovakia. The Hungarian army must not exceed 35,000 men and have no guns of more than ten centimeters caliber. Count Apponyi claims that 35,000 soldiers are insufficient to maintain order in such troublous times or to protect the frontiers against the Bolsheviks. He argues further:

We have been pillaged of everything. In the first place, we had the hardships of war; secondly, we had two Communist administrations when all of our money was spent abroad for propaganda; and, thirdly, the Rumanians robbed us of manufacturing machinery, even printing plants and railroad equipment, so that we now have but twenty-seven locomotives. Our agricultural interests, which the Central European powers ruined by taking away our live stock, is in a condition of general devastation beyond the River Theiss. As proposed in the treaty we should have no wood, lumber, coal, salt, iron, or oil. It is mockery to ask us to live after these are taken away.

The nationality principle is constructed in defiance of geography and economics and also destroys the traditions of the people whom it cuts off from home. From generation to generation there will be revolts. It is a transfer of national leadership to races inferior in culture. It is the destruction of our schools and universities, leading people back to ignorance. It is a cultural downfall that mankind cannot witness without abhorrence.

The president of the National Federation of Hungarian Industries estimates that the loss of the iron mines will throw 200,000 workmen out of employment; that 93 per cent of the textile manufactories will have to close down; that Hungary is deprived of 84 per cent of her forests, which means ruin to the charcoal industry and dependent business; that coal and sugar and lumber will have to be imported instead of exported, as formerly; that the famous glass industry will disappear with the alienation of the salt mines and gas wells.

The first election in Hungary since 1910 and the first under universal suffrage took place on January 25, for a national assembly to meet February 16. The Social Democrats boycotted the election because the Government had prohibited their meetings, suppressed their papers, burned their books, and imprisoned their speakers. A wave of anti-Semitism is sweeping over the country. The National Christian party (Catholic) and the Peasants' party, which is also anti-socialistic, have gained greatly in the reaction from the excesses of the Communist régime. There is a strong movement toward the restoration of the monarchy, but its advocates cannot agree upon a candidate. Some propose to recall the ex-King Karl, others his son Franz. There are four hundred Hapsburgs to choose from, but it is suggested that it might be better to go outside the family and take a foreigner, say the Rumanian Crown Prince Charles, the Italian Duke d'Abruzzi, the British Duke of Connaught or an American millionaire. In the elections the National Christian party ran ahead of the Peasants'.

The Progress of Prohibition

Photographs from Brown Bros.

1794 is one of the first important dates in the progress of prohibition in the United States. It was then that the famous Whiskey Rebellion took place in western Pennsylvania against the collection of revenues from liquor, and George Washington sent 2300 troops from New York and New Jersey to enforce order. This old wood cut shows a messenger warning the workers in a mountain still of the revenue officer

This was one of the many prohibition banners carried in the great Temperance Parade in Chicago in 1909, a demonstration that acquired national significance and did much to focus interest in the crusade against liquor. There were only eight dry states in the Union in 1909: Maine, North Dakota, Kansas, Oklahoma, Georgia, Alabama, Mississippi and North Carolina

When Kansas became a dry state the "bad men" went over the border to Missouri for their booze and came back looking for trouble, as the caption of this old print puts it

Carrie Nation and her hatchet would be known nowadays as "prohibition publicity." This single-minded, vigorous old lady—a feminine Billy Sunday—furthered the temperance cause by getting people all over the United States to talking about it

And now a saloon, if it still exists, is usually transformed into a lunch room like this one over in Hell's Kitchen, New York. The same old bar and the same old tables and probably the same customers—but the drinks are soup and coffee

The Russian Muddle

BY keeping out of the Paris Council the United States is put at a considerable disadvantage in competition with its trade rivals. The announcement in the newspapers that the Allies were going to open up commercial relations with Soviet Russia took Washington completely by surprise. Our ships are not yet permitted to clear for Russian ports, but the British Government is already granting clearance papers. Our exporters have been pilloried if they even considered the possibility of trading with Soviet Russia, but in France and England plans have long been laid with the coöperation of the Government for capturing the Russian trade so soon as the bars should be lowered. A French company, which was started a year ago with a capital of \$5,000,000 and comprizing the leading French banks at home and abroad, has now made itself public and will proceed as soon as possible to carry out its plans for industrial, mining, engineering and financial operations in Russia. British firms have had their agents on the Finnish and Esthonian border for some time and are said to have secured contracts that cover a large part of the Russian output of flax, timber and other products for some years in the future.

The situation has been a perplexing one, for Russia was neither enemy, ally or neutral. Legally no blockade could be established against Soviet Russia without public declaration; officially it was denied that such blockade existed; actually a blockade of the strictest kind has been maintained by land and sea for more than two years. As late as August 5, 1919, Mr. Harmsworth, speaking for the British Foreign Office in the House of Commons, said:

No blockade has been declared, or is being exercised, against any part of Russia. . . . No blockade exists either in the White, Baltic, or Black Seas.

But in October Commander-in-Chief Foch, carelessly disregarding the official fiction that there had been no blockade, requested the German Government to join the Allied and Associated Powers in maintaining it, saying:

Inform the German Government that the English and French men-of-war in the Gulf of Finland will continue to blockade the Bolshevik ports, and to detain, from the moment they come into sight, ships bound for Bolshevik ports.

Now, it seems, we have a combination of war and peace policy. In January, American papers carried columns about the campaign which the Allies were about to start in the Caucasus to prevent the spread of the Soviet power toward the south. It was said that large numbers of British troops were to be sent to aid the Georgians and Azerbaijanians to make a stand against the Bolsheviks. But this report is now officially and flatly denied both by the Supreme Council at Paris and by the British Government. The decision reached was quite the contrary, for the Supreme Council refused to send even small contingents of troops and will confine its aid to material and supplies.

It is now admitted that the swift success of the Soviet operations is due more to the disaffection of the population with the dictatorial and harsh administration of Denikin and Kolchak than to the powers of the Bolshevik armies. The border peoples had little liking for the Bolsheviks, but they were equally averse to being forced into a Russian empire of the old sort. For instance, the Cossacks have always preserved, even under the Czars, a considerable degree of autonomy, and they wish to increase rather than diminish this freedom. When the Bolsheviks seized the Government of all Russia in November, 1917, the Cossacks of the Kuban country, lying between the Black and the Caspian seas, stood out against them and have waged war against the So-

Wide World

THE DEFEATED DENIKIN

General Denikin, who with a corps of volunteer officers and the aid of the Cossacks has been making a strong fight against the Bolsheviks in the south and last summer came near capturing Moscow, is now driven back to the Black Sea and has lost most of the tanks, airplanes and munitions supplied him by the British

viet ever since. They gladly joined forces with Denikin's volunteers to fight against a common foe, the Bolsheviks, and have constituted the mainstay of his army. But it gradually became evident that General Denikin was determined to restore integral Russia, if not imperial Russia, and he used the military power the Cossacks conceded to him in order to suppress their civil rights. The Kuban Rada (parliament) protested last August against his dictation and accused him of being a German agent and a Czarist. Denikin retaliated by sending one of the Czar's generals to the Kuban capital, disarming the guards of the Government, and purging parliament of his opponents. The President of the Kuban Republic, Nikolas Riabovol, was assassinated. Balabuchov, a member of the Rada, who had voted for independence, was hanged on a gallows by Denikin executioners, and left there for two days with the inscription: "Traitor to Russia." Malarenko and other members of the Rada, who had protested in the name of the people against Denikin's assertion that Kuban recognized the power of Kolchak, were also arrested. The correspondent of the London and New York *Times*, in reporting this incident, said:

The remarkable tact and firmness displayed by Denikin in dealing with this difficult situation have cleared the atmosphere and removed a serious danger in the rear of his armies.

But whatever may have been the justification of Denikin for such measures, they certainly did not have the effect desired, for the disaffection of the Cossacks and Caucasians increased until finally he was forced to withdraw his troops, who were advancing victoriously upon Moscow, to attend to insurrections in his rear.

Denikin alienated the Ukrainians, on whose land he was fighting, by ignoring their desire for independence. He captured their capital, Kiev, and carried off the Ukrainian treasury. He appears to have paid no atten-

tion to the administration of the occupied territory or to conciliating the population. The Jews fell victim to peasant pogroms and raids of irregular soldiery of all sorts. In these riots, according to Jewish estimates, 40,000 Jews have been killed and 200,000 more wounded, and property to the value of \$200,000,000 has been destroyed. The Jews of the Ukraine could not help observing that over the border in Soviet Russia the Jews have been safer and freer than under the Czar and have taken a prominent part in the Government, from which they were formerly excluded.

So General Denikin had offended four classes of the population, the Cossacks and Ukrainian Nationalists because he trampled on their autonomy; the peasants, because he refused them the land; the Jews, because he failed to protect them. Consequently, when he began to lose ground the people turned against him and his soldiers deserted. The Soviet forces cut thru his line in the middle and so reached the Sea of Azov and the Crimea. Denikin has now taken refuge on a British warship in the Black Sea.

In Siberia likewise the anti-Bolshevik cause was lost thru failure to win over the people. All attempts at self-government were suppressed and the Cossacks put down local risings with their traditional ruthlessness. When Admiral Kolchak became dictator and disbursed the rump of the Duma, the Czechs refused to fight further against the Bolsheviki and demanded to be sent home to Bohemia. That was more than a year ago, but the Czechs are still there and some of them have been caught in the rapid advance of the Reds, who have gained some 2500 miles, or about as far as from New York to Utah.

The Social Revolutionists, a socialistic but anti-Bolshevik party, who have resented their exclusion from the Kolchak Government, became the dominant power in Siberia as soon as Admiral Kolchak lost his grip. They attempted to seize the stations along the Trans-Siberian Railroad and so came into conflict with the Cossacks and Cadets. (The word Cadets is a contraction for C. D.'s or Constitutional Democrats, an imperialist party.) The Czech soldiers sided with the Social Revolutionists. Kolchak's own staff and body guard went over to the Revolutionists and Kolchak himself was made prisoner and will be tried for tyranny. His gold reserve, which the Czechs took from the Bolsheviki at Kazan two years ago and turned over to him, has now

fallen into the ready hands of the Social Revolutionists.

General Semenov, who claims to be the successor of Kolchak as Supreme Ruler and whose headquarters is at Chita, 648 miles east of Irkutsk, sent three armored trains loaded with Cossacks to the aid of Kolchak, but the Czech captured one train at Muisovaya and the Americans captured another at Verkhne-Udinsk. Three Americans were killed in the fight with Semenov's troops. The Czechs and Americans then took charge of the latter town and reestablished order.

Thanks to the Czechs and the Japanese, most of the Americans were removed from the danger zone, but it is telegraphed that eight American engineers, one woman and several members of the Red Cross were captured by the Bolsheviki west of Irkutsk. An entire Polish army, with 20,000 rifles and sixteen guns, fell into the hands of the Bolsheviki here.

At the other extreme of Russia, the Baltic front, the Letts and Poles continue to make progress against the Bolsheviki, altho the Allied Powers have reinforcements. The Letts have taken Ryezhitza, the Letgaler capital, about fifty miles beyond Dvinsk.

The Extradition of the Ex-Kaiser

THE Supreme Council on January 15 demanded of the Dutch Government the delivery to justice of the former German Emperor, who on the eve of the armistice in November, 1918, slipped over the border and has been living at the Bentinck castle at Amerongen. The note charges him with many crimes, among them

The cynical violation of the neutrality of Belgium and Luxembourg, the barbarous system of hostages, massed deportations, systematic devastation without military reasons, the submarine war, . . . for all of which acts responsibility, at least moral, reaches the supreme chief, who ordered them or abused his unlimited powers to break, or permit others to break, the most sacred rules of human conscience.

The Powers cannot conceive that the Netherlands would regard with less reprobation than themselves the immense responsibility weighing upon the ex-Emperor. Holland would not be fulfilling her international duty if she refused to associate herself with other nations, so far as she is able, to prosecute or at least not impede the punishment of crimes committed.

This action was taken in compliance with Article 227

Russian war brides with their American husbands waiting at Murmansk for a transport to bring them to the United States

Central News

Famine conditions in Vienna are so bad that even Berlin is sending food to help relieve the shortage. This photograph was taken in the central market at Berlin while the food for Austrian relief was being packed

of the Treaty of Versailles, which "arraigns William II of Hohenzollern, formerly German Emperor, for a supreme offense against international morality and the sanctity of treaties." The special tribunal for his trial will be composed of five judges, one each from United States, Great Britain, France, Italy and Japan.

In reply to the demand for the delivery of the ex-Kaiser the Queen of the Netherlands points out that Holland was not party to the Treaty of Versailles and so is not bound by its provisions on this point; that Holland had nothing to do with the origin of the war and maintained, not without difficulty, its neutrality to the end. It is therefore in a position different from that of the powers. The note continues:

If in the future there should be instituted by the Society of Nations an international tribunal competent to judge in case of war, deeds qualified as crimes and submitted to its jurisdiction by statute antedating the acts committed, it would be fit for Holland to associate herself with the new régime.

The Government of the Queen cannot admit in the present case any other duty than that imposed upon it by the laws of the kingdom and national tradition.

Now, neither the constituent laws of the kingdom, which are based upon the principles of law universally recognized, nor a respectable secular tradition which has made this country always a ground of refuge for the vanquished in international conflicts, permit the Government of Holland to defer to the desire of the Powers by withdrawing from the former Emperor the benefit of its laws and this tradition.

Justice and national honor, of which respect is a sacred duty, oppose this. The Netherlands people, moved by the sentiments to which in history the world has done justice, could not betray the faith of those who have confided themselves to their free institutions.

It is generally admitted that the reply of the Netherlands is a strong one, and even some of the British press admit that England, under similar circumstances, could not have surrendered to his enemies a fugitive who had taken refuge on British soil. Holland expresses a willingness to associate herself with a League of Nations which may lay down a law regarding such offenses and thereafter inflict punishment for their violation, but she objects to an *ex post facto* law like this. Secretary of State Lansing, who was on the commission on penalties, raised the same objection when the subject was brought up in the Paris Conference, and President Wilson is reported to have said:

I think you'll find that when the time comes Holland will refuse to surrender her imperial political refugee, and that

then we'll all discover ourselves unable to force Holland to change her decision.

Signor Orlando in the same discussion called the demand a colossal absurdity which was unprecedented in the history of the world, and was in conflict with the principles of the Entente, which proclaimed that it was fighting for the triumph of right and justice. The Japanese objected to holding a constitutional monarch criminally responsible. The German Chancellor, Bethmann-Hollweg, also pointed out that according to the German constitution he, and not the Emperor, was legally responsible for all the Emperor's acts, and that to surrender the Emperor on a charge of which he was constitutionally incapable would be to violate the constitution that he, as Chancellor, was sworn to obey. But Lloyd George had won the election on the ground that he was going to have the Kaiser tried in London, which, as popularly understood, meant that he was to be executed in the Tower.

It remains now to see how the Allies will get out of their dilemma. The logical thing would be to wage war upon Holland, or at least impose a blockade, but that would be an unpopular move. On the other hand, they can hardly allow one of the articles of the treaty to be openly annulled so soon after its signature. They cannot now compel Germany to secure his extradition and hand him over for trial, together with the other five hundred accused, for Germany has signed her last treaty and protocol and the Allies have no right to demand anything more. One way out is to have the Kaiser tried and condemned *in absentia*.

The German Government has addressed a new note to the Allies asking them to abrogate Article 228 of the Treaty, which requires the delivery of German officers accused of crime. An attempt to arrest several hundred officers now might precipitate a monarchist rebellion.

Prevailing bad weather in the northern and eastern states has caused a recurrence of the influenza epidemic of last winter. In both Chicago and New York the number of cases reported daily rose to more than two thousand, and, as usual, the influenza epidemic was accompanied by a marked increase of pneumonia. The death rate remains very low; hardly more than one influenza case in a hundred resulting in death. Apparently a milder form of the disease prevails than in the world-wide epidemic of 1918, which is said to have killed more people than all the military operations of the Great War. Boards of Health in the great cities are taking all possible precautions against the spread of the disease but are handicapped by the shortage of trained nurses. In New York the hours of opening and

closing business houses, theaters and other places of meeting have been shifted to reduce the congestion on the lines of traffic and so diminish the danger of contagion.

Pestilence, the invariable sequent of war, is raging around the world. The Russian refugees in the Baltic states are suffering from typhus, influenza and dysentery. Thousands have died of typhus in the Ukraine and Poland. According to the official Soviet figures there were 1,340,000 cases of typhus in Soviet Russia in the six months ending March, 1919; since then it has increased. In eastern Galicia there are reported more than 100,000 cases of spotted fever with 10,000 deaths. A new form of sleeping sickness resembling infantile paralysis has appeared in Italy, France and England. There are thirteen cases in London and one reported in New York.

Mathias Erzberger, German Minister of Finance, was shot and wounded in the shoulder by Lieutenant Von Hirschfeld, a young monarchist. Erzberger was leader of the Center party in the Reichstag and advocated the peace resolution of July, 1917. He espoused the cause of the republic and favored signing the Treaty. On this account he is hated by the reactionaries and, when shot, he was leaving the Criminal Court building where he has been prosecuting a libel suit against former Vice Chancellor Helfferich, who had called him "a menace to the purity of our public life."

To combat the spread of disloyalty by instruction in the principles of American Government a non-partizan Constitutional League has been founded. Its executive committee contains Secretary Lane of the Interior Department, ex-Justice Hughes, Governor Smith of New York, Cardinal Gibbons, Colonel Theodore Roosevelt and other men of equal prominence. Among the announced purposes of the Constitutional League is the distribution of a copy of the American Constitution to every home in the country.

Mr. Alexander Magruder of the American Embassy at Madrid has been appointed Chargé d'Affaires at Helsingfors pending the appointment of an American Minister to Finland. Secretary Lansing recognized the independence of Finland in May, 1919, but hitherto a regular legation has not been created and Mr. Haynes, American Consul at Helsingfors, has acted as our diplomatic agent. Finland now enjoys full diplomatic relations with nearly all the countries of Europe and America.

Congressman-elect Victor Berger is considering a suit against the municipal authorities of Jersey City for refusing him permission to address a public meeting in the city. The ground taken by the authorities responsible for the order is that as Mr. Berger is under sentence for violation of the Espionage Act they were justified in com-

PELLING him to leave the city without making his intended speech.

The New York *Herald*, the *Evening Telegram* and the *Paris Herald* have been acquired by Mr. Frank Munsey, who is already owner of the New York *Sun*. The papers now taken over by Mr. Munsey have long been the property of Mr. James Gordon Bennett. Mr. Munsey announces that the *Herald* will be combined with the *Sun* and will not be maintained as a separate publication.

Mayor Thompson of Chicago has sent a personal message to each member of the Senate demanding the unconditional rejection of the Treaty. The political importance of this lies in the fact that Governor Lowden of Illinois has come out for ratification with reservations, and a breach in the solidarity of the Republican party in Illinois is thus indicated.

The International Labor Organization of the League of Nations, which held a preliminary meeting at Washington last November, met and completed its organization at Paris on January 26. German representatives were present, but the chairs set aside for the American delegation were vacant.

In the liquor referendum in New Zealand 240,998 votes were cast for continuance of the licensing system, 32,148 for state purchase and control and 270,000 for complete prohibition. The proposal for prohibition therefore fell short 2968 votes of the absolute majority necessary to carry.

All of the expresses and many of the local trains on the northern Italian railroads were held up for several days by a political strike of the employees. Premier Nitti told the Allies at Paris that unless the blockade with Russia were raised he would have a revolution on his hands.

The sale of the American army supplies left in France after the departure of the troops brought in almost \$800,000,000, which is less than half the value of the stock. It is estimated that it would have cost \$75,000,000 to have shipped it home.

The French army is being reconstructed so as to be stronger than ever before. At the head of it will be a supreme council of war presided over by the Minister of War and including Marshals Petain, Foch and Joffre and nine generals.

American Ambassador Wallace notified the Paris Council of Ambassadors on January 26 that the United States had decided to recognize the independence of Armenia.

The Prince of Wales, who recently visited America, will leave on March 15 for Australia by way of Canada.

Wide World

The Flexible Salary

Altho nothing but increased production and saner standards of expenditure can permanently remedy the high cost of living, it should be possible to prevent the burden from falling so heavily upon the fixed income. The Government might act, as proposed by Professor Irving Fisher, by "stabilizing" the dollar by discontinuing the issue of gold coin and substituting paper money redeemable in a weight of gold bullion variable according to the average values of the principal commodities.

But these index figures of commodity values can be used in another way, without waiting for the Government to act, by making salaries and long-time contracts payable not in a fixed *sum* of money but in a fixed *value* of money. This has already been done, as Professor Fisher points out, by the Shipbuilding Labor Adjustment Board which revised wages twice yearly according to the current figures for the cost of living as determined by the Bureau of Labor Statistics. Some private employers also made use of this method.

Manual labor, however, usually manages to make wages follow closely in the wake of prices, partly because contracts are revised at short intervals and partly because of the power of the labor unions in collective bargaining. These advantages do not apply to the man with a fixed income, whether from salary or investment. In fact, he should rather be termed the man with an "unfixed income" since its value in actual buying power is always changing.

Why, then, for example, should not a Board of Education, instead of enacting that "teachers in the High Schools of this city shall be paid \$2,000

Press Illustrating

Professor Irving Fisher, of Yale, author of "Stabilizing the Dollar"

a year" and leaving it at that until the rise of prices has cut the value of the dollar in two, legislate that "teachers in the High Schools of this city shall be paid each year a sum equivalent in buying power, as measured by United States index values of commodities, to \$2,000 in the month of January, 1920"? If any increases of pay were granted on this basis they would be *real* increases, instead of belated attempts to catch up with rising prices. On the same principle some enterprising business concern might issue bonds "bearing interest at five per cent of the purchase value of the sum invested at the time of investment."

Healthy, Wealthy and Wise

Most of us have seen in the comic papers illustrations of sturdy youngsters in tatters who apparently grew up in robust health, defying dirt and exposure, while the children of the well-to-do were anaemic, spindle-legged, and wore heavy, tortoise-shell

glasses. We often hear it remarked after the death of a child in a wealthy home that children with poorer surroundings seem able to survive all sorts of hardships, while children whose every want is anticipated fall early victims to disease. That this is

a fallacy has long been recognized by physicians and students of vital statistics, but it has been left for the Children's Bureau in Washington, thru the studies published in its Infant Mortality Series, to demonstrate that economic factors play a large rôle in the deaths of infants in this country. Several cities, including Saginaw, Mich., have been studied to determine whether there was a connection between the economic condition of the parents and the death rate of the children.

The chart shows graphically the connection between the infant mortality and the annual income of the father in Saginaw in

the year ending November 30, 1913. During the year there were in this city 981 live births and 83 infant deaths, giving an infant mortality rate of 84.6. When the annual earnings of the fathers were taken into consideration the infant mortality rate was as follows:

Earnings of Father.	Infant Mortality Rate.
Under \$450	179.5
\$450 to \$549	112.2
\$550 to \$649	103.4
\$650 to \$849	105.7
\$850 to \$1049	44.6
\$1050 to \$1249	33.0
\$1250 and over	22.2

This shows pretty conclusively that, in Saginaw at any rate, the infant mortality rate is much lower in those families where the earnings of the father are sufficient to provide proper care for the children. Altho the figures were quite different in New Bedford, Mass., and Manchester, N. H., the same relation existed between low income and high infant mortality. Of course it was not entirely lack of ability to furnish proper care and nourishment which made this difference; ignorance played a large rôle. The standard of intelligence was much lower in the families with insufficient income. To spread knowledge of the proper care of children requires active propaganda and this is at present being done thruout this country by physicians, health officers, visiting nurses, public health nurses, school nurses, and infant welfare associations.

The effect of this campaign of education will be to reduce the disparity between those of different economic rank. Additional proof that it is probably lack of intelligence as well as lack of financial ability which causes this difference in mortality rate is evident from the fact that where the mothers were literate, the infant mortality of the children was 77.3 per 1000 births, but where they were illiterate it was 203.4.

The Saturation Point

The automobile press is now vigorously discussing the question whether there is any such thing as a "Saturation Point" in the Automobile industry.

When it is remembered that the automobile registration record in 1919 was seven million six hundred thousand one wonders how much higher this can go. One automobile dealer scorns the claim that only people with \$5,000 or \$10,000 incomes a year are "buying prospects." The demand for automobiles, he declares, does not result from the number of people who have incomes above a certain point any more than the demand for typewriters or wheelbarrows. The one great invention of the era for the economizing of time has no direct connection with the income tax returns.

Another manufacturer puts it this way. "It is not what a car or truck costs that counts but what it will earn, whether it be money, convenience or pleasure. If an automobile costs \$2500

and brings better results than something else that costs \$2500 then the automobile will be bought and always should be."

The automobile manufacturers are evidently not yet afraid of the saturation point judging by their proposed output for this year—2,000,000, we believe, is the astounding total.

A Fable

By Bolton Hall

"And God saw that it was all very good"; but the Adversary said, "It is pretty good; but it would have been better if Thou hadst made man of cement instead of clay."

And God said, "I have enough of plaster saints now, I want men that can mould themselves."

A Doctors' Trust

"Fifteen Oshkosh physicians purchased a large apartment building in the heart of that city and will have offices there, organizing the Oshkosh clinic which has been incorporated."

It was reading the above notice that caused Dr. J. Rawson Pennington to deliver his presidential address before the Ohio Valley Medical Association the other day on the topic "Group Medicine—the Medicine of the Future."

Dr. Pennington points out that in these days of the specialist it is not only a convenience for the patient and a benefit for the community but an economy for the practising physician to pool their offices in one building where they can maintain a joint clinic.

The group method presupposes a business manager, who looks after the equipment, financial supplies, financial details, but otherwise the cost will be small to begin with. Already other "groups" of physicians are incorporating clinics, notably in Oregon, Kentucky and Minnesota.

Coöperation is evidently the order of the day in the medical profession as it is in the business, labor and international world.

Children vs. Colts in Kentucky

An elaborate report has just been made regarding the children of Kentucky. Here are some of the general statements made by Edward N. Clopper, who writes the introduction to the report:

Kentucky neglects her 1,200,000 boys and girls, 20 per cent of whom live in urban homes and 80 per cent in rural districts. Medical instruction is provided in but few places. Sanitation in many rural homes is wholly absent. The public schools are in politics. School teachers' salaries are so low that mostly incompetent teachers are in charge of schools. Country schools are seldom open longer than six months—often less. Rural elementary schools are held in archaic buildings, poorly equipt, with poor teachers and poor methods. Attendance is irregular.

Opportunity to attend high school is frequently denied country children. More than 6500 children over ten years of age are illiterate. The juvenile court law is generally disregarded in rural districts.

At times children are kept in jail, some awaiting trial, others serving sentences. Some county judges do not distinguish between children and adults in their methods of trial. Apprenticing and binding out children under obsolete conditions still prevail. Girls of twelve and boys of fourteen are permitted to marry with the consent of their parents. Unregulated commercial amusements largely dominate the field of recreation.

This is not a pleasing picture, as Mr. Clopper says. It would be wholly depressing were it not for the fact that the spirit of protest thruout the State is becoming active. Let us hope this report will startle the good people of Kentucky so that the birth state of Abraham Lincoln will set itself forthwith to rear as beautiful, sound and healthy children as for many years it has colts.

The Army and the Meter

One of the interesting by-products of our participation in the Great War was the conversion of American army officers to belief in a world-wide standard of weights and measures. Ammunition manufactured in inches can't be made to fit the bore of a cannon measured in centimeters. General Pershing

is quoted in the *Weekly Metergram* to this effect:

The experience of the American Expeditionary Forces in France showed that Americans were able readily to change from our existing system of weights and measures to the metric system. I think the principal advantages of the metric system are summed up in the fact that this is the only system which has a purely scientific basis. Not the least advantage of the fact that the metric system is based on scientific principles is the facility which that system gives to calculations of all kinds, from the simplest to the most complex.

I believe that it would be very desirable to extend the use of the metric system in the United States to the greatest possible extent.

Major-General Gorgas, former surgeon-general, writes that he is "strongly in favor of metric units and will be glad to assist in having their adoption brought about," and Lieutenant-Colonel Guy Edie of the Medical Corps adds:

I am in hearty accord with World Trade Club in its efforts to have world standardization of weights and measures, and believe that the metric system is the simplest and most scientific system that has been devised. I was with General Sternberg, then Surgeon-General of the Army, when the metric system for prescription writing was adopted in the medical department of the army. Again in 1904 I was a member of a committee to revise the Manual for the Medical Department, and provide a standardized field equipment. During the life of this committee all pressure to do away with the metric system and to go back to the old system of weights and measures was resisted.

A Metropolitan Town Meeting Hall

On January 24 the cornerstone of New York City's new civic auditorium or Town Hall was laid. Now that the civic center of the city has moved far away from old Cooper Union, whose platform has been hallowed by the greatest speakers of the world for the past three generations, it is fitting that a new people's auditorium be erected in the very heart of the city. The building aims to be more, however, than an auditorium. The auditorium will hold 1700. Above it will be the

offices of the League for Political Education which has done such wonderful work for the political education of the enfranchised women of New York, the Economic Club, easily the most important club in town for the discussion of public events, and the Civic Forum, under whose auspices the most eminent of the

world's celebrities have been brought to New York to deliver their messages to the American people. Perhaps the most interesting project planned for the auditorium will be a People's Club, occupying the entire sixth floor. The club will be open to men and women in equal numbers and the various classes will be so represented as to be an epitome of the city's variegated population. That is to say professional, business and working people will all be represented propor-

New York's new Town Hall is a big six story building in the center of the city, planned to give the citizens of the largest city in the world a chance to talk over matters of government as freely and easily as in the old-fashioned town meeting

tionally on the membership as well as all religions and political faiths. The dues will be moderate, \$15 a year at most. The father of this most interesting idea is Robert Erskine Ely, who is also the constructive genius of the League for Political Education, the Economic Club, and the Civic Forum. There is no other man in the city, or the country for that matter, who is doing just the kind of work Professor Ely is doing. His personality and achievements deserve a special article which we hope to give him one of these days.

Keep His Feet on the Carpet

The Horse Aid Society of New York advises horse owners in slippery winter weather to fasten bits of carpet on their 'horses' feet instead of using the more expensive and complicated chains. Drivers who insist on using non-skidable chains, however, should be especially instructed in how to put the chains on, for if improperly adjusted there is a little steel link that is apt to go up into the frog of the foot and thus lame the horse for weeks. The carpet, however, is a very simple, safe and inexpensive matter. All that needs to be done is to take an old piece of carpet, punch three holes in it, draw it together with stout manila cord and tie it on the horse's feet something after the fashion of a bag.

Waste Paper and Tin Cans

Waste reclamation is a peace necessity as well as a war exigency. Thru organized committees a "Clean-up and paint-up" campaign for salvaging waste is being undertaken thruout the country under the auspices of the Department of the Interior. Paper, rags and rubber will be bought for Thrift stamps and carried off for reclamation from the home of the housewife who displays in her window the slogan "Salvage for Thrift Stamps."

Waste reclamation councils have already been started in some places and together with the waste dealers they have divided the communities into districts, from which the dealers collect material on scheduled days. The utilization of untrained and handicapped labor has been successfully employed in certain cities and a tremendous volume of waste material has been prepared for the market.

A ton of waste paper that is salvaged will save eight trees of mature growth. Last year two million tons of boxwood were manufactured from old paper, for which sixteen million trees would have been sacrificed providing the old paper had not been conserved. Waste material, therefore, is the protector of our national resources and a community can help out the cost of production in this country thru increasing the supply of waste material and can become an ally of the forestry service by paper saving.

In connection with the reclamation service a cutting machine for tin cans has been provided for some localities. It removes the tops and bottoms, which cannot be utilized in their present form and which are shipped in bulk to the detinning plants. Approximately 2,000,000 cans are used annually in this country, a number representing about

800,000 tons of material, 8000 tons of which is pure tin and can be used again. Under the new system of utilization this tin is recovered and the unsightly methods of discarding cans will be prevented. By so diverting the supply of usable waste, from the dumps to industry, the "Clean-up and paint-up" campaign is not only one of conservation but one for civic betterment as well.

Shavings

The railways of Canada in operation extend about 40,000 miles.

Oregon's minimum wage for women office workers is \$48 a month.

Japan has appropriated \$125,000,000 for the development of aviation.

The American people are now spending \$80,000,000 per annum for candy.

A new 1200 room, 25 story \$5,000,000 hotel will be erected in Kansas City.

The supply of pine for lumber in the South will be exhausted in ten years.

The Seaboard Air Line is soon to turn 250 of its coal burning engines into oil burners.

Washington, Jefferson, Madison, Jackson, Fillmore, Harrison and Wilson married widows.

Maryland has just incorporated a company to insure employers against losses caused by strikes.

Oxford and Cambridge are the only universities in Great Britain which do not offer degrees to women.

A direct passenger service will soon be inaugurated by the Pacific Steam Navigation Company to South America.

The National Council of Women in the United States consists of thirty-one organizations with about 10,000,000 members.

The minimum yearly salary for a Government clerk should be \$2262.47, according to the Chief of the Bureau of Labor Statistics.

The Federal Council of Churches of Christ in America has just appointed a commission to study the tangled relationships of the United States and Mexico.

An investment banker in Chicago is responsible for the statement that our recent prosperity is responsible for over 20,000 new additions to the American millionaire class.

In Ohio a survey of spring plowing was made from photographs from an airplane, just as they used to take pictures over No Man's Land a year ago. The swords are being turned into ploughshares.

Better Boxes

Official reports from France say that during the last year broken packages received there were only 15 per cent as large as prior losses and that they now compare favorably with domestic shipments. This result has been gained by much experimenting and testing with boxes to determine the proper kinds of wood to

use, the proper sort of nails, thickness of wood and the manner of putting the boxes together, all of which may differ according to the materials to be packed in them.

When one stops to realize how many commodities come to the retailer in wooden boxes it is not a surprise to read the Government figures that 4,547,973,180 feet of lumber are used annually in the United States by box makers, in fact that this is the second largest wood-consuming industry in the country.

To make a box that is strong enough to stand the severe strain of transportation and yet to have it of the lightest possible weight has been the problem of the last few years when the transportation systems of the United States have been strained to the breaking point. A box which is sent out on its journey nicely packed and apparently strong enough often reaches its destination a wreck, but just where the strain first appeared cannot be determined from the broken structure, and the box maker was no better off in experience in constructing his next lot. So a series of tests were made at a laboratory conducted by the Forest Service in coöperation with the University of Wisconsin at Madison, Wisconsin, combining practical experience, which is a knowledge of the designs in use, lumber available, box factory practise with the accurate scientific tests made on the packages, packed as in actual service and subject to strains that approximate actual transportation conditions.

The most practical method yet de-

This revolving drum puts the box thru every sort of drop it could possibly receive during transportation. The drum is a six-sided machine, weighing ten tons, and it makes a revolution every minute

vised for these tests is the use of a revolving drum. The drum is a six-sided machine. The boxes to be tested are packed with the actual contents and placed in the drum. The drum is arranged with a series of hazards which cause the box to fall on its sides, top, bottom ends, edges, corners and flatwise upon a projection similar to the corner of another box, every sort of drop that a box could possibly receive during transportation.

Protection for the Homebuilder

No features in a home contribute more to year-'round satisfaction than the heating, plumbing and sanitary installations, when they possess the reliability of design and manufacture which for sixty years has characterized all such fixtures bearing the name of

CRANE

It is not too much to say that the factors of heating, plumbing and sanitation largely control the success of home-building. When judged by Crane standards, they insure comfort; safeguard health; promote contentment. And through extra durability they prevent undue depreciation in the value of the property.

Crane installations would be the logical choice of the home-owner even if they were difficult to obtain. With a national service system everywhere alert to supply them, their selection ought to be a matter of course.

Literature on Crane bathroom and kitchen fixtures, heating, ventilating and vacuum cleaning systems and associated products will be sent on request

Beautiful 365 days in the Year—

Evergreen Bittersweet

With gorgeous red berries against foliage that is green all year round, this vine beautifies the home with a thick shade in the summer, and with glowing fruit and bright leaves when other vines are bare.

Evergreen Bittersweet (*Euonymus Vegetus*) climbs to a noble height in the severest climates, where English ivy can be used only as a ground cover. Two year old vines fruit freely. Planted in rows and sheared, it makes an incomparable evergreen hedge, solid and erect.

Letters to the Great and the Near Great

By John Citizen

Speaker Thaddeus
C. Sweet,
New York Assembly,
Albany, N. Y.

Dear Sir:

You have our heartiest congratulations on discovering the short cut to political uniformity. By preventing the Socialist assemblymen from taking their place as the chosen representatives of their constituents you did all that can be done under existing laws to prevent troublesome dissenting minorities from intervening in the affairs of government. We say "existing laws" because we do not doubt that you can devise legislation which will prevent these difficult questions from arising at all.

Let it be enacted that any political party which puts forth a platform adjudged by the majority to be "contrary to the best interests of the community" be barred from nominating candidates for office. This will give us the "short ballot" recommended by so many political reformers; not, as hitherto proposed, by reducing the number of elective offices but by reducing the number of rival candidates for each office. Instead of having to perplex his (or her) brain by conning over the claims of half a dozen parties the voter will save time and energy for more useful employments by simply casting a straight ticket for the nominees of the party in power. We believe that this method has already had the most remarkable results in Mexico and in many parts of Russia. Nor should anyone think that it unduly limits civic freedom, for the voter has always the alternative of voting or staying at home.

Other useful laws might be suggested; such as a new definition of freedom of speech and of the press: "saying or writing anything which is in complete conformity with the best interests of the community." Liberty, as ancient inquisitors pointed out, means permission to do what is right and must not be confounded with license, which means doing what one pleases. To permit anyone to do, say or think erroneously is no better than tolerating heretics!

We have but one word of caution. In debarring Socialists from taking part in political life you should be watchful that they do not take to non-political methods. All educators know that if you do not give a boy some relatively harmless outlet for his energies he is

From a Cartoon by Thomas in Detroit News

John Citizen

apt to get into serious mischief. Americans have had the ballot and have become the most conservative people on the face of the earth, for they had nobody but themselves to blame when things went wrong. But the energy which was here dispersed was bottled up in some European Empires and the results have not been encouraging. Denied a vote the Russians took to bombs. It is true that the bombs were less effective, but they were noisier and the primitive mentality of the average revolutionist prefers noise to

legal reforms. Should we pander to their childish whim?

Admiringly yours,

JOHN CITIZEN.

Senator Henry Cabot Lodge,
Washington, D. C.

Dear Senator:

To most of your colleagues we would give the advice to look forward to the future rather than merit the fate of Lot's wife by gazing continually in the direction of the year 1800, when national isolation was possible and perhaps desirable. But we do not believe that you favor surrounding America with a Chinese wall or wish with Jefferson that the Atlantic were a lake of fire. As a man of culture, acquainted with the diplomatic realities of the modern world, associated with the vigorous foreign policy of the late President Roosevelt, you know as well as anyone that all living nations are dependent on each other and that an injury to one is harm to all.

We ask you, therefore, rather to forget the future, especially the coming November, and look toward the past, a very recent past. Have you forgotten the early days of the Great War when, to your great honor, you urged the United States to forget isolation and neutrality and become an integral part of the Great Coalition which vanquished Germany? We heard nothing from you then about abstaining from international complications or European influences. To save France and Belgium, to save the cause of our civilization, to save the honor of America you bade us *care* what happened across the sea. We cannot, even at your bidding, unlearn the lesson which you then taught us.

But our work is done. Is Europe then so secure? Were you not a little disquieted when Germany followed the

rejection of the Treaty in the Senate by refusing reparation for Scapa Flow? If we do not guarantee the rights of small nations by such methods as are indicated in the Covenant there may be new ultimatums to Serbia and fresh invasions of Belgium. That we should once again, in such a case, come to the aid of the oppressed is probable. But an oppressor will always take a gambler's chance that there will be no interference; it is only *certainty* which stays his hand. Think it over.

Sorrowfully yours,
JOHN CITIZEN.

Governor Edward I. Edwards,
New Jersey.

Dear Governor:

After congratulating you on taking office and wishing you a successful administration, we should like to make a brief comment on the policy which you have placed in the forefront of your program. We refer, of course, to the nullification of the eighteenth amendment to the Federal Constitution.

We do not here contest your views on the harmlessness of wine and beer, still less your right to hold such views. We admit that you speak for a large body of opinion in your State in advancing them. The questions of constitutionality which you have raised must be left to the courts to decide; tho it is a little hard for us to see how an amendment to the Constitution, if regularly enacted, can itself be unconstitutional. But the proposal to evade a constitutional provision by enacting local laws which run counter to its spirit and probably to its letter stands on another footing altogether.

Such doctrines were fashionable in the days of the late Senator Calhoun of South Carolina, but they seem a little out of place in twentieth century New Jersey. The power of the Federal Government is still restricted to the limits of the Constitution, but within those limits—and the eighteenth amendment is, for the present at least, a part of the Constitution—the Government acts freely. State sovereignty has legal safeguards, but it no longer is fenced by religious taboos. The voted will of more than two-thirds of both Houses of Congress and forty-five State Legislatures is not to be evaded by the ingenuity of a single Governor. You are but encouraging Congress to adopt more drastic laws and the administration to take more arbitrary measures if the authorities of your State fail to cooperate in good faith in enforcing the law of the land.

Sincerely yours,
JOHN CITIZEN.

Any Presidential Candidate,
Anywhere.

Dear Sir:

If you can get rid of your friends' idea that you are a "second Lincoln" or a "second Roosevelt" you may make a very good First Mr. Smith. Originality is the sincerest form of imitation.

Yours truly,
JOHN CITIZEN.

No more dragging the stair carpet out on the porch and laboriously beating it to the disgust of the neighbors and in defiance of the law

Getting the dust and dirt out of the stair carpet and from all corners and cracks is no work at all with the easy stroking of the ARCO WAND Cleaning Tool.

Easy stair cleaning!

An ARCO WAND Vacuum Cleaner makes this household work not only easy but quickly and thoroughly done. The above illustrations are not exaggerated, for cleaning any carpets, and rugs the ARCO WAND way prolongs their life and removes all dust, grit, and dirt without fatigue or waste of time.

ARCO WAND VACUUM CLEANER

No beating, bending or straining—this splendid cleaner does all of the work—noiselessly!

A light, stroking motion of the ARCO WAND cleaning tool takes out all dust, grit, and lint and pipes it away into the sealed dust bucket of the machine. Rugs, carpets, upholstery, mattresses, pillows, clothes, shelves, corners, and mouldings are quickly cleaned without the drudgery of old-fashioned broom and duster work. All the dust is piped away — you do not rehandle it, as in clumsy portable cleaners. The ARCO WAND is noiseless in operation.

BUY ON EASY PAYMENTS IF YOU WISH

See your dealer today about an ARCO WAND for your home. Easily installed in old buildings. Made in sizes for apartments, clubs, factories, hotels, and public and private institutions.

762 Harrison Avenue Kankakee, Illinois
Dodson Sparrow Trap guaranteed to rid your community of these quarrelsome pests. Price \$7.00.

Spring Will Bring the Birds

A Dodson House Will Attract and Keep Them—But, Important—

Erect them now so they may weather. While they are scientifically built to overcome the little peculiar features to which the birds object, an appearance of newness sometimes intimidates the little feathered fellows, and they abhor fresh paint. Erected now they will weather blending into the foliage, and inviting immediate habitation. The first step to beautify your grounds is the erecting of Dodson bird houses—as important as planting trees and shrubs. The trees and shrubs will thrive when protected by our native song birds. They are invaluable for destroying insectivorous pests—and their beauty and song lend a finishing touch to Nature's brush.

Free Bird Book sent on request, illustrating Dodson line, giving prices; also beautiful colored bird picture free.

DREER'S 1920 GARDEN BOOK

Not only the most dependable guide for the flower lover and the vegetable grower, but the most complete catalogue in America.

Everything worth growing is listed—the really meritorious novelties as well as the tried and true varieties that have stood the test of years.

Selected strains are offered in practically every vegetable and flower. Special departments devoted to Gladioli, Cannas, Dahlias, Roses; and many pages to Perennials, of which we are the largest growers in America. 224 pages, 6 color plates and hundreds of photographic reproductions of Vegetables, Flowers, Aquatics, Small Fruits and Garden Requisites.

A copy will be mailed free if you mention this publication.

On the market 10 years.

"It's Not Our Funeral!"

(Continued from page 201)

published in 1918, explains their program: "The program of the Communist party is the program not only of the liberation of the proletariat of one country. It is the program of the liberation of the proletariat of all countries, because it is the program of international revolution. The overthrow of Imperialist governments by means of armed revolt is the road to international dictatorship of the working-class."

Trotsky himself has with authority explained the object and purpose of the Bolshevik movement. He says:

The war has undermined the foundations of the entire capitalist world, and in this lies our invincible strength. The Imperialist ring, which is choking us, will be broken by a proletarian revolution. We no more doubt this for one moment than we ever doubted the final downfall of Tzardom during the long decades of our underground work. To struggle, to close our ranks, to establish discipline of labor and a Socialist order, to increase the productivity of labor, and not to be balked by any obstacle, such is our watchword. History is working for us. A proletarian revolution in Europe and America will break out sooner or later, and it will free the whole of suffering humanity.

Trotsky goes on to observe:

In Russia the propertied classes, altho forcibly removed from power, refuse to give up their positions without a fight. The revolution has raised in an acute form the question of private property in land and the means of production, that is, the question of the life and death of the exploiting classes.

The same phenomenon may some day be witnessed in the rest of the world if the Bolshevik movement overflows the boundaries of Russia. The propertied classes elsewhere may refuse to give up their position without a fight. At any rate in Russia a very large part of the Russian people ranged themselves on the side of Denikin, Kolchak and Yudenitch. There is no possible excuse for pretending that these armies represent the forces of reaction, of Tzardom. Admiral Kolchak has over and over again defined the outlines of his political program. When he accepted power from the Council of Ministers in Siberia he said:

I declare to the population that I will follow neither the road of reaction nor the disastrous way of party politics. My chief aims are the creation of a strong fighting army, victory over Bolshevism, and the establishment of law and order founded on right. This will enable the nation to choose freely the sort of government it prefers and to realize the great ideals of freedom now proclaimed thruout the whole world.

In a further speech in February he said:

In the Russia that is to be only a democratic regime is possible. The main task of the Government is to establish universal suffrage in the sphere of democratic self-government and thoroly progressive legislation in the sphere of labor and agrarian questions.

The aim of Kolchak's Government in his own words is "to secure for the Russian people an opportunity, with-

out violence from any party, freely to declare its will thru a Constituent Assembly," and he has given entirely satisfactory pledges to this effect to the Allied Governments.

The Volunteer Army of Southern Russia is now under the command of Denikin, and its aims have been defined by its leader in the following words:

The Volunteer Army cannot become a weapon for one or another political party or public organization. Then it would cease to be Russia's State Army. The army will never try to restrain other people's thoughts and consciences. The army says to you simply and honestly: "Whether you belong to the Left or the Right, love your tortured native land and help to save her."

The Administration to which his army is attached represents all shades of political opinion. Its main lines of policy, as published in the *Times* on the fifth of May, are the following:

- (1) Abolition of Bolshevik anarchy and institution of law and order.
- (2) Reconstruction of a powerful, united and indivisible Russia.
- (3) Convocation of a People's Assembly based on universal suffrage.
- (4) Decentralization by means of wide regional autonomy and liberal local self-government.
- (5) Guarantee of full civil and general freedom.
- (6) Immediate agrarian reforms with a view to meeting demands for land by the working classes.
- (7) Immediate labor legislation, securing the working classes from exploitation by the Government or by capitalists.

Unfortunately the working classes in all countries in Europe are entirely ignorant of the plain facts which I have briefly summarized with regard to Russia. On the subject of Bolshevik atrocities I shall not speak as these are matters on which controversy is at present inevitable. On the broad facts which I have outlined there is no room for dispute. But the British working man is largely convinced that Bolshevism is merely a Russian word for democracy, and that its opponents in Russia and out of it are necessarily reactionaries without sympathy for the working man. Indeed, the Allied Governments and the British Government are undoubtedly in a very difficult position in dealing with the Russian problem. They are anxious, and keenly anxious, that peace should be restored. As I write, there comes a rumor that by way of compromise they will, while refusing to negotiate with the Bolshevik Government, withhold all further assistance from the anti-Bolshevik forces. Whether this rumor is correct or not, I do not know. If the Bolshevik State should emerge victorious from the present civil war in Russia a situation would arise which, if we were not personally concerned, would be of the utmost interest; we should have a spectacle of a planet in which two forms of government based upon entirely contradictory principles were established side by side—the democracies of the West, the government of the people by the people, re-

specting property as a legitimate institution, and the new anti democratic form of Russian government, the dictatorship of a class basing itself upon military force, denying civil rights to all classes of the people other than laborers, and in essence denying the right of any man, except in a limited degree, to the possession of private property. The complete restoration of peace with Bolshevik Russia must necessarily mean the free interchange of thought between the exponents of these antagonistic ideals. Such a state of things could hardly remain static. So far as one can judge at present the propagandist ability of the Bolshevik creed is at a far higher level than the propagandist ability of the Western governments, which at present have not even succeeded in explaining to their own peoples what Bolshevism really is.

At the present time, in every country of the world a fierce spirit of unrest is manifesting itself in strikes and industrial disorder. I cannot help thinking that the recognition of a Bolshevik Government in Russia would be represented to the proletariat of all countries as a recognition of the anarchic and immoral theories upon which the Bolshevik ideal of government is based. It would open the flood gates to a tidal revolutionary propaganda which some of the governments at the present time of great economic crisis are singularly unready to meet and combat.

CHAMBERLIN METAL WEATHER STRIPS

"THE STANDARD FOR 26 YEARS"

UNEVEN HEAT

Cause of Ill Health

Unprotected doors and windows are a continual menace to the health and comfort of your family.

Icy currents of air sift in around the cracks, making it impossible to heat your home evenly—it's too cold in one spot, too hot in another.

Chamberlin Metal Weather Strips effectively stop these dangerous draughts. Your house is evenly heated at a considerable saving.

And they shut out dampness, germ-laden dust and dirt—the house stays clean longer.

They are installed by expert Chamberlin Weather Strip mechanics—a service maintained by the Chamberlin Company thru branches located in all parts of the country. This also insures immediate capable attention should your weather strip need minor adjustments.

For 26 years Chamberlin Metal Weather Strips have been the standard. Simple in design—they last indefinitely—in fact we guarantee them unlimitedly.

85 per cent of all houses now weather stripped are Chamberlin equipped. This preference is your assurance of complete and lasting weather strip service.

Let us send you our booklet "26 Years of Weatherstripping," containing interesting information for home owners

Chamberlin Metal Weather Strip Company
119 Dinan Building, Detroit, Mich.

The left diagram shows uneven heat distribution caused by draughts and air currents sifting in thru unprotected doors and windows. Also loss of heat on lee side of house thru same channels. On the right the diagram shows even temperature thruout—the result of Chamberlin Metal Weather Strips.

RUTHERFORD, NEW JERSEY

TWENTY ACRES AND PLENTY

Now is the day of the dissolving dollar and the diminished dinner. Each month we pay more for what we eat, and eat less for what we pay. Normal conditions will come back when more of us get back to the land. Our furrows of care will disappear when we begin to turn more furrows in the soil.

The dollar of today is worth just about half as much as in 1914. While inflation and other effects of the war have greatly reduced the purchasing power of the dollar, this condition will not endure. If you buy good land now with depreciated dollars, your principal will be repaid later in dollars having a normal purchasing power, and in addition you will profit by increased land values. Thus, you will gain both by the prevailing low prices of land, and the temporary low purchasing power of the dollar.

In this day of unrest, the safe investor puts his money in LAND. It cannot burn up or blow away—it is panic-proof. Good agricultural land is the foundation of all lasting prosperity. Get an income producing home and you will have a steady income. You can do it by taking advantage of our liberal terms. We will improve your land for you on our fair and equitable *ten-per-cent-above-cost plan*.

Less than ten per cent of the good productive lands in Florida are under cultivation. Until recently, the mistaken idea that Florida is hot in summer has kept many desirable settlers away. But they are coming now—thousands strong. Settlers, farmers, stockmen, fruit growers, truck gardeners, home-seekers from every state in the Union—and Canada. They want Florida land while it can yet be had at reasonable prices. Those who wait too long will find this land quoted at \$200 to \$500 per acre in the next few years.

California passed through just such a stage. Today, wild lands available for citrus culture, are sold at \$500 to \$700 per acre, and little left at that figure.

Last year gardeners in Orange and nearby counties in Florida cleared over \$1,000 per acre on truck crops. Orange and grape fruit groves sold last fall as high as \$1,000 to \$3,000 per acre. Individual grove owners clear as high as \$1,000 to \$1,500 an acre on the sale of fruit.

All you need is a moderate amount of money and a fair knowledge of farming. Send for our Big Free Book—"TWENTY ACRES AND PLENTY." It tells about our easy monthly payments, sick and out-of-work clauses and free insurance features. Address **Sylvester E. Wilson, Dept. "G," Orlando, Florida.**

LEARN FROM ADVERTISING

THE main thing an advertiser wants to do is to tell you plainly just how and why his goods are worthy of your consideration. You can learn a great deal from that alone, because many things you see advertised are the things you buy and use in your regular daily life. By reading the advertisements, you can learn the names and read descriptions of the things that are best and most satisfactory.

One Day in a Coal Mine

(Continued from page 196)

that we've got to have ninety cars by noon."

More shoveling. That shovel didn't seem heavy when Boss Waple handed it to me early in the morning. Now it felt like a good sized log.

"Hear that grinding noise?" asked Cheatham. "That's Joe Bell over near the old work. Listen, I'll signal him."

Sharp taps on the solid wall of coal with the flat side of his pick. Then back came answering taps from Joe, altho thousands of tons of unmined coal lay between us. Wonderful the way sound will carry thru so much coal and stone deep down in the earth.

"That Joe Bell can hog more coal than any man I ever saw," said Cheatham. "He shoots off the solid. Doesn't follow the machine. He has been averaging better than six dollars a day, and he gets in over three hundred days in the year."

Then Repp and Mary rolled away with the thirteenth car. We noticed that the roar of the machine in the next entry had stopped.

"Wonder if it's noon?" said Cheatham. "My watch has stopped and I guess I'd better go down the entry and find out the time."

He disappeared around the first turn to the right. Silence and then sudden darkness. My lamp had gone out. The silence of seven Egyptian tombs and darkness so thick you could cut it with a pick. Overhead, eighteen inches of slate; above that, 190 feet of Kentucky earth pressing down—and nothing pushing up. What if Beaut, our town's 350 pound colored bootblack, were to slip on the ice? Why, there would be a Widow Harris, of course; and perhaps a few trillion years in the future geologists of a new human race would dig up my skeleton and reveal to the world the framework of a prehistoric creature that broke coal with a pick and loaded little cars with a shovel. Cheatham had said that if the slate cracked—and it always cracks before it falls—the obviously wise thing to do is to run. Which way did he say run? How can a fellow run in the dark? Then I put my mind off the danger. I wondered if the bookkeeper would pay the printers tomorrow. Who would put the cat out tonight? Would the day ever end? Already I had been down there a mighty long time. Had everybody forgotten me, including Cheatham? And gosh, I was getting hungry. I could have eaten a whole side of bacon or a leg of mutton. Then—

I heard the rumbling of the car as it turned down our entry. The beloved ears of Mary loomed out of the darkness.

"Whoa, you durned mule; not so fast. You're haulin' a lady this trip." Johnny Repp was admonishing Mary.

It was the Missus bringing me something to eat.

"I brought plenty," she said, "so that you could divide with some of the boys." Women are always generous when they are filling lunch baskets.

Divide? Not on your great-grand-

father's crayon portrait! I had reverted to type. I'd divide nothin' with nobody—except Mary, bless her mulish heart. I fed her pie with my fork. Mary is democratic; she did not mind eating after me, and I split fifty-fifty on the pie. It was the first pie Mary had ever eaten, and she looked a thousand thanks with her eyes.

During my repast Friend Wife sat on a lump of coal and took in the "atmosphere" of the place. She suggested that I tip Johnny half a dollar for bringing her in with my lunch.

"Not if I can help it," I replied. "Gosh, that's pay for digging a ton of coal. . . . Think of the tons of coal I've spent buying my hat back from Little Bright Eyes at the hotel check room."

As Mary licked her lips over the last bite of pie I picked up the shovel and cranked up again. Cheatham set up a jack and began boring for shots. Again the roar of the big machine in another entry, the rumble of cars along the rusty track, endless streams of profanity and mule talk as Johnny pulls out the loaded cars and returns the empties.

"Come on with that coal," Johnny commanded. "Nicholson will crab if we don't make two hundred cars today." (He meant the whole mine force must get out 200 cars.) Cheatham and I were on our nineteenth car.

"One more will make ten apiece for us," said I.

"Nothin' doin'," said Cheatham. "The coal's all out."

"And I'm all in."

"Look out, here comes the devil."

The devil is the pet name for the big machine that cuts the coal. It is a monster—a weird combination of cogs, wheels and cutting knives, and a motor. It weighs several tons. It travels on the mine tracks, by its own power. It was headed for our entry to cut coal for tomorrow's run.

"Get this damn rubbish out of the way."

We needed no second invitation to move on with our picks, shovels and faithful crowbar, which tools we left at Cheatham's tool box. Thence to the shaft, and up to the face of Mother Earth, where a shower bath in the mine wash room removed the traces of honest toil. Then to the office to be told that I had mined nine tons of coal, which labor had netted me \$5.27. On top of that sum I may some day get fourteen per cent assured by the armistice brought about by the Government, and my grandchildren may get the extra money which may come from the new commission's compromise.

What had I learned from my day in a coal mine?

That the old joke, 'A strong back and a weak mind for a coal miner,' is a long way from being a joke.

That coal mining is hard work.

But that there is worse paid work, and worse places to work than in a coal mine.

That miners seldom change to other

occupations. Once a miner, always a miner.

That the time has not yet arrived for a six-hour day in a coal mine. Too much lost motion and too much waiting for empties.

That the coal industry needs to be reorganized and systematized so that miners will be insured steady work.

That a greenhorn can mine coal, tho it is better at the start for him to be hitched up with a veteran like Cheat-ham.

That the more I see of labor agitators, the more I think of Mary, the mine mule.

Henderson, Ky.

Stories of State

(Continued from page 203)

connected with the welfare, happiness and safety of the American people and the adjustment of the troubles of a battle-torn and war-sick world.

This is in brief the story of what the Department of State did during the period ending with the signing of the Treaty of Peace. It was, during that period, the nerve center of the Government in its most important activities—which were its foreign activities. The United States will never return to its old isolation; the war has made that impossible. Consequently the State Department has a new and most important place in the permanent organization of our Government. It is now rendering great service to American industries and the people, and is preparing by a reorganization along new lines to render even greater service.

During the war the submarine restricted commercial activities on the sea to certain well defined latitudes. Most of the world's tonnage was concentrated in the North Atlantic, operating for belligerent purposes. The signing of the armistice, however, reopened trade routes thruout the world and since that time commerce has tended to proceed along the natural lanes.

The consular officials of the United States, who are the representatives of the Government for trade purposes, have again become busy with commercial rather than political activities. They are collecting and sending to the Department a vast amount of information on the needs of the localities in which they are stationed. To properly digest this information and treat it from a scientific point of view has necessitated the creation of a corps of experts on finance and economics, capable of analyzing and correlating it and making it available to American business concerns.

This in itself is a large undertaking and one of very great importance. It has for its object the furthering of the interests of American business by opening new markets abroad and by building up those which already exist in order that American industry may find the outlet necessary for the continuation of manufacture and the continuous employment of labor.

Washington, D. C.

Simplify Your Shaving

A New Way to Soften the Beard

Slow, bothersome processes are done away with by Shavaid. It softens the beard instantly. It soothes and protects the skin. It does away with hot towels and rubbing in. After-shaving lotions are unnecessary. A great scientific laboratory offers you a Free Trial Tube.

THE actual process of shaving is simple. It is the preparation that takes the time, that makes it an irksome task for many men.

Shavaid frees you from this bothersome rubbing in. It softens the beard instantly. Instead of making the skin more tender, as hot water and rubbing do, it soothes, heals, protects.

Harsh Methods Unnecessary

Hot water applications before shaving should be avoided, as skin specialists agree. Hot water brings the blood to the surface at the wrong time. It causes that dry, drawn feeling. It brings wrinkles too soon.

By using Shavaid, you can do away with hot water applications and after-lotions. Shavaid keeps the skin firm and smooth—the pores remain normal. You can shave closer, without the usual abrasions and frequent use of the caustic stick.

The Simpler Way

Just apply a small quantity of Shavaid to the dry beard. Then apply your favorite lather.

Shavaid

Softens the beard instantly

—apply to dry face before the lather.

Saves time and trouble

—no hot water, no “rubbing in” of the lather.

Protects the face

—skin remains firm and smooth.

Removes the razor “pull”

—harsh ways age the skin prematurely.

Replaces after-lotions

—Shavaid is a cooling, soothing balm.

But there is no need to rub the lather in. Shavaid works better if the lather is merely spread on. Then shave with comfort, new ease. Note how Shavaid has softened the beard quickly. Note the time you save.

The razor does not “pull.” It “takes hold,” because the hairs have been properly prepared. The face feels velvety and soft. The coating of Shavaid not only softens the beard, but acts as a complete and scientific balm for the skin.

Even if you shave close, there is no smarting, no “drawn” feeling. Shavaid is in itself a cooling, soothing, healing emollient.

Try the New Way

Until you try Shavaid for yourself, you cannot be convinced. That is why we offer you a Trial Tube, at our expense. Just fill in the coupon and mail it. When your Free Trial Tube comes, abandon old ways and try the new way. You will be convinced.

After you have used up the Free Trial Tube, you can get Shavaid from your druggist at 50 cents a tube. Or, if he cannot supply you, we will be pleased to fill your order direct.

Making Alcohol Our Benefactor

(Continued from page 199)

business and taken the largest share of the profits, has never been the gainer by it on the whole. Every bottle of whisky is a prize package and you can never tell what it contains. Possibly a statistician might figure out that in a thousand bottles of whisky there is on the average one crime, five misdemeanors and fifty follies. The Government has doubtless had to expend more than it got out of the liquor business in providing extra accommodations in jails, almshouses and insane asylums and in making up for the lessening of national efficiency due to drink.

So we need not worry about the loss of revenue to the Government for that will be more than compensated by the increase of taxable wealth and savings. As for the stocks on hand they need not be a total loss. Medicine will require some of the liquor. Part of the wine may be sold for sacramental purposes for a majority of the Christians of the world believe that their souls are not safe unless they occasionally imbibe a wine of not less than seven per cent alcohol. As an old toper in my town used to say: "The preachers may fool you temperance people but don't think you can fool the blessed Jesus on raisin juice."

Something may be made of the unsalable beer by distilling off the alcohol in excess of 2.75, 1, .5 or whatever per cent may be allowed and selling the rest as baby beer. But I anticipate that the taste for such substitutes will die out for I cannot conceive of anyone's liking to drink beer except for the alcohol in it.

But we are just at the beginning of a new era, the Alcohol Age, when the Demon Rum, who has for thousands of years tyrannized over man by ministering to his pleasure, will become man's servant and do his work. During the next twenty years every effort will be made by scientists, inventors, manufacturers and governments to discover sources of cheap and abundant alcohol. The boom started during the war on account of the demand for alcohol for munition purposes. As Mr. Kressmann of the U. S. Forest Products Laboratory at Madison said in 1916:

The ethyl alcohol business is enjoying an unprecedented prosperity and many old distilleries that had not operated in years are working at full capacity and several very large new distilleries have been built. In fact, the industry was contracted up to such an extent that an order for 2,000,000 gallons of 95 per cent alcohol for immediate regular delivery went begging for some time.

Under this stimulus the production of denatured alcohol jumped from 10,000,000 gallons a year to more than 30,000,000 and attention was directed to processes that hitherto had not been profitable such as alcohol from wood. It is a Freshman laboratory stunt to make alcohol out of an old shirt or a handful of sawdust, but ventures in large scale production have never been

successful. But it seems a promising field, for the Forest Products Laboratory figures out that one ton of sawdust will yield from fifteen to twenty-five gallons of 190 proof spirit and the raw material cost only two cents a gallon as compared with 20 cents a gallon for material when molasses is used and 30 cents when spoiled grain is used. The cellulose of the wood is first converted over to sugar by digesting with dilute acid and after neutralizing the acid with limestone the syrup is fermented by yeast and the alcohol distilled off.

The alcohol so made from wood is not "wood alcohol." The distinction is important. Thru ignorance of this little point in chemistry seventy-two persons near New York lost their lives a few weeks ago. The chemist calls many things acid that other people would not, for instance all the sugars and glycerins are alcohols in the chemical sense. But of the hundreds of alcohols that the chemist knows only two are of interest to the public. These are called by pretty harmless names as tho they were characters out of Maeterlinck's "Blue Bird," such as "methyl" and "ethyl." The former is also known as "wood alcohol" and the latter as "grain alcohol," but these names are misleading, for both can be made from either wood or grain. The former, methyl alcohol, is the more harmless to humanity because it is the more poisonous. The fact that anyone drinking methyl or "wood" alcohol is straightway killed or struck blind will always prevent its becoming permanently popular as a beverage. The other one, ethyl alcohol, is slower and more insidious and consequently has more fatalities to its account, not counting minor misdemeanors.

Methyl or wood alcohol when purified cannot be distinguished by looks, taste or smell from ordinary ethyl alcohol, but is so poisonous that half a glassful will in sixty to seventy-five per cent of the cases cause speedy death or permanent blindness. This is a higher percentage of fatalities than in cases of poisoning by arsenic or mercury chloride. Even so small a quantity as two teaspoonfuls is sometimes fatal.

It is ethyl alcohol that constitutes the attraction of all wines, beers and liquors. Ten per cent or so of methyl alcohol added to ethyl alcohol is supposed to make it undrinkable and it may then be sold free of government tax as "denatured alcohol." Both alcohols are good for fuel. Methyl alcohol can be made by the destructive distillation of any woody substance. It forms part of the fumes that are given off from a charcoal oven. Ethyl alcohol can be made by the fermentation of any sugary substance.

But the alcohols can be made in various other ways and probably some of these will be extensively utilized in the future. The newspapers report that an English engineer has worked out a process for making alcohol from coal and claims that Great Britain will be able

to get 50,000,000 gallons of motor spirits from this source annually and be independent of gasoline. Alcohol can be easily made from acetylene gas and this from calcium carbide and this from lime and coke so we can if we like eliminate the vegetable stage altogether and utilize waste waterfalls. New patents are reported every week for making alcohol from such material as cactus plants, acorns, horse chestnuts, weeds, garbage, spoiled potatoes and rice. Any kind of grain and any kind of fruit can be used, whatever is cheapest and easiest to handle. We may see in the future immense tracts of tropical or semi-tropical territory devoted to some fast-growing sacchariferous vegetation which will be frequently harvested by alcoholic machinery and set to ferment in acre-wide vats. As a fuel for the internal combustion engine alcohol is a close rival of gasoline. It is not so easy to ignite as gasoline, but may be made to produce quite as much power per pound. Alcohol has the further advantage of being less dangerous to store and handle and an alcohol fire, unlike a gasoline fire, may be put out by water.

We must anyhow hunt up some liquid fuel that we can produce as we consume, either alcohol or some other, for the stock of combustible that we had in the cellar is being rapidly exhausted.

If He Were President

(Continued from page 198)

him as an advocate of preparedness, presume preparedness engenders war, and, as Mr. Gerard insists, are intent upon seeing that we have had an end of war; and when it is axiomatic among them—among their leaders at least—that the candidate they vote for shall be, as General Wood is not and as Colonel Roosevelt was, on the honor roll of the men who helped them attain their enfranchisement?

But suppose, since one man writes this and there will be (the figures are for 1910) twenty-four millions of women and twenty-six millions of men of voting age, that General Wood is nominated, despite any particular love the Old Guard and other business men have for him, and duly elected:

He would be the twenty-eighth President and the fourteenth soldier or war veteran.

As was pointed out in this series anent General Pershing, our major national problems are so far from being military ones that there is no more logical reason to suppose that a great soldier would make a great President than that a great President need know how to drill a regiment.

If this big conclusion holds, then proof of the excellence of President Wood needs to consist in large part of proof that he isn't a soldier, or is more than a soldier.

He is a soldier! By common reputation, in the Army and out, and, it may be judged, in foreign armies, too, he is a very exceptional soldier—not a West Pointer, moreover, as those who didn't get their training on the Hudson, proudly adduce! His origination of the

Bubble Grains At Bedtime

Foods Easy to Digest

Puffed Wheat and Puffed Rice are not for breakfasts only. Serve them for luncheons and suppers. Float in every bowl of milk.

These are bubble grains, airy, crisp and toasted, puffed to eight times normal size. No other dainty in existence makes the milk dish so enticing.

Every Food Cell Blasted

Consider Puffed Wheat. Here is whole wheat made delightful, both in texture and in taste.

Under Prof. Anderson's process, every food cell is exploded. Digestion is made easy and complete.

It supplies whole-wheat nutrition. It does not tax the stomach. It makes milk inviting, and every child should drink a pint a day.

Serve as a breakfast dainty. Mix with your fruits. But don't forget that Puffed Grains also form the ideal bedtime dish.

Puffed Grains are the greatest of grain foods and the most enticing. Serve all three kinds. Let children revel in them.

**Puffed
Wheat**

**Puffed
Rice**

**Corn
Puffs**

Also Puffed Rice Pancake Flour

A New Pancake Delight

Now we make a pancake flour mixed with ground Puffed Rice. It makes fluffy pancakes with a nut-like taste—the finest pancakes ever served. The flour is self-raising. Simply add milk or water. Ask your grocer for Puffed Rice Pancake Flour and you'll have a new delight.

The Quaker Oats Company

Sole Makers

Suppose there were no more advertisements

Just imagine for a minute that some power could stop all advertising. How would that affect you?

It would cut you off from all direct, commercial news about things that you need and use in your everyday life. Somebody might be selling a new, better, more economical food; or a utensil that would save money and time; or an article that would add greatly to your comfort and well-being; or some better material for making shoes or clothing—but you would never know it.

Manufacturers would be unable to tell you about new and better things. They would thus find it hard to put these things on the market, and often would not try.

"It pays to advertise." And advertising pays not only the advertiser and publisher, but *pays you too*. It keeps you informed about the things you need in order to live a profitable, happy and useful life in this age of progress.

No. 9

Plattsburg idea, which was adopted by the War Department and extended far and wide, of itself is sufficient to establish him high in military annals. His fight—it was a fight!—for military preparedness, which is the bayonet point of industrial and other kinds of preparedness for war, will always stand, in the history of American arms, to his vast credit. So, too, will virtually all of his career as a soldier, from the day that he arrived, "the young Army contract doctor from Harvard Medical," at Huachuca, Arizona, in 1885, and was sent "hot-footing" with the Fourth Cavalry on a 2,000-mile chase that caught up with and captured Geronimo—from that day to the day not eight months later, when he was given the Congressional Medal of Honor, and from then to the time he made his reputation as Colonel of the Rough Riders, then was made Governor-General of Cuba, then Chief of Staff, and then on, to date. Conclusively, he is a soldier!

More than a soldier!

As Governor-General of Cuba he had to feed, fumigate and educate to self-government 2,406,117 natives complicated atop 44,164 square miles—a little less than the area of Louisiana or Pennsylvania. In doing that he had, of course, neither the personnel nor the facilities that one would have at hand now in feeding, fumigating and educating either of the states mentioned, were that necessary.

He had to employ force, and he has that in abundance.

He had to employ patience, which he has not in so great abundance.

He had to employ resourcefulness and vast energy, which he has in good store.

Courage, too.

Intelligence, of course, imagination, and ability to understand men and to pick subordinates.

His use of these attributes, plus his capacity for plan, marked him as an effective administrator, and much more than a soldier merely—and so does his present machine—"a machine" says Senator Moses, "whose belts do not slip, and whose gears run smoothly—a machine which neither squeaks, nor breaks down, but which delivers the goods."

We can only conclude that his success as Governor-General of Cuba, wellnigh a generation ago, might "indicate" his success as President of the United States, if he were elected President.

He is an omnivorous worker, reader and student. One can only conjecture, then, the fullness of his knowledge of international exchange, the intricacies of international trade, of big economic factors on whose operations no one can close the door; of the high cost of living, of legislation anent big business; of labor questions, and industrial questions, of farming, of the problems resulting from the enfranchisement of women. In other words, he has gone on record in detailed relation to only three major themes: Preparedness, Radicalism and Americanism.

Washington, D. C.

STRONG NERVES

Is what you need to endure the "Mile a Minute Life" of today, with its worry, grief, strife, business pressure and thousands of other Nerve Strains.

Are you tired and depressed? Can't you sleep or digest your food? It's your NERVES—they have become exhausted.

READ THE BOOK **NERVE FORCE**

This valuable 64 page book explains every possible phase of nerve abuse and teaches how to calm, soothe and care for the nerves. It contains hundreds of health hints especially valuable to people with high-strung nerves.

The Cost is only **25c** (Coin or Stamps) **Bound in Cloth 50c**

If after reading this book you do not agree that it will mark the turning point in your life toward GREATER POWER, Mentally as well as Physically, your money will be refunded without question, plus your outlay for postage.

PAUL VON BOECKMANN Studio 234, 110 West 40th St., New York

One Thing Which War Has Cheapened

By the Bachelor Maid

WHEN I contemplate my sixteen-dollar shoes, or lubricate my corn-bread (sparingly) with eighty-cent butter; when my weekly settlement with my "wash-lady" depletes my purse to precisely twice the old-time extent for the same amount of clean raiment, it ought to be a joyous thought to me that I have discovered, and in my own immediate field, one thing which War's hand has touched and left us cheaper. But it is not. This may be because I am temperamentally a crêpe-hanger, altho I have never heard that I enjoy that reputation. Somebody did once have the temerity to say, however, that somebody else said that I was an active disseminator of the Gospel of the Useless, and since his definition of the "Useless" was, in substance, the education of the *mind*, I could not but plead guilty; so it may be my somewhat too ardent belief in that unpopular cause which now renders me indisposed to hurrah over my discovery that since at least 1915 the educational ideals of my native land have cheapened as appallingly as eggs have "riz."

Of course, the marking-down process had begun a long time before, but the war has not only hastened the reduction and made it general, but has served as a more than full-page advertisement of the bargain-counter values in the educational plans now being offered on every hand under the label "Reconstruction." It would be an infinite pity were we to make no use of the war-inspired discoveries both of our shortcomings and our hitherto unguessed capabilities; but I cannot but think that the awakened conscience in Education is concentrated mostly upon the shortcomings, and that the plans most heralded for overcoming the same are based upon such appalling revelations as that when Uncle Sam entered the war, thousands of us, his children, did not know how to knit. (I don't know how *yet*! But Richard redeemed the family honor by knitting a wash-cloth, altho I believe it never got to France, being turned down by the Red Cross inspector, so that perhaps he could have served his country as effectively by putting the time on the periphrastic conjugations.)

To drop figures of speech, there began to be, and still is, a great outcry that those unable to offer in some way the work of their *hands* to the great cause in which we had enlisted had reason to be bitterly humiliated, and that the source to which they might righteously trace the blame was their impractical and bookish schooling. The burden of the outcry was the same that the "practical education" votaries had been shrieking for years; but the war gave a sudden point to it, and many college graduates and other persons of culture were all at once pricked in their hearts and ready to spurn all that "cultural education" as filthy rags. Even certain college professors

wrote magazine articles (very clever they were, too, whether from the persistence of their discarded culture or from the injection of the new practical vigor) to prove that their Phi Beta Kappa keys stood for no real thing as compared with the bushels of potatoes dug by their erstwhile inefficient hands from various spots in their front lawns and their wives' flower gardens.

Naturally, the demands of the war did cause an unprecedented era of *making* things. It was a time when production of material, of every sort, was the supreme requisite for the achievement of an end which was perhaps as far from material as ever a nation has sought. Nobody has ever been disposed to question that requisite, I think; but what saddens me is that the material needs of a purely temporary condition should have so stamped themselves upon the national soul that it cannot be rid of the impression that we should conduct ourselves as if that were to be our condition forever afterward.

I doubt not that many will hasten to dispute my estimate of post-bellum educational values with fervid declarations that, contrary to my statements, we have been witnessing, since the moment we got our breath again after the armistice, a veritable educational revival, and they will cite, in support of their declarations, certain education bills and the actual epidemic of educational articles in our sundry periodicals. To which I would reply that what they cite is in no respect contrary to my contention; it is merely beside it. There is indeed a perhaps unprecedented stirring of interest in education. But to me the thing for which public desire is reaching out seems not of the right sort. The people generally feel about it as they do about milk and eggs—that it ought to be cheap and abundant. They fail to perceive that their so justifiable instinct in the one case has no justification in the other, and that eggs and education have nothing much in common beyond their initial letter. Because the war did reveal a shocking degree of illiteracy in certain hitherto unsuspected sections, a duly shocked public conscience is as eager as could be wished for a general dissemination of literacy, but it is almost equally shocking to note how sparingly that same public conscience is ready to permit the seeds of culture to be sown. How generally, too, it is hoping for a congressional distribution of seed varieties which will spring up quickly, and where there is no deepness of earth. The general idea is for an educational system that will *show results*—and that speedily. And the conclusions fallaciously drawn from premises presented by the war are responsible for that general idea. Actual illiteracy was not the only or even the greatest shock to our satisfaction with our former educational order. We had to ad-

Intelligent Selfishness

Capitalizing selfishness, which is inherent in all business, so that it *functions constructively*, and becomes "intelligent selfishness," is a matter of vital interest to every American business man. If you will read the book

Intelligent Selfishness A Business Builder

By Montague Ferry

and subscribe to the practical plan it presents, you will not only contribute to the further success of your own business, but you will be doing your part in a necessary reconstruction of American business.

"I heartily endorse the principle of which this book treats."

Deformities of the Back

Greatly benefited or entirely cured by the Philo Burt Method.

The 40,000 cases successfully treated in our experience of more than 18 years is absolute proof of this statement.

No matter how serious your deformity, no matter what treatments you have tried, think of the thousands of sufferers this method has made well and happy. We will prove the value of the Philo Burt Method in your own case.

The Philo Burt Appliance on 30 Days' Trial

Since you run no risk there is no reason why you should not accept our offer at once.

The photographs here show how light, cool, elastic and easily adjustable the Philo Burt Appliance is—how different from the old torturing plaster, leather or steel jackets. To weakened or deformed spines it brings almost immediate relief even in the most serious cases. You owe it to yourself to investigate it thoroughly. The price is within reach of all.

Send for our Free Book today and describe the nature and condition of your trouble as fully as possible so we can give you definite information.

PHILO BURT CO.

mit the discovery of serious defects among the lettered of our youth as well; few have had the discernment of President Hadley—to acknowledge no less seriousness in ignorance of laws of health, of reasoning straight than of shooting straight, of European languages than of English.

NO less a scholar than the venerable president emeritus of New England's other great university delivered, shortly after the signing of the armistice, an address which, despite its numerous wise counsels and noble sentiments, was, in its entirety, a plea for nothing in educational matter or method but the concrete, the physical and the material, and—if one dare to say it of so eminent a man—a series of fallacies whose premises were his pet educational aversions, "language, literature, philosophy, history and the elements of mathematics," whose conclusions were the resultant defects of the American recruit.

When such a man will say of persons trained predominantly in these subjects that "their habits of thought permit vagueness, obscurity and inaccuracy, and their spoken or written statements have these same defects," defects which he declares could be removed by giving "a considerable part of school time to the sciences and arts, and to the acquisition by every pupil of some skill of eye or hand or both," altho the experience of every high school and college classroom contradicts his statement, it is not strange that lesser educational "reformers" are encouraged in their similar clamor, and that the non-school-teaching public swallows such doctrine whole, and manifests all sorts of educational indigestion. Hence we read that this university president has declared that the war has shown the need of putting half the work of the professional schools down into the last two years of the college course; that that school superintendent has drawn from the war the lesson of more agriculture and chemistry in the high school—"we shall need it in our kitchens"; that some bellicose congressman predicts universal military training as the nation's sole salvation; that *everybody* feels it rankest treason to teach or speak any but the English language.

Perhaps there is no more pitiable display of our almost universal cheapness of reasoning than this last. And the stamped to acquire and exhibit this article labeled "Supreme Patriotism" has surpassed even the wildest rush for ladies' oxfords marked down to \$1.95. The casting out of German was a shoddy enough performance: the disposition which has followed it to "Americanize" by disregarding every other foreign language besides exhibits a flimsiness of national mental texture which makes it hard to deny that somewhere in our educational system there evidently have been grave defects. But in my judgment they have not been of a linguistic, literary, philosophical or mathematical ancestry. Rather have they come from our les-

Beat the High Cost of Living

Today, with its almost daily increases in the cost of food, clothing and other necessities, you need to handle your finances on the budget plan.

Read "How Spending \$3 Ended Their Worry Over Money Matters" on the Inside Back Cover and learn the secret of saving money.

sened stress upon such studies: their omission, or their permission to be taught badly. Every now and then we read in some paper a tabulated statement of the high percentage of college graduates among Presidents of the United States, Justices of the Supreme Court, and others in authority. These statements are always brief—evidently tucked in rather to fill out a column than because of an editor's appreciation of their thought-compelling qualities. It seems a pity that the column never has enough more space to fill for the addition of just one oft-forgotten truth: that every one of these eminent Americans was a product of the old-time college whose courses were mainly "language, literature, philosophy, history and the elements of mathematics." It would not appear that such college training had produced in them habits of thought permitting vagueness, obscurity and inaccuracy, with spoken and written statements to match, while, on the other hand, the soldiers whose educational defects Dr. Eliot holds up as an awful example are of the generation trained in schools where already the ideas of Dr. Eliot and those of like beliefs had so prevailed over the old disciplinary system of the classics as to have much opportunity to show their fruits. If President Eliot is not pleased with the 1917-18 educational harvest, he ought to remember how much of the seed for it has been sown by his own hand.

I am assuredly not so narrow of mind as to ignore the great potential educational worth of the sciences. I do mourn to see them degraded in the popular mind solely to the uses of feeding and clothing us (in colors that won't "run"), and of inventing fiendish devices for clearing the earth of our enemies. It is, literally, a cheapening of all our national ideals to pervert education to such ends, to distort the experiences of the war into such lessons. That it is a distortion is no less true for being next to universal. We all shouted "Food will win the war," and perhaps it did; but now that the war is won, I find courage to utter my unspoken conviction of sugarless 1918, that victory was considerably less a matter of stomach than of backbone, and that our "unprepared" armies owed their high percentage of heroes to the old idea of the discipline that makes for character and the culture that makes for idealism.

Education, I repeat, is not a thing of apparent and present values. But, if it were, there would surely seem to be one thing which the war has taught as an immediate practical necessity: the study of the ancient history and ancient languages of the peoples of the other hemisphere for a proper understanding of those peoples today, and the study of mathematics of the most rigorous type for the fullest development of scientific knowledge in the work of reconstruction and material advancement. Even if education manipulators are unwilling to look farther ahead or behind than just that, how can they refuse to recognize the higher value which such material offered by the Great War puts upon their wares?

Keep Young while Growing Old

YOUTH is often a matter of nerves rather than of years. You see that proven almost every day—this man of thirty with nerves wrecked and old before his time—that man, sixty but bright-eyed, sprightly because he kept his nerves youthful.

It is in this care of the nerves that Sanatogen is of real service. For to the hungry nerves, impoverished by over-drafts, Sanatogen brings just the foods they must have for speedy restoration to health—pure albumen and organic phosphorus in easily taken-up form.

And by its kindly tonic action Sanatogen helps bring back the ease of digestion, the restful slumber of youth.

If the enthusiastic letters of thousands of physicians and the grateful praise of people everywhere mean anything—you surely will not delay giving Sanatogen its opportunity to help you.

Sanatogen is sold by good druggists everywhere, in three sizes, from \$1.20 up.

ENGLISH: LITERATURE AND
COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT
HIGH SCHOOL, NEW YORK CITY

I. Stories of State. By Brackinridge Long.

1. What is the purpose of the first paragraph? What is the purpose of the second paragraph?
2. Make a list of the "stories more absorbing than any fiction" that you can read between the lines.
3. Write out in full any one of the stories that particularly interests you, drawing on the article for suggestions, and building the story from imagination.
4. Imagine that you played an important part in any one of the stories. Write, in the first person, a complete narrative of your experiences.

II. It's Not Our Funeral! By C. A. McCurdy, K. C., M. P.

1. Write a composition of two paragraphs, the first of which shall describe the cartoon on the first page of the article, and the second explain the meaning of the cartoon.
2. Prove that Bolshevism and Democracy are utterly opposed.
3. Write an original short story in which you narrate the experiences of a liberty-loving citizen of the United States who attempted to find happiness under the present conditions in Russia. Make your story show plainly that Bolshevism and Americanism are antagonistic.

III. General Leonard Wood. By Donald Wilhelm.

1. What is the effect of the short sentences in the opening paragraph of the article?
2. How does the writer make paragraph length contribute to the interest of the article?
3. From what sources did the author draw his material?
4. What general plan is the basis for the organization of the article?
5. By what means does the author emphasize the character of General Wood?
6. Write a short biographical sketch of General Wood.
7. Write a brief for an argument in which you will prove that General Wood would make a successful President.
8. Write a comparison of General Wood and Colonel Roosevelt.

IV. Spring Comes—By Clement Wood.

1. What is the principal thought conveyed by the poem? How may you apply the poem to your own life?
2. Point out connotations, or suggested meanings, in the following expressions: "Unless he blew his reveille"; "Purple garden flags are furled"; "The green and gorgeous tapestry."
3. How many different pictures of beauty are suggested by the poem?
4. Prove that the poem has climax.

V. One Day in a Coal Mine. By Leigh Harris.

1. Explain how narration and exposition are combined in the article.
2. What is the advantage gained by using direct quotations thruout the article?
3. How does the writer make choice of words contribute to the success of the article?
4. Show how the writer avoids making his narration dull and commonplace.
5. Write a detailed description of some scene mentioned in the article.
6. What does the article reveal concerning the daily life of a coal miner?
7. What does the article say concerning the spirit of coal miners?
8. Write a similar article concerning a day at school.

VI. Letters to the Great and the Near Great. By John Citizen.

1. What is the purpose of the letters?
2. How are these letters related to such works as "The Letters of Junius," Dean Swift's "Modest Proposal," "The Sir Roger de Coverley Papers," and other somewhat similar works?
3. What serious points do the letters make?
4. Write a series of similar letters concerning school affairs.

VII. Making Alcohol Our Benefactor. By Edwin E. Slosson.

1. Explain the full meaning of the first sentence.
2. How does the writer give his article popular interest?
3. Point out the steps in the development of the article.

HISTORY, CIVICS AND
ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,
NEW YORK CITY

I. Presidential Candidates—"If He Were President," "The Mystery Candidate."

1. "He is of the Roosevelt tradition." Does this qualify General Wood as a probable successful presidential candidate?
2. Balance Mr. Wilhelm's favorable comments on General Wood against his unfavorable ones. As a result what is your judgment of the man as a candidate?
3. In what sense may Herbert Hoover be called a "neutral" in the present canvass for presidential candidates? What are the elements of his strength?
4. "The choice of the [Democratic] party seems in great measure to depend on two unanswered questions: 'Whom does the President favor?' and 'Whom does Mr. Bryan favor?'" Show how, in a sense, this fact summarizes the history of the Democratic party for the past twenty years.

II. Stories of State.

1. On the basis of Mr. Long's article, prove that: "The Department of State 'carries the policy of the Government'."
2. Summarize the activities of the State Department during the war in dealing with the following subjects: (a) "Black Lists," (b) embargo lists, (c) tonnage for transport service, (d) loans to other governments, (e) the secrets of enemy movements and intrigues.

III. The Russian Situation—"It's Not Our Funeral!" "The Russian Muddle."

1. Quote extracts from these two articles which show that there is lack of unity of opinion in Europe and America as to the proper treatment of Russia.
2. Summarize Mr. McCurdy's chief criticisms of the present Bolshevik Government. Does he prove his statement: "The essence of the Bolshevik State is a dictatorship of labor and the denial of the right of private property," etc.?
3. Compare, especially, Mr. McCurdy's judgment of the activities of Kolchak and Denikin with those of the writer of the second article.
4. Even if it is true that "in France and England plans have long been laid... for capturing the Russian trade," should our Government change its attitude?

IV. The Extradition of the ex-Kaiser.

1. By what authority and upon what grounds did the Supreme Council demand that the Dutch Government deliver the former German Emperor to the Allies?
2. Upon what grounds did the Queen of the Netherlands refuse to comply with the demand?
3. In view of Secretary Lansing's position and that of Signor Orlando and the Japanese commissioners, is the refusal of Holland a cause for surprise?
4. How are the Allies going to get out of their dilemma?

V. Letters to the Great and the Near Great.

1. Rewrite the first letter, putting the argument into a serious tone.
2. Why is the second letter addressed to Senator Lodge? What is the gist of the writer's argument?
3. What is the significance of the following statement in the third letter: "Such doctrines were fashionable in the days of the late Senator Calhoun," etc.?

VI. Problems Before Congress—"A Panic of Economy," "Railway Perplexities."

1. What are the chief items of expenditure which will bring the total expenditures during the next fiscal year up to the figures mentioned by Mr. Mondell?
2. What are the chief recommendations for army reorganization now being considered by Congress?
3. What is the present status of the proposed legislation for the reorganization of American railroads?

VII. One Day in a Coal Mine.

1. Does this article help you to solve any of the questions raised in the recent controversy between the operators and the coal miners?
2. Why does the author come to the following conclusions: (a) "That the time has not yet arrived for a six-hour day in a coal mine." (b) "That the coal industry needs to be reorganized and systematized." (c) "That the more I see of labor agitators, the more I think of Mary, the mine mule."

THE BUSINESS VALUES OF PELMANISM—By George Creel

PELMANISM is able to promise advancement and increased incomes for the very simple reason that it gives workers the qualities that employers are hoping for and searching for. Salary is no longer the determining consideration: the main thing is intelligent service.

One of the country's greatest executives, speaking recently to the writer, made this statement:

"For every efficient man or woman, there are ninety-nine inefficient. Stenographers who listen with one ear only, secretaries who can't remember, clerks who keep their eyes on the clock, department heads who are afraid to make decisions of their own, superintendents utterly lacking in initiative and originality—nearly all of them a wool-gathering lot without ability to concentrate on anything but quitting time. Not one in a hundred with any real interest in their work beyond doing as little as they can for the money they get."

The same complaint comes from the trades and professions. Carelessness, laziness, and indifference, instead of intelligent enthusiasm, driving purpose, and quick thinking. A willingness to "stay put" instead of the eager ambition that fairly begs for new opportunities and larger responsibilities. As a result, employers of every kind are the *hunters* today, scouring the country in search of men and women who can "deliver the goods."

The Master Words of Modern Life

INIITIATIVE! Imagination! Personality! Good judgment! Originality! These are the master words of modern life, and it is precisely these qualities that Pelmanism develops, strengthens, and directs. It opens your mind for *inspection*, letting you see wherein you are strong, wherein you are weak; for even as it adds to strength, so does it correct weakness.

Where the average employer makes a mistake is in assuming that inefficiency is willful and premeditated. He is convinced that his employees do not *want* to give good service and have no real interest in advancement. This is true in very few cases. The general run of men and women have no desire to cheat, most of them have high hopes of holding places of power and distinction, and all of them want to earn more money. The trouble is that they express themselves in *day-dreams* and not in *action*.

When analyzed, this is seen to be a misfortune, not a fault. How can they *listen* when they have never been taught concentration? How can they have *initiative* and *originality*, when our educational system tries its best to turn pupils into parrots and have them all *uniform* in type? How can they have *purpose*, and hold to it, when our life ignores the fundamental truth that the human mind has got to be exercised in order to be *fit* and *stay fit*? As a matter of fact, the majority of workers are doomed to day-dreams because their training, or lack of it, has robbed them of their *mental teeth*.

GEORGE CREEL

They can't take hold and hang on. The mind, unused to continued effort, tires quickly and jumps from one thing to another like a grasshopper.

Pelmanism Trains the Mind

PELMANISM does the simple, obvious thing. First of all, it teaches self-realization. Very few people really know themselves. They imagine they are this or that, and blunder through life the victims of their own ignorance. In the second place, Pelmanism trains the mind, exercising it scientifically, meeting its new strengths with new tests, until, at the end, there is perfect balance, full power, and an amazing endurance.

Another great mistake, and one made generally, is the assumption that business is a purely *mechanical* process.

There is, on every hand, a general, well-grounded belief that business calls for the *hard* qualities, not the *fine* ones—that it is a thing of routine, not a drama of inspiration.

As a matter of fact, modern business is an organization as interesting as it is vast, and its operations make steady and imperative demands upon every mental quality. Not a day passes that its generals, captains, and corporals are not called upon to bring the functions of the mind into instant operation at high pressure. Routine efficiency is not enough.

The call is for the quick, leaping brain that is able to create ideas, to find fresh viewpoints, to make decisions as logical as they are swift, and to manufacture opportunities, instead of waiting for them. Imagination, courage and resourcefulness are assets as real as stocks and bonds.

Pelmanism Develops Business Power

BUSINESS is the *Great American Romance*. It is business that has harnessed the stream, tunneled the mountain and the river, turned deserts into orchards, and made the United States the world power in one hundred and forty-three years. It calls for the *best* and it *deserves* the best. It is this *best* that Pelmanism develops, trains, and directs.

Business needs the *whole* mind, not just part of it. It is often the case that a man of vision, forethought, initiative, resource, courage, and confidence is forced to confess

that he has "no head for detail." On the other hand, masters of detail "fall down" when the big problem comes along.

The fault in each case is an incompletely developed mind, a mind which has been developed on one side but not on the other.

The Pelmanist finds no difficulty in assimilating detail and he rises supreme when big issues confront him. His training gives him the balanced mind, the alert mind, the mind that is receptive and responsive. And that is just the type of mind which achieves success with almost miraculous ease while other men lag behind, puzzled, confused, and inert.

Go Forward or Go Back

THE appeal of Pelmanism is neither narrow nor specialized. The beginner will find the secret of promotion in it. The veteran "job holder" will get from it new courage, self-confidence, and a resourcefulness that will lift him above his fears and out of his ruts. Executive heads will discover that Pelmanism takes up "mental slack," tones up the mind processes, and acts as a tonic to vision, decision, and imagination. Business permits no stand still. Those who do not *go forward* commence to *drop back*.

This great course comes at a great time. Never before in the history of American business were such chances open to intelligent ambition. Old barriers are down, the gates of success swing wide, and the ranks of the country's workers are being *combed* for the "right sort."

(Signed) GEORGE CREEL.

Make Yourself That "Right Sort"!

MAKE yourself a Pelmanist. Do for yourself what 400,000 other men and women have done—put yourself in a mental position not alone to grasp opportunity when it comes, but to *make* opportunity come to you.

Pelmanism is neither an experiment nor a theory. It has stood the test of twenty years. Its students are in every country in the world. Its benefits are attested by hundreds of thousands of men and women in all walks and conditions of life.

Pelmanism is taught entirely by correspondence. There are twelve lessons—twelve "Little Gray Books." The course can be completed in three to twelve months, depending entirely upon the amount of time devoted to study. Half an hour daily will enable the student to finish in three months.

Send for "Mind and Memory" Today

THE booklet is free. Fill out and mail the coupon or a postcard—today—now—before you forget it. Don't "put off"—decide to do a thing and then do it—*now*, not later. Write to Pelman Institute of America, Suite 374, 505 Fifth Avenue, New York.

Save Half the Cost of Your Food

Half your table expense, during the greater part of the year, is for vegetables which could easily be grown in your own garden. The higher the prices of food, the greater is the saving represented by every article on your table that comes crisp and fresh from your own garden.

For a really successful garden, you must be sure of the quality of your seeds. The highest quality seeds are so small an item of the cost, and so vitally important to your success, that you should consider none but the best.

Henderson's seeds are tested seeds. Every packet is backed by our seventy-three years of experience in seed raising, testing and selling.

Henderson's Catalog for 1920

is entitled "Everything for the Garden." It is really a handsomely bound book with beautifully embossed cover. It has 184 pages, illustrated with eight color plates and over one thousand half-tones direct from photographs, which show actual results without exaggeration. It is a library of everything worth while for either farm or garden.

Special Introductory Offer of Henderson's Seed Specialties

We have made up a Henderson Collection, consisting of one packet each of the following six great specialties:

Ponderosa Tomato
Big Boston Lettuce
White Tipped Scarlet Radish

Henderson's Invincible Asters
Henderson's Brilliant Mixture Poppies
Spencer Mammoth Waved Sweet Peas

To demonstrate the superiority of Henderson's Tested Seeds, and also to obtain the largest, possible distribution for our annual catalogue, "Everything for the Garden," we make the following unusual offer: Mail us 10c and we will send you the catalogue, together with this remarkable "Henderson's Specialty Collection," enclosed in a coupon envelope which, when emptied and returned, will be accepted as 25c cash payment on any order for seeds amounting to one dollar or over.

PETER HENDERSON & CO., 35-37 Cortlandt St., New York City

PETER HENDERSON & CO.
35-37 Cortlandt St., New York City

I enclose herewith 10c. for which send catalogue and "Henderson's Specialty Collection," with complete cultural directions, as above used in The Independent.

Remarkable Remarks

LOUIS GUYAN—Ugly girls make the best dancers.

GENERAL LEONARD WOOD—We want a large navy.

SIR OLIVER LODGE—There are lots of things I don't know.

THE SULTAN OF TURKEY—Right dominates everything.

MRS. REGINALD DEKOVEN—I believe in communication with the dead.

ADMIRAL SIMS—I never wrote a speech and that's been my trouble.

W. J. BRYAN—What the people want is more meat and less phraseology.

SECRETARY NEWTON D. BAKER—I heartily favor the father and son week.

REAR ADMIRAL FREDERICK B. BASSETT—We must prepare for the next war.

CHARLES M. SCHWAB—Labor has not had a fair share in the prosperity of the country.

ED. HOWE—In every country town you will find an elaborate bandstand and a poor band.

GENERAL TASKER M. BLISS—A revival of a general European war is not entirely improbable.

GERALDINE FARRAR—Every woman in Paris who has a pretty ankle or a pretty back exposes it.

HERBERT N. CASSON—In the last hundred years Great Britain has gained four acres a second.

BERNARD SHAW—The gentleman is the man who tries to put into the common stock a little more than he takes out.

MAJOR MONTGOMERY SCHUYLER—If I had my way I'd shoot with my own revolver any man who called himself a Bolshevik.

FLORENZ ZIEGFELD, JR.—Small girls are prettier with curly hair. Tall girls are just as effective with smooth straight hair.

THE PRINCE OF WALES—I am still receiving the most charming letters from America, and I may add not all of them from the fair sex.

SECRETARY HOUSTON—If we did not eat so much candy and ice cream sodas to the detriment of our health, there would be plenty of sugar to go around.

Just a Word

Dr. Franklin H. Giddings, Professor of Sociology and the History of Civilization, in Columbia University, goes straight at the root of reconstruction problems in an article that we shall publish soon, called "Why It Can't Be Done." The chances are that he will answer some of the very questions that have puzzled your own thinking.

Had you realized that flying nowadays is becoming so usual that one's passport in the ordinary course of travel may read, "Paris—by air" or "British Isles—via air route"? Mr. Harold Howland, Associate Editor of The Independent, was among the first passengers to use the London-Paris air service. His story of the flight, to be published shortly, opens new vistas to commuters.

Our next message from the United States Government to the American people will be written by Senator Carter Glass, who recently resigned from the Cabinet as Secretary of the Treasury and was elected to the United States Senate from Virginia. Senator Glass bases his discussion of the question of foreign credits in this message upon his intimate knowledge of the United States' financial position. "The business of banking," he says, "is far removed from the business of charity, yet it often becomes necessary for a banker to help out a debtor whose obligations he holds in order that those obligations may be made good. That is the position in which the United States Government now finds itself."

New Plays

Grace George is the whole show in *The Ruined Lady*, an entertaining Leap Year comedy of much humor and charm. (The Playhouse.)

Ma Tante d'Honfleur. Last year we had a French theater that gave us the classics. This year we get very Frenchy farces, cleverly played, at the Theatre Parisien.

Pietro, by Maud Skinner and Jules Eckert Goodman, is a melodrama of murder, "Father-love," Italo-Americanism, and Luther Burbankism which does not give Otis Skinner the greatest opportunity of his histrionic life. Fair and pleasing. (Criterion Theater.)

**When Cocoa goes to School*

From kindergarten right through the grades to high school, cocoa is a "warm friend" of energy-using youngsters.

Indeed, in the opinion of food authorities, no hot beverage is better for young digestions than this delicious, nourishing food-drink—before school, in school, or after school.

But what cocoa? It should not be so rich as to tax young digestions. Neither should it be robbed of its cocoa butter fats.

Delicious, healthful Lowney's Cocoa, with its 25% of nutritive cocoa butter fats, offers a safe middle course between the two extremes in cocoas. Serve it to your growing youngsters.

Lowney's Cocoa has always met the Government Pure Food Standards. It meets, too, Dr. Wiley's and the Westfield Standards of Pure Foods.

Why the Young Folks Leave the Farm

By Chester T. Crowell

THE subject of why Willie and Mary leave the farm has been very thoroly treated from the economic standpoint. Most of us are familiar with the fact that Willie's colt becomes papa's horse and Mary's chickens lay eggs for mama. The economic reasons for discontent with the farm are obvious enough. But I do not think they alone account for the steady movement from farm to city which goes merrily on year after year in spite of all the excellent arguments brought forward to show that there is just as much opportunity in the country as in the city. Similarly the "back to the farm" argument continues perennially and is getting not much better results this year than last. Yet this argument is economically sound—never more so than since the cost of food has brought better and wider and surer markets for everything man and beast can eat.

IT is my own observation that economic reasons never were more than a mere part of the reason why Mary and Willie left the old homestead and sought the city. The fact that they continue to leave the farm after economic conditions have so vitally changed bears out the theory that other considerations have been as important as the economic.

Whether in the city or the country there is a conflict of opinion on many important subjects between the boys and girls on the one side and their parents, a generation older, on the other. The city parent looks on as youth has its way—sometimes shocked, often a little uneasy, but not infrequently entering into the zest of the times with as much gusto as youth itself. The rural parent puts his foot down firmly. Things shall be as they were when he was a boy—or as he imagines they were when he was a boy—and that ends the argument. Rural youth today reads the modern magazines, hears the music of the day, is caught in the national craze for pretty clothes, considers the automobile a pleasure vehicle, loves to dance, and is at least on speaking terms with the boys and girls of New York City. This is true of country boys and girls generally, no matter where they live. The older folks of the farm tend to get out of touch with the ever more swiftly moving times. The clash comes and the boys and girls look longingly in the direction of the places where they can do the things they wish to do without being considered wicked or selfish or half-witted.

Persons who have always lived in cities of 50,000 population and upward do not realize the restrictions thrown around pleasure in the country. Under a Puritanical domination, much of the picturesqueness of country life has disappeared. In its place is nothing at all. The people are starved for entertainment and yet

they put the ban of disapproval upon almost any suggestion likely to be made in these times. Personally, I am most familiar with the South and Southwest. Almost anywhere in that part of the country the question as to whether dancing is wicked is debated. In the rural districts those on the affirmative side are in the majority.

In my own state of Texas a majority of the rural school boards lay down rules that young women teachers shall not dance, shall not attend motion picture shows, shall not enjoy the company of young men during the school term. They make inquiry as to the young women's religious affiliations. Most of them insist that it shall be the same as that of a majority of the community. If the young woman were to reply that she did not have any religious affiliation, I do not venture to guess what the board would do. Probably fall dead. I mention teaching because it is about the only employment available for the rural young woman.

Now as a matter of fact young people do dance almost everywhere in the United States, especially in this age of the phonograph. But young folk are impatient of criticism. They grow "sick and tired" of the controversy about something they have made up their minds they are going to do because they are certain it is not wrong. When the opportunity comes to get out of an environment that they consider "stifling" they leave.

IF there is one time more than another when youth likes to pretend it enjoys privacy, it is during the course of a love affair. But in the country there is no privacy. If Mary likes Johnny and her face lights up when he appears, the village gossipmongers tell one another that "the way that Johnson girl is carrying on over Johnny Stubbs is scan'lous. If she was a daughter of mine, etc." And yet Mary has not used one-hundredth of the arts a city girl would never hesitate to use to win the young man she liked. Poor Mary doesn't know any arts, anyway, except those she inherited from Eve.

MEANWHILE Johnny discovers that everybody in town knows the exact amount of his salary as cashier in the bank. Just why this should make Johnny angry I am not going to attempt to explain because I don't know. But it does. Older folk don't mind such things, but they make youth furious.

In fact I seldom find an elderly person in a city who does not yearn to get back to the "sociable life of the country" and I seldom find a young man who does not abhor that same sociability.

Then there is the attitude toward labor which differs

so widely in the country and in the city. Johnny will suffer torture in going over to the Jones place as a hired hand. In at least a large part of the United States he has an uneasy feeling that this places him in a class with negro labor. Of one thing he is certain, a hired hand on a farm is the absolute bottom of the social scale. Of course he may be wrong about that, but the farm owner never does anything to disabuse his mind of the idea. The farmer usually shows that he agrees with the hired hand as to his position socially.

When this farm hand goes to town to get a job driving a street car he is welcomed. There are thousands like him and they have their own place in society. The owner of the traction system does not invite them to his own table as the farmer did, but he makes numerous efforts to indicate to them that he wishes them well. On the farm the hired hand received a certain amount of money for each day's labor—and board. In the city he receives all of it in cash. He can march into a restaurant in the morning and sing out: "Theda Bara, gimme a shot o' Java an' a coupla sinkers." I wonder if you who read this article have ever pondered the fact that one of the most galling conditions of slavery was that one could not order his own meals but accepted what was placed before him? Thousands of slaves have been fed a quantity and quality of food right in this country that a single man earning \$90 a month cannot afford today. But they would not on that account prefer to be slaves.

But it was not the condition of labor which I wished to emphasize in this article so much as social life and the lack of entertainment. It has always been interesting to me to observe how tenacious the cities are of every form of entertainment whether worthy of defense or not, while any attack upon a form of entertainment in the country—where it is already entirely too scarce—will usually result in killing it. New York with more entertainment than any city in the world weeps over the loss of alcoholic liquors. Any attack upon any of the people's amusements, good, bad or indifferent, would bring defenders by the hundred into the open. But it would be a brave band of women who would continue their regular bridge schedule in a village of 2000 population in my state after the pastor had delivered a sermon on the subject of card playing.

Why is it that the liberals remain in the minority in the rural districts? Because the desertions from their ranks swell the liberal majority in the cities and towns. Suppose you have been in secret a liberal all your life. Suppose you had been residing in local option territory for twenty years and always secretly voting an anti-prohibition ticket—as thousands have done in every prohibition state in this country. Suppose you have never considered dancing and card playing in the home sinful. Suppose you are of a light-hearted disposition and simply cannot get up the enthusiasm your neighbors have on the

subject of conduct. Suppose you have often taken the whole family fishing on Sundays, missing church. Suppose that you are the sort who often pulled down the shades and enjoyed secret domino games with a few trusted friends. Suppose that you and your family never failed to see all the shows on the semi-annual visits to the big city. You have accomplished all this without losing the respect of your neighbors because you were tactful and discreet. Now your two daughters are about grown. There is no country life out where you live. Most of the young men about the age in which your daughters would be interested have long since "gone to town." You would like to develop what you would consider country life in the little community, but you hesitate about embarking upon such an adventure because it is so much easier to let a tenant have the farm. You can move into a city and live comfortably and the girls will be much happier.

THEN, there are the young men and women who do not happen to have such a sympathetic parent. He has sent them away to school because the local schools are generally not good. The same amount of money expended on sending children away would probably make the local public school a model, but that is seldom if ever thought of in the country. The children come back with an entirely different point of view from that of their parents. This tragedy has been treated in story, song and play scores of times and it is still good for another twenty years. I am not attempting to say who is right. I do not care what you think about the matter. The purpose of this article is to explain what elements beside the economic element are sending the young folks to town.

The spirit of our American cities is the spirit of youth. In them youth predominates in numbers and rules in every way. This is the day of the young man. He may have seen sixty summers or more, but if he is still ruling in a city he is a young man. The city is adaptable, quick to appreciate, unafraid, much quicker to applaud than to condemn in spite of what sarcastic writers have said in an effort to be clever. The very fact that city people can and do make fun of the city and then laugh at their own jibes is one of the elements of greatness of the city. That would not be tolerated in a rural district or a small town. Life there is too serious, local personages too sacred, for careless comment. It becomes a sort of religious duty to tell everyone what

a wonderful country you live in. And nothing becomes more burdensome than that sort of duty. Young people prefer to reside in a place like New York City, where most of the newspaper editorials and most of the conversational comment on the conditions of life in the community is adversely critical—but you couldn't drive the critics out with machine guns. Someone comes along [*Continued on page 260*]

"How're you going to keep them on the farm, after they've seen Broadway?"

A Message from the Republic of France to the Republic of the United States

What the World Needs

By Paul Deschanel, President of France

This message was addressed by the new President of France to the Council of Right, a national society created by prominent French statesmen and thinkers to plan the moral and material reconstruction of France, and because of its forceful and vivid presentation of some of the most critical problems of France after the war it has been selected by the Representative of the French Government as the third message from the Republic of France to the Republic of the United States

THE most pressing question which confronts France at the present moment, that both she and the world may know peace, is the diplomatic question. What is needed for its definite settlement? A strong, well fortified frontier. And our soldiers have deserved it. France cannot put up with four or five invasions of her territory every hundred years or so. And, altho it is a fine thing to check invasion, it is better still to prevent it.

As long as the Germans feel they can find a way into our country by invasion, as long as they can increase the means of aggression on this side of the Rhine, there will be no safety for the world.

On the other hand, let us seek to maintain international safeguards. Let us never forget that Germany, with her broken sword, is trying to disrupt our alliances. But our alliances should survive the war; they are every bit as useful and productive of good results in peace as in war time.

In spite of the discussions that are inevitable in the unparalleled task of a world-wide readjustment, the thirty states which have broken with Germany will remain as the full-formed nucleus of a new organization of the world.

If such an organization had existed in 1914, Germany could not have slaughtered Belgium. So a league of peace-loving peoples should be the first task to be accomplished, provided that this league can be given the proper guarantees.

MANY generous-minded persons hope that such a League of Nations can be organized with sufficient power for all peoples. This does not rest with France, however. It rests with Germany.

We know Germany as she was yesterday and as she is today. What will she be tomorrow?

We are assuredly not to blame if Germany has always

© Keystone View

President Deschanel

opposed the propositions of M. Leon Bourgeois and of our plenipotentiaries at the conferences of The Hague.

One thing is certain: the incredible upheaval we have just passed thru must be followed by a step forward toward a higher civilization. There, too, it will be France's pride that she was the first to show the way.

In the future, justice will prevail. On this point the noble-hearted youth of our land are agreed. Yes, we are convinced that the future will be ruled by justice, and we are working for such a realization with all our strength.

Truly, a tremendous humanitarian task, a great work of justice! We may say of it what Cicero said of politics: "It is the first duty of our life, the highest mark of virtue, the most magnificent use to which wisdom can be put."

Such a definition of politics appeals to every Frenchman, wherever he may live, from the North Sea to the Mediterranean, from the Pyrenees to the Rhine.

ABOVE all, it appeals to our compatriots of Alsace and Lorraine. Their sons cheered it with all their might when it was expounded at one of the first lectures given at Strasbourg University, now reopened to France for all time.

In order to accomplish all this, in order to solve our social, constitutional, educational, economic and diplomatic problems, before anything else, we must live. Hence, France should fight against her low birth rate.

Youth, happy youth, must lead the way. And it can find no better example than that which the sons and daughters of Alsace and Lorraine have never failed to give.

The youth of all of France is flocking to join our great crusade, the Crusade of Life, first and most generous of all crusades.

Paris

A Message from the United States Government to the American People

Brown & Dawson

The Panama Canal at its Pacific entrance—in the distance the famous Culebra Cut

The Eighth Wonder of the World

By Newton D. Baker, Secretary of War

Secretary Baker has just returned from a business trip to the Canal Zone—made for the express purpose of seeing just what is needed there, so that he can support with first hand information any requests to Congress for appropriations. It was Secretary Baker's first visit to the Panama Canal and what he saw gave him a new pride in America's achievements there. So besides bringing facts and figures for Congress he brought back this message to the American people

A MERICANS should visit the Panama Canal! It is not only the greatest work of mankind in modifying the work of nature, but it is like an exposition containing American civilization at its best set down, for purposes of comparison, in a tropical jungle, with two Latin-American cities, which preserve many of the aspects of the early Spanish settlements in America, and at the same time show the improvement and progress which have developed as if by inspiration from the perfect example of the Canal Zone.

The Canal Zone, ten miles in width, runs from ocean to ocean, practically thru the middle of the Republic of Panama. It is about forty-five miles long. In the center of the strip lies the great artificial Gatun Lake which impounds the waters of the Chagres River and supplies the two lock systems which float away to the Atlantic on the one side and the Pacific on the other from the high point of the Canal, which is eighty-five feet above the level of the sea. The lake covers what was once the bed of the river, and spreads out over wide areas of former jungle.

At both ends of the Canal, and here and there thruout its length, there are little cities built for the accommodation of Canal employees. The locks are huge concrete structures, with gates heavier and more massive than

ever protected fortified cities, and in the gate houses there is specially devised machinery, powerful and intricate and yet so perfect that its operation is controlled by an electric switch no larger than a telegraph key.

FROM end to end of the Canal Zone, the Government of the United States is owner, builder, landlord and caretaker. Everything is spotless in its cleanliness; perfect in mechanical detail, and the natural beauty of the mountainous country is supplemented by the order and beauty of the structures, lawns and gardens of the Canal Zone itself. The homes are set in hedges of hibiscus, and the jungle ends abruptly on each side of the strip in smooth-mown grass and flowers. The very perfection of American ingenuity is illustrated in every mechanical and physical detail.

IT all belongs to the twentieth century, with its new polish kept bright in marked contrast to the cities of Panama and Colon, where there are still houses built for the accommodation of the gold-seekers of '49, who sought California by crossing the Isthmus, and people who still speak the Spanish language which Balboa planted there just after he annexed the Pacific Ocean to the dominions of Spain.

Meanwhile, the Republic of Panama, in more ways than one the child of the Canal—for its prosperity has always been dependent upon the hope of a Canal or its reality, is now a growing and progressive country, with warm sympathies for the people of the United States, developing its own civilization, coöperating with us in our great task, and helping us to make the Canal a great agency, both in the carrying of commerce and in the spread of progressive ideas.

MOST Americans are proud of the Panama Canal without having seen it, and without any clear idea of its real usefulness. We know vaguely that a number of projects came to grief, including that of the great de Lesseps, and that finally American enterprize, engineering genius and determination completed the great work. We know that it cost a very great deal of money, and we all regard the canal as a gift to mankind, without a thought that it may ever be a profitable venture.

It is important to have the facts known.

During the building of the Canal, before the cut was completed, it was found necessary to move a great dredge from the Atlantic side to the Pacific side. In order to do this it had to be towed around the end of the South American continent. It took just ten days less than four months to make the journey, and when the dredge arrived at the Pacific side the men who had accompanied it took a train at Panama and in forty-five minutes were back at Colon, from which they had started. In other words, the Canal saves vessels plying between Europe or from the Atlantic ports of America to California and the Orient from 4000 to 6000 miles in the journey. It is a lock Canal, but so perfect are its appliances that it can be navigated equally well by day or by night, and no ship is detained in either ocean by wind, tide or water, from making the transit at once upon arrival. As a consequence, the business of

© Newman

Gatun locks—the most important point in the Panama Canal, where the sea level section ends in a series of three pairs of locks forming the steps to Gatun Lake, 85 feet above the sea

the Canal is rapidly increasing. It was opened in 1914; in 1915 it was closed for six months by reason of the great slides at Gold Hill, which seemed to threaten permanent destruction. The sliding mass has, however, now been cleared away; a stable condition reached by additional excavation, and the commercial world realizes that the Canal is not only adequate for the largest draft ships and always ready, but that it is safe for the future, and that ships can rely with confidence upon it.

During the war the shipping of the world was needed for special uses, and the business of the Canal grew but slowly. Now, however, the world's shipping is released to trade; new lines are being organized from Europe to the Orient and from America to the east and west coasts of both North and South America, so that in 1919 the Canal actually showed a profit of \$200,000 above operating and maintenance expenses, and the late months of 1919 show an increasing business which will rapidly make available some return upon our great investment. If the Canal can obtain three-times as much business as it had in 1919 it will pay as an investment, and from the present prospect that point should be reached in relatively few years.

The naval and military importance of the Canal is great, but its commercial importance ought to be more widely known, and Americans can have a just pride in the success with which this great undertaking was carried thru.

The British Republics?

By Arthur Lynch

This startling proposal comes from a man who knows the various dominions of the British Empire from the inside as well as other parts of the world. Colonel Lynch was born in Australia; studied engineering in Melbourne, medicine in London, philosophy in Berlin, and electricity in Paris; he was made a colonel of the Boer army fighting against the British in the South African war; he was from 1909 to 1918 a member of Parliament for an Irish constituency; he saw fighting on the French side against the Germans in the Argonne; he raised an Irish Regiment and was made colonel in the British army in 1918; he has lectured in Toronto and lived in New York. But altho he is best known as a man of action, he is by preference a scholar, and his chief interest is in the philosophical system that he has developed in his two volumes on "Psychology," in his "Purpose and Evolution" in his "Nouvelle Ethique" and in various literary and scientific works in both the French and English language

IF to have the consecration of Parliament be reassuring to orthodox minds, the most timid of reformers may venture upon these lines; the projects that I set forth here have already appeared in the papers of the House of Commons as formal motions submitted to that august assembly.

It was the war that gave a chance of presenting doctrines that a few years ago might have been received with indignant protest, for that volcanic outburst threw to the surface a host of ideas that had lain deep in the minds of men, and amidst the strange notions that lighted into day it is not surprizing that a few sane thoughts also found their liberty.

Amongst these is the proposal I have made for the establishment, in place of the so-called British Empire, of a band of free Republics, recognizing common citizenship, and united by a voluntary agreement, not for imperial aggression, but for mutual defense. While studying various social and political questions, including the Irish question, I have again and again been led to consider that the most potent obstacles to all vital reforms are found in the monarchical system and in all of which it is the keystone and the symbol.

The time has come to put this principle to the test in England. The republican movement there is real and vital; its spirit permeates the trades-unions and the various democratic organizations—as, for instance, the Independent Labor Party—which are continually increasing their power in practical politics. Most of the great labor leaders are not merely republicans, but they are determined that republican institutions shall be established in England.

IN order to give a rallying center to men of liberal views all over the country, the Republican League of Great Britain has been founded, and I have been elected the first president; Mr. H. G. Wells, the famous novelist and historian, is the vice-president. During the last few years of my term in Parliament also I worked hard to familiarize members with our main objects, and I received encouragement on all sides and from unexpected quarters. Several members of the present British Cabinet, I say definitely, favor the republican idea, and this is true at least of one, if not more, of the inner circle of government.

The main obstacles in our way are those of inertia and of that peculiar frame of mind, sedulously fostered at the public schools and the universities, and for which no better term can be found than superstition. Therefore, in this article I devote attention—in a manner that may seem almost absurd to freeborn Americans—to the removal of that superstition.

One of my strongest arguments in favor of the elimination of the system consists precisely in the existence of such a psychopathic condition. Where otherwise, I ask, in the whole history of the world, can be found an instrument of government, neither ancient in date nor respectable in history, nor even marked by that seal of legitimacy that might be thought to hallow it, yet which so enslaves the minds of men that they dare not look upon its origins nor consider its efficiency?

Such an attitude of mind—call it by what grandiose names of loyalty one will—is debasing; tho again I believe that such an attitude is the one effective argument of royalists. Once the superstition is pierced, once the phase of reasoning and weighing and testing has begun, then the doom of royalty has been virtually pronounced.

I will not now enter into a discussion of the numerous arguments invented in these latter days by the royalists—"The golden link of the empire"; "the necessity of governing India"; the rigid virtue of one monarch, or the flexible morality of a successor; the German blood and marriage ties of the royal family, or the feat of explaining these away; the Teutonic solidity, or again the French sympathies of certain of its representatives; the physical or mental endowments of one, or the absence of such dangerous qualities in another; the cosmopolitan appearance of the court at one epoch, or the splendid British character so marked at another when all the Continental demi-reps had been banished—all these and a score of others are obviously not the real defense of royalty, for that institution was founded before the basis existed of such arguments, and no royalist will admit that, if these grounds disappeared, he would be content to see the liquidation of the system.

Each of these and a score of others I have pursued with no other weapons than common sense and logic, and each one I have found in the last resort absurd. In my quest, however, I have always met with the outworks of the real defense, and in attempting to define its limits I have seen that these cover the whole field.

Vested interests, unfair privileges—there is the defense of the royal system. The origin of all monarchy is usurpation; the only monarch who can make any appeal to right is indeed the usurper, for usurpation is a mode of election. Augustus, Charlemagne, Cromwell, Napoleon, these were all usurpers; there is much to be said for their reigns, little for those of their successors. Yet the plea for our latter-day royalties consists in the eulogy of all that has become ineffective, poor in spirit, decadent in the old spectacular tyrannies—"the king does nothing," "the king is only a figurehead," the

power we ascribe to the king in the terms of the Constitution, the soul-abasing subservience with which we approach him—all that means nothing; the Constitution is really a tissue of lies and hypocrisies; on that we will build the grandest era of history; it is part of the genius of our statesmanship that we write the word "sham" on the frontal of our edifice, and under that inspiring sign go forth to raise the moral status of the world!

We abhor the system of German Kaiserdom; we think it worth while to spill the blood of millions to overturn it; but look at ours, with our matchless talent for compromise!—that differs from the German in the boasted fact that all the fibers of the royal function are degenerate, and hypocrisy takes the place of violence. Moreover, our aristocratical class, which would vanish if brought to the test of competitive examination in the world's rough ways, may live forever behind the Chinese wall of prerogative.

Ah, but there is the Symbol; is that nothing?

It is something, it is so important that it behooves us to adopt symbols that indicate great principles. Take a walk from Trafalgar Square to the House of Commons. One sees there the statues of men whom the nation delights to honor. There we find George III, and George IV, and Charles I, and the Duke of Cambridge still obstructing the traffic.

Where are the symbols? Where is the statue of John Milton, of Shelley, or of Keats? Where is the statue of Turner or of Foley? Where is the statue of Clerk Maxwell, or of Faraday, or of Darwin?

These are the mere fringe, in the eyes of our imperialists, on the garment worn by Charles I, George III, George IV, or on that of the heroic Cambridge. Yes, the symbol is so important that when we recognize symbols that mean truth, and energy, and sympathy, that spell enlightenment, progress, the greatness of citizenship—we will not then turn to the symbols of a decrepit system.

The best symbols will be something that, like ferments transforming the whole mass, may bring enlightenment into our great universities, the last strongholds of false teachings and of little souls. Symbols should be the index to standards of judgment; the adop-

tion of true standards is vital to the greatness of a nation. Under the monarchical system its standards are set up at every turning post and the citizen—I beg pardon, subject—is called upon to show conformity, or to place himself in opposition, to a juggernaut that proceeds to crush him down.

Whenever a man becomes in any manner conspicuous in any walk of life, not merely political, but literary, scientific, or industrial, that standard is automatically applied. The tyranny is inquisitorial both in its methods and its force. That really constitutes my main objection to monarchy—the profound immorality which compels obeisance to something which has no intrinsic greatness, and of which the authority is founded on falsehood and enforced by violence.

THESE standards, for instance, affect even that domain which should be the least spotted from the world, that of philosophy. . . . What is a Thinker in England? Is it one who, setting before his mind the ideal search for knowledge, follows whithersoever it may lead, the guiding star of Truth? No. Such men are ostracized in circles of culture. . . . The Representative of British Thought is a man who has been careful to secure the cachet of Oxford, not because that aids him in thought, but because it is useful for influence. He adopts the standards of that home of intellectual in-breeding. He conforms, that is the essential. He reads Kant and Hegel without comprehension. He writes a disquisition on such works, or he translates Schopenhauer. He keeps in the good graces of the authorities by ignoring originality and discarding rigor of thought. He is approved. He sets up a society in Oxford, London, in some center at least within the folds of the royal robe. He patronizes fashionable phases of intellectual expression. He invites, let us say, Bergson to London, because Bergson can combine a shimmer of pseudo-philosophy with something that may reconcile us to safe beliefs. He may even receive a knighthood, and with this "recognition" from the King his title to representation is complete. Mr. Balfour or Lord Haldane will praise him at a public dinner, and he is consecrated among the elite. . . . In all this nothing has been said about [Continued on page 260]

Instead of being parts of the British Empire, the countries marked black on this map would become a band of free Republics, united, however, for mutual defense, if the proposal advanced in the accompanying article were put into effect

The Taft and Lodge Reservations

By Hamilton Holt

ALTHO last week's Senatorial Compromise Conference came to a tentative agreement on almost all the reservations proposed in regard to the Peace Treaty and the Covenant, it broke up when Senator Lodge refused to accept Mr. Taft's draft of a reservation to Article X as indorsed by the Democrats, and Senator Hitchcock refused to accept Mr. Lodge's unconditional demand that the Lodge draft be adopted without the dotting of an "i" or the crossing of a "t." Now the issue must be thrown back again into the Senate where each Senator must cast his vote separately on each reservation.

Article X, the crucial article, of the Covenant reads as follows:

The members of the League undertake to respect and preserve as against external aggression the territorial and existing political independence of all members of the League.

In case of any such aggression or in case of any threat or danger of such aggression the Council shall advise upon the means by which this obligation shall be fulfilled.

There are two purposes of this article. First, that the members of the League, in one respect and one respect only, that is in the case of "external aggression," obligate themselves to preserve the nation attacked from the loss of its territory or independence. Second, in case of aggression, whether actual or threatened, the League shall advise—never command—the members how they shall fulfil the obligation. It rests with the sovereign nations to decide whether they will accept or reject the advice. They are free to determine not only whether the obligation in a given case exists, but how the obligation shall be carried out.

Now how do the Lodge and Taft reservations affect Article X? The Lodge reservation reads as follows:

The United States assumes no obligation to preserve the territorial integrity or political independence of any country or to interfere in controversies between nations—whether members of the League or not—under the provisions of Article X, or to employ the military or naval forces of the United States under any article of the Treaty or any purpose unless in a particular case the Congress, which under the Constitution has sole power to declare war or authorize the employment of the military or naval forces of the United States, shall by act or joint resolution so provide.

This is the Taft reservation:

The United States declines to assume any legal or binding obligation to preserve the territorial integrity, or political independence of any other country under the provisions of Article X, or to employ the military or naval forces of the United States under any article of the Treaty for any purpose; but the Congress, which under the Constitution has the sole power in the premises, will consider and decide what moral obligation, if any, under the circumstances of any particular case, when it arises, should move the United States in the interest of world peace and justice, to take action therein, and will provide accordingly.

A careful perusal of these two reservations discloses the fact that they differ from each other in substance about as one pea in a pod from another.

In both cases the general obligation to prevent a nation's taking away by force another nation's territory or sovereignty is denied, unless and until Congress affirmatively provides for the contrary. This is clearly an amendment to the Covenant if accepted by the other members of the League.

About the only difference between the two drafts is that the Lodge proposal seems to assume there is no legal obligation of any kind—tho there may be some doubt about this—whereas the Taft proposal denies there is any legal or binding obligation whatever, but recognizes a moral one.

Of the two drafts, friends of a virile League of Nations would slightly prefer the Lodge reservation, which does not deny the legal obligation in toto as does the Taft draft.

It is evident, therefore, that if the Democrats who have stood for the Treaty without reservations or amendments can swallow the Taft draft they can swallow with an even less wry face the Lodge reservation.

It is equally evident that if the Republicans defeat the Treaty because they prefer Senator Lodge's phraseology to Mr. Taft's the insistence on the Lodge draft is merely a pretext with which to kill the whole Treaty.

It is now as plain as a pike staff that there is no fundamental difference between the two factions of the Senate on Article X, or any other article. Sensible men must draw the inevitable conclusion that it is nothing but the hope that each side can make some partizan political capital out of the compromise that keeps them apart and denies peace to a war-weary world.

Editorially Speaking

Every country has the kind of Socialists it deserves.

* * *

There is still time for anyone who wants it to secure the vice-presidential nomination.

* * *

If Mars is signaling to the earth let us turn a deaf ear. We have had enough of Mars for quite a while.

* * *

The first recorded deportation of undesirable citizens was from the Garden of Eden.

Or maybe it was when Satan was expelled from heaven (of Milton).

* * *

We are curious to know on what issue the Prohibitionist party will make its campaign this year. With

the achievement of its aim its reason for existence has gone, but parties usually survive their reason for existence.

* * *

"Any child here," said the teacher, "may grow up to be President."

"No, mum, I can't," says Johnny.

"Why not?" "Because I wasn't born in a doubtful state."

* * *

Mothers now caution their children to play on the railway tracks where it is safe and not venture on the roads where the automobiles may run over them.

A similar reversal has come about in the investment world, owing to the wild fluctuations of the currency.

The time may come when a father will tell his too-adventurous son: "Invest in something safe like oil stocks and you will never regret it. These flyers of yours in bonds and francs and pounds are no better than sheer gambling!"

* * *

"A living wage" is a phrase often used and rarely defined. But in Australia where the Government undertakes to guarantee every worker "a living wage" they have to know what it means. The New South Wales Board of Trade, which has made a thoro statistical study of the question and examined many witnesses of all classes, has established it as three pounds seventeen shillings a week. This if sterling were up to its normal value would amount to about \$18.50, but at the present rate of exchange equals about \$14.00 in American money. This is regarded as sufficient to provide a worker of the lowest-paid class and his wife and two children under 16 (the average Australian family) "with the normal requirements of a member of a civil-

ized community." It is supposed to be expended in the following proportion:

Fuel and light	4	per cent
Clothing and boots	18	" "
Food and groceries	42	" "
Rent	20	" "
Insurance, union dues, tobacco, liquor, religion, charity, amusements, etc.....	16	" "
<hr/>		
100		

But this weekly wage, modest tho it may seem to be, is higher than is paid in any of the other Australian states and the employers protest that it will be ruinous to pay such an amount when their competitors are paying less. To allay their alarm the Board of Trade consented to suspend the general enforcement of the new standard of living and apply it only in the case of new awards. Australia is often held up as "the working-man's paradise" but evidently there is a chance for improvement yet.

Don't Worry About the Flu

By James J. Walsh, M. D.

AS all those who knew anything about the history of influenza expected, the disease has recurred in epidemic form during the winter of the year following its appearance as a pandemic. It will recur again each year for several years, each time less serious.

Influenza is one of the oldest contagious diseases with regard to which we have definite information. Hippocrates' description of the affection in his time would fit any modern epidemic of the disease that has occurred. He tells us that it spread from Asia to the Grecian Islands and Peninsula and thence across the Adriatic Sea to Italy, so that it behaves quite the same now as it did nearly twenty-five hundred years ago when the great father of medicine observed it. It has occurred very probably nearly every generation ever since, surely every century, and there are good authorities in the history of medicine who insist that the epidemic described in the first book of Homer was probably influenza.

Practically always it has been noted that the years following a severe exhibition of epidemicity on the part of the affection have had a large number of cases of the disease constituting practically a minor epidemic. Its second appearance has as a rule never been anything like so severe nor so fatal as the original epidemic. The deaths have always been fewer and the complications much less dangerous and less likely to be followed by serious crippling of sensory organs, though some of these unfortunate cases have always turned up. Pneumonias have been much rarer and the disease but seldom attacked those who had had the affection during the preceding year. They seem to have acquired a certain immunity to it. One curious thing about the recurrences of the disease has been the fact that it often attacked older people on the average in its subsequent visitations than during the primary spread of the disease.

A great many recommendations for its treatment and prevention are made in the advertising columns of our newspapers, but the great majority of these are simply examples of an effort to make money out of the crisis. Many chemical irritants of various kinds are

recommended as antiseptics, supposed to keep the mucous membranes healthy and enable them to throw off the disease, but the reasons for thinking that they will accomplish this are more than dubious. It must be borne in mind that the mucous membrane is composed of living cells. The microbes which produce disease are also living cells, any chemical substance that will kill living cells is not likely to be selective in its action and spare the mucous membrane cells and destroy the microbe. Either these substances will prove inactive or else they will do at least as much harm as good by lowering the vitality of the mucous membranes while disposing of the microbes. Certain chemical washes may help the mucous membranes of the throat and nose to get rid of dangerous material in the shape of dust that may have accumulated, but the natural processes accomplish this so well if they are healthy that it is a very serious question whether we should dare to interfere with them in any groping way.

The all important prophylaxis against the disease is to keep out of crowds where some people are almost sure to harbor the influenza bacillus either in a preliminary stage of the affection or in convalescence. The disease is caught from other persons and not from the air, tho the word influenza from the Italian originally signified that they felt that there was an "influence" in the air which caused the affection. Besides avoiding crowds it is important to have plenty of cold, fresh air in one's sleeping room and to get out into the air several hours a day, to avoid wet feet and other disturbing physical conditions, to eat plain food and to get regular sleep, so as to keep the resistive vitality as high as possible. Good nursing and the meeting of symptoms as they occur represent the most effective treatment. Whisky does no physical good for the disease and is not a stimulant, but it lifts the scare which comes over many people when they find they have influenza and this is often an extremely important element in the treatment. The death rate will not be high from this recurrence and at the end of the year it is doubtful whether the number of deaths due to it will cause any material increase in the annual mortality.

New York

The Story of the Week

Labor Policy Versus "Red" Politics

THE American Federation of Labor has declared its opposition to the anti-sedition laws pending before Congress. Mr. Gompers stated that every legitimate purpose of the proposed legislation was already covered by existing laws and that other provisions might easily be construed to interfere with trades union organization and ordinary political agitation. In this stand the President of the Federation undoubtedly unites both radical and conservative labor unionists.

On other points, however, the radical element in the Federation shows itself increasingly hostile to Mr. Gompers. He suffered a serious rebuff when a local of the Cigar Makers' Union refused to elect him as delegate to the convention of the Union. Altho Mr. Gompers left his trade of cigar maker to become President of the American Federation years ago he has always attended the conventions of the Cigar Makers' Union as a delegate until this year. Many "reds" have been offended by his eloquent denunciation of Bolshevik Russia:

We know about Russia. We know about Bolshevism. We know the piteous story of cruelty and intolerance and we know the autocratic concept that underlies the minority dictatorship which is hailed to the world by its dupes and advocates as the most perfect state of society yet devised. We know about it and we condemn it completely, finally and for all time.

He attacked the Bolshevik Government with especial bitterness for introducing the principle of forced labor, as the "right to strike" is one of the fundamental articles of the industrial creed of the American Federation of Labor. For this reason he also denounced the recommendation of President Wilson's second industrial con-

ference concerning compulsory arbitration. Mr. Gompers said that while he admitted the friendly attitude of President Wilson to organized labor, the future might bring into power a hostile administration whose Boards of Adjustment would give adverse decisions. He lauded the strike as "the most civilized form of protest" against industrial injustice and added that "the country which has the fewest strikes or no strikes at all has the lowest standards of life." President Shea of the Brotherhood of Locomotive Firemen said that the compulsory arbitration laws of Canada and Australia had proved failures, and that the railroad companies desired anti-strike legislation because they were planning to reduce wages when the roads are returned to private control.

A similar hostility to compulsory arbitration was evident in the strike of Kansas coal miners when the state legislature passed the Industrial Courts Act on the recommendation of Governor Allen. Under the law an Industrial Court of three judges was created with broad powers for supervising common carriers and public utilities and "for the purpose of preserving the peace, protecting public health, preventing industrial strife, disorder and waste, and securing the orderly conduct of business directly affecting the living conditions of the people." To strike against the recommendations of the Court may be punished by a fine or by six months in jail. Four hundred miners defied the new law by at once going on strike, but most of them returned to work within a few days. Governor Allen has ordered an investigation of the incident.

At a conference of labor leaders in New York it was decided to unite into one organization the central organizations of the different boroughs. The combined union will represent 500,000 workers of the Greater City. This decision is interpreted as a victory for Mr. Gompers, who had advocated the amalgamation, which was viewed with distrust by his opponents. Mr. Gompers has now brought forward a more ambitious program for the affiliation of national Federations of Labor in the countries of the American continent with an inclusive Pan-American Federation "to the end that the workers of all the American countries may be better prepared to act concertedly for their mutual protection and advancement." The third Pan-American Labor Congress will be held in Mexico City next July.

The I. W. W., radical rival of the American Federation of Labor, is now under the displeasure of the law in many parts of the nation. In Chicago a special grand jury has returned indictments against William D. Haywood and thirty-six other members of the Industrial Workers of the World. The charge is advocacy of force and violence to overthrow the Government. The same grand jury had already indicted eighty-five members of the Communist Party and thirty-eight members of the Communist Labor Party. In the state of Washington thirty-six members of the I. W. W. have been found guilty on a charge of "criminal syndicalism."

On the other hand, violent actions against the I. W. W. have also led to prosecution. The Arizona

Jugend, Munich

"Times have changed, doctor. Here's two marks for you. You tipped me many a time in the old days!"

Marcus in New York Times

U. S.—“You can’t be my friend and theirs, too”

courts are trying the cases of 210 men charged with kidnapping and deporting striking copper miners at Bisbee in 1917. After prolonged delay the affair has at last been brought to trial, but it will probably be many weeks before a verdict has been rendered in every case, especially if the defense wins its contention for separate trials of the individual defendants.

The trial of the five Socialists elected to the New York Assembly is still in progress. Ex-Justice Hughes and other representatives of the Bar Association were not permitted to appear directly on behalf of the suspended Assemblymen and the conduct of the defense has been left to Morris Hillquit, Socialist candidate for mayor of New York City in 1917, Mr. Stedman, and other counsel of the defendants. Martin W. Littleton is conducting the prosecution, as counsel for the Assembly Judiciary Committee. He contended that as members of the Socialist Party the accused “gave their allegiance wholly and solely to an alien and invisible empire known as the Internationale.” Numerous motions to reseal the suspended members or dismiss the case against them were offered, but in every case rejected, Speaker Sweet being determined to prosecute the case to a conclusion.

Four hundred delegates of labor organizations, claiming to represent nearly a million workingmen, met at Albany on the last day of January to protest against the action of the New York Assembly. But labor was not alone in its stand on this question. The New York State League of Women Voters adopted resolutions of censure against the Assembly. A council of clergymen, including five bishops of the Episcopal Church and numerous leaders of other denominations, declared that “We have long been saying that constitutional changes can be effected without violence in America, because of our right to free expression of opinion by voice and ballot. We cannot now deny this American substitute for violence without directly encouraging resort to revolution.” Besides denouncing the exclusion of the Socialist Assemblymen, the council of clergymen opposed “the deportation of men without judicial trial” and “the proposed repressive legislation now before Congress, threatening the primary rights of free speech, free press and peaceable assembly.” This declaration drew forth a protest from Judge Alton B. Parker, President of the National Civic Federation and in 1904 Democratic candidate for the presidency, who said, “I think these gentlemen should have waited until Congress finished before they undertook to characterize

that legislation as in effect unconstitutional.” He defended the policy of deporting aliens affiliated to revolutionary organizations.

The National Civic Federation has declared in favor of a campaign of education against the Socialists. In a recent pamphlet issued by the Federation the issue is thus stated:

However the contest now beginning at Albany may result, as stated above a much bigger question arises than those involved in the seating or exclusion of the five Assemblymen . . . and that question is whether the American people want what the Socialists want, no matter how they propose to bring it about, whether, under any circumstances, they want to elect to any office men subscribing to such principles and views.

At the annual meeting of the Federation it was voted to ask other agencies to join it in “a thoro study of the principles, policy, tactics and objects of the Socialist movement in this country.” Mr. Collins, who spoke at the meeting, declared that there was “more Bolshevism to the square inch in New York City and to the square foot in the United States than there is in the whole tremendous expanse of the Russian Soviet Republic.” President Parker and Vice-President Gompers were re-elected as officers of the Federation.

The 19th Amendment

WOMAN suffrage is in a race with Father Time for the 1920 election. That the equal suffrage amendment to the constitution will be law within a few months seems almost to be conceded, but it is very doubtful if a sufficient number of state legislatures will have ratified by November to make possible the full influence of the women’s vote in the election of President and Congress. One difficulty lies in the fact that many legislatures do not meet this year in regular session and cannot act on the amendment unless called into special session by the Governors of the several states.

Wyoming has already acted in special session, rati-

Judge

“He loves me, he loves me not!”

fying the amendment by unanimous vote. The Nevada legislature has been summoned to meet in February and will doubtless follow suit as it also has already granted equal suffrage under state laws. Wyoming is the twenty-seventh state to ratify the federal amendment. Seventeen states have yet to act, if we include Virginia, where the state House of Representatives declared for a popular referendum on ratification but the Senate Committee on Elections voted against the amendment. In the four states of Georgia, Alabama, Mississippi and South Carolina the legislatures went definitely on record against equal suffrage. A favorable omen comes from Texas, where the Supreme Court has upheld the state law giving women the vote in primary elections.

The effective opposition to woman suffrage seems at present to be limited to one section of the country, the southeastern states. No northern or western state, even in the southwest, has yet ventured to reject the proposed federal amendment and in all the doubtful states the suffragists are making a hopeful campaign. The open question is whether the sectional opposition extends to more than twelve states. Advocates of equal suffrage must capture nine more state legislatures to carry the amendment; opponents must win and hold nine more state legislatures to block it. The accompanying map shows the strategy of the campaign. It contrasts curiously with the "war map" of the already concluded struggle over the eighteenth amendment, as the southern states showed no tenderness for "state rights" on the prohibition question, the opposition to that amendment being strongest in the northeast, especially in Rhode Island and New Jersey.

It's Darkest Just Before Dawn

INTO the muddled treaty situation there has fallen a ray of light, justifying the hope that the Senate very soon may find a way to ratification. It will never consent to making the United States a full member of the League of Nations on the terms laid down by the covenant, but it is almost ready to agree to making this nation a coöperating member under the covenant terms as modified by the principles of the Lodge reservations.

When the bi-partizan conference on compromise dissolved, following the refusal of Senator Lodge to accept any modification of the reservation on Article X, the situation seemed hopeless. Senator Hitchcock gave notice he would seek to call the treaty up for open debate in the Senate February 10. There was nothing else to do.

Senator Lodge was urged to oppose this move. Its purpose, his advisors said, was to put the Democrats in

the position of working for quick ratification, and to compel the Republicans again to defeat the treaty. Senator Hitchcock was not sincere. But Senator Lodge saw the light. He would not oppose the Democratic move, but would forestall it, he announced, by moving himself to take the treaty up February 9.

Only one conclusion can be drawn from Senator Lodge's decision. It is that he has good reason to believe the treaty can be ratified with the Republican reservations when open warfare is resumed. To call up the treaty and have it rejected by Republican votes would be poor political tactics, but calling it up and having it ratified will give to the Republicans practically all the credit there is to be secured at this late day.

Unless there is some unexpected development within the next ten days Senator Lodge's program should be able to command enough Democratic votes to ratify before the end of the month. The change in the situation is due to the letter of Viscount Grey, special British ambassador to the United States, in which he explained to the British people the reservations under consideration in the Senate and indicated there would be little objection to them on the part of the British Government. The effect of Lord Grey's letter in Washington was tremendous.

Democratic senators who had argued that the proposed reservations would be unacceptable to the Allies quickly shifted their ground. Many of the staunchest supporters of the Administration now agree that it is desirable to accept whatever conditions are necessary in order that the influence of the United States may be quickly added to the League to assist in its work of world stabilization.

The irreconcilables still are in a position to create some trouble. Lord Grey's letter, they say, amply confirms their contentions that the Allies want the United States in the League on any terms to protect them in the possession of their war gains. They will renew their fight to give the United States a vote equal to that of Great Britain and her dominions in the League assembly.

The bi-partizan negotiations were broken up when the irreconcilables threatened to bolt Senator Lodge's leadership if he accepted any compromise on the reservations affecting the Monroe Doctrine and Article X. This was rather a remarkable stand for a group that voted solidly against ratifying with the Lodge reservations on November 19. If Senator Lodge did not make a bargain on that occasion whereby the irreconcilables agreed to support his reservations in exchange for his going no farther in the direction of compromise he lost an opportunity. If he is now able to count on the irreconcilables, even to the extent of refraining from

voting against his reservations, ratification by the Senate is not far distant.

The irreconcilables have definitely threatened a filibuster of presidential speeches when debate is resumed. Senator Lodge has no present sympathy with the aspirations of any of them, and when he can count enough votes to ratify without them he will be in a position to invoke the cloture rule and thus bring the long and bitterly fought contest to an end.

What effect Lord Grey's letter has had upon the President is not known. The renewal of debate is expected, however, to create an enormous public pressure for peace and it is now believed that the President, when the time comes, will not stand in the way. His advisors have made it clear he was under obligations to the Allies to insist upon unqualified acceptance of the Treaty he helped to negotiate, but would not be likely to reject the advice and consent of the Senate, once it had been given, whatever the terms laid down in the resolution of ratification.

Senator Smoot, chairman of the Joint Committee on Printing, told the Senate the other day that 7,300,000 words had already been expended in debate on the Treaty. The printing of one speech, made a public document and broadcasted over the country, had required forty-three tons of paper. He suggested that one way to help meet the paper shortage would be for Congress to economize on talk.

Federal Trade Commissioner Colver suggested to the Ways and Means Committee an appeal to publishers to limit the size of Sunday editions and the number of daily newspaper editions. Others have recommended a tax on advertising. It has been established to the satisfaction of the committee that the shortage of newsprint is due to an unprecedented use of advertising space, and that this is due in turn to the desire of the advertisers to utilize excess profits that would otherwise be collected by the Government in taxes.

Recent statements of former Secretary of the Treasury Glass have caused the Ways and Means Committee to worry about a possible shortage of cash and to cut the authorization for food relief for central Europe from \$125,000,000 to \$50,000,000 in the measure reported for this purpose to the House. Mr. Glass has been sworn in as the successor to the late Senator Martin, of Virginia, and announced his intention of fighting to increase the amount of the food credits to be established in the Senate. He will meet strong opposition.

Senator Borah told a group of western governors pressing for extensive irrigation development that if the senators from western states could be induced to stand together against loaning any more money to Europe it would be possible to make a bargain and secure the issue of \$26,000,000 in irrigation bonds by

Will all the women vote for the next President of the United States? The white states on this map show the trend in that direction. Nine more ratifications are necessary to pass the Federal Amendment for woman suffrage

the Federal Government.

Senator Borah joined with other senators in opposing the New bill for the creation of a Department of Air with jurisdiction over military, naval and commercial aeronautics on the ground that the country could not afford it. Supporters of the bill spoke of huge appropriations made by other nations for the development of aeronautics and the

economy men rejoined with assertions if these nations could appropriate for aeroplanes they could also pay the interest on American loans and send food supplies to their starving neighbors instead of turning to the United States. The bill was recommitted to the Military Affairs Committee.

The advocates of economy plan also to make a strong fight against universal military service when the bill reorganizing the military establishment comes before the Senate. They continue to insist that the Senate committee plan would cost the country more than \$1,000,000,000 a year.

If universal military training is pressed at this session it seems certain to be defeated. Political leaders are recommending that it be allowed to go over until the next congress. They do not want the issue fought over in the presidential campaign. Neither do they want the treaty in the campaign. In the Senate every one, with the exception of the Borah-Johnson group, will be happy if present expectations are realized and the treaty put out of the way.

RICHARD BOECKEL, *Washington*

The Age of Steel

IN spite of the end of the war and of the boom in munitions which war brings with it, in spite of the steel strike and the coal strike and other labor troubles, the steel industry has enjoyed one of the most prosperous years of its existence. The annual report of the United States Steel Corporation showed earnings for the last quarter of 1919 amounting to \$35,791,302. For the whole year the earnings amounted to \$143,813,219. Even after making every deduction for taxes, depreciation and interest on bonds, the corporation was able to pay for the year over \$25,000,000 in dividends on preferred stock and an equally large sum on common stock, besides maintaining a surplus of more than \$26,000,000.

The Bethlehem Steel Company made a good record. Its gross sales for 1919 amounted to \$281,641,907 and its net earnings represented a profit of 5.45 per cent on the volume of business done. President Grace said that his steel plants were working at full capacity and that his shipbuilding plants had the capacity of every shipbuilding way definitely scheduled for 1920 and in many

What the Coal Strike Cost

When the soft coal miners tried to enforce their demands for shorter hours and higher wages last November they cut down the soft coal output to a third of the production of the previous month. The diagram at the left shows the cost of the strike in a graphic comparison. Unfortunately, no diagram can show the cost to the country as a whole of this decrease in coal production just at the time when it should have been at its high. In spite of real sacrifices all over the country to save coal during the strike and after, many communities both East and West are facing the fear of a shortage now. Only last week the "Mauretania" was held up at her dock in New York harbor for several days because there was no coal for her return

Lost!
37,000,000 tons
of coal
\$42,000,000 in
wages

Perhaps the increased wage rates granted to the miners will pay for their losses during the strike; but there seems to be no way by which the public is to be reimbursed for the loss of coal. The diagram below shows the total production of soft coal in the United States during each week of the strike—and in the background the output that should have been made each week to supply our national needs

As the drawing above points out, the soft coal mining industry in the United States is highly unionized—and to the union of course goes credit for the success of its strike. The more radical elements in the union threatened trouble at the end of the strike by refusing their leaders' power to settle

cases for the first half of 1921. New business was offered far in excess of the capacity of the corporation to handle it.

While the stockholders of the steel companies are the chief beneficiaries of the year's prosperity, the workmen have made important gains. Chairman Gary of the Directors of the United States Steel Corporation has announced that beginning with February the wage rates of day labor would be increased ten per cent. Henceforth day laborers will get \$5.08 for ten hours' labor instead of \$4.62. As there are about 170,000 men affected by the increase the cost to the corporation will be some \$24,000,000 a year. There will be later adjustments, it is announced, in the salaries of higher grades of labor. The annual payroll of the United States Steel Corporation now includes altogether about a quarter of a million names and reaches nearly \$500,000,000. The corporation also paid last year \$733,707 in pensions to employees, the largest amount since the establishment of the pension system in 1911.

Lord Grey Offers an Olive Branch

THE conflict on the ratification of the Treaty entered a new phase when Viscount Grey intimated in a letter to the *London Times* that, disappointing as were the reservations to the Covenant formulated by the Senate majority, England would welcome the United States as an active member of the League of Nations even should this membership be conditioned by reservations. Lord Grey is supposed to speak with the sanction of his Government in which he formerly held the position of Foreign Secretary.

In the first part of his letter, Viscount Grey cleared the United States from the accusation of bad faith in failing to ratify the Treaty which President Wilson had signed. He pointed out that under the American Constitution the Senate is a treaty-making power equal with the President and had acted altogether within its constitutional powers. He did not believe that party politics, altho no doubt a factor, were "the sole or even the prime cause of the difficulty in the United States about the League of Nations."

It would be well, therefore, for the reasons both of truth and expediency, to concentrate our attention on the real underlying causes of the Senate's insistence upon reservations in ratifying the Covenant of the League of Nations.

1. There is in the United States a real conservative feeling for the traditional policy, and one of those traditions consecrated by the advice of Washington is to abstain from foreign and particularly from European entanglements. Even for nations which have been used to European alliances the League of Nations is felt to be something of a new departure.

This is still more true for the United States, which has hitherto held aloof from all outside alliances. For the League of Nations is not merely a plunge into the unknown, but a plunge into something of which historical advice and traditions have hitherto positively disapproved. It does not say that it will not make this new departure. It recognizes that world conditions have changed, but it desires time to consider, to feel its way and to act with caution. Hence this desire for some qualification and reservation.

2. The American Constitution not only makes possible, but under certain conditions renders inevitable, a conflict between Executive and legislature. It would be possible, as the Covenant of the League of Nations stands, for a President in some future years to commit the United States thru the American representative on the Council of the League of Nations to a policy of which the legislature at that time might disapprove. . . .

Viscount Grey considered it essential that the United States enter the League, as otherwise its basis would be narrowed to a mere "League of the Allies for armed self-defense against a revival of Prus-

sian militarism or against a sinister sequel to Bolshevism in Russia." He believed that the American people agreed that the war put an end to complete national isolation and he hoped that once they entered the League they would find that some of their reservations had been framed to meet dangers which in practise would not arise.

I do not deny that some of them are material qualifica-

© Underwood & Underwood

As the result of his four months in Washington, Viscount Grey on his return to London was able to accomplish a great deal in explaining to the British the status of the peace treaty in the United States and in pointing out, perhaps, the way to our settlement of the difficulties here. Viscount Grey was for ten years the British Secretary of Foreign Affairs; he came to this country last September as Ambassador from Great Britain, but, owing to President Wilson's illness, never presented his credentials

tions of the League of Nations as drawn up at Paris or that they must be disappointing to those who are with that Covenant as it stands and are even proud of it, but those who have had the longest experience in political affairs, and especially of treaties, know best how often it happens that difficulties which seem most formidable in anticipation and on paper never arise in practise. I think this is likely to be particularly true in the working of the League of Nations. The difficulties and dangers which the Americans foresee in it will probably never arise or be felt by them when they are once in the League. . . .

The most difficult of the reservations to meet, he thought, was that which seemed to deny the rights of nationhood to the British Dominions, but even this point admitted of adjustment:

There is one particular reservation which must give rise to some difficulty in Great Britain and self-governing dominions. It is that which has reference to the six British votes in the assembly of the League of Nations. The self-governing dominions are full members of the League. They will admit and Great Britain can admit no qualification whatever of that right. Whatever the self-governing dominions may be in the theory and the letter of the constitution, they have in effect ceased to be colonies in the old sense of the word. They are free communities, independent as regards all their own affairs, and partners in those which concern the empire at large. . . .

It may be sufficient to observe that the reservation of the United States, as far as known at the time of writing, does not in any way challenge the right of the self-governing dominions to exercise their votes, nor does it state that the United States will necessarily reject the decision to which those votes have been cast. It is therefore possible, I think it is even more than probable, that in practice no dispute will ever arise. Our object is to maintain the status of the self-governing dominions, not to secure a greater British than American vote, and we have no objection in principle to increase of the American vote.

The Trial of German Officers

THE refusal of the Dutch Government to deliver over the ex-Kaiser and the reluctance of the German Government to arrest the other offenders have not altered the determination of the Allies to bring them to trial. The present German Government, which is in the hands of moderate Socialists, is in a precarious position, for the Socialists have been drift-

ing over to the Independent or Spartacus side and growing more sympathetic toward the Soviet scheme. On the other hand the Monarchists and Militarists, who were at first quite cowed, are now plucking up courage and openly agitating for a return of the old régime. If the Government should undertake to search out and turn over to an enemy court about a thousand army officers and civil functionaries, among them some who are most admired as the heroic defenders of the Fatherland, it is feared that there will be a violent revolt of the reactionaries which in turn would arouse opposition on the part of the radicals and perhaps lead to the overthrow of the republic and the setting up of a Soviet. The German papers are asking what the Americans, French and British would have done if Germany had been victorious and demanded the surrender and punishment of Wilson and Pershing, Foch and Joffre, Haig and Beatty.

The German Government, foreseeing these difficulties, has expressed the hope that the Allies would not insist upon the execution of Article 222 of the Treaty of Versailles, which begins:

The German Government recognizes the right of the allied and associated powers to bring before military tribunals persons accused of having committed acts in violation of the laws and customs of war.

Secretary Lansing, who was chairman of the crimes commission of the Peace Conference, was skeptical of the propriety or policy of bringing the German Emperor to trial and lately the British are said to be coming around to this view, but the French insist upon exemplary punishment. Therefore the Allies will bring pressure to bear upon Holland to surrender William Hohenzollern, fugitive from justice, and will also demand the delivery of the ex-Crown Prince, Admiral von Tirpitz, Field Marshal von Hindenburg, General Ludendorff and perhaps ex-Chancellor von Bethmann-Hollweg. The official list has not yet been published, but it is said to contain 896 names; the most conspicuous of whom, besides those mentioned, are:

Field Marshal Prince Rupprecht of Bavaria, for the deportations in Northern France.

Field Marshal the Duke of Württemberg, commanding the Fourth German Army, for massacres at Namur and on the Somme.

Underwood & Underwood

Chicago, when the plans proposed in this drawing are completed, will have the largest stadium in the world, seating 100,000 people—30,000 more than the present "largest stadium," the Yale Bowl. It will be designed for outdoor theatricals as well as for athletics, and it will have the advantage of Lake Michigan as a scenic background as well as a natural electric fan on hot days

Field Marshal von Kluck, commanding the First German Army, for the assassination of hostages at Senlis, and for the massacre of civilians at Aershot.

Field Marshal von Buelow, for incendaries in the Argonne and the shooting of civilians.

Field Marshal von Mackensen, for thefts and executions in Rumania.

General Baron von der Lanken, for the murder of Nurse Edith Cavell, and of Captain Fryatt.

Admiral von Capelle, for unlawful attacks by submarines.

Field Marshal Liman von Sanders, for Armenian and Syrian massacres.

General Stenger, for issuing an order to take no prisoners.

General von Ostrowsky, for the pillage of Dieuze and the massacre of 103 civilians.

General von Tesny, for the execution of 112 inhabitants of Arlon.

The Neimeyer brothers, for cruelties against English prisoners at the camp at Holzminden.

Major von Giertz, for cruelties at the war camp at Magdeburg.

Lieutenant Rudiger, for cruelties at the prison camp at Ruhleben.

General von Cassel, for cruelties at Camp Doboritz.

General von Buelow, for the destruction of Aershot and the shooting of 150 civilians.

General von Manteuffel, for the burning of Louvain.

Lieutenant Werther, Commander Valentiner and Commander Forstner, for the ruthless sinking of hospital ships.

The offenders will be tried by courts-martial in the countries against which the crimes are committed. France, Belgium and Italy will claim the commanders which abused their population, while the submarine officers who sank ships and airmen who raided England will be tried on British ships or soil. Sir Ian Hamilton, speaking for the troops who fought at the Dardanelles, has protested against the inclusion of his former foe, Liman von Sanders, in the Black List, for, he says, "He was a clean fighter and always for fair play."

Baron von Lersner, the head of the German peace delegation at Paris, has resigned and returned home rather than receive the list of the Germans whose extradition is demanded.

The Russian Revolution Continued

NOTHING less than the motion picture film can properly register the Russian revolution. Print and paper are too slow and tame to record its oscillations. Men rise like rockets and as swiftly fall. Nicholas, Autocrat of All the Russias, whose fiat was law thruout a greater empire than any Augustus Cæsar, was butchered in a Siberian town and no man knows where his body is buried. Lenin, the Siberian exile and fugitive pamphleteer, reigns in his stead, and from the seclusion of the sacred Kremlin at Moscow issues ukases with more authority than any Czar. Sazonov, the astute Foreign Minister who steered Russia into the war, is now a refugee in Paris concocting bungling schemes for the restoration of the Empire. Trotzky, the Jewish journalist whose only military training was in writing polemical articles for a paper published on the East Side of New York City, is now in command of a disciplined and victorious army of a million men. Admiral Kolchak, self-styled Supreme Ruler, whose authority it was death to dispute three months ago, has disappeared from sight; some say hoisted on the bayonets of his own soldiers, others say hidden away in Manchuria. Semenov, the young Buriat and Hetman of the Siberian Cossacks, seizes the scepter dropped by Kolchak, and already dreams of becoming a second Genghis Khan. General Yudenitch, whose capture of Petrograd was prematurely proclaimed in our papers a few months

Harding in Brooklyn Daily Eagle

But the world moves on

ago, has been arrested in a Reval hotel for absconding with \$500,000 of public funds. General Denikin, K. C. B., whose near approach to Moscow last August set the Bolshevik leaders to packing up for Turkestan, is now said to have sought safety on board a British warship in the Black Sea. Gaida, the young Czech subaltern, who took command of Czechoslovak prisoners in the heart of Red Russia and with them fought his way thru to Siberia, and then held the line of the Urals against the hordes of the Bolsheviks, was deposed and disgraced by Kolchak, whom he defended, and was wounded and transported by the Allied forces sent to rescue him. Twelve new republics have appeared upon the map, stretching in one chain along the border from the Arctic Ocean to the Mesopotamian valley. Red Russia is swelling like a balloon before one's eyes and has added unto itself in the last seven months an area as large as the United States. In this gigantic drama the treasure of Kazan plays the sinister role of the Rhine Gold in the Wagner Tetralogy. Stored by the Czar's order in this remote town of the Volga valley for safe keeping, the \$200,000,000 in gold coin was first captured by the Bolsheviks, then taken from them by the Czechs and turned over to Kolchak, and now whatever is left of its millions of gold is being fought over by the Bolsheviks, the Social Revolutionists, the Czechs and Cossacks.

The Brest-Litovsk treaty between Soviet Russia and the German Empire was annulled by the Treaty of Versailles, but hardly was the ink dry on the latter document before a treaty was signed at Dorpat between Soviet Russia and the Esthonian Republic. The Bolsheviks, being very anxious to secure one peaceful frontier and remove the menace to Petrograd, conceded easy terms. Esthonia receives \$7,500,000 in gold as her share of the treasure of imperial Russia and is relieved of any responsibility for the imperial Russian debt. The new republic will have an area of about 18,000 square miles, which is a little larger than Massachusetts, Connecticut and Rhode Island combined. The population is about 1,750,000, the country mainly agricultural.

Latvia, Lithuania and Poland are expected to follow the example of Esthonia and conclude peace with Soviet Russia. Poland fears that a Red offensive toward Warsaw will be started in the spring and is desirous of forestalling it by launching a forward movement im-

Keystone View

Lieutenant Edmund P. Graves, the first American to be killed fighting under the Polish flag in the war against the Bolsheviks. He was a Harvard 1913 man, who fought in the British Royal Air Force during the war, and afterward volunteered in the Kosciuszko Squadron of American pilots under the Polish army

mediately with the aid of the Allies. Naturally, Poland would expect to be compensated by the annexation of Russian territory. The French favored supporting the Poles in this venture, but the British and Americans opposed, for Poland has already absorbed a large extent of territory to which she has no ethnological right. Secretary Baker stated plainly to the congressional committee that the United States would aid Poland only in case of defensive warfare to preserve the frontiers assigned to her by the treaty.

The conclusion of a peace with Esthonia opens to Soviet Russia a way to an ice-free port on the Baltic. This comes by a timely coincidence, just when the Allies have decided to abandon the blockade and reopen commerce with Russia. Trade will at first be carried on exclusively thru the Russian coöperative societies, which have agreed to distribute goods among the people without regard to their political proclivities.

As the coöperative movement has never made such progress in America as it has in England, Belgium, Denmark and Russia, we may quote from a statement given out by the Information Bureau of the Russian Coöperatives at 136 Liberty street, New York:

There are three kinds of Coöperative societies in Russia. First, there are consumers' unions which conduct stores, distributing the profits among the members at the end of each year. Always, however, some part of the profits is set aside, either for reserve capital, or for the furtherance of some social enterprise the society wishes to undertake. Such Coöperative societies have twelve million members, and as only heads of families are allowed to become members, they probably represent a population of sixty million. Next come the credit societies, which conduct banks for the savings of the farmers, loaning their funds to the consumers' societies, when the latter wish credit. These societies have about four million members. Third, there are the producers' unions of flax growers, dairymen, lumbermen and truck garden growers, in which the producers are organized to market their products, and these have about four million members. It is estimated that about two-thirds of the Russian population is represented in these various societies.

The Coöperative societies of Russia are a tremendous social as well as economic force. Beginning with one society in 1865, by 1919 Russia had nearly fifty thousand societies of varying strength. Production, distribution, credit, transportation, education, amusement—there is hardly a feature of industrial or social life with which they are not occupied. Each local society is composed of shareholders, heads of families, who pay an initial fee, and assume responsibility for an amount from five to ten times larger.

The Coöperative societies in Russia hold themselves strictly aloof from politics, and have carried on their activities with remarkably little interruption, all things considered, from the war. In 1918, in spite of the hindrances connected with the blockade and the disturbed state of the country generally, their total turnover was eight billion rubles, or about one billion six hundred million dollars. In that year they operated over five hundred industrial plants and had a total of over fifty thousand employees.

The Bolsheviks when they came into power two years ago tried to crush out the coöperatives as they did the private banks and merchants, so as to monopolize all trade and industry. But the coöperative societies were more efficient and trusted than the Soviets. Altho the leaders of the coöperatives at first were imprisoned or shot and their funds seized, the Bolsheviks soon found that to interfere with such an extensive and popular system of distribution would bring ruin upon the country, so a compromise was adopted by which the coöperative societies were to continue on condition that a Soviet commissioner should sit upon all their boards.

Since the Russian ruble is worthless and the Russian Government is not trusted, international commerce will revert to the primitive form of barter. Russian products such as flax, timber, furs and metals will be brought to the frontier and exchanged directly for the goods required by the Russians, especially agricultural and railroad machinery, shoes, cloth, printing presses and medicines. The Soviet Government has authorized the Central Union of the Russian Coöperatives to engage in commerce with the coöperatives and business firms of western Europe and America and has guaranteed the protection of all goods handled by the coöperatives and the safe passage of their agents back and forth across the frontier. A delegation of the coöperatives has left their headquarters in Paris to go to Moscow and arrange for opening the avenues of trade. The Soviet has also signified its willingness to grant mining, manufacturing and timber concessions to American and other foreign capitalists provided that they give their employees the wages and working hours required by Soviet standards.

The military situation continues to favor the Soviet. The Red troops have occupied the isthmus connecting the Crimean peninsula with the mainland. Denikin's forces have withdrawn from Odessa, and this city is said to be in the hands of the Ukrainians. A fleet of British warships has been dispatched to the Black Sea to prevent the Bolsheviks from working down to the Caucasus and capturing the oil fields of Baku. Vladivostok is in the hands of the revolutionists. The American troops are being withdrawn and the American military stores have been sold to the coöperatives.

The Suppression of Sinn Fein

IN the Irish elections of January 15 the republicans of the Sinn Fein and Labor parties gained a majority in most of the local councils outside Ulster. The new municipal councils of Dublin, Cork and Limerick immediately upon assembling declared their allegiance to the Irish republic and their repudiation of the British rule. The flag of the Irish republic was

They are up for Arson

Which one would you sentence heaviest ?

OPINIONS would vary as to which one of these famous firebugs is the worst culprit.

But nine out of ten people would indict the oil lamp, gasoline, waste litter or matches, and overlook the insignificant little brand over at the end, seemingly guilty of nothing more than "smoking in court," but really the worst offender of the lot.

Not that the oil lamp, the gasoline and the match aren't guilty. Their toll of fire loss is well known. But actually they are small inside workers, who can never pull a big job—a community fire—without their little accomplice, the roof ember.

It is this burning fragment from another fire, this ember blown from one inflammable roof to another that is responsible for a great part

of our huge annual fire loss. And it is in protecting you from this ever present menace that the service of Johns-Manville is most vital. Buildings roofed with Johns-Manville Asbestos are themselves preserved from this danger and are prevented from menacing others.

Furthermore, in addition to fire protection, asbestos carries with it a greatly increased durability. This wonderful fibrous mineral is not only absolutely fireproof but is immune to the disintegrating effects of sun, snow, hail, ice, rain, smoke and acid fumes. It is truly the ideal roofing material. Buildings of all sorts are covered with it in some one of its several forms, such as shingles, ready roofing, built-up roofing, Corrugated asbestos. Thus Johns-Manville affords to the modern roof not only protection from fire but a very high degree of durability.

raised over the city halls in place of the British ensign. This open defiance of the authority of the King was met by prompt measures on the part of the Lord Lieutenant, Viscount French. Before morning sixty-five of the republican leaders were in prison or on board British warships ready for transportation. Warrants are cut for nearly as many more. Seven of the newly elected members of the Dublin municipal council are among the captives. At Limerick a riot occurred and the military fired on the crowd, killing a publican.

Highway robbery and murder have become common in Ireland, which formerly had a clean record as to crime. The attempt to assassinate Field Marshal French as he was motoring from the railroad station to the Vice Regal Lodge was made in broad daylight by a score of men armed with bombs, rifles and revolvers, yet not one of the conspirators has been caught. One of them was shot by the guard and the coroner's jury passed a resolution of such warm sympathy for the widow as amounted to approval of the crime. Fourteen police officers have been killed within the last three months and even the offer by the Lord Lieutenant of \$50,000 for information leading to the conviction of the murderers has not induced any informer to come forward. Even persons implicated in the conspiracy and concerned in the crime if they did not actually commit the murder are promised a reward of \$5,000, full pardon and the special protection of the crown if they will furnish secret information as to the criminals. But such offers have so far proved fruitless.

The secession movement has been greatly strengthened by the official recognition given to Mr. De Valera as President of the Irish Republic by the municipalities of New York, Boston and other American cities. Millions of dollars of American money have been invested in Irish Liberty Bonds and since these will be worthless unless the republic is established those who have put their money in them will naturally bring strong pressure to bear upon the United States Government to recognize the independence of Ireland at the earliest possible occasion. It was the sale of Confederate bonds in England that led to British recognition of the Confederacy as a belligerent power and to active British support of the South. It is rumored, tho officially denied, that shipments of American arms for the republicans have been landed in Ireland.

Premier Lloyd George in introducing his new Home Rule bill said:

I think it is right to say here, in face of the demands which have been put forward from Ireland with apparent authority, that any attempt at secession will be fought with the same determination, with the same resources, with the same resolve as the Northern States of America put into the fight against the Southern States. (Loud cheers.) It is important that that should be known, not merely thru-cut the world, but in Ireland itself.

Subject to those three conditions, we propose that self-government should be conferred upon the whole of Ireland. Our plan is based on the recognition of those three fundamental facts—first, the impossibility of severing Ireland from the United Kingdom; secondly, the opposition of Nationalist Ireland to British rule in Ireland; and, thirdly, the opposition of the populations of northeast Ulster to Irish rule. The first involves the recognition that Ireland must remain an integral part of the United Kingdom; the second involves the conferring of self-government upon Ireland in all its domestic concerns; and the third involves the setting up of two parliaments, and not one, in Ireland.

These two parliaments, one for the province of Ulster with its 1,500,000 inhabitants and the other for the provinces of Leinster, Munster and Connaught with their 2,800,000 inhabitants, would be connected to a council to which they might delegate such powers as the two parliaments could agree upon and so in time the two parts of Ireland could come together. But Lloyd George's scheme is not very favorably received in either part of Ireland.

The Federal Council of the Churches of Christ in America reports that during 1919 the membership of the churches increased by 2,779,667. There was also an increase of 3,519 in the number of ministers and of 5,350 in the number of organized churches. On the other hand, Sunday school membership showed a marked and inexplicable decrease. There are nearly 26,000,000 persons in the United States in the various evangelical Protestant churches, including only adult communicant members. The Roman Catholic Church reports more than 17,500,000, but this includes all baptized children in Catholic families. There are also half a million Mormons, 260,000 members of Jewish synagogues, 120,000 of the Greek Orthodox Church, nearly a hundred thousand of the Russian Orthodox faith and 50,000 Syrians. It is evident that a large majority of the adult inhabitants of the United States are affiliated with some religious body.

John M. Parker, candidate for Vice-President on the National Progressive ticket of 1916, has won the Democratic

The influenza epidemic has brought into prominence lately the indispensable value of public health nurses. Their work primarily, of course, is to prevent sickness, to teach people how to keep well; but in the large cities especially they have met the immediate needs of the epidemic and saved more lives than any record can show. The nurse at the left is giving necessary medicines to a whole family down with the flu; at the right are the children of one house all out to welcome the public health nurse's visit

nomination for Governor of Louisiana, a nomination which ensures his election. He obtained a large majority over Colonel Stubbs, the candidate of the "Behrman machine," which has long dominated New Orleans in the same manner that the Tammany machine has dominated the politics of New York. The press, even in northern states, has widely commented on the primary election in Louisiana as a revolutionary step in the reformation of local politics.

Gabriele d'Annunzio is changing his profession from poet to pirate. Not content with holding the city of Fiume in defiance of the Allies and his own Government, he has seized the torpedo boat "Orsini" and the naval ship "Citta di Roma" and diverted to his own use the military supplies and 2,000,000 lire that were being sent by the Italian Government on the steamer "Taranto" to feed and pay the Italian troops in Albania. One night he sent a band of his lieutenants across the armistice line into Istria and kidnaped General Nigra, commander of the Italian 49th Division.

In spite of all that has been said of a slump in prices, the report for December of the Federal Bureau of Labor Statistics holds out little hope for the "ultimate consumer." Of forty-four articles of food the prices of twenty-two showed an increase within the month and ten remained stationary. Prices averaged 2.6 per cent higher than in November; 5 per cent higher than in December, 1918; and no less than 89 per cent higher than in 1913—those idyllic days of cheap living costs "befo' the wa'."

The Methodist Church North and the Methodist Church South are actively carrying on negotiations for reunion, after a separation dating from the Civil War. A joint conference at Louisville, Kentucky, recommended unanimously a plan of reunion which would establish a supreme General Conference for the whole Methodist Church and seven regional conferences, one of which would include the negro churches and each of the other six about one million white members.

The constitutional convention in New Hampshire has approved the elimination of the religious qualifications which limited full citizenship rights to "Protestants" who were "rightly grounded in evangelistic principles." These provisions have long been a dead letter, but remained embedded in the text of the constitution like flies in amber. The convention also approved an amendment empowering the legislature to lay a graduated inheritance tax.

The United States Public Health Service has accepted the request of the Missouri State Board of Health to cooperate in a campaign of education for the benefit of public

Charged!!

Is your electric bill too high?

That minimum charge of a dollar or so a month for service—"whether you use it or not"—is it really unreasonable? Is the public receiving that square deal every American demands as his right?

Consider the question in all fairness and you will find the reason why an interesting one.

If you regard that dollar a month as a sort of interest charge on the electrical equipment used for you, it will seem fair enough.

There's a meter in your cellar and a system of mains and cables coming right up to the door. The flow of current through your street is constant night and day, so that at any time you may turn a stream of it into your home.

A delivery system as rapid as a desire, as dependable as an honest man's promise. But this problem of distribution is the biggest, most costly task the central station has to tackle.

Indeed, for every two dollars invested in generating equipment, three dollars must be added for equipment to deliver the current at your door—distribution.

Then too distribution requires that poles be erected, wires strung, lines maintained through the heaviest weather. Or it entails the opening up of streets and laying of cables—more satisfactory in the long run, but at an enormous first cost.

Little problems that must be solved behind the scenes before the show can proceed. But you enjoy the show and don't want the stagehands to work for nothing.

That is why you pay the minimum service charge—so much a month—a charge for which the central station gives full return.

Published in the interest of Electrical Development by an Institution that will be helped by whatever helps the Industry.

Western Electric Company

No. 7 *Reaching into every corner of this broad land, even to the most secluded farm, the Western Electric organization brings all the conveniences and the utility of electric light, power and communication.*

hygiene. Special endeavor will be made to examine the physical condition of the children of the state and give advice as to its betterment. It is expected that other states will follow the enlightened example set by Missouri.

After long delay, a jury has at last been selected to try Senator Truman H. Newberry and his 123 co-defendants, accused of election frauds in the Michigan Senatorial contest of 1918 between Mr. Newberry and Henry Ford. The chief accusation thus far brought forward by the prosecution is that the law limiting the campaign expenses of candidates was seriously violated.

According to the British official statisticians the United States on armistice day was issuing 1,924,000 rations in France, while Great Britain was issuing 1,731,578. The combatant strength in France is estimated at 1,160,000 for the Americans and 1,164,790 for the British. The two overseas forces were therefore substantially at a parity when the war closed.

Several villages in Newfoundland between North Bay and Port-au-Basques are reported to be threatened with famine because the railway line on which they depend for supplies has been completely blocked by ice and snow, which it may take several weeks to remove. The shore is also ice-bound, thus cutting off relief by sea.

Brazil has declined to sell the forty-five German ships which she took over during the Great War until it is known whether or not France will exercise her right of option for the purchase of the ships leased to France. It is reported that American shipping interests have offered \$250 a gross ton for the former German ships.

The French Government has executed two more spies. One Funck was a major in the Austrian army, but in the guise of an Irishman remained in the employment of a Paris bank and communicated thru Spain information as to where the shells of the German long-range gun fell in Paris.

The fleet transport "Northern Pacific" rescued 271 passengers from the transport "Powhatan," disabled by the storm and overdue at port for several days. The ship was not salvaged at the time the passengers were taken off, but was later towed into port by a wrecking steamship.

The Republic of Chile is remodeling its banking system after the example of the United States. A State bank is

proposed along the lines of our Federal Reserve bank, which will have control of the currency and money exchange.

And now comes the pension period which will last for more than fifty years. The new French Minister of Pensions, André Maginot, has still to handle 3,225,000 claims for pensions and 2,400,000 demands for increased allowance.

The loss of automobiles by theft in 1919 is now estimated at no less than \$90,000,000. One car out of every sixteen in the larger cities is stolen on annual average, the figure for smaller towns and country districts being rather less.

Admiral von Reuter, who gave the order for the scuttling of the German fleet interned at Scapa Flow, was given an enthusiastic official and popular reception on his return to Germany with the other prisoners released by the British.

A Cape-to-Cairo air route of 6323 miles has been laid out and is now ready for traffic. The trip from one end of the African continent to the other may now be made in one week instead of ten or twelve.

A new diamond field, rumored the richest ever, has been discovered in the desert near Taungs, 100 miles north of Kimberley, and thousands of men and women have rushed there to stake out claims.

The Treaty of Versailles has been criticized for its unprecedented length, some 80,000 words, but the speeches about it by the senators add up to 7,300,000 words and they are still talking.

British commerce beat all its former records last year. The exports for 1919 were nearly 300,000,000 pounds over 1918 and the imports showed an increase of \$315,000,000.

It is announced that packages for dispatch by parcel post from the United States will be accepted for any post office of the Republic of Panama.

A general lockout in the Swedish iron works and engineering shops on January 25 has thrown 950,000 men out of employment.

The first German steamer to pass under London Bridge since 1914 was the "Borussia" from Hamburg, which arrived January 15.

The camel and the needle's eye

A Number of Things

By Edwin E. Slosson

I am naturally unselfish in sharing good things when it does not cost me anything. At table I always pass the cake along to my left hand neighbor except when there is only one piece left. Words are something that can be shared without self-sacrifice. A book is as inexhaustible as the Widow Cruce's oil. Here my native altruism meets no check. I like to pass along to my friends whatever has struck me in recent reading. But my friends are all too few for the complete exercise of my generosity. Some of them won't listen to me more than an hour or so. So I am going to try the readers of The Independent and see how they stand it. In order not to conflict with the Remarkable Remarks column I shall call it

LIVE REMARKS BY DEAD AUTHORS.

WILLIAM BLAKE—What is now proved was once only imagined.

ADAM SMITH—Science is the great antidote to the poison of superstition.

NAPOLEON—Public opinion is a power invisible, mysterious and irresistible.

HENRYK SIENKIEWICZ—It is no harm to spill blood unless it be spilled to no purpose.

EMPEROR KANG HSI—If all your life you yield the path you will not lose a hundred yards.

OSCAR WILDE—Nothing is so dangerous as being too modern. One is apt to grow old-fashioned suddenly.

SAMUEL BUTLER—There ought to be some form of social separation as simple and void of offense as introduction.

HENRI FREDERIC AMIEL—No one sees the same landscape twice over, for the window is one kaleidoscope and the spectator another.

LORD BEACONSFIELD—Whatever form a government may assume, its spirit must be determined by the laws which regulate the property of the country.

THOMAS JEFFERSON—I can scarcely withhold myself from joining in the wish of Silas Deane, that there were an ocean of fire between us and the Old World.

ABRAHAM LINCOLN—It has long been a grave question whether any government not too strong for the liberties of its people, can be strong enough to maintain its existence in great emergencies.

JOHN BRIGHT—If I were asked as to the probabilities of it I should say that, judging from our past and present policy in Asia, we are more likely to invade Russia from India than Russia is to invade us in India.

KWANG-TZE—Man's feet are small and can cover little space, but by continually stepping on untrodden ground he can traverse the entire earth. Man's mind is small and can hold little knowledge, but by always going on to what he does not know he may come to comprehend the universe.

Mother Pins Her Faith to Musterole

In days gone by, mother mixed a mustard plaster when father had bronchitis or brother had the croup, but now she uses Musterole. It is better than a mustard plaster.

She just rubs it on the congested spot. Instantly a peculiar penetrating heat begins its work of healing—and without fuss, or muss or blister.

Musterole relieves without discomfort.

The clean white ointment sets your skin a-tingle. First, you feel a glowing warmth, then a pleasant lasting coolness, but way down underneath the coolness, old Nature is using that peculiar heat to disperse congestion and send the pain away.

Made of oil of mustard and a few home simples, Musterole is uncommonly effective in treatment of the family's little ills. It takes the ache out of grandfather's back. It soothes sister's headache. It helps mother's neuralgia.

Mother pins her faith to it as a real "first aid."

She is never without a jar of Musterole in the house.

Many doctors and nurses recommend it. 30c and 60c jars; hospital size \$2.50.

The Musterole Co., Cleveland, Ohio

The British Republics

(Continued from page 243)

the need of deep and sincere thought.

If a discussion of royalty were conducted on a basis of destructive criticism it might still be salutary. Every function of public life should justify itself, and it is not allowable to tolerate among the institutions of the nation an organism whose chief value is its uselessness. One cannot classify royalty with the vermiform appendix and yet hold it up to the perpetual adoration of the people.

But the positive reasons for the supersession of royalty are vital. Does any thinking man really believe, what is so often said, that the disappearance of the monarchy would "make no difference"? Why, if only for the psychological effect our new movement will be justified. The fall of monarchy will mean a new birth of a national life, a new impetus to effort, a new vision of the future, a new desire to win out a better world, and to realize great ideals; it will mean also the appearance of new men in every field of endeavor, in literature, in art, in science, in all forms of social industry and organization, men whose names are now beclouded or unknown owing to the false standards of the old regime.

There are, moreover, reasons even of wider scope, at least in the political aspect of things, why we are setting up the Republic of Great Britain. South Africa is in the main republican. At the next General Election, it may be anticipated that Hertzog will come into power. The establishment of the Republic of South Africa will be a matter of a few months. The question is, whether South Africa will become a republic against the will of Great Britain, or whether it may, as a republic, remain within the ring of the British dominions. Those who say that monarchy costs little will soon find themselves facing the question whether they will pay a continent for that possession.

My plan is conservative, of that form of conservatism, however, that refuses to accept falsified values or build the

future on a foundation of bad material.

What I have said of South Africa is true, with certain changes of local conditions, of Australia and of Canada. There has not been an overt act of either of these countries for some time past which has not tended in the direction away from the centralized authority of the British cabinet. Men born with the free spirit of Australians and Canadians cannot be content to have their souls bound in the trammels of a system which, in its very inception and in its ritual, flouts democracy in the face.

When all the dominions have become republics, and Great Britain, and Ireland also, many of the dangerous questions of the day will have found their natural solution. The cohesion of this ring of Republics will be maintained, more closely than at present, by free exchange of citizenship between the associated Republics, and by an agreement, voluntary of course, to provide for mutual defense. A thousand other details will be arranged in accordance with this conception, such as a system of exchange of university students and professors; but it is not necessary now to enter into these.

My main theme is that the difficulties that the British Dominions face all hang round an institution which has no sanction in right or reason, but of which the superstition has been instilled into the minds of the people by those in authority; but that when once that superstition is overthrown then the way is prepared for a flood of new thoughts which contain the promise of a great future. One concrete expression of these thoughts is the circle of the Republics of Australia, New Zealand, South Africa, Canada, Ireland, and Great Britain, held together by free exchange of citizenship, and associated for mutual defense. The next step after the establishment of our associated Republics will be to secure a friendly entente with the United States. By such means it will be possible to secure the peace of the world.

London

Why the Young Folks Leave the Farm

(Continued from page 238)

with a bright idea for public service and sets up business in a big city and makes money during the first three months. An equally useful idea in the country would have to be financed to operate at a loss for three years until people became used to it. The fact that it was needed would not overcome the frightful disadvantage of its being entirely new. That is one reason why the boy who feels sure he is full of ideas wishes to go to the city to try them out.

During last October it was my pleasure to be present at an entertainment which disclosed rural conditions in a manner one might wait years to see—and then miss! A little musical comedy show drifted into a prosperous village of about 5000 population where I know

everyone. Being one of the reckless liberals I immediately decided to attend that very evening, having in mind that the show would probably be so miserable it would be funny. Sometimes one can enjoy a rare evening's entertainment in a small town "opry house" if he brings his sense of humor along.

To my utter astonishment the place was crowded. The management, unacquainted with local conditions, had all the lights burning and everyone could see everyone else. This is ordinarily a motion picture theater and the people had overlooked the fact that they would not be protected by the dark at a musical comedy. There are thousands of them who see no objection to motion picture shows, but a musi-

cal comedy with girls dancing in tights is considered wicked by almost the entire community. And there sat that unhappy crowd—more than three-fourths of it feeling pilloried for the inspection of the remainder.

The curtain rose. The stage was about twelve feet wide. Five chorus girls pranced in, singing loud enough to knock the tin roof off the building. I settled down in my seat, expecting it would be as frightful as I hoped. Then the comedians came in. And they were excellent! The dialog was snappy, the plot moved along nicely. In fact I was astounded. Naturally with such an excellent show in progress it was difficult to choke off a laugh. But nearly everyone did—except me and a business woman there who has the same sort of a laugh I have, in that it will not choke. The crowd nearly strangled. They absolutely didn't dare laugh. They didn't dare applaud. Sometimes one would hear a man fairly explode and then choke his handkerchief into his mouth. And when the show was over they filed out as quickly and as silently as possible. It was a warm night, but by the way they scattered at the door one would have thought the temperature was freezing.

Among those present that night was the principal of the high school, a young man and a jolly fellow. He resigned the next day. He knew what was coming to him so he beat them to it. I have never been back there since. I'm never going back there, altho I have a score or more of dear friends there. I am a young man myself. I had some property there. I sold it. I don't like that kind of an environment. I like my friends there just as much as I ever did. I forgive those who were present that night. I understand how circumstances have given us our different points of view. But I always find an excuse for not going when it is suggested that my business there requires my presence. The place is repulsive no matter how sincerely I try to laugh at myself for being bothered by such a thought.

New York

Pete: Have you got any mail for me?

Postman: What's your name?

Pete: You'll find it on the envelope.
—Princeton Tiger.

Struck by the notice, "Iron Sinks," in a shop window, a wag went inside and said he was perfectly aware of the fact that "iron sank."

Alive to the occasion the smart shop-keeper retaliated:

"Yes, and time flies, but wine vaults, sulphur springs, jam rolls, grass slopes, music stands, Niagara Falls, moonlight walks, sheep run, Kent hops and holiday trips, scandal spreads, standard weights, India rubber tires, the organ stops, the world goes round, trade returns, and——"

But the visitor had bolted. After collecting his thoughts he returned, and showing his head at the doorway, shouted: "Yes, I agree with all of that perfectly—and marble busts."—*London Opinion.*

That Would Buy 100 Dishes Of Supreme Food—Quaker Oats

Consider that—the steak for an average family meal would serve 100 dishes of the food of foods.

Quaker Oats costs one cent per large dish. One egg would buy five dishes. One chop would buy twelve dishes, based on prices at this writing.

You can serve ten breakfasts of Quaker Oats for about the cost of serving one with meat or eggs or fish.

Saves 90% On Your Breakfast

But the true way to measure foods is by nutrition. The calory—the energy unit—is used for this comparison.

Quaker Oats yield 1810 calories per pound, while round steak yields 890 and eggs 635.

This is the cost per 1000 calories in some necessary foods at this writing:

Cost Per 1000 Calories					
Quaker Oats	-	-	-	-	5½c
Average Meats	-	-	-	-	45c
Average Fish	-	-	-	-	50c
Hen's Eggs	-	-	-	-	70c
Vegetables	-	-	-	-	11c to 75c

So Quaker Oats, compared with average meat foods, saves some 90 per cent on a breakfast.

And the oat is the supreme food. It is almost the ideal food in balance and completeness.

It is rich in elements which growing children need. As a vim-food it has age-old fame.

Make Quaker Oats your basic breakfast. Start the day well-fed. Use this saving to bring your average food cost down.

Quaker Oats

Flaked from Queen Grains Only

Serve Quaker Oats for its delightful flavor. It is flaked from queen grains only—just the rich,

plump, flavory oats. We get but ten pounds from a bushel. Yet it costs no extra price.

Here Are Books—and Books

Four Different Viewpoints

Editors and publishers have a very definite idea that the public does not want to read war books any more. To a certain extent they are right. We are forgetting the war with an appalling swiftness; there are so many other—and frequently worse—things to think about. There is no longer that insatiable craving for knowledge of “over there” which led to the devouring of innumerable letters and accounts of personal experience good, bad and indifferent, but there is a steady demand for war fiction—in fact it is almost impossible to write a novel now which does not bring the war at least into the last chapters—and for the war book which is literature and history as well as first-hand impressions there are still interested readers.

Quite aside from any light it may throw on the campaign in the Orient, *Eastern Nights—and Flights* is an enthralling and exciting tale. It reads like a combination of the *Thousand and One Nights*, E. Phillips Oppenheim and a college musical comedy, and it is true. Captain Alan Bott, a young English aviator, was shot down on the Palestine front and captured by the Turks. He was imprisoned at Nazareth, at Damascus, in numerous Turkish hospitals and villages and finally at Constantinople where, after many daring attempts, he succeeded in escaping, and stowing away on a vessel bound for Odessa, whence, after more incredible adventures, he reached Salonika in safety. The story abounds in secret letters, bribed guards, extraordinary disguises and hardships which would have daunted anything short of a British aviator, all told with a keen sense of the dramatic and the picturesque, plus an unquenchable youthful pluck which can conclude: “But Time, the greatest of romantics, has nearly persuaded me to disregard memory and believe that I enjoyed it all.”

When you talk of enjoying the war, or perhaps to be more accurate, laughing at it, there is no one to compare with Bruce Bairnsfather. America knows *Bullets and Billets* and *Fragments from France* almost as well as England does and New York is still laughing over *The Better 'Ole*, so *From Mud to Mufti*, Bairnsfather's latest “melange from the mud,” needs very little introduction. It is an amusing,

vivid and curiously naïve account of his unique job as cartoonist on all fronts. It is written very much as a boy writes to his mother, “think of me lurching with the general,” and there is something very likeable about it. It is illustrated with a score or two of pictures which combine very good drawing with a very good sense of humor and it is particularly interesting to Americans because a lot of the

One of the many sketches in “From Mud to Mufti,” by Captain Bruce Bairnsfather. Captain Bairnsfather is in the United States now, lecturing and drawing new sketches of O’P Bill for American audiences

the Marne. He gives an extraordinarily vivid account of the British retreat, the exhaustion, the courage, the confusion of the men who took part in it. The whole book seems to have been written at white heat. It was written as the man thought and felt, with no attempt to soften judgment or put the best face on a bad matter. It is full of bitterness. Men talked that way during the war, but they seldom put that aspect of their thoughts on paper. Mr. Gibbs's brother comments on this in his very interesting introduction:

There is a tragic bitterness in the book, and that is not peculiar to the temperament of the author, but a general feeling to be found among masses of demobilized officers and men, not only of the British armies, but of the French, and, I fancy, also of the American forces. What is the

cause of that? Why this spirit of revolt on the part of men who fought with invincible courage and long patience? It will seem strange to people who have only seen war from afar that an officer like this, decorated for valor, early in the field, one of the old stock and tradition of English loyalty, should utter such fierce words about the leaders of the war, such ironical words about the purpose and sacrifice of the world conflict. He seems to accuse other enemies than the Germans, to turn round upon Allied statesmen, philosophers, mobs and say, “You, too, were guilty of this fearful thing. Your hands are red also with the blood of youth. And you forget already those who saved you by their sacrifice.” . . . All nations were involved in this hark-back to the jungle-world, and Germany was only most guilty because first to throw off the mask, most efficient in the mechanism of brute government, most logical in the damnable laws of that philosophy which poisoned the spirit of the modern world. That was the conclusion to which, rightly or wrongly—I think rightly—many men arrived in their secret conferences with their own souls when death stood near the door of their dugouts.

A book with an utterly different point of view, a book which paints war as a serious and terrible thing, the aspect we ought never to forget, is Hamilton Gibbs's *Gun Fodder*. The author is a younger brother of Philip Gibbs, a writer, too, who enlisted as a private in 1914, saw service in France, in the Orient and again in France as an artillery major, until he was put out of commission by gas not long after the second battle of

Eastern Nights—and Flights, by Alan Bott. Doubleday, Page & Co. *From Mud to Mufti*, by Bruce Bairnsfather. G. P. Putnam's Sons. *Gun Fodder*, by A. Hamilton Gibbs. Little, Brown & Co. *The Last Four Months*, by Major General Sir F. Maurice. Little, Brown & Co.

It is curious to turn from so intensely personal an account to Major General Maurice's *The Last Four Months* and to consider the war from the point of view of the Director of Military Operations on the British Staff, to consider it in terms of army corps and divisions and enormously difficult military problems. General Maurice describes the events which led up to the unity of command and how, under Foch's leadership, the war was won.

Eastern Nights—and Flights, by Alan Bott. Doubleday, Page & Co. *From Mud to Mufti*, by Bruce Bairnsfather. G. P. Putnam's Sons. *Gun Fodder*, by A. Hamilton Gibbs. Little, Brown & Co. *The Last Four Months*, by Major General Sir F. Maurice. Little, Brown & Co.

Another Spanish Novel

“The Four Horsemen of the Apocalypse” has reached a point where extreme courage is required to admit that you do not like it and more courage than most of us possess to admit that you have not read it. The wide popularity of such an unnecessarily unpleasant book is a little depressing,

© Paul Thompson

Blasco Ibanez's novels are responsible for creating a vogue for modern Spanish literature among American readers

but it has had at least one good result, it has introduced one of the foremost Spanish novelists, who would otherwise never have been read so widely, to the United States. It is a good thing for us to become, even superficially, acquainted with the manner of thought of another nation. Translations of Blasco Ibanez's other books, most of them far more worth while than "The Four Horsemen," have been rushed forward to an eager public. The latest is *La Bodega, The Fruit of the Vine*. It is a novel whose plot occurs almost entirely in the last chapter, but it is all so full of action and of vivid pictures that the plot is relatively unimportant. Written in 1903, it deals with two of Spain's great social evils, drink and the exploitation of the laboring class, especially the agricultural workers by the large estate owners. There is something positively restful in reading of social evils which you are not expected, in fact really ought not to attempt, to remedy. Blasco Ibanez's descriptions of life on the farms and vineyards are picturesque and full of color. He speaks of certain subjects with a frankness which the average Anglo-Saxon does not relish, but tho the book is not pleasant it is interesting, even enthralling because of the skill with which it is written.

La Bodega, The Fruit of the Vine, by Vincente Blasco Ibanez. E. P. Dutton & Co

The Glory That Is France

There are not many brief English histories of France adapted equally for the college student and the general reader. Even were books of this class more numerous *A History of France*, by Professor William Stearns Davis of Minnesota, would be amply justified by the need for rewriting the history of the French nation from the point of view afforded us by the events of the last five years. For example, Professor Davis is able to bring out some interesting comparisons with the Russian Bolshevik movement in discussing the French Revolution. A reasonable amount of space is devoted to the events of the Great War, which is narrated to its conclusion, as well as to the colonial development of France and other topics of contemporary interest. The author's point of view with respect to the merits of the European struggle is that taken in his former book, *Roots of the War*; unqualified championship of the French cause. There is a good critical bibliography and all periods of French history are given judicious and well-proportioned treatment.

A History of France, by William Stearns Davis. Houghton Mifflin.

Interesting Folks

Adventures in Interviewing, by Isaac F. Marcossou, the star reporter of great personalities, contains a large number of lightning sketches of the statesmen, warriors, captains of industry, authors, journalists and actors who have been most prominently in the public eye for the last two decades. In some cases their celebrity owed not

The Human Side of Service

More than a year has passed since the signing of the Armistice, yet all the world still feels the effects of the War. The Telephone Company is no exception.

More than 20,000 Bell telephone employees went to war; some of them never returned. For eighteen months we were shut off from practically all supplies.

War's demands took our employees and our materials, at the same time requiring increased service.

Some districts suffered. In many places the old, high standard of service has been restored.

In every place efforts at restoration are unremitting. The loyalty of employees who have staid at their tasks and the fine spirit of new employees deserve public appreciation.

They have worked at a disadvantage but they have never faltered, for they know their importance to both the commercial and social life of the country.

These two hundred thousand workers are just as human as the rest of us. They respond to kindly, considerate treatment and are worthy of adequate remuneration. And the reward should always be in keeping with the service desired.

NAME _____
ADDRESS _____

a little to Mr. Marcossion himself, as the author candidly admits. Thus he acted as a sort of "liaison officer" between Upton Sinclair and President Roosevelt in making the message of *The Jungle* bear directly upon the Pure Food Law. He was one of the first to recognize, and make others recognize, the genius of Frank Norris. But more frequently his service was not the popularizing of unknown greatness but bursting the shell of reticence which shuts a man of acknowledged greatness from the real understanding of the public. As the author truly says: "Some men are born to be interviewed. Others acquire the habit, still others have it thrust upon them."

The most difficult tasks before the interviewer were the generals of the Great War and the American business men, and it is much to the credit of Mr. Marcossion that he is able to give us vivid impressions of the personalities of these men. Literary folk and men of the political world were by comparison expansive, communicative and easily "pumped." When a born interviewer is a close personal friend of men with such a genius for publicity as Premier Lloyd George and Lord Northcliffe, for example, the reader may confidently expect something unusual in the way of "revelations"—and the reader of this book will not be disappointed on that head.

Adventures in Interviewing, by Isaac F. Marcossion. John Lane Co.

Unhappy Far-Off Things

Vignettes is as close as one can get to a name for Lord Dunsany's *Unhappy Far-Off Things*, but vignettes is a rather long reach. It suggests something black and white and a little artificial, which they are not. They are neither poems, nor tales, nor plays, tho they have something of the quality of each. They are written about the ruined villages of France, written for people who have not seen and known how France has suffered, and they may well be read by people prone to rapidly forget. Quite apart from that they are strange and beautiful. Read this, for instance:

In the old drawing-room with twenty others the wandering officer lay down to sleep on the floor, and thought of old wars that came to the cities of France a long while ago. To just such houses as this, he thought, men must have come before and gone on next day to fight in other centuries; it seemed to him that it must have been more romantic then. Who knows? He had a bit of carpet to lie on. A few more officers came in in the early part of the night and talked a little and lay down. A few candles were stuck on tables here and there. The candles burned low and were fewer. Big shadows floated along those old high walls. Then the talk ceased and every one was still; nothing stirred but the shadows. An officer muttered in sleep of things far thence and was silent. Far away shells thumped faintly. The shadows, left to themselves, went round and round the room, searching in every corner for something that was lost. Over walls and ceiling they went and could not find it. The last candle was failing. It flared and guttered. The shadows raced over the room from corner to corner. Lost, and they could not

find it. They hurried desperately in those last few moments. Great shadows searching for some little thing. In the smallest nook they sought for it. Then the last candle died. As the flame went up with the smoke from the fallen wick all the great shadows turned and mournfully trailed away.

Unhappy Far-Off Things, by Lord Dunsany. Little, Brown & Co.

A Good American Novel

From Father to Son is one of those slices-out-of-life novels which are usually so much more interesting than the thrilling plot kind. Mary S. Watts is interested in two things, people and atmosphere, American atmosphere. In fact, *From Father to Son* is of the stuff of which the Great American Novel will be made. It begins a year or two before the war and ends in 1917. There are clever, and truthful, pictures of society, chiefly in Maine coast resorts, of business and of a phase of New York life which very few novel-

© Hoppe from Ledger Service

Lord Dunsany served thru the war without losing his ability to believe in fairies

ists have attempted to describe, the borders of Greenwich Village. The last chapters give the same kind of description of the war in America that May Sinclair and Stephen McKenna, and others have given of the war in England. They are really the best part of the book.

The people are interesting, men and women both, especially the women. In fact, the daughter has a good deal more individuality than the son, altho the main plot and problem of the story center about him. Really, the theme of the book is one of the least vital things about it; it is the background and the characters who count.

From Father to Son, by Mary S. Watts. Macmillan Co.

From Sunup to Sundown

There is a pang in the thought that these delightful letters between Mother and Daughter will never be continued, since Faith Harris Leech slipped away from earth in her radiant, young womanhood, leaving sorrow for a brilliant promise unfulfilled. Mrs. Corra Harris writes the letters from the Georgia mother to her daughter beginning her married life on a farm, and they are full of the homely wis-

dom of an experienced agriculturist, and of a woman learned in the lore of heart and life. Her advice is racy, entertaining, and, for the most part, dependable and illuminating. The daughter's letters are full of ambitious experimentation, and an honest desire to make the most and best of an untried way of living. The book is wholesome reading with the initial gladness of the mother that

your problems will be real issues, and that you will live in a hand to hand struggle with just nature and the weather, instead of the competitive, extravagant and artificial existence of a woman in the social life of a big town.

I always enjoy your letters, my dear. This year they have been like chapters in a good little book—not a novel, but a story of adventure where the leading characters really did the things they said they did. . . . Your deeds have been so blown about by the weather, so warmed by the sun! Sometimes you have been so anxious, sometimes so furtively happy—you are always like that, Dora, as if you sneaked a blessing from Heaven's sugar bowl of mercies when Providence was not watching! You and John have lived the very oldest drama—with ardor and excitement as if the land were an entirely new thing discovered by you two, to be coaxed and cherished and caressed. . . . And the things you have accomplished are not just crops and dividends. They are the triumphs won by courage and intelligence—the same things we have been doing so long made fresh and vivid by the light you have cast upon them.

Which describes the book very happily. The Georgia farm becomes a battlefield, an arena, where a gallant fight is won; and there is gain in nobility and steadfastness as well as in crops and the financial rewards of farming.

From Sunup to Sundown, by Corra Harris and Faith Harris Leech. Doubleday, Page & Co.

These Reds

One of the most remarkable studies in revolutionary radicalism ever written is Bertrand Russell's *Proposed Roads to Freedom*. These roads are three in number: Socialism, syndicalism and communistic anarchism; the various forms of individualism being, apparently, ruled out of consideration. Each of these social philosophies is examined in turn with impartial sympathy and for each Mr. Russell states the case as persuasively as possible. But after this objective analysis of three diverging ideals, Mr. Russell presents his own conclusions. Socialism he rejects as involving too great an encroachment on individual liberty; anarchism as not completely solving the problems of production and of social order. His own vote is cast for a modified form of syndicalism; borrowing from socialism the existence of the democratic state for general civic purposes, but vesting the detailed control of industry in coöperative Guilds. One proposal he borrows from the anarchists, the "vagabond's wage." No one should be absolutely compelled to work; there should be a minimum income allowed even to the idler, tho not so large, of course, as the wage of the worker. The relation of Mr. Russell to

the syndicalist movement is emphasized in *Syndicalism and Philosophical Realism*, by J. W. Scott. Mr. Scott contends that there is a subtle connection between the metaphysical theories of Bergson and Russell on the one hand and the activities of the syndicalists on the other, altho only Mr. Russell has allowed the relationship.

If you want to know everything about *The I. W. W.*, Dr. Paul Brissenden, special agent of the United States Department of Labor, has written your book. It does not contain a criticism, favorable or unfavorable, on the "Wobbly" philosophy, but it contains everything except comment. Here is a detailed history of the Industrial Workers of the World with full accounts of its conventions, its internal schisms and heresy hunts, its tactics, its form of organization, its platforms and declarations of policy. There are citations from the *I. W. W. Song Book* and from the anti-sabotage laws of the western states and every sort of information that lies between these extremes. Finally there is a long bibliography for those who wish to read still further on the subject.

Man or the State? edited by Waldo R. Brown, is a collection of essays which reminds us that altho revolution has become to our generation identical with collectivism there was a generation of radicals who carried individualism to the verge of anarchy or beyond. The men represented in this book are Prince Kropotkin and Count Tolstoy, the Russian anarchist philosophers; the English individualists, Herbert Spencer and Henry Buckle; the American prophets of personality, Emerson and Thoreau, and the wayward champion of the artist's lawlessness, Oscar Wilde. Of all these men Kropotkin alone lives, and he has lived to be rejected by the revolutionists now ruling Russia. But thought does not die either with the death of a thinker or with the passing of a fashion, and some day the ghosts of Spencer and Thoreau may again dispute the empire of Marx over the minds of radicals. *Democracy Made Safe*, by Paul Harris Drake, has also an old-fashioned coloring about it, tho the author claims the most strenuous modernism. It belongs to the eighteenth century type of socialism, which disposed of all problems simply by abolishing money, lawyers, middlemen and business generally and putting everybody at "productive" work, apparently thinking that administration runs itself.

Roads to Freedom, by Bertrand Russell. Henry Holt. *Syndicalism and Philosophical Realism*, by J. W. Scott. A. & C. Black, London. *The I. W. W., A Study of American Syndicalism*, by Dr. Paul F. Brissenden. Columbia University Studies in History, Economics and Public Law. *Man or the State?* edited by Waldo R. Brown. Huebsch. *Democracy Made Safe*, by Paul Harris Drake. Four Seas Co.

Domesticating the Aeroplane

Now that you can send a letter by aeroplane mail from New York to Washington or from Cleveland to Chicago for an ordinary two-cent stamp, now that flying from London to Paris is an everyday occurrence, the or-

inary, everyday individual who mails letters with two-cent stamps is beginning to consider the aeroplane not as a romantic and terrifying sort of bird, but as a machine which he is sure sooner or later to travel in and perhaps even to own. Aviation is, if the expression may be permitted, coming down to earth. Consequently all sorts of people will be interested in a little book by Claude Grahame-White and Harry Harper, *Our First Airways, Their Organization, Equipment and Finance*. The authors raise the three questions: "Can an air service be made safe? Can it be made reliable? Can it be made to pay?" They answer all three questions, "Yes," explaining briefly and clearly what the difficulties are, how they are being, and can be, met. The book is so convincing that it is distinctly exciting.

Our First Airways, by Claude Grahame-White and Harry Harper. John Lane Co.

Unwritten Novels

I suppose the reason people like to read Grace Richmond is because she writes the kind of novels we have all of us written, usually in our heads, sometimes on paper but always in incomplete fragments quite unfit for publication. They have tense moments between friends and dark hours when men are alone with their souls and romantic proposals with correct settings and you enjoy them, while you know perfectly well they are unreal and sentimental, because they are the type of "experience" you secretly covet and things so seldom turn out that way in real life. The proportion of your enthusiasm depends on the quantity of experience—but this is venturing upon very thin ice; it is safer to say that if you like Grace Richmond you will enjoy her latest book, *Red and Black*, which is chiefly the story of the friendship between Red Pepper Burns and Robert McPherson Black, a young minister—also, of course, the story of Black and a charming girl—also, of course, a story of America at war.

Red and Black, by Grace S. Richmond. Doubleday, Page & Co.

Sonia Married

When you are going through a highly emotional scene, say a proposal or a confession or a quarrel with your husband, you seldom stop to consider the literary excellence of your speeches or the dramatic value of your gestures. Afterward you may look back and realize their artistic worth, or worthlessness. That is very much the way it is when you read Stephen McKenna. You are occasionally vaguely aware that things are not as they should be but you are too absorbed to criticize. In fact you have to wait two or three days to "get over" the book completely before you can criticize at all. There are few authors of whom it is harder to make a cold, dispassionate analysis. His people are too interesting to argue about, you don't care very much whether they are true to life or not. He is extraordinarily successful in giving an atmosphere, especially an exotic

For the Ambitious Though Busy Bible Student

Dictionary OF The Bible

THIRD REVISED EDITION

By JOHN D. DAVIS, Ph.D., D.D., LL.D., with the co-operation of B. B. WARFIELD, D.D., LL.D., and the late GEORGE T. PURVES, D.D., LL.D.

The Bible student who cannot afford the time or money to avail himself of the many volumes that might enrich his work will find in this dictionary a bringing together, in brief essential form, the mass of information to which he most needs access. The past years have witnessed a number of historical and geographical discoveries in Bible lands, and the results of these discoveries are included.

All Those Who Enjoy

"This dictionary comes about as near meeting the needs of the rank and file of our Sunday school teachers as any volume of its kind with which we are acquainted. It is up-to-date without being radical, and while giving the main facts in regard to Bible characters, places and events, its treatment is not so full as to make it impossible for busy men and women to read it."—*Sunday School Magazine*.

delightful characterization of Biblical persons and clear, brief resums of doctrine will welcome this book.

Full page halftones of actual pictures of the more important places, taken by the author, make the book very attractive.

Special attention is given to the spelling and pronunciation of proper names.

We do not believe that any better dictionary of the Bible can be found for the money.

It is sufficient for the needs of the average Bible student and Christian worker, and also ministers who do not care to invest a large sum of money in a work of several volumes.

"We consider this one of the most satisfactory dictionaries in print. It is really a dictionary of the Bible, and not of things about the Bible. The illustrations are realizations, and not 'might be imaginings' of some fertile minded artist. When you look for information it is to be found. We know of no dictionary better suited to the work of the Bible student and the Bible teacher."—*The Religious World*.

It is attractively bound in three styles:

Cloth, \$3.00 postpaid
Half Leather, 3.75 postpaid
Full Morocco, 6.00 postpaid

Training for Authorship

How to write, what to write, and where to sell.

Dr. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. *Real teaching.*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes: descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

one, from which it is hard to break away.

Sonia gave a remarkably good picture of England at the outbreak of war. *Sonia Married* is England in the middle of the war, the dark days, the long, discouraging pull of 1916 and '17, when the glamour was gone and nerves were snapping under the strain. Everybody in the book is in a wrought up state of nervous excitement. There is certainly an undue amount of physical violence. It is not so good a book as *Sonia: Between Two Worlds* but if you read that you can't help reading this.

Sonia Married, by Stephen McKenna. George H. Doran Co.

Railroad Stories

I remember a long-legged lad in a Neuilly hospital who, after explaining, very briefly indeed, how he "got his" at Chateau Thierry, launched into an enthusiastic account of the thrills of railroading in the Rockies, how it felt to run along the icy tops of freight cars on a December night and how he was going back to railroading after the war because it was "so fascinating you couldn't keep away from it." After you've read *The Night Operator* that doesn't surprise you at all. Frank Packard makes you feel that it is the life for a real man, not easy, not in the least—hard and tense and exacting, but exciting and real. Yet, after all, *The Night Operator* and the other stories in the book weren't written to boom the railroad business, but just as stories, good stories, whose plots alone would carry them even if the men they tell about weren't so well worth knowing. It's a first-class book to read aloud.

The Night Operator, by Frank L. Packard. G. H. Doran Co.

Inevitably Interesting

The thing which sets Joseph Hergesheimer apart from most modern American novelists is the pleasure he takes in writing. The man who likes to play with words, to polish and caress them, is much more apt to write essays or poems than novels. Our novelists are generally absorbed with a story or a theme and the language into which it is put is more or less incidental. Joseph Hergesheimer doesn't really care what he writes about. He waxes just as lyrical, he expends as much thought and care on a description of a hair dressing establishment and an apparatus for permanent waving as he does on a portrait of his heroine. He loves perfection and finish and detail. He loves to set each one of his stories against a different background and paint it with such skill that it seems as if he must have given his life to the study of that one atmosphere. He can do it with a Neapolitan villa; he can do it with a colonial house on the outskirts of Philadelphia. He can do it with old Salem. He can do it with a dozen other places. You see this particular quality most strikingly in *The Happy End*, where ten curious, intriguing tales are unlike in anything except their conclusions. If you think

a happy ending must be mawkish and sentimental, read them.

It is in Mr. Hergesheimer's last novel, *Linda Condon*, that the extraordinary description of the permanent waving apparatus occurs. The scene at the hair dresser's when they burnt mother's hair marks a turning point in Linda's life. The succeeding events follow with a naturalness and an inevitability which is one of the strongest things about the strange story. The same quality is present in all the stories of *The Happy End*. It is present in *Java Head*. It is the lack of it in *The Lay Anthony* which is one of the chief reasons why it seems to us a pity to have resuscitated that in many ways skilfully written early novel. The long arm of coincidence appears far too often. *Linda Condon*, tho a most extraordinary tale, is always convincing. Linda worships beauty and she is beauty personified, not merely an earthly beauty but a transcendental, Platonic idea of beauty. When you set a Platonic idea in a New York hotel, a studio, a Philadelphia garden, strange things happen. There are interesting people in the book, well drawn with Mr. Hergesheimer's curious detachment. He is always impersonal but he never permits his reader to be. He fascinates you partly by his characters, partly by his story but in large measure by the curious hypnotic rhythm of his style.

The Happy End, *The Lay Anthony*, *Linda Condon*, by Joseph Hergesheimer. Alfred A. Knopf.

Thrills

How do you like your thrills? Steeped in romance lighted by the glint of rapiers? Set in gloomy castles where women's screams echo thru the shadows and dead men's voices whisper in the trees? Or flavored with German agents, wireless messages and "the papers"? There is no publisher's shortage of thrills, you may have them served to taste. For the romantic kind try Baroness Orczy's *The League of the Scarlet Pimpernel*. Probably you have already read *The Scarlet Pimpernel* and so do not need to be told that these are tales of an intrepid band of English gentlemen in the midst of the French Revolution. Led by the daring and elusive Pimpernel, they spend their leisure time in outwitting the Committee of Public Safety and rescuing aristocrats condemned to the guillotine.

The Shadow of Malreward is a tale of murder and mystery, of detectives with tape measures, of revolvers and secret passages. Despite its ridiculous style it is an effectively gruesome story, the kind that makes you look apprehensively over your shoulder when you go upstairs in the dark.

But when it comes to spies there is no one who can hold a candle to E. Phillips Oppenheim. He is positively inspired in the weaving and unravelling of international intrigue and his secret service men have wonderful times. When they miss transatlantic liners they take up the chase in airplanes. They dine nightly at the Claridge and

the Savoy. They send their ladies daily bouquets of American Beauties. Not one of them stirs without at least three detectives on his heels and, under stress of emotion, they indulge in lightning changes of facial expression which would make their fortunes on the screen. Oh, *The Box with Broken Seals* is a good story. It explains what happened to the documents which were not found in Ambassador Bernstorff's chest when he sailed from America.

The League of the Scarlet Pimpernel, by Charles O'Conor. George H. Doran Co. *The Shadow of Malenard*, by J. B. Harris-Burton. Alfred A. Knopf. *The Box with Broken Seals*, by E. Phillips Oppenheim. Little, Brown & Co.

The Biography of an American

Your vision keen, unerring when the blind,
Who could not see, turned, groping, from
the light.

Your sentient knowledge of the wise and
right

Have won today the freedom of mankind.

Honor to whom the honor be assigned!

Mightier in exile than the men whose
might

Is of the sword alone, and not of sight,
You march beside the victor host allied.

These lines of Corinne Roosevelt Robinson's stand at the beginning of *The Career of Leonard Wood*, an excellent little biography by Joseph Hamblen Sears. The part which General Wood played in the Omaha race riots and the steel strike disturbances brought him more prominently than ever before the public eye. And even if he were not a Presidential possibility he is an important American citizen, so that just now a sketch of his life is peculiarly interesting. Mr. Sears shows him as "Administrator, Organizer, Patriot, Statesman, Soldier, American." Very simply and readably he tells the story of Wood's boyhood, his Indian fighting, his military and administrative experience in Cuba and the Philippines, his friendship with Roosevelt, his work for preparedness and the part he was permitted to play in the Great War. It is an interesting, exciting, inspiring story, the sort of story that it would be well for every American boy to read.

The Career of Leonard Wood, by Joseph Hamblen Sears. D. Appleton & Co.

Onyx and Rosewood

Louis Couperus ought to be very perfectly translated, and he has not been. A story woven of nothing more tangible than the emotions of two souls needs to be very delicately handled. Probably it can not be really appreciated by anyone who can not read it in the original Dutch but even in a far from perfect English rendering *Ecstasy* has an unusual charm, something quite different from the average, every day novel, an atmosphere of "rosewood and rose moiré," lighted by "an onyx lamp, glowing sweetly within its lace shade, a great six-petalled flower of light." But it is not a book written entirely in the clouds. It is the story of a very real and tangible man and woman.

Ecstasy, by Louis Couperus. Dodd, Mead & Co.

Banks Hold the World Together

IN every important country there is a native commercial bank which serves as a point of contact with world business.

These great international commercial banks have the same standards of financial ethics; their operations are fundamentally the same; they observe the same code of rules, and work together intelligently to coordinate national business customs into an international process for the safe and orderly conduct of world commerce.

The National Bank of Commerce in New York is an associate of the leaders among these international commercial banks, and through them offers to its friends comprehensive aid in matters relating to foreign trade.

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. The Eighth Wonder of the World. By Newton D. Baker.

1. By consulting some work of reference find the names of the "Seven Wonders of the World." Tell something concerning one or more of these "wonders."
2. If you were asked to name seven wonders of the modern world what would you name? Write a short paragraph concerning any one of the modern "wonders."
3. Write an original story in which you imagine yourself escorting a man of the ancient world, proud of its wonders, thru the world of today.
4. Explain, in full, the meaning of the first paragraph.
5. Write two contrasting paragraphs, the first giving a description of an antiquated Spanish-American settlement; the second giving a description of a United States city of today.
6. What is the rhetorical purpose of the second paragraph of the article?
7. Consult an encyclopedia. Then tell clearly the story of Balboa.
8. Explain the figure, "The Republic of Panama is the child of the Canal." What advantage is gained by the use of figurative language?
9. Prove that the Panama Canal is worthy of being called one of the wonders of the world.

II. What the World Needs. By Paul Deschanel, President of France.

1. Summarize the points made by President Deschanel.
2. Prove that what Cicero said of politics is worthy, or not worthy, of support.
3. Write a composition consisting of three related parts, the first describing a king of France before the French Revolution; the second describing one of the rulers of France during the Revolution; the third describing the newly-elected President of France.

III. Why the Young Folks Leave the Farm. By Chester T. Crowell.

1. What advantage does the writer gain by speaking of "Willie" and "Mary"?
2. Show how the writer, thruout the article, makes use of specific instance.
3. How does the writer explain the fact that young people leave the farm?

IV. A Number of Things. By Edwin E. Slosson.

1. Explain, in full, every one of the "Live Remarks by Dead Authors."
2. Which of the "Remarks" do you think best for the subject of a commencement essay or oration? Explain.
3. Find, in your library, any one of the poems written by William Blake. Read the poem to your class, and explain its meaning.
4. What great book was written by Henryk Sienkiewicz? Tell something concerning the book.
5. Select, from the books you read in your classes in English, or from books you read at home, a series of "Live Remarks."

V. Here Are Books—And Books.

1. Read aloud the quotation from "Unhappy Far-Off Things." Tell why the passage is especially worthy of quotation.
2. Read aloud the passage quoted from "From Sunup to Sundown." What spirit does the passage emphasize?
3. Read aloud the passage from "The Biography of an American." Explain the passage.

VI. The British Republics. By Arthur Lynch.

1. Put into the form of a proposition for debate, the striking proposal made by the writer.
2. Write, in the form of a brief, the arguments that the writer presents in support of his proposition.
3. Explain why statues should be erected to the memory of John Milton; of Shelley; of Keats?
4. What statues would best symbolize the ideals of the United States? Explain your answer in full.

VII. Don't Worry About the Flu. By James J. Walsh, M.D.

1. Give the derivation, and the meaning, of every one of the following words: epidemic, pandemic, contagious, pneumonia, antiseptic, prophylaxis, bacillus, convalescence.

VIII. The Story of the Week.

1. Prepare to talk before your class on any one of the following topics. The Taft and Lodge Reservations; The Trial of German Officers; The Russian Revolution; Lord Grey's Letter; The Sinn Fein Movement.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The United States and the League—"It's Darkest Just Before Dawn," "The Taft and Lodge Reservations," "Lord Grey Offers an Olive Branch."

1. "The change in the situation is due to the letter of Viscount Grey," etc. What is the change in the situation? Show how Lord Grey's letter caused the change.
2. Show how Lord Grey's letter gives the President a chance to get out of an awkward situation if he chooses to accept it.
3. Is Mr. Holt justified in making the statement contained in the last paragraph of his article?
4. According to Lord Grey, what are the reasons why the United States has thus far failed to ratify the Peace Treaty? What reasons does he put forward why it is necessary for the United States to enter the League?

II. Disruptive Forces in the British Empire—"The British Republics?" "The Suppression of Sinn Fein."

1. In what parts of the Empire are the forces of discontent most active? What are the causes for this discontent?
2. What, according to Colonel Lynch, are the chief forces which hold the Empire together? What are the forces which are tending to pull it apart?
3. Would the establishment of "the British Republics" bring greater peace or more chances for trouble into the world?
4. What, according to Lloyd George, is the present attitude of the Government toward the Irish question?

III. The Russian Revolution Continued.

1. Write a brief note on each of the following persons mentioned in the first paragraph: (a) Czar Nicholas, (b) Lenin, the Siberian exile, (c) Sazanor, (d) Trotsky, the Jewish journalist, (e) Admiral Kolchak, (f) Semenov, (g) General Yudenitch, (h) General Denikin.
2. What steps has Soviet Russia thus far taken toward making its peace with the world?
3. Give a brief account of the Russian coöperative societies. Is the present Russian Government disposed to allow these societies to reopen trade with the outside world?

IV. What the World Needs.

1. What historic justification is there for M. Deschanel's belief that what France needs most is "a strong, well fortified frontier"? What, in your judgment, would constitute such a frontier?
2. "On the other hand, let us seek to maintain international safeguards." What should these safeguards be?
3. Assume that you have been asked to write an article on M. Deschanel's subject, set down four or five topic headings of the subjects you would treat.

V. The Eighth Wonder of the World.

1. Compare the conditions which exist in the Canal Zone at present with those which existed a generation or more ago.
2. "We know vaguely that a number of projects came to grief," etc. Write a brief history of these projects.
3. Show that both from the physical and from the economic point of view the Panama Canal deserves the title which Mr. Baker gives it.

VI. Labor Policy Versus "Red" Politics.

1. What is the significance of the title of this article?
2. On what grounds is Mr. Gompers opposed to the anti-sedition laws pending before Congress?
3. What is the reason for the general hostility to the I. W. W.
4. What evidence has thus far been presented in Albany to justify the expulsion of the Socialist members of the Assembly?
5. What measures, in your judgment, should be taken to allay the present labor discontent in this country?

VII. Why the Young Folks Leave the Farm.

1. "The economic reasons for discontent with the farm are obvious enough." Enumerate as many of these reasons as you can.
2. "... other considerations have been as important as the economic." Quote topic sentences from various paragraphs of this article which state these other considerations.

We celebrate this year the tercentenary of perhaps the most important date in American history—the landing of the Pilgrims on Plymouth Rock in 1620. "They were not the first religious zealots who landed in the New World, nor was Plymouth the first colony," points out Mr. Darwin P. Kingsley in an address on The Most Successful Adventurers in All History, "but they first interpreted America to Europe. The thing that impressed Europe chiefly was not the high ideals of the Pilgrims, not their religious devotion; the fact that counted was their economic success. It is not easy for us to understand what it meant in those days to demonstrate to the Old World that men could live, even prosper, in the New World, without aid from over the sea. No one had previously done it; no one believed it could be done. The men and women of Plymouth came to the New World to make homes, to stick even tho they died in the struggle. They stuck and died. In the first year more than one-half their number died. In the next six years out of a population of 199 only six died.

"The great Puritan migration which began in 1627—which directly created Massachusetts and had an almost immeasurable influence in founding New England—was the direct result not of the Pilgrims' religious beliefs but of the economic success achieved at Plymouth."

It is interesting to remember how much courage it required for the Pilgrims to make their momentous voyage in the "Mayflower." Even granted a safe landing they foresaw a New World full of unknown terrors—terrors of the wilderness, of the Indians, of the lack of food, of the drinking of water—which they thought would infect their bodies with loathsome diseases. As late as 1643 Governor Bradford expressed surprise that the change of air and food and the "much drinking of water," all "enemies to health," had not been fatal to most of them. Clearly they were not prohibitionists!

"The Pilgrims," Mr. Kingsley concludes, "made the great demonstration; it was they and not Columbus who made the Great Discovery. With their feeble hands they erected pillars that marked the entrance to a new continent thru which speedily poured the flood of life that has given America to the

world. The little "Mayflower" band has become a mighty host, steadfast always in the maintenance of individual rights.

"There are now more sons of the Pilgrims in the Mississippi Valley than in Massachusetts, more on the Pacific coast than in Plymouth."

Remarkable Remarks

MARSHAL FOCH—War can be evolved indefinitely.

GENERAL LEONARD WOOD—The watch word today is "steady."

THE POPE—A lasting true peace must be based on just alliances.

KING GEORGE—I note the steady improvement of industrialism in England.

GENERAL PERSHING—Too often we have been slow to value the influence of our mothers.

THEATRICAL PRODUCER MAURICE GEST—The hand of Wall Street is upon the American theater.

ED. HOWE—Every one who drives an automobile hates those who make suggestions from the back seat.

BLASCO IBANEZ—If I were an American it would be my ambition to become the Abraham Lincoln of American husbands.

ALLA NAZIMOVA—My idea of perfect outdoor exercise is riding comfortably in a motor car with some one else at the wheel.

BERTHA VON KRUPP VON BOHLEN—Owing to undernourishment only two-thirds of German mothers are able to suckle their own offspring.

DR. DORA CASTLE—From the dawn of history to the present day only 868 women have accomplished anything that history has recorded as worth while.

O. W. FERRIS—Everybody—that dusky personage who seems to occupy the halfway point between the substance of somebody and the vacuum of nobody.

CONGRESSMAN FRANK MONDELL—If England can afford to pay \$35,000,000, or \$150,000,000, or \$1,000,000,000 for airplanes, then she ought to pay the interest on her debts to us.

POET SADACHI HARTMANN—Prohibition will deprive the world of arts and letters of many songs from the soul of which the umbra might be lifted by the warmth that comes from imbibing.

NINA WILCOX PUTNAM—Ah, for those almond squares with jelly in the middle, those crisp macaroons with cherry centers, large and carelessly shaped, for ten cents a dozen. Ye Gods, O dolce far niente, oh, boy!

Gunning? Pheasant hunting may be the finest of the sports—but shooting for prospects with the Mimeograph also has its thrills. Five thousand shots an hour this business-bagging repeater fires. And every shot goes to where it is addressed—sent at maximum speed and minimum cost. Letters, diagrams, maps, bulletins, forms and the like are Mimeographed now as they have never been Mimeographed before. *Neater*—better work has been the aim of every improvement. You don't know what the Mimeograph can do if you haven't recently seen the Mimeograph in operation. With it—the cherished plan of this hour becomes the business-getting policy of the next—departures from the beaten track are invited by this ready and cheap means for their quick accomplishment—and dreaded emergencies disappear in an easy routine. Five thousand shots an hour—bringing down overhead and bagging bigger business! Others are gunning—why not you? Get booklet “E” from A. B. Dick Company, Chicago—and New York.

A Message from the United States Government

Would You Rather Save Dollars or Lives?

By Senator Carter Glass

CONDITIONS in Europe today show a remarkable improvement over those of a year ago. Most of the larger nations are now in a position to go ahead with the work of industrial rehabilitation, which, barring untoward developments in certain areas, should restore in a short time approximately normal conditions.

The United States has made this possible by furnishing during the armistice year some \$2,000,000,000 in loans to purchase food supplies. Social, political and economic demoralization would otherwise have overtaken the whole of Europe and peace would have been impossible.

The larger nations need no further assistance from the United States Government. They can work out their own salvation by living within their incomes, foregoing expenditures for armaments, by issuing domestic loans and imposing adequate taxes. The unfavorable exchange situation they can correct by limiting their imports to actual necessities and permitting exports of gold to clear trade balances.

When these common-sense policies are adopted and the German indemnity is set at a figure that can be collected, all further assistance necessary will be forthcoming, even to Germany, thru private channels. The larger nations can look for no further assistance from the American Government.

There are nations, however, to which this does not apply. They are the small nations set up with our assistance by the Treaty of Versailles. Had they an adequate supply of food to carry them to the next harvest, they would need no help that could not be secured from private sources, but the fact is that some of them are

Senator Glass approving one of the United States Victory Loan posters when he was Secretary of the Treasury

starving. Stable conditions for them are impossible so long as the menace of famine remains.

Their present condition constitutes a threat against orderly government, not only within their own borders but thruout Europe and the world. People who are ill-clothed and hungry and diseased have no regard for orderly government. They are easy victims to any suggestion of violence. The wonder is that they have borne their misery so long.

The sores that remain, inviting infection and threatening the restoration to health of all Europe, are ten to twelve cities of Middle Europe whose people must die of starvation unless immediate assistance is given.

The rural districts are suffering less than the cities for the reason that the farmer has first hold upon the food supply. He has held back and buried enough food for himself and his family, but the people of the cities have had no such opportunity, and, according to the reports of all persons who have visited these places, their conditions are frightful.

Riding two blocks thru the streets of one Austrian town Sir George Paish counted twenty-seven bodies lying unburied. The people have not the strength to bury their dead. Bodies lie unburied in the houses, decaying and converting the atmosphere into a stench that is a provocative and creator of pestilence.

Wan, haggard, emaciated forms, mere ghosts of human beings, with tattered rags hanging about them and skeleton hands extended appealingly for help, are sickening and terrifying sights that greet the traveler everywhere. Men, women and children—especially children—are dying by the thousands in these towns. The children that survive are growing up in a state of de-

formity, their bellies distended and their bones awry, not knowing why they should be allowed so to suffer. And this is the generation to which we look to rebuild a better world!

The situation in Austria is perhaps the worst in the world. It is doubtful if its horrors have been surpassed even in medieval times. What is left of Austria has a population of 7,000,000 people, 2,000,000 of them living in the city of Vienna. All the portions of the old Austrian Empire that were self-sustaining were given by the peace treaty to other states, leaving this portion, which is mountainous and never could sustain itself more than three months of the year, in a desperate situation.

Vienna is the capital of an empire, with the empire cut off. Before the war it was the commercial and economic center of a very large area and contained a largely centralized government with a great mass of civil employees. The functions of the city have been largely destroyed, leaving the vast majority of the people idle. Vienna must either develop large industries whose products can be exchanged with neighboring states for food, or its people must emigrate. But this will take time. There is no conceivable way in which they can meet their present difficulties without assistance.

At present there is not more than fifteen days' food supply on hand, and the officials of the Government stand in constant fear that the people will loot the warehouses and thereafter have nothing upon which to live. There have been numerous famine riots and the danger of a revolutionary uprising is very great, for the spirit of the people is one of utter discontent and despair.

To the mayor of San Francisco, James Rolph, Jr., the mayor of Vienna, Jacob Roumann, sent this cablegram:

"In this hour of our great distress the mayor of Vienna appeals to you and your people for immediate help. This city of 2,000,000 is on the eve of starvation and death from cold. Now, after Austria has signed the peace treaty, the terrible sufferings have still increased. The inland crop is eaten up. Therefore, hands are idle and factories at a standstill. Simultaneously, Austrian money has lost all purchasing power abroad. The bread and flour ration has had to be reduced again, and the meat ration of one-fifth of a pound a week cannot be distributed these last months.

"All forests in the neighborhood of Vienna are cut down, but the wet, green wood does not replace coal. In the hospitals new-born babies are dying of cold. Up to now the people of Vienna have borne all this misery with wonderful patience. What threatens now is beyond endurance. I do not ask for char-

ity, what I appeal for is a loan in order to be able to buy foodstuffs and, above all, coal. . . . Help us!"

Next to that of Austria, the situation in Poland is the most appealing in Europe. Its government, set up only a year ago, has done admirably thus far, but there is no telling when the situation may get beyond its control. Frosts have destroyed 50 per cent of the potato crop, the staple food of the lower classes, and the Children's Fund has felt obliged to lend flour to Poland from its supplies intended for child feeding.

Poland has 700,000 men under arms, maintaining a front of 1600 miles against the Bolsheviks. The troops are suffering terribly for lack of clothing and supplies. Poland has been unable to secure any quantities of clothing since 1914 and during the last five years practically all clothing has been worn out.

The concentration of the Soviet forces against the Polish lines would constitute a direct menace to the whole civilization of Europe. While the troops might remain loyal, there would be the utmost danger of an uprising behind the lines, and Bolshevism thereafter would have an unobstructed path to the west.

Had it not been for private American charities, which have been sending from \$6,000,000 to \$7,000,000 worth of supplies each month to these destitute areas, the new governments might long since have been overthrown. Chief among these charities are the European Children's Fund, thru which 2,500,000 children are being fed; the American Red Cross, which has been fighting typhus and other epidemics in Poland and elsewhere; the Jewish Joint Distribution Committee and the Commission for Relief in the Near East. The situation has become so desperate, however, that private charity is able to cope with it no longer.

In Russian and Turkish Armenia, where 700,000 refugees from Turkey have been added to the native population of 1,000,000, the Commission for Relief in the Near East has expended \$1,500,000 a month to keep the people alive. American orphanages are caring for hundreds of thousands of children, but will have to close, practically sentencing their charges to death, unless they are given additional assistance.

"Vienna is on the eve of starvation and death from cold," cables its mayor. The people who are able to have gone out and cut wood from the famous forests nearby, but the wet, green wood does not replace coal. Even if our motives are merely self-interest, we cannot fail, argues Senator Glass, to supply food on credit to save human lives and safeguard civilization

Combatting starvation and Bolshevism do not fall within the functions of the Treasury Department, but my last official act as Secretary of the Treasury was to urge upon Congress the necessity of giving assistance to these destitute peoples. I took this step reluctantly, for the impression has been spread among these peoples that America would help them and that if they were left to die America would be to blame. I took it only when convinced that all we won in the war would be lost unless we acted.

The business of banking is far removed from [Continued on page 302]

A Message from the Italian Government to the American People

Press Illustrating

Baron Avezana was in Italy thruout the war and has only recently come to the United States as Ambassador

Italy and Bolshevism

By Baron Romano Avezana, Royal Italian Ambassador

ITALY may be said to represent the indicator of the scale which marks the exact status of European equilibrium. This is due to her great historical past and, even to a larger extent, to her peculiar geographical position. She projects toward the center of the Mediterranean Sea, on the borders of which grew and flourished those great civilizations of the past, from which all others derive. Her geographical boundaries, clearly defined by the Alps and the sea, guaranteed to her, in the fact of constant migrations of peoples, her essential unity: even when divided, she did not cease to be regarded as one.

At the same time, the enormous extent of her coast lines, forever open to the commerce of all nations, kept her in a continuous and very close touch with every movement and every progress. Thru her position, Italy was destined to become the heart which with every pulsation threw back into the world, after having enriched it with new life and energy, the blood which had been flowing toward it from the most distant points. Every one knows this to have been true in the times of ancient Rome. But, even after the fall of the Roman Empire, Italy did not cease to play her important rôle. Notwithstanding her condition of political inferiority, her "Rinascimento" shed brilliant light thru the obscurity of the Dark Ages. No empire was considered complete if it did not include Italy: no crown was sufficiently steady unless imposed there.

When, after a glorious fight for independence, the people of Italy succeeded in regaining their unity and freedom, the country was destined to regain, and did quickly regain, her special function in the equilibrium of Europe. It is a matter of common knowledge that, when the Great War broke out, Italy held what is called the "balance of power." Her position, resources and strength would, in the then existing alignment of nations, have made victory smile on the side she would come to join. It is also a well recognized fact that, had not Italy taken immediate steps to notify France of her friendly intentions, the battle of the Marne could never have been won for civilization. But for the victory on the Piave, the arrival of the American troops would not have been effective, and Germany, disposing of the whole Austro-Hungarian army, might have arrived at a favorable decision before America's weight could have been felt.

It has been asserted that, with the close of the world's war, Italy has lost her privileged position. We do not think any more in terms of "balance of power," and Germany and her allies have ceased to be a menace to the peace of the world. It is too early as yet to be able to form a very clear conception of what the political condition of Europe will be ten years from now. But, however that be, a new fact has entered the situation which again places Italy in a position of extraordinary importance: I refer to Bolshevism.

As in the past, Italy's geographical position demands that she become the bulwark of Western civilization. As in the past, Italy must assurge to the rôle of defending it against the attacks from the East. In the Middle Ages, Venice put an end to the Moslem's "holy war" on the shores of the Adriatic: the same function Italy must now perform against the spread of the new propaganda. The Russian masses, inflamed by the fire of a new religion, however false and conducive not to progress but to retrogression, will quickly strive toward the expansion of their social creed.

The possibility of Italy's falling prey to the new doctrines is not purely an internal question: her transformation into a Bolshevik state would also mark the transformation of the whole of Europe.

Bolshevism, a deformation of the socialistic and Marxist conception, is essentially a product of the Slav race: its inherent weakness lies in the fact that it has never succeeded in taking root among peoples of different race and higher state of culture. If it should be able to gain even a momentary foothold in Italy, it would easily sweep down the feeble resistance of the Slav nations which have resulted out of the disintegration of the Austro-Hungarian Empire; it would extend its hands toward Russian Bolshevism, and form an immense mass which nothing could prevent from engulfing the whole of Europe.

America cannot any more, even tho she be willing, isolate herself from the rest of the world without exposing herself to serious crises of an economic character. She sees already, in the movements of revolutionary tendency which are troubling her, that the time is past in which the ocean and her enormous resources were sufficient in isolating her from the rest of the world. America is now realizing that she is not as removed as she thought from those currents which draw the proletariat toward the conquest of power. From Europe, Bolshevik doctrine would reach her, not so much thru immigration, but thru cable, wireless, newspapers and the countless new means of communication which have destroyed the old barriers between countries. The wide ocean is now a smaller and a less effective defense than was the great wall of China in times gone by.

That being the case, how can America disinterest herself from providing that, at the present moment, the most vital point of the whole structure should be reinforced and put in condition to resist? Other nations may be more or less blinded to this, thru conflicting interests or historical biases: America ought to be able to look in perspective and grasp a good view of the whole situation. To fail to do this would be on her part a great lack of foresight, especially because of the fact that the prevalence of socialistic currents in Italy would be the effect of a transitory situation and not of a spontaneous and natural evolution.

Bolshevism is for the vanquished, not for the victors. The King of Italy (center) opening the Italian Parliament

It follows in the wake of tyranny, and Italy has one of the most democratic governments of the whole world and a King who rightly possesses universal respect and love. It is true that Bolshevism thrives on deprivation and physical suffering, but not when such deprivations are borne with a steady heart, not when sufferings are offered at the altar of an ideal. The mass of the Italian people is agricultural, and naturally conservative. The directing classes are so thru self-interest. The unusually large representation which the socialists have been able to obtain in the Italian Parliament would be apt to mislead one into a false estimation of the relative strength of that party, which counts only 7 per cent of the voters, unless special conditions are taken into consideration. About two months before the general elections a new election law had been passed in Italy. This substituted to the context of single candidates a context between the different political parties, centering on lists of many candidates. Unfortunately, the system, which is very similar to that of America, proved to be rather complicated, and a large number of farmers and peasants, unable to understand it, decided to abstain themselves from voting. Hence a very large percentage of the "conservative" element failed to register their opinions, and a very light vote was cast. On the average, about 45 per cent of the possible total: in some cities, as Palermo, as low as 16 per cent. Moreover, only two parties, the Catholic and the Socialist, were well organized as such, and therefore could immediately take advantage of the new conditions.

The weakness of Italy, in front of the audacity of a small minority, derives from two sources: lack of immediate help for alleviating the great privations which the people are still required to endure, and her anomalous political situation.

It is not a secret that the Italian people, nourished in the precepts of Roman Right, have never been able to understand how, in virtue of new principles, the Treaty of London should now be disregarded. Even less could they understand how even admitting that, thru these new principles, they might have to renounce

some portions of the Treaty of London, these very same principles should have to become devoid of significance when applied to Fiume and other cities of Dalmatia which Italy has always considered as Italian. Hence a great ferment in the best classes, upon which the Government knew it could rely in a fight against the extreme parties. The unrest in the Italian army and navy are not at all a sign that Italy is turning Bolshevik: quite the contrary. No Italian man-of-war ever came back to port with the red flag at its mast: the few which did abandon port thought so much of the flag they carried and of the privileges which it represented that they moved to offer it to the cities still unredeemed. No Italian regiment ever rebelled because tired of fighting for the [Continued on page 299]

A Series of Monthly Articles Written from a First Hand Survey of Big Business Enterprises that Have Given the United States the Name of the Foremost Industrial Nation of the World

The main plant of Sears, Roebuck & Co. occupies over ninety acres of floor space and houses seventy-five complete stores

Satisfaction or Your Money Back

The story of how Sears, Roebuck and Company built up the largest mail order business in the world

By Edward Earle Purinton

HOW to live more cheaply, and more comfortably and effectively, too, may be regarded the universal problem of today. Whoever helps to solve it performs a great public service.

"Anybody can reduce living costs, by learning where, what and how to buy. Merely form the habit of doing all your shopping with intelligence, prudence, patience, independence, and a modern, scientific method of choosing your store by comparative tests."

This advice, being the consensus of opinion lately delivered by numbers of economists, domestic scientists, Government commissioners and leading club women, sent us forth on a tour of investigation. We wanted to find a standard system of choosing the right store; and then a store that measured up to the standard, and that anybody could patronize, no matter who he was, where he lived, or how much he had to spend. We found both.

An expert buyer, who has learned how to save thousands of dollars a year in the purchase of business and household necessities, furnished a list of specifications. He declared that every customer should apply these to every store, and that nobody should be a regular customer of any store without first knowing that a majority of the tests had been met. We give here twenty of the most important qualifications:

1. Prices are lower.
2. Values are higher.
3. Stocks are varied and plentiful.
4. Service is prompt and reliable.
5. Nothing is ever misrepresented.
6. Trade names and terms are avoided, or translated into plain English.

7. Customers pay cash.

8. Salespeople are deft, courteous, knowing and obliging.

9. Goods are all fully guaranteed, with cash return on customer's request.

10. Complaints are received with thanks, and settled with speed.

11. Full weight and measure is the iron-clad rule.

12. Rapid turnover ensures fresh, modern goods.

13. Principles of sanitation and hygiene are scrupulously observed.

14. Goods are allowed to sell themselves, without persuasion of clerk on customer.

15. Store aids economy by featuring staples, not fancy or out-of-season articles.

16. Visitors are welcome, any day, in any part of the establishment.

17. Folks are treated as well when they don't buy as when they do.

18. You can shop easily, quickly and comfortably.

19. You know and trust the character of the merchant.

20. You know the merchant knows the character of his goods.

These tests are not exhaustive. But they would, if universally applied, go far to drive out the profiteer and put the honest merchant in the lead everywhere. The customer who insists that a store live up to a standard raises the level of the whole community.

The expert buyer thus noted happens to be one of the six million customers of Sears, Roebuck & Co. He was therefore asked if a big mail order house could, would and did meet such tests. "I should say more eagerly and

effectively, on the whole," he replied, "than the average small retail store."

"To make new customers and friends, the large mail order concern relies on nothing but superiority of merchandise and service. The little neighborhood shop has many things in its favor: Convenience of the telephone, speed of delivery, acquaintance with the clerk or dealer, appearance of the store, visible array of merchandise on shelves and counters, word-of-mouth advertising, newspaper bargain advertising, community feeling, the customers' habit of going shopping."

"Whoever bids successfully for your mail order trade has to give you more goods, better goods, or some overwhelming advantage. The science of merchandising has probably reached its highest point in the practise of the large mail order houses.

"Unusual care is exercised in filling orders. People are more critical of goods bought by mail; a slight defect or inaccuracy that might be overlooked in the hurry of shopping locally stands out like a premeditated crime when all the family gather for a leisurely examination of the contents of the mail order parcel. And the actual description of the merchandise, printed and photographed, is right before you in the catalog, so you can verify the details of your purchase to an extent impossible when you buy over the counter.

"In a hundred ways the interests of the customer living perhaps a thousand miles off are closely safeguarded. The science and ethics of this process create a marvelous confidence, a *faith impersonal but absolute*. When 6,000,000 people send money to Sears, Roebuck & Co. for goods they have never seen, to merchants they don't know personally, on the strength of a mere promise of these merchants to do exactly as they say—could there be a greater proof of commercial character expressed in human service?"

Thus introduced, we made a pilgrimage to the world's largest mail order house. The modern way to arrive at

Mr. Julius Rosenwald, head of a company which is founded on: a fixed price, a fair profit, a fine organization and the faith of the customer

truth is by pilgrimage not to a temple of idolatry but to a temple of industry. There is more of honest religion, as well as of honest money and honest work, in the temple of industry.

The first impression of Sears, Roebuck & Co., of Chicago, is that of huge size, with almost incredible speed, system, accuracy. While the main plant occupies over ninety acres of floor space, the buildings are so compactly arranged that you can walk in about three minutes the length of the property. Under this roof are housed seventy-five complete stores, with each store manager both head salesman and head buyer; thus, in ordering from the mail catalog you deal direct with the manager, who is considered the best posted authority to be found, and who takes a personal pride in guaranteeing sat-

isfaction to the customer.

As many as 180,000 letters have been received in one day; 300 girls are kept busy sorting, marking and distributing the mail, envelopes being opened by machine at the rate of 450 a minute, while outgoing mail requires the services of 200 other girls in the mere process of weighing, checking and dispatching parcels and letters. During the rush season sixty railroad cars a day are filled with parcel post mail. It takes 500 clerks, operating billing machines, just to classify and enter orders, then write the tickets or bills for the respective departments to handle simultaneously, that the different items may be assembled and the whole order filled at the same time.

Every ten minutes about 2700 orders pass a given point, and a most ingenious record slip for each order indicates precisely where it is at any moment, and how fully and properly action thereon has been taken. Almost any order, of any size or complexity, can be filled in three hours. When the shipping schedule was first proposed, a number of department heads complained that their clerks could never be geared up to a super-human speed, therefore prompt deliveries could not be

This modern typewriters' office is part of a mail order business in which as many as 180,000 letters have been received in one day, 2,000 orders pass a given point every ten minutes and, during the rush season, sixty railroad cars a day are filled with parcel post mail

expected. A fine of 50 cents on each department for late delivery, plus extra shipping costs, persuaded these downcast gentlemen that their workers had more speed than given credit for. Some floor managers protested and postponed still; whereupon they were fired bodily, and immediately the clerks of whom they complained manifested a new lease of life. When the employees of a department head are forever making the poor man trouble, the only cure is to fire him.

To expedite the filling of orders, a stock of goods valued at \$14,000,000 is kept in reserve all the time. The storage costs, plus interest on capital invested, would raise the price of merchandise to the customer by several cents on the dollar, but for close economies practised on a big scale to reduce overhead in ways that a small store could never utilize.

One addressing machine does the work and takes the place of sixty-five girls. There was none of exactly the right kind on the market, so this had to be made to order; but the machine paid for itself in a short time, and now the customer gets the benefit. Gravity chutes and conveyor belts carry packages all over the building more swiftly and safely than human hands can transport them. Between departments flit messenger girls on rubber-tired roller skates. For instantaneous delivery of messages and small parcels, a pneumatic tube system over fifteen miles long honeycombs the entire establishment. A moving stairway supplants the old-fashioned crowded and often tardy elevator, with a capacity six times that of the elevator. All departments are numbered, and the interphone calls, of which thousands occur daily, specify numeral of department only, thus saving time of operator, speaker and listener.

Many of the time-saving methods and labor-saving devices are unique. Formerly the packages, rushing down the chute to the mailing room, had to be sorted by hand, according to size, after piling themselves up in a grand mix; also they had to be guarded on the way down; after some thought, a bright youth invented a mechanical guard and sorter which first held the parcels confined to their appointed course in transit, then automatically separated them by size when they left the chute. In the book binding department, a capacity of 2000 great catalogues an hour is attained largely by an original assembling machine with a pair of almost human hands—though quicker and surer—that “feel” each section before it goes into the book, to guarantee that no pages are missing. These “hands” remind one

of the artificial yet powerful members that cripples who have lost their arms can wield with such effect.

A shipping route automatic guide furnishes complete and instant directions for hastening a parcel by the quickest, cheapest and best route to any locality in the United States. Geographical guide cards contain every post office, express office and freight office clearly marked—one look at the card showing the customer's address points out the route to the clerk. Another simple aid to speed is the early morning computation of the total of the day's orders; the volume of night and early mail is carefully weighed, and the number of orders estimated, the average per pound being known from long experience; if the day's receipts will bulk large, extra clerks trained to act in emergency are called from other duties and put in the mail department for that day. Thus the orders, no matter how many, are cleared away by closing time.

The company has no regular “suggestion box,” nor does it reward with spot cash the evolution of practical ideas by workers to improve the services or decrease the cost. The assumption is that part of every worker's job is to think about his work, and to pay him every time he did so would be to insult him. However, the managers and foremen are instructed to keep an eye on a youth of extra diligence or brains, and to give him a quiet promotion or substantial increase in pay when he deserves it. Many of the departments heads thus rose, little by little, from boys at the bench.

THE great secret of economical production is not, however, in the practise of zeal and thrift by the workers; it is rather in the principle of centralized factory ownership. When the demand for a certain line of goods warrants the expenditure, the company thinks nothing of going out and buying a whole factory or group of factories, in full operation, with a national reputation. Then the manufacturing cost is reduced by cutting out most of the manufacturer's profit. When you note the modest prices on staples, from hardware to lace, it is well to remember that the explanation is not inferior merchandise but superior management. Because these merchants are manufacturers, wholesalers, jobbers and retailers, all in one, they can sell at one profit; whereas you would necessarily pay three or four profits when buying the same article over the counter. We mention a few of the company's main plants:

The ten shoe factories [Continued on page 294]

Over 100,000 persons a day send money to Sears, Roebuck & Co. for goods they have never seen, on the strength of a mere promise of these merchants to do exactly as they say—could there be greater proof of commercial character expressed in service?

Startling News in World Finance

An explanation of the slump in foreign exchange
and the unprecedented premium on gold

By Alexander Dana Noyes

Financial Editor of the New York Evening Post

TWO movements on the world's financial markets—one of them already a familiar phenomenon, the other a startling novelty—came to a head in an impressive way during the past week. Sterling exchange, which stood at \$4.75½ when the war ended, or about 11 cents under normal parity, declined to \$3.75 during 1919. Since the middle of January it has fallen so rapidly that by February 4 it touched \$3.18, a rate entirely without precedent in the New York foreign exchange market.

Last September, for the first time since the Napoleonic wars, gold went to a premium at London; but the rise above the British Mint price was at first comparatively small. That Mint price, calculated in fine gold, is 85 shillings per ounce. It reached 106 shillings at the end of 1919, but last week ran up violently to 127. Gold, in other words, was at a premium of 49¾ per cent.

These two economic movements of the present month were not only sensational in themselves for scope and violence, but they attracted particular attention because they had happened, not during the war, but a year after the war was over. This apparent paradox is easy enough to explain. In wartime, especially after the United States had entered the conflict and was lending money on account of our Government to our European allies, the rate for sterling exchange was artificially supported at an arbitrary level. This was done partly thru actual purchase of sterling on British Government account, but chiefly thru payment for goods bought in America with the credits advanced in America by our Treasury, so that the sale in the exchange market of drafts on London to pay for the merchandize was avoided.

During 1917, our exports to England exceeded our imports from her by \$1,728,000,000; in 1918 the excess was \$1,912,000,000; but the sterling exchange rate did not reflect it. In March, 1919, however, when our Government had ceased to grant advances of credit to the Allies except for food, the artificial support of the sterling market was abandoned. But the excess of our merchandize exports to England in the calendar year 1919 was \$1,970,000,000, or larger than in any year of wartime, and this immense debit balance meant such pressure of actual bills of exchange on the London market as was bound to force down sterling rates progressively.

Gold would probably have gone to a moderate premium in England as in other belligerent countries of Europe when gold payment on the paper currencies was suspended at the beginning of the war, if export of gold

Harding in Brooklyn Daily Eagle

When will this swelling go down?

and the bidding for it by foreign markets had been permitted. But this the Government prohibited, and the result was that, even in England, the gold market was virtually kept in the Government's hands. This being so, there could be no higher price paid than the regular coinage price of the British Mint. There was therefore no premium on the British paper currency, even when, in addition to greatly increased issue of notes by the Bank of England, there were put out thru the banks something like £350,000,000 in so-called "currency notes," which were not redeemed in gold on demand and which were secured only by an idle trust deposit of £28,500,000 gold.

After the war was over the Transvaal mine proprietors became restive over the forced restriction of the price of gold in

British paper currency, knowing that countries in whose exchange market sterling was at a discount could afford to pay more than the Mint price for gold in London. The depreciation in exchange meant that those foreign markets, by paying in New York only their Mint price, could buy on the exchange market more British currency than was needed to pay the London Mint price.

When the British Government yielded to the mine owners and reestablished a "free gold market" at London, these foreign countries immediately began bidding for gold a premium measured by the depreciation of sterling in their markets. There were three main bidders on this basis—the United States, India and Spain. Naturally, the foreign market in which the discount on sterling was greatest could afford to pay the highest gold premium in London. The lower sterling exchange fell, the higher the price of gold rose at London. In the competitive bidding, India got the great bulk of the gold received by England from the Transvaal and elsewhere, which has amounted to something like \$100,000,000 since last September.

The whole episode throws an exceedingly interesting light on the question of the manner in which our country shall help in the financing of Europe thru granting of long credits against merchandize bought by the European countries here. The call for a conference on this question, which was sent out a few weeks ago by an international group of bankers and statesmen, made reference particularly to Continental Europe. In those states the conditions are the same as in the case of England, except that, altho their paper currencies are vastly more inflated, they have not permitted an open premium on gold.

The Story of the Week

Congress Gets to Work

THE question before the Senate for decision when consideration of the peace treaty was resumed was whether the United States should accept the obligation of Article X to join in guaranteeing the territorial integrity and political independence of other nations, at the same time making clear that Congress is the sole authority to decide how the obligation should be met—thus making the United States a full member of the League of Nations.

Or should refuse to accept this obligation, or any other obligation to interfere in controversies between nations over which the League assumes jurisdiction—thus making the United States merely a coöperating member of the League.

The controversy has narrowed down to this—and if a two-thirds majority of the Senate can be mustered for any proposition, either to accept or reject the obligation of Article X, in whole or in part, the treaty will be well on its way to final ratification.

On the surface the situation was little changed from that of November 19, when the treaty was last before the Senate and the special session adjourned *sine die* without ratification. Senator Lodge still controlled enough votes to prevent acceptance of the obligation and Senator Hitchcock, altho somewhat weaker than before, commanded sufficient voting power to prevent its rejection—unless the whole treaty be rejected.

But under the surface there were indications that the deadlock might soon be broken. Every one looked for developments during the ensuing ten days that would speed the Senate's decision, but exactly what was expected no one was able to say.

President Wilson's "last word" on reservations, written January 26 and read to a gathering of Democratic senators by Senator Hitchcock just before the contest was renewed, was at first received with dismay by the friends of the Treaty.

The President approved the Hitchcock reservations, which, tho rejected by the Senate 50 to 41, received more votes than any other proposition. He also approved the "substance" of the compromise reservation on Article X submitted to the bipartisan conference by the Democrats and rejected by the Republicans.

"But," he added, "I think the form of it very unfortunate. Any reservation . . . stating that the

'United States assumes no obligation under such and such an article, unless or except' would, I am sure, chill our relationship with the nations with which we expect to be associated in the great enterprise of maintaining the world's peace."

The President's letter was written in advance of the publication of the letter in which Lord Grey indicated that the Allies would not object to even so complete a repudiation of obligations as was contemplated by the Lodge reservations, but the fact that the President allowed his letter to be made public at the later date showed that his position had not been changed by the Grey statement.

In conference with the newspaper men the day before, Senator Hitchcock, professing to express the President's ideas, made the startling suggestion that the Allies might not wish to have the United States as guarantor of the territorial integrity and political independence of the weaker nations of Europe, against which they might even at the present time be contemplating aggressions.

However, the Senate seems unlikely to accept the obligations that the President desires shall not be nullified upon this or any other argument. If ratification comes at all it must come upon the basis of the Lodge reservations—and then it will be up to the President to decide whether to deposit or withhold the American ratification.

It is regarded as significant that the President did not say he could not accept a reservation weakening the obligation of Article X, but merely that he thought "the form" of the reservation before him was "very unfortunate." The Republicans saw in this a sign of weakening. If the President was willing to go that far before the contest opened, they argued, he would be willing to go very much farther before it closed. The belief continues that the President will ultimately accept whatever reservations the Senate is able to agree upon.

There came during the last week the first sign of a serious break in the ranks of the irreconcilables. Senators Moses, Sherman and McCormick said they believed the Treaty was going thru with the Lodge reservations and thought it "good politics" to vote for ratification on the conditions

Thomas in Detroit News

Trying to live in a house while it is being decorated

they laid down. The mild reservationists announced that they would not "play with the Democrats" but would work for modification of the Lodge reservations within their own party.

At the same time it became known that a number of Democratic senators who have opposed the Lodge reservations merely for fear of offending the President had decided to give Senator Hitchcock "one more try," and if he was unable to secure ratification with interpretative reservations would vote thereafter for the best bargain that could be driven with the Republicans. It is doubtful, however, whether they, with the Republicans, would constitute a two-thirds majority.

Resumption of the Treaty discussion opened a wide field for debate, but it is not expected that the contest will be unduly prolonged. The Senate has much other work to do and it is probable that the Treaty will be laid aside from time to time to permit the transaction of legislative business.

One of the first interruptions will come when the conference report on the Esch and Cummins bills is submitted in the Senate. Senator Cummins expects that the conference report will have been adopted by both houses in ample time to make the legislation effective when the railroads are returned to private operation March 1.

The conference report is practically a new bill containing some of the provisions of the House bill, but few of the radical departures from traditional railroad policy proposed in the Senate measure. The anti-strike clauses were entirely eliminated by the conferees and there was adopted a plan for the adjustment of labor

disputes by regional boards made up half of employees and half of employers. Any dispute not adjusted by these boards goes to a new Federal agency for settlement. The enforcement of its awards is left to the pressure of public opinion.

The theory of the new bill is so to standardize railroad credit, by compelling the stronger to assist the weaker roads, that the carriers will be able in the future to do their own financing and to give efficient service on all lines.

The country is to be divided into rate-making groups by the Interstate Commerce Commission and rates to be fixed that for two years will yield a net operating income of $5\frac{1}{2}$ per cent on the value of the railroad properties within each group. Profits above 6 per cent are to be divided evenly between the earning road and the Government; the Government's share going into a pool for assisting the weaker lines.

The practical guarantee of a $5\frac{1}{2}$ per cent return on railroad property values is expected to give a great impetus to railroad construction in areas in which the railroads could not expect otherwise to be commercially successful. In addition, the railroads are guaranteed the standard return paid by the Government during the war for a period of six months after Federal control is relaxed. The first six months of a year are always the lean months and without the additional guarantee many of the weaker roads would certainly be forced into bankruptcy.

One of the features of the bill that has received little attention is that making the installation of automatic control devices on all railroads "within a reasonable time" mandatory. This is in line with the policy established when the automatic coupler was forced upon the railroads. It is estimated that the savings thru prevention of accidents will more than cover the cost of installing the devices within the first year.

New cloture rules have been proposed by Senators Curtis and Kellogg, Republicans, but both senators have denied that they are intended to apply to the Peace Treaty, the railroad conference report or any other pending question. The Curtis rule would make it possible to invoke cloture by a majority vote after five calendar days, or ten consecutive hours, and the Kellogg rule after three calendar days or six hours had been spent in debate upon a single piece of legislation.

These proposed rules are intended to apply to appropriation bills and other legislation that will come before the Senate later in the session. They were referred to a special sub-committee of the Rules Committee, which has been authorized to consider a complete revision of the standing rules to permit greater expedition so that Congress may adjourn in time to permit its members to be of greatest use to their parties in the coming presidential campaign.

Secretary Lane is the fourth member of the Cabinet to resign in as many months. He has been Secretary of the Interior ever since President Wilson first took office in 1913, and he gives the meagerness of the salary in comparison to the high cost of living as his reason for leaving the post now. This portrait, painted by Assip Perelma, was presented to the National Gallery in Washington by Mr. Frank B. Noyes, president of the Associated Press

Fixing Up the Platforms

THE Presidential campaign has thus far been a contest of personalities rather than of issues. This is partly because no one dominant issue, such as free silver in the election of 1896, occupies the political field, unless we make an exception of the League of Nations, and the leaders of both parties earnestly hope that this question will be safely settled and out of the way before the conventions meet. Perhaps it is also felt that a candidate is his own platform; for the voter will always read the policies of an incoming administration in the words and deeds of the man nominated rather than in the formal declarations of those who nominated him.

Platforms, however, there must be; and the Republican campaign managers are quite awake to the fact. Chairman Hays of the Republican National Committee has therefore organized an advisory committee on policies and platform, containing prominent Republicans from all parts of the nation and all walks of life. The power of the committee does not extend to the actual drafting of the platform and it cannot commit the convention to any policy, but it will be entitled to offer advice and suggestions on all questions of domestic policy. Foreign policy is a "reserved" subject for the present in view of the uncertain development of the Treaty situation in the Senate.

Among the more than 160 consulting experts summoned by Chairman Hays appear such well-known names as Governor Allen of Kansas; ex-Senator Beveridge of Indiana; Senator Cummins of Iowa; Frank Farrington, President of the United Mine Workers of Illinois; General Goethals of Panama Canal fame; President Hadley of Yale University; ex-Justice Hughes; Senator Lodge; George W. Perkins; Gifford Pinchot; Theodore Roosevelt; Elihu Root; ex-President Taft; William Allen White, and many men of equal prominence. Nineteen women are included in the committee. The work of the advisory committee on policies and platform has been widely supplemented by the action of state committees and by "platform contests" in the colleges and in Republican newspapers.

The Republican candidates are by no means agreed as to the lines on which the campaign of 1920 should be fought. Senator Johnson of California is continuing his propaganda against the League of Nations and has spoken on behalf of Mr. Frost, the Republican candidate for Representative of the Third Missouri Congressional District, who is contesting the seat recently vacated by Secretary Alexander of the Department of Commerce. This by-election is regarded as a local test vote on the League of Nations, as Mr. Frost and Captain Milligan, the Democratic candidate, are opposed to each other on that issue. Senator Borah is continuing his questionnaire of Republican candidates as to their attitude on foreign policy. After having queried Governor Lowden of Illinois and Major General Wood he has sent a third letter to Governor Cox of Ohio.

Other Republican candidates stress domestic issues. President Butler of Columbia has selected as the paramount issue of the campaign administrative reform, which will permit coöperation between the Cabinet and Congress. He favors giving members of the Cabinet the right to speak and the duty to answer questions on the floor of the House and the Senate, and the preparation of the Federal budget on the responsibility of the President. The National Republican Club has advanced a plan for returning the railroads to private ownership under government supervision, with legislation to establish a fair scale of wages and to prevent lock-outs and strikes.

Mr. Hoover has presented a personal platform and intimated that he cannot declare for either party until the issues of the campaign have been better defined. He said that he was not a candidate for President and that no one was authorized to speak for him, but he did not say that he would decline a Republican or a Democratic nomination if one were offered to him. He did, however, emphatically reject all offers that might be tendered by a third party ticket, declaring: "I do not believe in more than two parties. Otherwise combinations of groups could, as in Europe, create a danger of minority rule. I do believe in party organization to support great ideals and to carry great issues and consistent policies."

If the Treaty with Germany were carried over into

Kirby in New York World

Melting

the campaign Mr. Hoover announced that he would be constrained by his convictions to support "the party that stands for the League." "With it," he said, "there is hope not only of the prevention of war but also that we can safely economize in military policies. There is hope of earlier return of confidence and the economic reconstruction of the world."

With respect to domestic issues he declared emphatically against all invasions of the constitutional rights of free speech and free representation; but added also that he "could not vote for a party if it were dominated by groups who hope for any form of Socialism, whether it be nationalization of industry or other destruction of individual initiative." This declaration covers the question of the Committee of Forty-Eight which asked Mr. Hoover to state his position with respect to the non-partizan platform of the Committee, including the "restoration of free speech, free press, peaceable assembly and all civil rights guaranteed by the Constitution" and "public ownership of transportation, other public utilities and the principal natural resources." Mr. Hoover's statement agrees in part with the policies of the Committee but diverges on the question of nationalization of industry.

The Democratic platform, of course, is virtually embodied in the policies of the present administration, as there does not appear to be any chance for such a party revolution as in 1896 when the Democratic convention refused to endorse the record of President Cleveland. Only on a few points can there be divergence. One of these is prohibition. A Presidential boom has been launched in New Jersey for Governor Edwards, the most uncompromising champion of the saloon among the political leaders of the moment. The Governor has declared his intention to carry the fight to repeal prohibition into the San Francisco convention. This is an open challenge to Mr. Bryan to throw all his strength into the primary campaign to secure the nomination of a candidate friendly to the eighteenth amendment and the writing of a party platform containing a "dry" plank. A fight between the Bryan and Edwards factions of the party appears to be among the certainties of the Democratic convention.

Attorney-General Palmer has at last announced his active candidacy for the Democratic nomination. This is thought to indicate that President Wilson will not seek a third term; as hitherto members of the Cabinet, from motives of loyalty to their chief, have not openly responded to the demands of their friends that they enter the race for nomination. He announced that his platform would lay stress on the regulation of big business and an unrelenting war against profiteering. The very fact of his candidacy will also make the measures taken by the Department of Justice against the "Reds" a leading issue of the campaign.

Thomas in Detroit News

But the school teacher doesn't get a living wage

Labor Omnia Vincit

LABOR conquers everything" is to be one of the slogans of the impending campaign. The American Federation of Labor has flung its hat into the ring, not as a backer of the proposed "Labor Party," but as an independent force to compel a favorable attitude on the part of the Republican and Democratic organizations. The chief objective of the labor campaign will be the capture of a friendly Congress. Many Congressmen of both parties are accused of reactionary hostility to trades-unionism. Against all such the American Federation of Labor will unite its strength not only at the November elections but in the primaries. To this end a National Non-Partizan Political Campaign Committee has been established and every trades union local is asked to cooperate with it.

President Samuel Gompers, altho personally a Democrat and a supporter of the Wilson administration, has endorsed the new bi-partizan plan by which labor hopes to obtain the nomination of friendly candidates in both parties. The difference between the policy of the backers of the proposed Labor Party and that of the American Federation of Labor parallels the difference between the Prohibition Party and the Anti-Saloon League. The Anti-Saloon League supported Republicans, Democrats and Prohibitionists indifferently, provided only that the candidate of their choice would insert a "dry" plank in his platform. Both old parties discovered that the dry vote, thus organized and united, was worth capturing, and both parties found out in consequence that they were as ardent anti-liquor men as the Pro-

hibitionists themselves. The American Federation hopes in the same way to convince politicians that the united power of the labor vote is greater than that of any group hostile or indifferent to its claims.

Another aim of the movement is to secure a greater number of workingmen and farmers in Congress and the state legislatures. It is a singular fact that altho persons of all occupations vote freely in the United States most of these occupations are never directly represented in legislative bodies. More than half of Congress consists of lawyers. Twenty of our twenty-seven Presidents have practised law. Of course it is natural that the profession whose study is the law should contribute lawmakers far out of proportion to its numbers, but it may be pointed out incidentally that in no other great nation is the proportion of lawyers in political office so high. *Labor*, a periodical of trades unionism, demands that in the next Congress there should be at least two hundred farmers and industrial workers.

The announced policy of the American Federation of Labor of "boring the parties from within" has also been adopted by the Non-Partizan League, which aims to capture the Republican primaries in Minnesota, and thus control the party organization, in much the same way that Hiram Johnson bodily annexed the Republican party of California, name and all, to the Roosevelt candidacy in 1912.

With all its activity, the Non-Partizan League has not yet attained the importance of the farmers' movement in Ontario. Appearing in the open field under its own banner the United Farmers of Ontario obtained last October a greater representation in the provincial legislature than the two old parties combined and thus established a farmers' ministry in the very citadel of the Conservatives. The party is carrying on an active campaign in other provinces and hopes to obtain control of the Parliament of the Dominion. In Nova Scotia an Independent Labor Party has recently been organized with a more radical platform than that of the United Farmers.

Third party prospects do not seem bright in the United States this year. The decision of the American Federation of Labor to work in the primaries of the old parties deprives any possible Labor Party of most of its possible constituency. No attempt has been made to resurrect the late Progressive Party, and Mr. Hoover has emphatically declined to run on any third ticket. The Prohibitionists have lost their issue with the triumph of their policy. The Socialists have been greatly assisted by the reaction from repressive legislation and such incidents as the Albany trials, but their "left wing" has broken off to form the Communist and Communist Labor groups, which disdain political methods, and their "right wing" was long ago alienated by the opposition of the Socialist Party majority to American participation in the Great War, leaving only a central group led by Congressman-elect Berger and Mr. Hillquit. If a really formidable third party appears in the contest of next November it will probably come from some split in the Republican or Democratic Party conventions next June.

The Progressive Negro

THE twenty-ninth annual conference at Tuskegee, Alabama, brought together at the end of January more than 2500 leaders of the American negro—teachers, doctors, lawyers, and prosperous farmers and business men. Dr. Robert R. Moton, successor to Booker Washington as principal of Tuskegee, presided. Most of the session was devoted to a discussion of better agriculture and to reports on the progress already made

The cold spell of this winter froze even Niagara making some of the cascades and minor falls into beautiful ice caves like this

by negro farmers. For example, in Macon County, where Tuskegee is situated, the negroes own 78,000 acres of land. These self-supporting, independent farmers sustain fifty-eight schools for colored children and paid one-half of their initial cost.

Among the white men who were invited to address the Tuskegee Conference were Mr. Harris, state superintendent of schools in Louisiana, and Governor Bickett, of North Carolina. Their speeches may be taken as typical of the better sentiment of the educated white men of the southern states and promise much for happier relations between the two races in the future. Governor Bickett promised that North Carolina, while adhering to the principle of separate accommodations for black and white in the schools and on the railroads, would try to make these accommodations of equal value for both races. He said that the negro might safely leave his cause "at the door of the white man's conscience."

Mr. Harris favored opening the door of industrial opportunity to the negro without other restriction than individual merit. He said:

I think all of us can accept the fundamental truth that every individual in this great democracy of the United States deserves to be permitted such mental, moral, and economic development as his natural powers will enable him, after proper training, to enjoy. . . . It will be necessary for the white race to reorganize its views as to the negro's place in this country. There is a widespread belief among a considerable number of white people that the negro was created and placed in America to do the rough, manual work for the white race—and at the lowest possible wages.

There is an equally widespread belief among the negroes that while it has fallen to their lot to do the most of the rough, common work, this work is an imposition and does not call for efficiency and skill.

Russia and the Border States

THE allogenic peoples along the western edge of Russia seized the opportunity occasioned by the rise of the Bolsheviks to break away from the old Russian Empire and assert their independence. They have been fighting desperately and persistently against the Bolsheviks, sometimes single-handed and without moral or material aid from the Allies or America. Of the twelve republics forming a continuous band extending from the Arctic Ocean to the Persian border, only two, Finland and Poland, have received official recognition from the Paris Peace Conference. These peoples are mostly not Russians and many of them, like the Estonians, Lithuanians and Caucasians, are not even Slavs, but differ from the Russians in language, religion and race. Millions of them are in America and these expatriates have for many years been zealous in their efforts to secure the freedom of their brethren in the homeland. During the war they did good service in the American army and in rallying their people in the United States to the support of the Government, for they believed that a victory of the Allies would lead to the establishment of the principle of self-determination for all small nations.

But when the war was won they found that the Supreme Council of the Peace Conference was resolute in its determination to restore integral Russia. Admiral Kolchak assumed the title of Supreme Ruler of All Russia and refused to make any concessions to the spirit of independence of the subject nationalities. It was supposed that the United States was more sympathetic than the Allies toward the infant republic, but recent disclosures show that its influence was exerted against their aspirations for complete independence and in favor of Kolchak.

Recently the London *Daily Herald* published what purported to be a secret despatch dated Washington, October 11, 1919, from Ambassador Bakhmeteff to Sazonov, former Foreign Minister of the Czar, in Paris. In this are revealed the verbal instructions given by our State Department to Mr. Head, when he was sent as American commissioner to the Baltic Provinces. According to the alleged despatch, Mr. Head was instructed that:

His attitude must not rouse hopes in the minds of the local population that the American Government supports any separatist tendencies that go beyond the bounds of autonomy. On the contrary, the American Government hopes that the population of the Baltic Provinces will support their Russian brothers in the common work of restoring Russia.

Whether this secret message is authentic or accurate or not, it now appears that its tenor expresses the attitude of our Government toward the secession movement. Secretary of State Lansing has just given out his letter of October 15, about the same date, in which he denies the appeal of the Lithuanian National Council for the recognition of their republic. He informs the Lithuanians that the United States, in common with the Allies, has proffered aid to Kolchak on condition that he recognize Lithuania as autonomous. Again, on January 7, 1920, Secretary Lansing refuses to recognize the diplomatic character of the agents of the Lithuanian Republic in this country. The same policy has been adopted by our Government toward Esthonia, Ukrainia and the other nationalities aspiring for independence.

The Soviet Government, having made peace with Esthonia, is now trying to conclude a similar treaty with Poland. In its invitation to open negotiations the Soviet declares that it had made the principle of self-determination its fundamental policy and that it had

from the first recognized the independence and sovereignty of the Polish Republic. All territorial or economic questions could be settled peaceably by agreement or mutual concessions, as in the case of Esthonia, and the Soviet proposes that while negotiations were in progress both armies should keep their present lines in White Russia.

The Polish Government agreed to consider the Russian peace proposal and the Polish Minister of Foreign Affairs, Stanislas Patek, went to London and Paris to see if the Allies would permit Poland to make peace. He came back with a report of divided counsels. Lloyd George is supposed to favor Poland's acceptance of the peace proposals, while Premier Millerand is, like his predecessor, Clemenceau, opposed to it. Marshal Foch, who has been foremost in urging an invasion of Russia by means of Poland, has gone to Warsaw to use his influence against peace. The Socialists and labor unions of Poland have declared that if their Government rejects the Soviet peace offer they will call a general strike which will tie up all the industries and transportation of the country.

Trade with Soviet Russia began on February 1. On that day two carloads of flax passed over the border into Esthonia and on to the seaport of Reval, doubtless destined for the Belfast mills since British agents had contracted in advance for the Russia flax crop. At the same time the northern route was opened and a shipload of British goods was sent from the Finnish frontier to Petrograd. The Bolsheviki sent back simultaneously four British officers whom they had taken prisoners in the Archangel campaign.

The Supreme Council of the Allies at Paris, just before its dissolution, authorized the raising of the blockade against Russia on condition that the Russian coöperative societies have a monopoly of foreign commerce. The Russian coöperatives naturally prefer to deal with the coöperatives of other countries rather than with proprietary firms. Their agents in England have for many months past been negotiating with the British Coöperative Wholesale Society at its headquarters in Manchester in preparation for the opening of commercial relations. The British coöperatives have their own factories and are able to supply many of the needs of Russia without recourse to the open market.

Paul Thompson

The youngest member of the British Parliament is Mr. Esmond Harmsworth, a nephew of Viscount Northcliffe. He was elected to the House of Commons this fall on an "anti-waste" campaign

British and Colonial Press

The "Paul," the first German ship to come to Canada since the war, was blown into Halifax harbor with masts broken and sails carried away after fighting storms in the North Atlantic for over two weeks. Her commander, Captain Krueger, had served in the German naval air force for three years in the North Sea

The Soviet Government has invited the British and French trade unions and coöperatives to send delegations to Russia to study for themselves the workings of the Soviet industrial system. Such a deputation was appointed by the British Trades Union Congress on December 16 and is probably already in Russia. The British unions have been emphatic in their demands that the blockade be raised and have declared that if the Labor party comes into power it "will not regard itself bound by military or diplomatic commitments made secretly" by the present Government.

In the south the war continues and Bolshevik armies still advance. Odessa, the chief port of Russia on the Black Sea, was occupied on February 7. Tens of thousands of refugees fled from the city during the month preceding its fall, but only a part of those who wished to escape could do so because of the lack of shipping. British and American steamers carried away as many of the sick and wounded and the women and children as they could, together with such of the men as had been most active in opposing the Bolsheviki and would be most exposed to their vengeance. Typhus is raging and there are 10,000 cases in Odessa, besides other epidemics. The British battleships "Ajax" and "Marlborough," lying in the harbor, fired over the city to hold back the Bolsheviki until the evacuation could be completed. But a large part of the garrison had to be left to be taken prisoners, and the enormous stores of food and munitions collected at Odessa for the use of Denikin's army of invasion fell into the hands of their enemies. General Denikin had taken ship some days before for the Bulgarian port of Varna. He will go to Bucharest in the hope of inducing the Rumanians to attack the Bolsheviki thru Bessarabia.

On February 4 the American papers published a report purporting to come from Odessa by way of Archangel, announcing a great victory by Denikin's forces on the Don, who, it was said, had driven the Reds back over the river in disorder and had captured sixty guns, 150 machine guns and 8000 prisoners. This news seems to have been a pure fabrication. At any rate, the Bolsheviki have gone far beyond the Don and Denikin's army is still falling back.

On the eastern side of the Caspian Sea the Bolsheviki have secured a notable victory in the capture of Krasnovodsk. This is the port and western terminus of the

Lustige Gesellschaft, Berlin

A German cartoon of profiteering—"Have you sold your estate?" "No, I have let a flat and this is my commission"

Trans-Caspian railroad leading into Turkestan, which is now altogether under the control of the Bolsheviki and gives them access to Persia, Afghanistan and India. On the opposite shore of the Caspian is Baku, the center of the Russian petroleum fields. This city is held by the British, but the Bolsheviki will now probably attempt to reach it by water as well as by land.

Lloyd George's Program

THE first session of Parliament after the conclusion of peace with Germany opened on February 10 with all its pre-war pomp and ceremony. The old gilded state coach was brought out, and, drawn by six black horses, carried the King and Queen in their royal robes from Buckingham Palace to the Houses of Parliament. The Prince of Wales, recently returned from his American trip and soon to leave for Australia, took part in the opening ceremony for the first time.

King George in the Speech from the Throne called attention to the need of peace and the restoration of normal conditions of life in eastern Europe and Russia, for "so long as these vast regions withhold their full contributions to the stock of commodities for general consumption, the cost of living can hardly be reduced or general prosperity restored to the world." The King announced that bills would be introduced for the regulation of the liquor traffic, for the government of Ireland, for the acquisition of coal royalties by the state, for the prevention of dumping of cheap goods from foreign countries, and for the promotion of agriculture.

Premier Lloyd George, in outlining his policy before the House of Commons, devoted most of his attention to Russia. He said:

Bolshevism cannot be crushed by force of arms. I held that opinion a year ago, but my advice, tendered on that assumption to the warring factions, was declined. It was necessary to give the anti-Bolshevists a chance to recover Russia, but they failed. The failure was not due to lack of equipment but to more fundamental causes.

Until they are assured that the Bolsheviki have dropped the methods of barbarism in favor of civilized government, no civilized community in the world is prepared to make peace with them. Further, there is no established government possessing the right to speak for the whole of European Russia. We failed to restore Russia to sanity by force. I believe we can save her by trade.

Commerce has a sobering influence. There is nothing to fear from a Bolshevik invasion of surrounding countries or the Middle East, because the Bolsheviki cannot organize

a powerful army. I believe that trading will bring to an end the ferocity, rapine and cruelties of Bolshevism more surely than any other method, and Europe badly needs what Russia is able to supply but cannot supply with contending armies moving across the borders.

Bolshevism, the Premier said, was efficient, but it was not democracy. The proposal to surround Russia with a ring of fire was impossible because the Baltic States were making peace with Russia, and neither Great Britain, France, the United States nor Italy were willing to provide the funds. He then turned to domestic issues:

The dangers are not all in Russia; they are here at home. I speak with knowledge, with apprehension and responsibility, and I warn the House that in the face of things which may happen we must use every legitimate weapon. We must fight anarchy with abundance.

He declared that there were murders "of the most cowardly kind in Ireland," and demanded of his opponents if they proposed to withdraw all troops "and leave the assassins in charge of Ireland." He denounced profiteering, but declared that high prices were due to inflation:

This fact not only is true here but it is true in every country in the world. It is the right of the working people of this country to know that when anybody tells them that high prices are due to profiteering the man who says it does not know what he is talking about, or else he is trying to deceive. There is only one way in which prices can be brought down, and that way is by increased production.

The German Criminals

THE list of Germans charged with violation of the laws of warfare comprises 896 names. Of these France and Belgium claim 334 each, England 97, Poland 57, Rumania 41, Italy 29, and Serbia 4. The list with the crimes charged against them make up a volume of two hundred closely printed pages. In many cases the names of the culprits are not known, but their offenses are specified so that the German Government can identify them.

The most important names on the Black List are Hindenburg and Ludendorff. They are accused jointly of planning devastations, of ordering houses destroyed, of ordering wells poisoned, of allowing graveyards to be desecrated, and of stealing American food sent into invaded Belgium and Northern France, of ordering the useless destruction of 150 villages, of the illegal formation of labor battalions in the invaded regions, and of forcing women to work for the German army, contrary to the laws of war, and of unlawful deportations of

Wide World

"Overcome Anarchy with Abundance"

Premier Lloyd George sounded the keynote for world reconstruction in his speech at the opening of the British Parliament last week. "There is only one way in which prices can be brought down," he said, "and that way is by increased production." He summed up his attitude on the Russian question in the sentence, "We failed to restore Russia to sanity by force. I believe we can save her by trade." This photograph is the most recent one of the British Premier and it shows Mr. Lloyd George wearing for the first time the Grand Cordon of the Legion of Honor, bestowed upon him by the French Government in recognition of his work for the Allied cause.

civilians. These charges are supported by the testimony of witnesses in the occupied district as well as by the German official orders. Hindenburg and Ludendorff are still popular heroes in Germany in spite of their defeat, and all classes except the extreme Socialists resent having to hand them over to their enemies for certain condemnation and possible execution.

Several of the persons whom the German Government is required to deliver have died. Captain von der Planitz, aide de camp to the German Crown Prince, whom Belgium demands, was reported killed in battle, October, 1915. Others said to be dead are: General Fritz von Below, commander of the First Army, demanded by France; General Otto von Below, demanded by Italy; Admiral Oscar von Ingenohl, commander of the German High Sea Fleet, demanded by Great Britain.

Many of those charged with personal acts of cruelty and injustice have, like the Kaiser, fled into neutral countries such as Holland and Switzerland, which have always prided themselves on never surrendering political refugees.

One woman appears on the list of German criminals, Fräulein Elsa Scheiner, daughter of Professor Scheiner, of the astro-physical observatory of Berlin University. She was in charge of the women's concentration camp at Valenciennes. Her father says he can prove by her letters that she had many friends among the prisoners and did not approve of the German policies.

Baron von Lersner, the German representative at Paris, as soon as he saw the list, refused to receive it for transmission to his Government. He returned it to Premier Millerand with a letter saying that he had in the last three months "laid most seriously before the representatives of the Allied and Associated Governments, ten times in writing and thirteen times orally, the reasons it was impossible to comply with such a request, no matter what the social rank of the accused persons might be." He thereupon resigned his office and took the first train from Paris.

Altho it was with a "Hang the Kaiser!" slogan that Lloyd George carried the campaign by an unprecedented majority a year ago, many of the English papers now say that the presentation of such a long and sweeping list is a mistake and there is no way of making the governments of Germany or of neutral countries sur-

render the accused. But the French papers demand revenge as vehemently as they did in 1871. *La Liberté* says:

Millions of men have died that a little more justice reign on earth. We swore in their name that we would make of the German war criminals such an example that never again would the leader of a people renew the gesture of William Hohenzollern. Yes, we swore it. We owed it to the victims. When they fell under the blows of the torturers, who laughed because they thought they were safe, these victims cried: "Vive la France! Vive l'Angleterre!" and these cries meant: "France, avenge me! I count upon you!" They meant: "England, I am a citizen of a mighty nation, and they torture me! Avenge me!" When they died they dreamed of justice. The guilty must be punished, else the idea of justice dies forever.

Several of the French papers, like *La Victoire* and *Le Journal*, suggest that if Germany refuses to carry out this provision of the Treaty the whole left bank of the Rhine, including Cologne and Coblenz, should be detached from Germany and permanently occupied by French forces.

All recognize that if Germany is allowed to escape compliance with the first demand made upon her it will be very difficult to hold her to the other stipulations of the Treaty. Various compromises have been suggested such as that the trials be held, not by the enemies of Germany, but by a neutral court at The Hague or under the auspices of the League of Nations.

Salvador Asks a Question

THE Department of State has made public a diplomatic note recently received from the little republic of Salvador in Central America. Foreign Minister Paredes replies to the request that Salvador join the League of Nations by raising the question of the exact meaning of the Monroe Doctrine. He begins with cordial praise of the Covenant and of the Treaty generally and expresses the ardent desire of his nation to become a member of the League. But one obstacle remains and that, he trusts, might be removed by a frank explanation.

The obstacle lies in the "brevity and lack of clearness" of Article 21 of the Covenant, which ranks the Monroe Doctrine among the "regional understandings"

Wide World

One of the first photographs of the recent riots in Berlin in which the mobs of Socialist workmen gathered outside the Reichstag building in protest against legislation relative to the factory councils. Machine guns were used against the crowds. The soldiers in the foreground of this photograph are standing guard on the steps of the Reichstag building during a session of the assembly

which have international sanction. Senor Paredes points out that the Doctrine has been variously interpreted by "prominent thinkers and public men of the United States" and requests that President Wilson settle the question once for all by an authoritative definition:

My Government recognizes that the Monroe Doctrine consolidated the independence of the Continental States of Latin America, and saved them from the great danger of a European intervention. It realizes that it is a powerful factor in the existence of the democratic form of Government on this continent and that it raised a barrier to European colonization.

Since, however, the Covenant of the League of Nations does not set forth nor determine the purposes nor fix a definite criterion of international relationship in America, and since, on the other hand, the doctrine will be forthwith transformed—in view of the full sanction of the nations of the world—into a principle of universal public law, juris et de jure, I request that your Excellency will be good enough to give the authentic interpretation of the Monroe Doctrine as it is understood in the present historical movement and in its future application by the Government of the United States, which must realize that my Government is keenly desirous of securing a statement which shall put an end to the divergence of views now prevailing on the subject, which it is recognized by all is not the most propitious in stimulating the ideals of true Pan-Americanism.

It was officially stated at the Department of State that no reinterpretation of the Monroe Doctrine was made necessary by the Treaty of Versailles. A note to this effect will be sent to Salvador.

Among the political coincidences of the week was the fact that while the Department of State was considering the request of Salvador, Senor Tejada, President of the Bolivian Chamber of Deputies, also urged a query as to the meaning of the Monroe Doctrine. Speaking as a delegate to the Pan-American Conference he asked that the Doctrine be reinterpreted as being as much a positive policy of the Latin American republics as of the United States. He declared:

If all our countries would accept and express the same theory as the Monroe Doctrine it would be not only a warning of America to all European and Asiatic countries against any aggression, but it would bring as a consequence the mutual and reciprocal help of the countries of the Americas against any external attempt to disturb the peace, whether it come from other continents or spring up in the middle of our own countries.

The Mayor of Boston has refused to see "President" De Valera of the Irish Republic on the ground that the nation which he claims to represent has not been officially recognized by the United States. This is in contrast to the action of Mayor Hylan of New York, who welcomed the Irish "President" with all official formality. De Valera is quoted as having made two recent statements which seem difficult to reconcile; that the Irish sympathized with Germany in the war against England and hoped that Germany would win, and that the Sinn Fein did not oppose the United States in the war with Germany and thought that President Wilson was justified in going to war!

Favorable action by seven more state legislatures will bring into effect the nineteenth amendment. Nevada and New Jersey are the latest endorsers of federal woman suffrage. The Nevada legislature, summoned in special session to consider the question, approved the proposed amendment with but one dissenting vote. In New Jersey the contest was much closer and an attempt was made to postpone the question by calling for a popular state referendum next November. The House of Assembly rejected this proposal by 33 votes to 25 and then passed the amendment, which had already been approved by the Senate, by 34 votes to 24.

The boy stood on the burning deck whence all but he had fled

The resignation of Secretary Franklin K. Lane of the Department of the Interior, coming close upon the resignation of Secretary Glass of the Treasury and the appointment of Mr. Meredith to the Department of Agriculture, shows how rapid in the recent months has been the "labor turnover" in the President's official family. Since 1913 there have been changes in the Departments of State, the Treasury, War, the Interior, Agriculture, Commerce and the Attorney-Generalship. Eighteen men have filled cabinet offices under the present administration.

By the simple substitution of a Council of Ambassadors of the Supreme Council at Paris the United States gets admission to the ruling body even though she has not joined the League of Nations. The American Ambassador, Hugh C. Wallace, signed on February 9 the treaty which cedes Spitzbergen to Norway. The Spitzbergen archipelago contains rich coal and iron mines, but had never been annexed by any nation until it was occupied by Great Britain during the war to prevent its falling into the hands of the Germans.

Fifty thousand garment workers in New York City have been awarded a fifteen per cent increase in wages by the State Industrial Board. The workers demanded a thirty per cent rise to meet the increased cost of living, but the manufacturers refused the demand as a violation of the three year contracts concluded last June. The Industrial Board in making its compromise award expressed the hope that the cost of higher wages would be absorbed by increased production and not passed on to the consumer.

The League of Nations has found another champion. The Ancient Order of Gleaners, in annual convention at Kalamazoo, Michigan, endorsed the League. Two thousand delegates were present, representing farmers' organizations in fourteen states.

The Bolsheviks are supporting the revolt of the Koreans against Japanese rule and supplying them with arms. It is claimed that 2000 Korean insurgents defeated the Japanese troops in northern Korea, killing 300 of them.

Arthur J. Balfour, former Foreign Secretary and Lord President of the Council, has been appointed British representative on the Council of the League of Nations.

The Palestinian Arabs have sent a note to the Pope protesting against the colonization of Bolshevik Jews in Palestine.

The Bolshevik Kind of "Democracy"

The "Russian Federal Republic of the Soviets," so much praised by American radicals as a daring if somewhat extreme experiment in democracy, is actually the least democratic government in Europe; perhaps in the whole world. Of course in practice the Bolshevik authorities have simply suppress any local soviet which fell into the hands of an opposition party and have suspended the publication of all "bourgeois" newspapers. But even in theory and principle the soviet constitution is the narrowest of oligarchies.

Voting is limited to soldiers or persons engaged in productive work, and even within these limits is denied to (1) any persons employing hired labor for profit, including even farmers with one "hired man" or "hired girl," (2) any person engaged in work which is not defined by the authorities as "useful to society," (3) any person drawing an income from interest, rent or profits, (4) any person engaged in private business or trade, even to the smallest shopkeepers, (5) any minister or clergyman of any church, (6) members of former royal families or the old police service. Nobody knows just to what extent these restrictions have cut down the electorate in Russia, but it is evident that they would disfranchise at least half of the persons now voting in the United States, if the Russian law were applied to this country.

But there is worse to come. As is shown in the accompanying diagram, prepared by the Institute of Public Service, the election of national officials is several removes from the voter. Under the Soviet constitution an American carpenter, let us say, would have a vote only for his local carpenters' union council ("soviet" means simply "council" or "committee"). The various trades union Councils would elect a general Commission for New York City. The Commissions of the various towns and cities would in turn choose a governing Council for the state, and these again would select the members of Congress or the All-American Soviet. Congress would be represented for all practical purposes by a Central Executive Committee and this would choose the Cabinet ("People's Commissars") which would be the real governing body of the nation.

The carpenter, however, would be more powerful in political system than the farmer, even if he dismiss all his hired hands in order to get a vote at all. The farmer would have a vote only for the village Council. The village Councils would elect the Township Councils; these in turn the County Councils; these the State Councils and so on up. But it would take, under the Soviet law, five times as many farmer votes as of city votes to elect a member of the State Council or Congress. The voters of New York City alone would choose about as many members of Congress as all the rural population of the Mississippi and Missouri valleys!

It may be said that as regards our Senate the man who lives in Nevada enjoys greater proportional power than the man who lives in New York. But there are no issues which divide small states as such from large states; so our system of equal representation in the Senate doesn't work much harm in practice. But there are many issues on which country voters are more or less lined up against city voters; the failure of the Populist Party to gain any votes in the cities and of the Socialist Party to make any headway in the country proves this. The Soviet constitution in America would mean that half a million laborers in the Pittsburgh mills and mines, the Massachusetts factories, the New York sweatshops and the Chicago packing houses would rule all the rest of the American people.

Dr. Frank Crane's Funny Rules

Rule I. You must find your fun in your imagination.

Rule II. You must observe decorum.

Rule III. You must learn how to have fun without spending money.

"Feed the Prof!"

According to the estimates of the United States Commissioner of Education the average teachers' salary in the United States is a little over \$630. This is lower than the average for any branch of railway work, including even "section men" and "messengers and attendants." In New York teachers' salaries are exceptionally high; ranking with the average income of butchers, clerks, chauffeurs and waiters (not inclusive of tips). In Chicago and Cleveland teachers get about fifty

per cent less than bakers, less than half as much as blacksmiths, and rather more than one-third as much as machinists. From 1915 to 1918 the average increase in salaries in the schools was only 16 per cent; wages in most branches of industry having practically doubled in the meantime. It only remains to be added that there are said to be 5,500,000 persons in the United States, above ten years of age, who cannot read or write in any language.

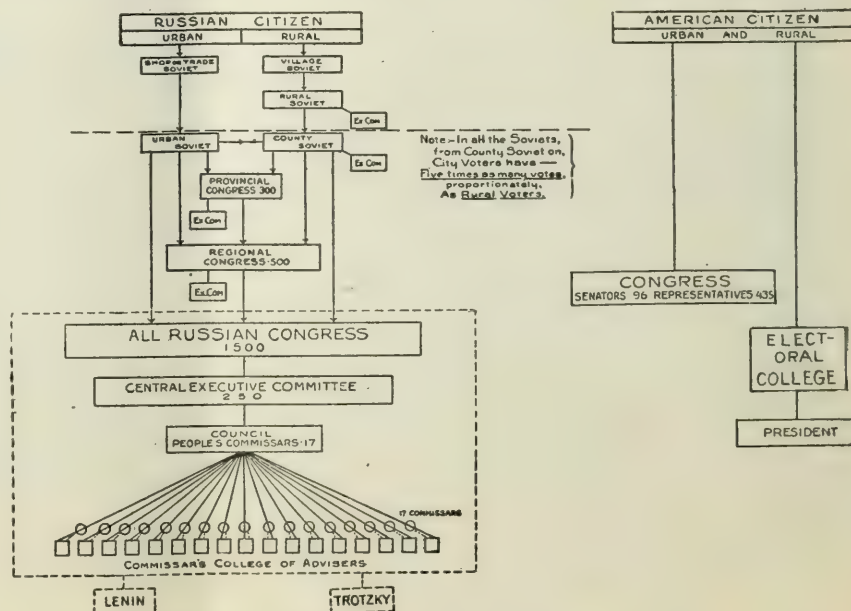

The Weather Man Makes Good

In view of the high percentage of accuracy attained in the predictions of the Weather Bureau, a percentage which may be very modestly placed at over 75 per cent, it is remarkable that so many of the intelligent public still consider the predictions as only a little better, if any, than mere guesses. One frequently hears such assertions, often accompanied by a remark to the effect that "when the Bureau says 'clear and cooler today, fair tomorrow,' I always take my umbrella and look for rain."

The explanation of this belief is, of course, partly due to the fact that when the predictions fail to give warning of conditions which bring discomfort, the memory thereof is sure to be more persistent than when the conditions are as predicted and comfortably prepared for.

There is, however, another fact which leads many intelligent people to deny the Weather Bureau the credit which its accuracy deserves. A moment's consideration of the atmospheric movements in the larger storms which generally determine the weather conditions during their prevalence, will show how readily an improper conclusion is reached as to the accuracy of a prediction.

In all these larger storms, which in meteorology are usually designated as "low area" storms, very large vol-

This comparison of the Bolshevik government in Russia with the government under which the United States has grown up disproves the prevailing opinion of the simplicity and radical "democracy" of the Soviet régime

umes of air are generally involved. The storm areas are, roughly speaking, circular and may be from 500 to 1500 miles in diameter, all the air immediately over this area revolving around the center of low pressure. The horizontal direction of motion of the air in the storm area in this hemisphere is counter-clockwise, that is, opposite to the direction that the hands of a watch would move if placed on the ground face upward.

These low area storms have been carefully studied for many years and charts have been drawn showing where they most generally originate, giving the lines of direction more usually traveled by the storm center, their rates of travel and showing where they leave our continent.

When an area of low atmospheric pressure makes its appearance and the air for hundreds of miles begins to circle around it, a storm is beginning. To predict what the weather is going to be in consequence of this storm, the weather prophet tries to determine along which of the lines of travel, usually pursued by storms, its center is going to move and how fast. He knows, speaking generally, that on opposite sides of the low area conditions are going to be opposite; at the opposite extremities of any diameter the winds will blow in opposite directions,

the warmer air is opposite the colder and the rain area of the storm approximately opposite the fair weather side, these facts being known from the laws of storms.

From all present indications combined with the recorded knowledge of storms, the predictor concludes that the storm-center will travel a particular path: then along that path on both sides, from the estimated time that the center will reach certain points, he prescribes the weather that the storm will bring. Should the storm-center at any point switch off, as often happens, and go fifty or one hundred miles further west or east than was expected, it is evident that the country between the line that the center traveled and the one that it was expected to travel, will get different wind and weather, frequently just the opposite of what was predicted.

The inhabitants between the two lines just mentioned are disappointed in the predictions; they exclaim "what a miss the Weather Bureau made," and forget that outside these lines over the entire large area covered by the storm the predictions come true and only miss for the small area between the lines. A consideration of this simple fact will cause many people to be more just and accurate in their judgment of the Weather Bureau.

The importance of preventing the pink bollworm of cotton from gaining a foothold in the United States will be understood when it is stated that experts declared its presence in this country would mean an annual loss of at least \$50,000,000 and possibly the total destruction of the entire crop. This insect enemy spreads like wildfire, once it is established, and, since man with his railroad trains is the chief agent of dissemination, jumps of a hundred miles at a time would be comparatively short. The overwinter-

The holes and malformations in these locks of cotton show the extensive injury that is done by the pink bollworm

The Cotton Crop vs. the Little Pink Pest

Hunting for a needle in a haystack is undoubtedly an exacting job, but it is hardly more difficult or tiresome than another one which the Department of Agriculture has successfully carried out. In its efforts to prevent the pink bollworm of cotton from entering this country thru Mexico, the Government has for some time maintained a quarantine in certain parts of Texas, along the border—zones in which the planting of cotton is prohibited by law.

As a first step in this quarantine, however, it was necessary to clean up some 10,000 acres of land on which cotton formerly had been grown. This was accomplished by a force of experts and approximately a thousand laborers, who went over every inch of

the surface in the area under suspicion with a fine comb, as it were, gathering up all cotton bolls, stalks, leaves, grass, and trash, and burning it, and otherwise making certain that no boll worm or larva was left in any sort of hiding place.

How well the work was done was demonstrated at the end of the 1919 cotton season, when reports of all the Government investigators showed that no evidence of the presence of the bollworm in the area cleaned up could be found. The complete success of the campaign will not be regarded as certain, however, until at least two other summers have passed. In the meantime the quarantine will not be relaxed and no cotton will be permitted to be grown in the dangerous districts.

ing larva if loaded into a freight car in Texas, in the litter at the bottom of the car, might well be swept out in Georgia and so start a campaign of destruction, just as it has done in practically every cotton growing country, except the United States.

No other insect enemy of cotton is nearly so destructive as the pink bollworm, which frequently reduces the yield of lint as much as 50 per cent, and greatly lessens the amount of oil produced from the seed. Moreover, it is singularly immune from parasites and other natural enemies, as neither predacious insects nor birds can reach the larva inside the cotton boll.

Land Lord's Logic By Bolton Hall

A Merchant wanted to build a house for himself; so he went out to Boomhurst where the city had put in water, city lights, pavements and sidewalks. The city had also included the district in fire and police limits.

There he met a man who said he was the Assessor. Said the Merchant, "I want to build out here; will you be easy on me? What will you do if I build?"

"Do?" said the Assessor, "I'll do you! I won't do a thing but raise your taxes."

"Taxes?" said the Merchant. "Why do you levy taxes here where there is nothing but vacant lots?"

"Why," said the Assessor, "they are for the lamps that light these lots, and for the police to keep order on the lots, and for pavements to make the lots accessible, and for water and fire protection to make the lots desirable for building."

"Then do all these taxes go to increase the value of the lots?" asked the Merchant.

Photography by Moulton

A gang of laborers searching for cotton bollworms, caterpillars and larvæ in the "clean-up" of 10,000 acres of cotton land in Texas

"Sure Mike!" said the Assessor. "They would not be worth anything without those improvements."

"But if I buy a lot I'll have to pay a bigger price on account of that increase," said the Merchant, "so I have to pay the owner of the lots for all those things. Shall I get them free after that?"

The Assessor laughed. "I guess not, you are young; you'll have to pay taxes every year for all of them. Where have you been living?"

"Shall I have to pay taxes on my house, too?" asked the Merchant.

"Sure thing!" said the Assessor.

"And will my house be worth more than it cost me on account of the taxes?"

"Well, no," answered the Assessor, "it will really be worth less, because it is liable for taxes."

"Then," said the Merchant, "if the lots get all the increase from the expenditure of the taxes, why don't you charge all the taxes to the lot owner?"

"Why, you fool," said the Assessor, "the lot owner has charged them already to you. They cannot be charged twice."

The Great Plague

The number of deaths per 1000 population due to influenza in the epidemic of 1918

to the other with alarming speed, but very fortunately the death rate is much below that of last winter.

One curious fact brought to light by statistics is that the Spanish influenza struck down most of its victims in the prime of life, between the ages of twenty-five and forty, when the death rate from most diseases of the type is lowest. The great loss of life in the army might be explained by the hardships of campaigning, but this does not account for the relation between age and mortality since it held equally as regards the civilian population and even the women. Children and young people less than twenty years of age escaped lightly; so did both men and women over forty. Medical science has rarely been confronted by so strange a puzzle.

Should College Men Know Something?

Some of the universities are worried by the college students' tradition of reducing study to the art of acquiring a small collection of facts convenient for securing grades on examination, and then promptly erasing those facts from the tablets of memory as soon as the grades are in. By this means it is possible for a Freshman to take a score of courses, obtain passing grades in them all, and graduate four years later with a mind quite as unspoiled by education as if he had never been to college at all.

Harvard University has met this difficulty by giving a comprehensive final examination in the student's main field of work at the close of his college course. "It is not," says President Lowell, "a mere review of what he has been taught. That had its merits and defects; but was simply an attempt to make sure that the pupil had not forgotten what he had learned. The ob-

ject of this examination is different, for it is designed to include much that has not been covered in class. It is a general examination on the subject, and the student must read for himself what his courses have not touched. The aim is to fasten his attention on the subject as a whole, rather than on isolated fragments of it."

Columbia University has tried an even more daring scheme to broaden the college course and compel the student to think instead of merely consuming cold scraps of information. All Freshmen are now required to take a course on Contemporary Civilization, which is given by the Departments of History and Philosophy in cooperation. The course aims to dig down to the roots of existing institutions, which even educated men are usually content to take for granted, and show why church, school, government, business, and domestic and social life are as we find them today and how and why they differ in various parts of the world. If the course is as well taught as it is well conceived, Columbia can safely "dare" the student to graduate without becoming for the rest of his life an irreparably educated man!

Triflings

In Kansas there are said to be four automobiles to every bathtub.

Twenty-six American states derive their names from Indian words; five from the Spanish.

Massachusetts makes use of more than a third of the wool consumed in American manufacture.

Of all the merchant tonnage lost during the Great War about three-fifths belonged to the British.

If the United States were as densely populated as Belgium it would hold all the people in the world.

There is one telephone to every nine New Yorkers; but one telephone has to serve twenty-five Londoners.

More Presidents were born in the two states of Virginia and Ohio than in all the other states put together.

A committee has been formed to erect a memorial to Christopher Sholes, who invented the first practical typewriter.

The largest city in that half of the world lying south of the equator is Buenos Aires in Argentina. Sydney, Australia, ranks second.

A National Junior Chamber of Commerce has been organized in St. Louis by delegates from twenty-seven American cities.

The loss of life in the Great War was about ten times that of the American Civil War, but the number of men engaged was over seventeen times at great.

In Great Britain a Middle Classes Union has been organized to uphold the economic interests of the "bourgeoisie" against increased prices, higher taxes and trades union coercion.

Daylo Puts a Thousand Eyes in Factory Storerooms

THE war taught industry one impressive lesson—the necessity for a safe, economical, portable light.

Factories suddenly realized they could not keep running at top speed without one.

When an inspection had to be made on the spot—when stock was wanted quickly—when a lost tool had to be found in a hurry—Daylo and Daylo alone—safely, quickly, economically said: "There it is!"

Dark corners vanished; lost parts jumped into sight; mislaid supplies hopped right into the hand.

Daylo answered the hurry call for a light to set machinery, adjust repairs, or inspect finished work. The thousand daily uses of Daylo speeded up production and helped turn out a better product.

In the stock room Daylo saves an unbelievable amount of costly time. It is needed at every shelf, bin and container—at all points where labels must be read—where sizes, numbers and classification marks have to be checked—where interior inspections are to be made—wherever the eye must see.

There is a Daylo to solve your difficulties—one of the many different styles of light that point the way to efficiency. All leading electrical, hardware, drug, sporting goods and auto-accessory jobbers and dealers carry Daylo. Or write us.

Satisfaction or Your Money Back

(Continued from page 277)

located in the New England shoe district, have a daily capacity of about 25,000 pairs of shoes. Besides the 240,000 sides of sole leather and 500,000 sides of upper leather used every year by these factories are 228,000 calfskins, 260,000 sheepskins, 420,000 horsehides, 720,000 goat and kid skins.

The paint factory produces over 1,000,000 gallons of ready mixed paint a year—the world's largest output for a single firm. Yet the raw ingredients are so minutely examined and the finished paints are so thoroly tested that the company guarantees the wearing qualities of every pint of it.

The wall paper mill turns out every year 20,000,000 rolls of wall paper—enough to girdle the globe four times. Every yard goes to the customer all trimmed, so the papering job will be cleaner, quicker and less costly. Further, scientific tests make sure that the fiber will hold after being wet, and that the colors will not run.

The stove works occupies forty acres, employs 1400 skilled laborers, and completes every year 200,000 stoves; with every particle of material in every stove tested in a modern laboratory on the premises before any stove can leave the factory. The maker has to put science even into a stove before the user can get satisfaction out of it.

The lace factory, bought from an expert lace maker, is located in a Swiss town, famous for its wonderful embroideries. The skill, patience and originality of the old Swiss designers creates many a pattern that cannot be duplicated in America.

Other goods entirely produced in the company's own plants range from the least things to the largest; from 150,000 miles of thread a year, 500,000 needles, 36,000,000 buttons, and 52,000,000 eyelets, to 4000 pianos, 10,000 organs and 85,000 buggies.

Last year more than 6000 carloads of groceries were shipped from the highly sanitary building where six stories and seven acres of floor space are devoted to the proper care of choice foods. All packages are sealed air-tight, open stock is never carried. Cereals are weighed by machine, with absolute accuracy. When sugar and other edibles are repacked, all touch by human hand is eliminated. A modern ventilating system of peculiar design prevents the odor of any food from vitiating the purity or taste of any other. The vacuum cleansing process removes the dust from the air. Heating and cooling plants under scientific control supply the different temperatures at all times that different products need; separate rooms for meats, dried fruits, bottled goods and other provisions are built into the basement, which operates as a classified cold storage vault. The customer never sees this grocery, but the honor of the house keeps it always cleaner than the average market ever is. That sort of honor should appeal to a housewife.

The company is prepared to fill at any time orders for any of 100,000 separate articles of merchandise. Every year 65,000,000 catalogs describing these goods are printed and mailed. The general catalog includes over 1500 pages of print, and thousands of illustrations, many in full color. It weighs nearly five pounds, and costs about one dollar a copy to produce and mail. The company doesn't break even until the recipient of every copy has ordered as much as \$10 worth of goods; yet the faith of the company in the conviction carried by the catalog is so great that the book is sent, absolutely free, to anybody who asks for it. The volume of business drawn by these catalogs now reaches over \$225,000,000 a year.

A thinking man is not interested in the mere size of a popular institution. He asks, *What made the size?* He knows that great moral principles and great ethical purposes underlie the great material products and great financial rewards that appear on the surface. Forty years ago there was no Sears, Roebuck & Company; today the firm handles two-thirds of the business done by exclusive mail order houses in America. Searching out the philosophy, psychology, ethics and economics of the undertaking, we saw a dozen high officials, from the general manager down. Here is their composite answer to the question: How have you become the largest enterprise of your kind ever on earth?

Forty years ago there was no science of merchandising. A storekeeper charged what he could get. He generally got, while the getting was good. Part of the spoil was a bad reputation; but that didn't worry him, because the dealers around him were getting the same kind, they were all adventurers together. It was fine sport, but no business at all.

The merchant seldom knew what his goods cost him, or what they should cost. He never knew their character, so he had to take the manufacturer's word; if their character was bad, he also had to take the blame. He didn't mean to run a game of chance, but he couldn't help it. He was a gambler in disguise, wearing the garb of business and a look of sanctimony on Sunday.

Production was slight, credit low, transportation poor, delivery uncertain. When a customer went shopping, about the only thing he was sure of bringing home was a sense of disappointment.

The founder of this concern, Richard W. Sears, had a vision of what a store ought to do and be; and no young man should ever start a life work without a similar vision of the future. Did you ever hear of Redwood Falls, Minnesota? Probably not. Young Sears was a telegraph operator and express agent there when his life chance came, and found him ready. By accident—or what we call accident—a consignment of watches to a local dealer was re-

General Motors Trucks

MODEL 16, of the General Motors Truck Line, is in big demand because it is more than a one-capacity truck.

In government work, for which it has been standardized, it was classified as both a $\frac{3}{4}$ ton and a 1 ton truck.

In commercial work it has become America's Standard All-Purpose Truck.

Model 16 has the flexibility, economy of operation, and speed required in a $\frac{3}{4}$ ton truck, while at the same time it has the power, chassis strength and long wheel base for all 1 ton requirements.

Model 16 is but one of the GMC line of trucks, ranging in capacity from $\frac{3}{4}$ ton to 5 tons.

Kardex Your Business

Instant Information

ONE clerk, with Kardex, can find a given number of record cards more quickly, more accurately, and more cheaply than four with cards-in-boxes. You don't have to rely on the file-clerk—Kardex is so simple everyone in the office will quickly understand it. No other system gives you as many advantages.

Every card in Kardex is in a separate holder with its index item in plain sight, yet protected in a transoloid pocket from dirt and dust and the effects of constant handling. Simple color signals give any desired classification.

Both sides of every card can be used without removing cards from holders. Yet cards and holders can be removed, singly or in groups, easily, quickly, and quietly.

Kardex steel cabinets or rotary stands form an orderly system for any number of cards from fifty to a million—yet the simplicity of the system is never disturbed,—the availability of every individual card is not decreased in the slightest degree. Your present records can be easily changed over to Kardex without loss of time or old cards.

Free Kardex Literature

An authority on cards-in-sight business systems. Explains exclusive features of Kardex. Find out how you can secure instant information at one-fourth clerk cost.

KARDEX SERVICE MEANS PROMPT DELIVERIES

Cards and holders can be removed or added, singly or in groups, making it easy to keep cards in alphabetical order at all times.

fused and left unsold in the express office. The agent undertook to sell them. In spare moments he jotted down a statement of exact truth about the watches, wrote letters to his railroad acquaintances, offered the watches on good terms and small profits, cleared out the lot, and ordered a second shipment. That went in a hurry too. In six months he made a profit of \$5,000.

From so trivial a beginning the company was founded on these four-square principles: *A fixed price, a fair profit, a fine organization, and the faith of the customer.* We were pioneers in dreaming out, thinking out, working out such a policy. The fact that we are the largest concern of this kind today only marks the fact that we have tried to be the best.

A few years ago there were two principal classes of business men: the good ones who were shy and stupid, the bad ones who were bold and smart. We did not care to imitate either class. We believed in aggressive honesty, coupled with high power efficiency. A new science, that of telling the truth in business, had to be formulated. Note some of the abuses that prevailed; and that we decided to correct, in order to give our customers a guarantee of quality and service that we knew we could and would back up. The essential most required, as you will presently observe, was a *guaranteed guarantee*.

When a manufacturer of goods of doubted appearance claimed they were perfect, we asked him how he knew. He didn't know. He guessed at the grade of raw material, guessed at the mode of manufacture, guessed at the uniformity of the finished product. He also guessed at our gullibility. There he guessed wrong. We tore his merchandise all to pieces, learned how and why it was poor stuff, and politely sent it back to him, along with a standard of specifications we required him to meet. If he doubted our sincerity and inflexibility of purpose—and he usually did—we persevered till he got the idea. I recall returning two carloads of underwear to a certain manufacturer, and we sent them back freight collect. We had no more trouble making that manufacturer live up to specifications.

A common source of confusion was ill-made and ill-marked sizes. The mother of a ten-year-old boy, shopping at a store handling a certain maker's line of boys' clothes, would find a twelve-year-old size a good fit, while at another store a nine-year-old size would be large enough. And she expected the lower priced garments to be skimpy, and the higher priced ones full. We developed a system of standardizing, and marking properly, the sizes of men's, women's and children's garments, based on the measurement averages of the army, navy, medical colleges and life insurance companies. All clothing must fit equally well, no matter if the price be fifty cents or fifty dollars.

A general practice of deceit was the use of high-sounding names to cloak the real names of inferior arti-

cles. Cheap furs, dyed to imitate expensive furs, bore flashy trade names that brought disgracefully big prices. Rabbit fur can be dyed, sheared and treated to resemble seal very closely, and was marketed as Baltic seal, near-seal or electric seal. Other costly furs can be imitated likewise. Loathing imitations and fabrications, we started the healthy custom of calling skunk fur "Skunk" and dyed rabbit "Dyed Rabbit." Tho we were accused of rank heresy and the total ruination of business policy, most furriers have by now come to their senses and followed our example.

You can hardly ever pin down a merchant to the exact percentage of wool in a piece of cloth he has to sell you. Doubtless he thinks a matter so trifling should not be mentioned. We always state the percentage of wool, and we understate rather than overstate. When a fabric shows a clear 100 per cent wool, we describe it as all wool; when the per cent is 95 to 98, we declare it 95; when it is 50 to 55 we call it about one-half wool and one-half cotton; when it is 10 to 15 we say about 10 per cent wool and 90 per cent cotton; when it is 9 per cent or less wool we mention it as cotton with about 5 per cent wool. A mercerized cotton we describe as mercerized, not as silk or near-silk.

Further examples of telling the truth. Kitchen vessels supposed to have a capacity of a pint, a quart or a gallon usually contain less; but we guarantee that the capacity quoted in every description is the actual content, proved by measure. The term 'horse power' has been greatly abused by manufacturers and dealers in engines, automobiles and other machinery; but when we state that our engines will develop 2, 6 or 10 horse power, we guarantee that for a minimum; as a matter of fact, brake tests have shown our engines to develop at least 10 per cent more power than we claim. In groceries, various grades of canned goods, while conforming to the Pure Food Law, are below the quality known as standard; we will not carry such products, indeed 90 per cent of our canned goods are better than the standard grade; we like to surprise our customers with merchandise above their expectations.

In order to guarantee how everything we sell is made, and what service it will render, we founded a complete physical and scientific laboratory department, which now tests all kinds of merchandize, whether food, drug, textile, paint, rubber, metal or other product. The first division was a pure food laboratory to carry out the spirit of the Pure Food Law, and the first man in charge was a Government pure food inspector. The laboratory method of analysis was later extended to cover all classes of goods; it is now being widely copied by manufacturers and dealers thruout the country. All chemical work here is done by chemical graduates from such expert organizations as Armour Institute and the U. S. Bureau of Standards. Every statement in our catalog is verified previous to publication. Samples of

Cut Down the High Labor Cost

WHEN you check over the costs of decorating your home you will find that the chief item will be for labor. The cost of varnish and enamel is comparatively insignificant—rarely more than 10%.

Now one of two things can happen. A cheap varnish or enamel may be used, saving a few dollars, with the result that the whole job will have to be done over in a year or so at additional labor and overhead costs of several hundred dollars; or "Murphy's" can be specified with the assurance of many years of protection. Furthermore, the painter can work more rapidly with good materials and they will cover more surface—a second important economy.

You can force your painter to use poor materials by insisting on too low an estimate. He would rather use Murphy materials. Painters have respected the quality of Murphy Varnishes and Enamels for over half a century—for architectural work, pianos and furniture, yachts, automobiles and railway cars and engines, for all new and old work.

May we suggest for the hall of your new house a finish of Murphy White Enamel and Mahogany Univernish?

Murphy Varnish Company

shipments are frequently tested, and compared with the original specifications and the catalog descriptions. Merchandise to the value of thousands of dollars a year is purposely destroyed, that we may know how it is made, and how it could be made better. A laboratory statement regarding any class of goods is furnished to customers on request.

Our firm guarantee is the backbone of our business. In the catalog it stands thus:

We guarantee that each and every article in this catalog is exactly as described and illustrated. We guarantee that any article purchased from us will satisfy you perfectly; that it will give the service you have a right to expect; that it represents full value for the price you pay. If for any reason whatever you are dissatisfied with any article purchased from us, we expect you to return it at our expense. We will then exchange it for exactly what you want, or will return your money, including any transportation charges you have paid.

When this guarantee first appeared, many conservative business men declared that no concern could make such a liberal offer and live. But having faith in ourselves and our goods, we had faith in our customers. What happened? Less than one order in a thousand was returned, from the start, under the provisions of the guarantee. Furthermore, after its adoption our business doubled in five years. The habit of telling the truth is worth to us about \$100,000,000 a year.

What a text for a sermon! If I were a preacher I would gather a large proportion of my texts from the great reforms achieved by great business men as business propositions.

The crown of this portrayal should be the character of Mr. Julius Rosenwald, head of the company. What sort of man is he whose customers include 25 per cent of all the families of the United States? We could not see him personally; he had left Chicago some weeks before we arrived, to go to Washington and help the Government solve its most critical problems of reconstruction after the war. But the men who knew him best gave us facts that he himself would not have given. So the absence was turned to account—as everything should be that one is foolishly tempted to regret. Some of the fine characteristics of the president are worthy of note.

He wears no jewelry or other marks of wealth, but he gives to charity \$1,000,000 at one time.

He works ten or twelve hours a day, setting a pace that few of his young employees can follow; the only thing that appeals to him more than work is a personal affection or a philanthropic duty.

He goes every morning to see his mother, eighty-six years old, and he greets her as humbly and respectfully as tho he had never grown up. He is still just "her boy"—this man who daily swings a giant's load of care. When he returns from a long business trip, he speeds to visit her before he

A GOOD FLORIDA (17c) LUNCHEON

Along about Christmas time a little town in Florida held a Farmers' Rally, and the Clubwomen were able to give the 500 persons in attendance a splendid Noon-luncheon, according to press reports—for 17 cents per plate. Most of the articles appearing on the Menu were home-grown.

The High-Cost-of-Living today is bearing down most heavily on salaried folks—office managers, clerks, professional men, and others of that class. According to Bradstreet's, living costs stood last December at 131 per cent above pre-war level. Profiteering, extravagance and inflation of the currency all have their effect, but the real, fundamental, underlying cause of our troubles is UNDER-PRODUCTION.

Florida growers, however, need worry but little about their own living costs, when you consider the big prices they receive for luxuries shipped north in mid-winter. The Christmas strawberries brought them from 90c to \$1.00 and as high as \$1.46 per quart, after shipping and selling expenses were paid. In December Green String Beans brought close to \$6.00 per hamper in New York. Tomatoes shipped to Northern markets brought \$2.75 to \$4.00 per crate, and Peppers \$3.25.

The Leesburg Commercial states: "We visited a twelve acre farm Saturday—ten acres in fruit and the crop sold on the trees this season for \$10,000 cash. Cost of production was \$1,100, leaving \$8,900 for interest on the investment—nearly 18 per cent on a value of \$5,000 per acre."

These are not "Pipe Dreams"; they are **Florida Facts**. Grove land that is at present in an uncultivated state will not last forever in Florida—note the lesson of California. I own and am offering for sale in Orange County some of the finest orange and trucking lands in the state.

Truck gardeners near Orlando cleared as high as \$1,500 an acre from head lettuce last year. We have copies of their signed testimonial letters in our book. Many of these truck gardeners are Northern men and they know our summer climate is cool and more pleasant than in Northern states.

Here is OPPORTUNITY reduced to its simplest terms. All you need is a moderate amount of capital and a little knowledge of farming. We will clear and cultivate your land on our fair and equitable TEN PER CENT ABOVE COST PLAN. Send for our Big Free Book—TWENTY ACRES AND PLENTY. It tells all about our dollar-an-acre monthly payments, sick and out of work clauses and other attractive features. Address Sylvester E. Wilson, Dept. G2, Orlando, Florida.

(NOTE: Mr. Wilson is Treasurer and principal owner of the Produce Reporter Company, Chicago, publishers of the "Blue Book," which is to the Fruit and Produce Trade what Dun's and Bradstreet are in other commercial fields.)

SPEAKERS: We assist in preparing material for special articles, papers, speeches, debates. Expert, scholarly service. **AUTHORS RESEARCH BUREAU**, Suite 42, 500 Fifth Avenue, New York.

PENNSYLVANIA
QUALITY
LAWN MOWERS

The preference of every man who has put them to the practical tests of use

At Hardware Dealers and Seedsmen

comes to the office. She is first to him—business can wait.

He gives at least a third of his time to charitable, religious or educational interests. He believes that a man's greatest possible pleasure is that of being of service to others. He looks on self-indulgence as a kind of slow poison, that a rational person will avoid.

He is most fond of spending an evening at home with his family. He does not like the fuss and folly of public dinners, or the senseless chatter of party politics and men's clubs.

He prefers the simplest foods, and eats lightly of them. He takes much physical exercise, playing tennis frequently with any young fellow he can pick up in the neighborhood. He is so thoroughly democratic you wouldn't notice it because you couldn't think of him as anything else.

He holds that employees require few written laws; their own sense of right should govern them, it is better to have a principle of conduct in a man's heart than a rule of conduct in his head. Principles, not rules, are the guiding forces of the company.

He has no class consciousness, no trace of personal pride. He was recently caught in the jam of 25,000 employees going home from the main plant; he was asked by an official how he felt to have so many people working for him; he replied simply, "I never thought of it that way, our employees are working *with* me, not *for* me."

He trusts everybody—and nearly everybody proves worthy of the faith. It is supposed to be the requirement of a "good business man" that personal checks be certified; Julius Rosenwald says to his customers, "I believe you're honest, I'll take your uncertified checks." Last year \$67,000,000 worth of these personal checks came to the company, and the loss thru bad ones amounted to less than one-fortieth of one per cent. Wouldn't business life be a joy if everything were done this way, as between gentlemen?

He faces trouble with a smile. He never dodges difficulty. He never spares himself. He forgets his age and the limits of human strength in a crisis of the community or nation. He declares "Whatever is for the public good can and must be done!" Ceasing then to be a merchant, he has time only to be a man, a citizen, a servant of the human family. Business? A physical means to a spiritual end. Of this great man, as of any great man, it can be truthfully said: He does his best work without pay.

Chicago

Italy and Bolshevism

(Continued from page 274)

country; on the contrary, they felt that their task was not yet accomplished, that further sacrifices had still to be made.

The elements on which law should rely thus fail in their function: whatever the motives, this condition of things weakens the position of the

The gay and witty romance of a girl—who was assistant to Providence—and of her Irish protégé. Sheila is a charming McKenna heroine. Net, \$1.75

HAPPY HOUSE

Author of PAM, etc.

Baroness von Hutten

The brilliant author of PAM and PAM DECIDES has achieved another success in this novel which dramatizes a crisis in the life of a successful English novelist. A unique story handled in a rarely fresh and distinguished manner. Net, \$1.75

GEORGE H. DORAN COMPANY Publishers New York

Reading advertisements has helped to make this a united country

Jim Hawkins props his feet on the rose festooned porch railing in an Oregon suburb and reads the same motor car advertisement that Cousin Peter is studying as he rides home from work in the New York subway.

In Arizona you can buy the same tooth paste and tobacco that are used by the folks in Maine.

California fruit growers advertise their oranges and lemons to the people of the East. New Hampshire factories make ice cream freezers for Texas households.

There can be no division in a country so bound together by taste, habit and custom. You can meet up with anybody in the United States and quickly get on a conversational footing because you both read the same advertisements.

Advertising is the guide to what's good to buy. Advertisements give you the latest news from the front line of business progress.

Reading advertisements enables you to get more for your money because they tell you where, what and when to buy. And it is a well-known fact that advertised goods are more reliable and better value than the unadvertised kinds.

Government in the fight against the extreme parties. Especially so because the Government, in homage to its allies and associates, and to the dictates of the Conference of which it forms part, represents an obstacle to national aspirations. Its policy has to run counter to the sentiment of the people who, having been victorious and having fulfilled their duties even beyond what was required of them, naturally expect to be allowed to reap the just fruits of victory, and to devote themselves to the great task of reconstruction, forever freed from the pre-occupation of foreign menace.

The present anomalous situation must be quickly resolved, since it jeopardizes not only the treasured liberties of Italy, but the peace of the whole world.

Italy's condition is on the whole healthy, and can be relied upon to successfully resist and destroy all germs of disease. But every act, every word which will tend to weaken and discredit the Government in the eyes of its people will tend also, not only to weaken Italy as a nation, but to endanger the whole structure of world's civilization.

Washington, D. C.

Pebbles

Dora—How did you vote?

Flora—In my brown suit and squirrel toque.—*The Siren*.

Duff: Is your name Gordon by any chance?

Gordon: No; it was entirely premeditated.—*Yale Record*.

"What kind of wood do they make a match with?"

"He wooed and she would."—*Yale Record*.

"Are you Mrs. Pillington-Haycock?"

"No."

"Well, I am, and this is her pew."

—*Lampoon*.

"Dad, what's a social scale?"

"Well, generally speaking, old man, it's a place where money is weighed."—*Bystander*.

Doctor (complacently): "You cough more easily this morning."

Patient (querulously): "I ought to, I practised nearly all night."—*Life*.

Employer (hiring new man)—You are not afraid of early hours, I suppose?

New Man—No, sir; you can't close too early for me.—*Punch Bowl*.

Young Bride (showing new hat)—"You wouldn't think such a simple little thing could cost so much money would you?"

The Brute—"I'm not so sure I'd call you such a simple little thing my dear!"—*London Mail*.

For months boasted General Kolchak: "My sword shall the criminal Bolshack."

But alas! in hysteria
He went back to Siberia
And drowned grief in an Omsk alcohol-shack.

—*London Herald*.

Letters to the Great and the Near Great

By John Citizen

Hon. William Jennings Bryan,
Lincoln, Nebraska

Dear Sir:

Welcome back to the political arena, O silver-tongued and golden-hearted Tribune of the people, hardy perennial of Democracy! How many battles you have lost and how many campaigns you have won! You have lived to see grape juice written into the American constitution and equal suffrage spreading not only over the United States but over the whole world. All of the causes most dear to your heart have come about in the course of time with the exception of free silver, and the inflation of the currency has brought about that very change in the value of money toward which free silver was but a means. The joke is on us, not on you.

We understand—contradict us if we are mistaken—that on this occasion you are entering the presidential campaign not in your own name but simply to see that the platform is correctly written and the right man nominated. If you can do as well as in 1912 when you secured the nomination of President Wilson you will put us deeply in your debt.

But one word of friendly caution. After you have elected the next President don't let him put you in his cabinet! A good prophet often makes a poor official.

Respectfully yours,
JOHN CITIZEN.

To Emma Goldman,
Somewhere in Russia
Comrade:

Sometimes we think it may have been hasty to have deported you without a more formal trial, but you infected everybody with your lawless spirit, especially the legislators at Albany. But please DON'T come back! If you feel resentment, punish us by perpetual withdrawal of the light of your countenance. If, on the contrary, you feel kindly, pay respect to our earnest wishes. May you flourish and be prosperous—in Nova Zembla! May you find the Urals an earthly paradise! May all good things be yours—except a return-trip ticket!

Yours for the revolution
(in Russia be it understood),
JOHN CITIZEN.

Madame Patience Worth,
Care Ouija Board

Dear Madam:

We understand that you speak to us out of the age of Queen Elizabeth. Please tell us: *did* Bacon write Shakespeare? Or was it Sir Walter Raleigh?

Anxiously yours,
JOHN CITIZEN.

Don't Say — "Just a Sore Throat"

IN a few days, you know, "just a sore throat" may be something much more serious. For science has proved that the throat is not only the first spot reached by infectious germs, but also forms the ideal soil for them to multiply on.

Throat protection, therefore, means germ destruction and is a duty that you owe your health. It is easily achieved by the regular use of Formamint—the germ-killing throat tablet.

Formamint (which is endorsed by over 5,000 American physicians) is the scientific way of disinfecting the mouth and the throat. Handy to have with you—pleasing in taste—it frees an efficient germicide that mixes with the saliva and so reaches where gargles cannot go.

And a tablet taken occasionally during the day not only brings grateful and immediate relief from "sore throat"—but affords protection against even more distressing ailments that so often follow infection of the throat linings. At all druggists—50 tablets for 60c.

THE BAUER CHEMICAL CO., Inc.
120 W. 18th Street
New York City

FREE SAMPLE

So that you may see how effective these pleasant Formamint Tablets are in mouth and throat troubles, we will gladly mail you a generous sample tube on receipt of a 2 cent stamp to pay postage. Write for it today

New Tax Laws Open \$10,000 Jobs

Corporations and individuals overtaxed themselves millions of dollars last year because of ignorance of the new laws. Our students discovered a \$4,000,000 over-payment by one corporation. As a result a tremendous opportunity is offered to men who will spend a few hours in study. Salaries of \$5,000 a year are ordinary. Consulting specialists have earned as high as \$1,000 a week. You can qualify—in your own home during spare time.

Make Me Prove That I Can Get Better Results From Your Letters

Alexander M. Candee, Advertising Manager of the National Enameling & Stamping Company, Lecturer on Business Correspondence in the Extension Division of the University of Wisconsin, has recently completed for us an entirely new book

BUSINESS LETTER WRITING

Letters are business representatives. They should be so dressed and so written as to properly represent the sender. They can be a great help in creating and maintaining good will.

There are certain ways recognized by progressive men and students of business methods that are based on correct mental principles as being the best for business letters.

It is for the purpose of presenting those ways for describing the principles and developing their practical application that BUSINESS LETTER-WRITING has been written.

Rather than to give examples, schemes and plans for one to copy or adopt, the author stimulates the student reader to think.

In the 23 chapters of this unusual book Mr. Candee develops your ability to write letters that get business by first laying a sure foundation in the fundamentals. He then builds on this foundation a structure of letter-writing ability which is in no way mechanical yet is positive in its results.

Mr. Candee does not stop with the "business getting" element of letter-writing. He also lays down definite principles for retaining business.

Read Mr. Candee's chapter on "The Four C's of Business Letter-Writing" and see if you don't get some very definite help. Securing conciseness without sacrificing completeness has been the stumbling-block of more than one letter-writer. Here this is cleared up so that it almost becomes a matter of routine.

Mr. Candee's students in the Extension Division of the University of Wisconsin paid many times the price of this book for the same material in lecture form.

Because it is so difficult to adequately describe Business Letter-Writing in the limited space available we are willing to send the book to you for examination without any money in advance. If the book doesn't measure up to the standard which you have set for it return it within the specified period—otherwise remit the price, \$4.00. Use coupon below.

The BIDDLE PUBLISHING CO.
BUSINESS BOOKS

Business

Would You Rather Save Dollars or Lives?

(Continued from page 272)

the business of charity, yet it often becomes necessary for a banker to help out a debtor whose obligations he holds in order that those obligations may be made good. That is the position in which the United States Government now finds itself.

A year ago Congress authorized a famine loan to Europe of \$100,000,000. Congress regarded it as a gift. Mr. Hoover, who believes that gifts in most cases are bad policy, regarded it as a loan and obtained securities covering all but \$12,000,000 of the amount dispensed. Eighty-eight millions of this money will ultimately be returned to the Treasury unless we allow the value of these securities to be wiped out by a period of chaos in Central Europe.

But the question is larger than that; for chaos, if it comes, cannot be confined within the boundaries of the new states, but will spread thruout Europe destroying governments to which we have loaned nearly \$10,000,000,000. By saving a dozen cities from starvation we will be building up security for all of our loans. It is a plain business proposition I submitted to Congress.

Taken by itself the proposal cannot be regarded as an attractive investment. Some of the funds to be spent will be pure charity, but much of the money should ultimately be returned to the Treasury with interest.

These peoples are desperate. They offer as security for American food credits everything they possess. Austria has a tobacco monopoly and valuable water powers and has offered a pledge of customs receipts. Even the paintings in her national gallery have been offered as security for food.

Poland has valuable natural resources, a rich soil and valuable railroads that are not mortgaged. In a very few years, if she weathers the present crisis, Poland will be a food exporting country, and a food exporting country always is economically sound. She has no war debt, her position in this respect being more favorable than that of many other European nations, and should be able to repay every penny.

As to Armenia much depends upon what nation receives the Armenian mandatory. Turkish and Russian Armenia if joined to the surrounding economic areas could be developed into a stable economic state that should be able at some future time to discharge all its obligations. There are a few other areas that may need some assistance before the next harvest, Belgium, Italy, Hungary, Czechoslovakia, but they all can give excellent security.

In meeting the desperate situation in Middle Europe other governments, fully understanding its dangerous possibilities, are willing to cooperate insofar as they are able. Great Britain, for instance, is willing to furnish practically all the shipping necessary for transporting American food, which will mean a very great saving. Canada will give wheat and flour and some

fats and Argentine has already appropriated \$2,000,000 for European relief.

Holland, Switzerland and even Germany have already given food outright to Austria. Switzerland had no surplus, but purchased 8000 tons of wheat on the outside and sent it to Vienna. The British, French and Italian Governments converted an American loan of \$48,000,000 into food supplies for Austria last spring, but these have long since been exhausted.

The United States has a surplus this year of 300,000,000 bushels of wheat. It is practically the only country to which the nations of Europe can turn for food. The larger countries can find means of financing their requirements thru private channels, but the smaller nations cannot. In the very nature of the transactions it is more difficult to finance purchases of food than of raw materials, because raw materials produce further goods with which to liquidate the original purchases, whereas food does not. Private interests, therefore, find little to attract them in the establishment of large food credits and the task of furnishing food for the small nations consequently falls upon the Government.

My proposal to Congress was that the United States Grain Corporation be empowered to purchase, sell and deliver food and relief supplies to Europe up to the amount of \$150,000,000 and that for the supplies so furnished credit be extended by the Grain Corporation from its original capital and surplus. This would avoid the necessity for any Congressional appropriation or any direct addition to taxation and would give the administration of the relief work to the Government agency best qualified for the task. It was simply a proposition of selling somewhere between 40,000,000 and 50,000,000 bushels of wheat and some other supplies for credit instead of for cash.

Upon closer calculation with Mr. Hoover I reduced the amount of the credits to be established to a minimum of \$125,000,000, but the Ways and Means Committee of the House, in the legislation it has reported, further reduced the amount to \$50,000,000. This sum exactly represents the profits of the Grain Corporation—profits made from the very people to whom we propose to give relief. The sum will be wholly inadequate. It will be worse, almost, than nothing at all, for only a few of these suffering people can be cared for and the resentment of those who cannot be relieved will be increased.

No one understands the necessity for care in making appropriations better than I. But cutting the fund for European relief to \$50,000,000 is an economy that will cost us dear in the end. We half repair the leaks in the dyke and invite a flood that may engulf the whole of civilization.

The emergency is of such magnitude, the dictates of humanity so

pressing, the effects of the present situation upon the social, economic and financial rehabilitation of Europe and consequently upon the trade and prosperity of the world, in which the United States has so great a stake, may be of such consequence that I did not hesitate as Secretary of the Treasury and do not hesitate now to assume the responsibility of appealing to the humane and practical sentiments of Congress and the people to take adequate measures to save the situation. We cannot and must not, from motives of narrow and immediate self-interest, fail to supply enough food on credit to save human lives and safeguard civilization for which we have already expended so many lives and billions of dollars.

Washington, D. C.

Startling News in World Finance

(Continued from page 278)

call stipulated carefully that such advances of credit ought to be made only to countries which were working actively in their own behalf, both industrially and financially; which were taxing themselves to their full capacity to meet the public deficit, and which had stopped the inflation of their paper currencies and were planning to reduce those currencies. The Secretary of the Treasury, speaking on the same subject a week ago, expressed his own opinion emphatically that mere advances of credit by our people, to finance our exports to Europe, had already gone far enough, and that it is time for Europe itself to effect the payment thru its own shipment to us of merchandise and securities, or, in default, of these, with gold.

Mr. Glass's opinion possibly went further than the situation would warrant; for Europe cannot pay in exported merchandise until her shattered industrial facilities are repaired, and there is a limit both to the amount of foreign securities that our people would buy in a given period, and to the gold which Europe could spare, with reconstruction of her currencies an impending problem. Nevertheless, the course of the markets shows how necessary the bankers' stipulations are. England is incalculably stronger than her continental allies; but we have seen what has occurred in the exchange and gold markets, even with England. As against the past week's depreciation of 34½ per cent in sterling exchange at New York, exchange on France was depreciated 66 per cent, and on Italy 74 per cent. It is reasonable to suppose that, if a free gold market had been permitted at Paris and Rome, the premium on gold would be more than double that which exists at London.

New York

"Why are you always playing golf?"
"Oh, it keeps me so fit."
"Yes—but fit for what?"
"Oh, more golf."—*London Opinion.*

Getting Ahead

is the story of Peter Perkins and how he accumulated \$10,000 in ten years by investing \$25 a month in high-grade listed stocks and bonds, on a novel plan. "Getting Ahead" is as interesting as anything you ever read. As thousands have read it and are now "getting ahead" financially on the same plan. You will be fascinated with it. But better still, it will show you a new way to invest your savings monthly—how to get interest, plus a PROFIT, on your money—without sacrificing safety. We send it free. WRITE FOR IT TODAY.

KRIEBEL & CO.
INVESTMENT BANKERS/
141X South La Salle St., Chicago

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of \$5,000 by a man aged 67 would provide an annual income of \$623.60 absolutely beyond question of doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

ENGLISH: LITERATURE AND HISTORY, CIVICS AND ECONOMICS

BY **FREDERICK HOUK LAW, PH.D.**

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT
HIGH SCHOOL, NEW YORK CITY

BY **ARTHUR M. WOLFSON, PH.D.**

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE,
NEW YORK CITY

I. Would You Rather Save Dollars or Lives? By **Carter Glass**.

1. What reasons lead you to believe that the title is a rhetorical question? What is the purpose of a rhetorical question?
2. Explain why rhetorical questions make unusually good titles.
3. In a single paragraph summarize the principal thought of the entire article.
4. Write a letter to the writer of the article, telling him what your school is doing, or can do, toward reducing the sorrows caused by the war.
5. Point out, and explain, figures of speech that occur in the article. What is their effect?
6. Point out any exceptionally strong use of adjectives for descriptive effect.
7. Re-write, in the form of a letter, the cablegram sent by the Mayor of Vienna to the Mayor of San Francisco.
8. Write the letter that the Mayor of San Francisco might have written in reply.
9. Write, in the form of a narrative told in the first person, the story of some unfortunate person in Austria.
10. Write a dialog between allegorical characters symbolizing Europe and America. Make the dialog emphasize the thought of the article.
11. Write a resolution embodying any definite proposal made in the article.
12. Write a brief for an argument in support of the resolution.

II. Italy and Bolshevism. By **Baron Romano Avezana**.

1. Imagine that you talked with Baron Avezana and that you found him as he is presented in the picture at the head of the article. Write a description of his appearance.
2. Write an account of your interview with Baron Avezana, making an occasional use of dialog, and of direct quotation. Embodiment the thought of the article.
3. Explain in full the first sentence of the article.
4. Explain in full the sentence beginning, "Thru her position, Italy was destined to become the heart."
5. Point out other examples of figurative language in the article.

III. Satisfaction or Your Money Back. By **Edward Earle Purinton**.

1. Write a clear explanation of what is meant by a "mail order business."
2. Condense into a few words the story of the development of a great mail order business.
3. Imagine that you are the owner of a small store. Draw from the article a series of rules that you can give to your clerks, that will aid them in enlarging your business.
4. Write contrasting paragraphs concerning the work of a small store and the work of a great mail order house.
5. Explain how a correct use of English might aid in increasing the business of a mail order house.
6. Write a graphic description of the typewriters' office.
7. Write the "autobiography" of an order for goods, telling the experiences and observations of the order as it passes thru various hands.
8. Explain in a short talk, or composition, the various devices for increasing efficiency in the mail order business.
9. Write a paragraph to emphasize the greatness of a mail order business. In the paragraph give, in some systematic form, a large number of statistics.
10. Explain how the mail order business, as exemplified by **Sears, Roebuck & Co.**, has elevated the standards of business dealing.
11. Read aloud the guarantee made by **Sears, Roebuck & Co.** Explain the value of making such a guarantee.
12. Write a character sketch of **Mr. Julius Rosenwald**.
13. Explain the sentence: "Business is a physical means to a spiritual end."

IV. The Bolshevik Kind of Democracy.

1. Read the list of persons who are denied the right to vote in Russia. Write an original short story in which you tell how a citizen of the United States dreams that he finds the United States under a government like that of Russia today. Tell of the citizen's experiences, and of the experiences of his fellow citizens. Give your story interesting action. Make it lead to a climax.

I. The Coming Presidential Campaign—"Fixing Up the Platforms," "Labor Omnia Vincit."

1. Formulate, as far as you can, some of the probable planks of the Republican platform. Of the Democratic platform.
2. What are the things that **Mr. Hoover** stands for? With which party is he likely to throw in his fortunes?
3. What is the attitude of the American Federation toward the coming presidential election? Which party is likely to get most of its votes?

II. Congress Gets to Work.

1. What has Congress done in the last ten days that justifies the title of this article?
2. Name three or four vital public problems which Congress ought to settle during this session.
3. What is the present status of the following questions now before Congress: (a) the Treaty, (b) the Railroad Bill, (c) the problem of army reorganization, (d) the problem of the "Reds," (e) national income and expenditures?

III. Lloyd George's Program.

1. Inasmuch as **Lloyd George** is the responsible head of the British Government why is the policy of the Government outlined in a speech delivered by the King?
2. Discuss the recommendations in the King's speech under the following headings: (a) foreign relations, (b) domestic problems, (c) the Irish Question.
3. Is England's future policy toward Russia foreshadowed in the Speech from the Throne?

IV. Startling News in World Finance.

1. Read the sections in some standard textbook on Economics which deal with the theory of international exchange. How far do present conditions conform to the theories expressed?
2. Explain the meaning of the term "gold points." What is the relation between "balance of trade" and the "rate of exchange"? Why under normal conditions does the exchange rate vary only three or four points?
3. Why has the exchange rate fallen so far below parity now when it remained almost normal thruout the period of the war?
4. What measures must be taken if the normal rate of exchange is to be reestablished?

V. Would You Rather Save Dollars or Lives?

1. How does **Mr. Glass** propose to reestablish normal exchange between the United States and the European countries?
2. Discuss in turn the economic situation in the following countries: (a) Austria, (b) Poland, (c) Armenia. What recommendations does **Mr. Glass** make concerning these countries?
3. Why, according to **Mr. Glass**, would it be a stroke of good business to help these countries out of their difficulties?

VI. Russia and the Border States.

1. Name as many of the "twelve republics" referred to in this article as you can.
2. Why is the United States Government opposed to the aspirations of these border states? What is the British attitude toward the same question?
3. What evidences do you find in this article that the outside world may very soon make peace with Soviet Russia?
4. "In the South the war continues and Bolshevik armies still advance." What is the result?

VII. Salvador Asks a Question.

1. What was the original purpose of the Monroe Doctrine? How was the Doctrine modified in the time of President Cleveland? In the time of President Roosevelt?
2. What does Minister **Paredes** mean by saying that under the Covenant of the League of Nations "the doctrine will be forthwith transformed . . . into a principle of universal public law"?
3. What interpretation of the Monroe Doctrine would probably satisfy the Latin American countries? Would this interpretation satisfy the United States?

VIII. Italy and Bolshevism.

1. What are the historic proofs of the statement contained in the first sentence of this article?
2. Is it true that Italy held the "balance of power" thruout the Great War?
3. Explain the last sentence of the article.

Remarkable Remarks

PREMIER CLEMENCEAU—Don't go to theaters.

MINNIE MADDERN FISKE—Furs are unnecessary as clothing.

MRS. GEORGE DAWSON—Olive oil will remove gum from a child's hair.

THOMAS L. MASON—New York has a heart of reinforced concrete.

WALT MASON—I have more work than I could do if I were twins.

THEATRICAL PRODUCER MAURICE GEST—The American theater is going to hell.

MRS. OWEN KILDARE—Legs are going out and arms and necks are coming in.

WILLIAM G. MCADOO—Nobody will ever overthrow a government if you will let him talk.

JAMES W. GERARD—I am my first choice as the next President, but Mr. Hoover comes next.

MADAME MAURICE MAETERLINCK—When one is wearing a beautiful dress one can speak to others with great grace.

NOVELIST VICENTE BLASCO IBANEZ—And letting her spoon fall into the frying pan of rice, she wept, swallowing her tears.

HEALTH COMMISSIONER COPELAND—If in five years the dairymen's league is not throttled there won't be a Republican or Democratic party.

COSTUMER ROBERT E. JONES—There is nothing that expresses cruelty and at the same time richness so well as a hard black glittering oil cloth.

THOMAS A. EDISON—Lee Deforest made an audium so delicate that when a fly walks over the transmitter the sound as amplified will almost shatter your eardrum.

GOVERNOR COOLIDGE—It is of the utmost importance that we use every means in our power by effication, agitation and prayer to reestablish religion in the New England states.

BISHOP HUGH L. BURLESON—The hymn, "O Zion haste, thy mission high fulfilling," has been translated into pure Dakotan and five thousand Sioux members of the Episcopal Church of South Dakota have adopted it as their rallying cry.

"If I fall on my head I'm done for! Help! Help!"

Just a Word

On the bulletin board in the editorial rooms of The Independent where we schedule articles for publication, there is an impressive array right now—authoritative messages from the governments of Europe and the United States, timely discussions of the problems of the day, stories of achievement, personality sketches of the men and women foremost in the news.

Next week's issue, for instance, will present as the monthly message from the British nation to the American people an article by Charles A. McCurdy, a member of Parliament, on Great Britain's most serious problem today—"The Strike Epidemic." Mr. McCurdy gives much information that has not been emphasized in the press.

Our new Secretary of Agriculture, Edwin T. Meredith, has written the official message of the United States Government to the American people, to be published next week.

Perhaps the most talked of man in

the United States recently (not counting President Wilson) is Sir Oliver Lodge. In an interview for The Independent, to be published in our next issue, Sir Oliver answers several of the questions that occur to the average man:

NEW YORK LIFE

INSURANCE COMPANY

(Incorporated under the laws of the State of New York)

346 & 348 BROADWAY - - - NEW YORK, N. Y.

TO THE POLICY-HOLDERS:

Life Insurance has suddenly taken on a new importance. Everybody wants it.

This indicates that the public has begun to understand the economic value of the principle on which life insurance rests, and it also demonstrates the high regard in which our life companies are held.

THE YEAR 1919

For the New York Life 1919 was in many respects the greatest year in its history.

Our new business (\$531,000,000) exceeded the new business in any previous year by nearly \$200,000,000. Our new business was written exclusively on the lives of individuals who made application to the Company and does not include any so-called Group insurance.

Our Mortality returned to normal figures, after the heavy mortality from influenza in 1918, which extended through the first four months of 1919.

The Russian Soviet Government by decree made life insurance a government monopoly in Russia and proceeded to liquidate the business of all life insurance companies, both domestic and foreign. Having by this decree assumed our liabilities, the government took possession of our property in Russia, including our investments which were chiefly railroad bonds guaranteed by the Russian Government, and purchased with moneys accumulated from premiums paid by Russian policy-holders.

With the concurrence of the Superintendent of Insurance of the State of New York, approved by the Convention of Insurance Commissioners of the various States, we have eliminated both Russian assets and Russian liabilities from our statement for the year 1919.

There are no material complications elsewhere in our foreign business.

The decrease in assets at the end of 1919, by comparison with assets at the close of 1918, is due to the elimination of the Russian business and to the fact that in the assets at the close of 1918 there were about \$22,000,000 which we had borrowed to purchase Liberty Bonds.

Taking account of these items, the assets in 1919 made a normal increase.

Safety funds increased during the year over \$5,000,000.

On December 31 our investments in Liberty Bonds and Victory Notes exceeded \$100,000,000.

DARWIN P. KINGSLEY - - President

The qualifications?

A Few Plain Words to the G. O. P.

By a Rather Typical Republican

Cassel in New York Evening World

Landed!

AS an individual I understand that I am wholly unimportant. I represent only one vote in a suburb that is safely Republican anyway.

But in traveling around the country I find that there are a good many other young men—thousands perhaps—who are feeling pretty much as I do. Perhaps in the aggregate we are important enough to justify our standing up in meeting like this, and speaking what is on our minds.

So that you may have the picture correctly, let me devote one paragraph to myself, and then pass on to the real facts in the case. I am thirty-three years old and the president of a successful business. I happened to be born in one of the border states, but most of my life has been passed in the heart of the middle west, and I live now in a city on the Atlantic seaboard, so that, if moving around can keep a man from becoming wholly provincial, I ought to be reasonably free from suspicion on that ground.

My grandfather was one of the early Republicans who would as soon have cut off his right hand as have a member of the family support a Democratic nominee. My father, with a somewhat less fervid attachment to the party, has maintained a pretty consistent record for regularity, and brought me up in the way I should go. With no special conviction in the matter, except the general feeling that the Democratic party was unfit to administer anything, I have usually voted under the symbol of the G. O. P.

A rather typical third-generation Republican, I imagine. Neither hot nor cold. Held by habit rather than affection; and inclined to be pretty critical of men and affairs at Washington. Nevertheless the managers of the party have been able to count on my vote

pretty definitely in times past; and I have no doubt that they are figuring it—with the votes of some thousands like me—in their rosy estimates of the next national campaign.

It is for that reason that I make bold to speak out. For recently I have heard rumors from Washington to this effect:

"It's a Republican year in spite of anything that can happen. The men in control don't have to care what is said or who is nominated. They can win on any platform and with anybody."

This quotation may do the gentlemen in charge of the party an injustice: it may not fairly represent their attitude. Indeed I am sure it does not. But I do think it is time for them to stop a little and look and listen. For there are a considerable number of us third generation men who had made up our minds several months ago that we were surely going to vote Republican in 1920 and now are not quite so sure. We are held with pretty thin strings to the tail-board of the machine. It is perfectly conceivable that on the first Tuesday following the first Monday in November we may turn up missing.

Let me go back a few months and get a running start.

In spite of all its mistakes the ramshackle old Democratic party did win the war. To be sure most of the dollar a year men were Republicans; but at least the Democrats had sense enough to use them. And, blundering and hesitating and leaking money out of every pocket, the administration did, none the less, manage to put Germany in her place.

Then almost simultaneously the war ended and a Republican Congress came in.

There were four very obvious things for it to do:

First—To make peace.

Second—To reduce governmental expenditures; get the Government out of private business, and off the back of business.

Third—To rehabilitate the railroads.

Fourth—To make some intelligent provision for the maintenance of our foreign trade, either by encouraging common action on the part of American financiers to finance Europe, or in some other way.

That was more than a year ago, and what do the records show? First of all the Peace Treaty still unsigned.

There is a good deal of difference of opinion among the men I meet about the League of Nations; but personally I have never had the slightest doubt that if it were submitted to a referendum it would be endorsed overwhelmingly by the plain people of the country. We hate war, we plain people; and we are for any big visioned experiment that seeks to abolish war and are willing to take a reasonable business risk in support of such an experiment.

Boiled down to their lowest terms, the arguments of Borah and Reed and Johnson seem to me to amount to this—that all the nations of the world are filled with thieves and robbers except our own, and that we cannot trust ourselves in such company. I don't believe it. Looking at the other nations from this distance it doesn't seem to me that we have a great deal on them in the matter of common honesty. I may be wrong, but to my average eyes Clemenceau looks fully as honest as Borah, and Lloyd George—under most circumstances—as decent and fair-minded as Reed. I'm willing to take my chance on that, at least; and so are most of the common folks of the country, I think.

I'm willing to go even farther. Grant for the sake of argument that the whole European game is crooked, and that none of the nations are fit to associate with our pure and high-minded selves. Even so I'd rather be in when the cards are dealt than I would to be forced into the game—as we were in 1916—when the ante is seven billion dollars and the cost, before we are thru, is thirty billion.

Does any man suppose for one minute that if Germany had known that we would be in the war she would ever have started it? Isn't it perfectly conceivable that with a League and someone like Roosevelt to speak for us and say: "One step farther and you've got to figure on us, as well as on France and Russia and Great Britain," the whole trouble would have been settled out of court? I think so.

At any rate we

Thomas in Detroit News

One visit to a studio spoils all your fun

Europe. And personally I think we ought to like it. The thing for which I condemn the Republicans is not that they disagreed about the League, but that in all their speeches I did not find one single spark of idealism, one single recognition of the fact that in this day no nation liveth to itself, and none can hope to prosper and be safe except thru the prosperity and security of all.

So much for the League. The fact remains that the business-like Republicans, contemptuous of the Democrats as they are, have talked and talked and talked for more than a year. And still there is no peace.

On the railroads, on governmental reorganization, and on international trade the record is the same. A year of utter futility, with no single sign of leadership or ability to get things done.

If men like me vote for the Republicans next time it will be because we love Wilson less, not because we love them more. And that, I suppose, is what they are counting on. That and the proverbial unintelligence of the Democrats which has saved them so often before.

Which brings me to the subject of candidates.

If the Democrats nominate McAdoo, or Gerard, or Baker, or even Palmer, I'll probably vote Republican, but suppose the Democrats, by a sublime and wholly unexpected stroke of intelligence, should nominate Hoover. What then?

Then, as far as I am concerned, it will be a very big question whether Mr. Hays can count on my vote or not. If the candidate is Lowden, or Harding, or Johnson, they can figure me out right now. Estimable gentlemen, perhaps, with many fine qualities. But they have the misfortune to belong to a crowd of which I—and millions of ordinary Americans—are heartily sick and tired. The good old stuffed-shirt crowd, with its fervid declaration of platitudes: its fearless war upon the Bolsheviks (who have no votes): its distortions and half truths and all the other tiresome camouflage of party politics. I'm sick of it all. The times call [Continued on page 332]

It's getting so's a fellow can't have any privacy anywhere any more

The Problem of the Pacific

A Message from the Imperial Japanese Government to the American People

By Vice-Admiral Isamu Takeshita of the Imperial Japanese Navy

THAT the world is growing smaller is due to the advancement in science, the development of means of transportation, and the more rapid communication on land and sea, under the sea and in the air. It follows, then, that the countries which constitute the commercial, political, and social world hold interests which are increasingly common to all. The countries bordering on the Pacific are no exception; so we find Japan and the United States discussing many more matters of common and mutual concern than at any time in the history of their relations. To develop these mutual concerns in harmony and to prevent discord is a responsibility devolving on advanced nations and civilized peoples. It is true that increasing community of interest does increase opportunity for differences of opinion, but at the same time—as thought and knowledge broaden and as narrow-mindedness decreases—agreements and understandings become more easy to reach.

In the Chino-Japanese war of 1894-95 and in the Russo-Japanese war of 1904-05, Japan fought successfully against what were considered great powers, but these facts should by no means give rise to an inference that Japan is an aggressive and warlike nation.

In those days Chosen (Korea) was extremely unstable and if the powerful neighbors of Korea, following an aggressive policy, had made with her an offensive alliance and so had secured a paramount influence or had established bases for naval and military purposes, the situation would have been intolerable to Japan. Obviously it would have been a strategic menace. Let me suggest an analogy. What would be the situation if the United States found that Canada, Mexico, or Cuba were making alliances with strong powers hostile to the United States? Let me ask what attitude the United States would assume. It was to avert the imminent danger of such a situation in the Far East that Japan fought against China and against Russia. Politically and strategically, these were purely defensive wars. They were fought for the very existence of Japan. It was because they were defensive and not at all aggressive that it was possible to mobilize our national strength; and it was because of the call for defense of home and country that our soldiers and sailors fought like the Spartans of old. Indeed, it may be said that the very fact of these contests over Korea

Vice-Admiral Takeshita, at one time Japanese Naval Attaché at Washington, lays claim to fame, among weightier things, in that he is the man who taught President Roosevelt "jiu-jitsu"

testifies to the firm belief of the Japanese nation in the necessity for a union between Japan and Korea.

Japan is short of raw material and food. The deficit must be imported from abroad and must be paid for by the export of our own productions. The industries of Japan, therefore, are gradually developing and her foreign commerce is expanding. During the last great war, some of the Powers, from their own necessities and rightly, put an embargo on exports and imports of certain articles. This brought to the people of Japan, who are not self-supporting or self-sustaining, the realization that their industries and even the necessities of their every day life depend upon foreign reciprocity and friendly for-

eign exchange. Consequently, Japan is now giving most earnest attention to the question of raw materials and food, the fundamentals of the existence of the people and of the trade of the country.

An island-power, circumstanced as is Japan, must have adequate shipping. The navy of such a power must be able to some extent to protect the trade-routes to and from the sources of supply and demand; it must in the best sense be equal to the task of safeguarding the existence of its people. The Japanese navy exists simply and solely as a guarantee of the national existence of Japan. Politically and strategically, our ambition is satisfied with a strength sufficient for such protective and defensive uses. The idea of the use of Japanese naval forces for any aggressive designs is foreign to the government and people of Japan. Even a modest ambition or program to show a naval strength equal to that of any foreign power is not entertained as a part of our naval policy.

The United States is a completely self-supporting country. It is rich, its people are highly civilized, progressive, and energetic. Production increases there steadily. Its foreign trade now occupies the first place in the world of commerce; and now as the result of a policy to carry as far as possible its trade in its own bottoms, America's merchant marine takes now the second place in the world of shipping. America's foreign investment of capital in various forms amounts to a fabulous sum, increasing with great rapidity. Necessarily, therefore, the interests of the United States in the Pacific Ocean and the countries bordering on it, increase and expand as much as American trade spreads eastward across the Atlantic. The United

States navy, consistent with this situation, is becoming stronger and always stronger. America's naval force in the Pacific is almost the most powerful in these seas. For these reasons, the economic and military interests of the two countries in the Pacific appear to be more or less complicated; and a false conception might argue the probability of increasing entanglements.

But if we care to study the economic situation in all its aspects, we will find that far more can be gained by both countries from a harmonious community of interest than could be won by conflict. A most important consideration is that Japan in no way encroaches upon any particular, national, or vital interest of the United States. Surely, there should not arise any necessity on the part of the United States to prevent Japan from securing food and raw materials which are of particular, national, and vital interest to the life of Japan.

There is another aspect also. Civilization is advancing. In the near future the League of Nations will be a factor; and as time advances forces calculated to harmonize conflicting interests will become more effective. In Japan, a sense of righteousness and justice always prevails. The Japanese are not a war-loving people: they will never fight unless in a righteous cause; and our armaments, I repeat, are designed solely for defense. I have realized the spirit which rules in the United States since the formation of the Union; I

believe I comprehend the noble principles for which the United States stand. During the past twenty years on frequent visits to the United States, I have studied the history and character of the people of that country very closely. As a result of the courtesy of many good friends with whom I could speak without reserve, I have had excellent opportunities to grasp the national characteristics by close touch with many Americans of varied circles and classes. Thru these experiences and thru general observation I have reached the confident belief that although the bearing, conduct, and comment of some Americans in certain sections might stir an unkindly sentiment, these after all are only temporary phenomena. There are also some people in Japan engaged in stirring up hostile sentiment. A few politicians or even one class of people, cannot be sufficiently powerful to direct a national antagonistic policy in both countries. Thru a mutual spirit of tolerance and with a certain patience, therefore, conflicting interests can with equity and fairness be adjusted amicably around the table of friendly conference.

Turning to a consideration of the naval situation, the United States has a very strong fleet in the Pacific and is strengthening her naval bases on the Pacific coast and in the Hawaiian islands. These are questions of the national defense for the United States and, of course, no foreigner has the right to attempt to influence such a policy. The newspapers report sometimes the establishment of naval [Continued on page 332]

People

By Marguerite Wilkinson

Sometimes when I am happy and at rest,
I think I like all kinds of people best;
Even the shallow, round-eyed gossips give
A little zest to life. So let them live!
Just to be near my kind and hear them talk
Seems very good to me. Oh, dearer far
The racket on the streets where people walk
Than all the prairie's quiet spaces are.

But when I think more keenly, I confess,
There are a few that I like somewhat less
Than others; those who smugly speak to me
With minds elusive as crabs upon the rocks,
Who reach limp fingers out too languidly
When they shake hands; whose kindness **only mocks**.
I hope that they may prosper in some good way
And find them friends according to their needs,
Die, without doing much harm, some quiet day,
And reach the heavens of their several creeds.

But I like people who can make things grow,
Whose hands are wise to move the quickened **earth**
In Spring, so that the new vine-tendrils know
An easier grace and a more confident mirth.
I like the makers of a thousand things,
Of music, magic of words, or mighty wings
That cut the winds as they go droning through
The wondering deeps of the defiant blue.
And always I can find out much of good
In people who know how to handle food;
I think there is some merit of heart or head
In any person who can make good bread,
And make it lovingly, and put away
The golden-crust loaves, as if to say.
"It is no small matter to remake mankind
Daily with flour, the body and the mind."
I like firm health that never comes by chance,
And a quick handshake, and a greeting meant,

A sudden glint of hardness in the glance,
And slow thought spoken out of strong content.
I like an athlete as I like a tree,
And both are very beautiful to me.
I like men with the manners of great kings
In all the little worlds of common things,
Shrewd, humorous men, still quick to kindliness,
With dreams they laugh at, rather than express,
And busy women, ample and motherly,
Guarding the little children they have borne
Or making their homes houses of refuge, free
To all who are unmothered and forlorn.
Mellow old autocrats to whom the years
Have given wisdom, and young pioneers
Who lay rough hands upon a living truth
And hold it with the passion of their youth,
And those who can be gay through middle-age,
And every questioner, and every sage—
All these have my respect; whole-heartedly
I would give thanks for all their gifts to me.
Since I have been poor and sick my words would bless
The sick and poor with every gentleness,
And since I have known sadness very well,
I care for the sorrowful more than I can tell.
And I revere the flower-like, serene
Spirits that bloom on hills where air is pure,
Lonely and rare, with a long climb between
Their world and the lower world that I endure.

But dearest are the homes where children play,
Where men smoke quietly to end the day,
Where women sew and sing and dream and brood,
Declaring, without speech, that life is good,
Where with some homely ritual of delight
The year's high festivals are made more bright.
Oh, when in such a simple home I rest,
I think that I like simple people best.

A Message from the United States Government

Our Forward March in Agriculture

By David F. Houston

Secretary of the Treasury, Former Secretary of Agriculture

VERY few people in urban centers have an adequate conception of the nation's agencies working for the betterment of rural life. Most of them are ignorant not only of the organization and activities of the federal Department of Agriculture but also of its great allies, the state universities and colleges of agriculture and the state departments. I may go even further and venture the assertion that not five per cent of the well-informed men of the nation can approximately describe the organization and activities of any of the great federal departments or locate many of the most important bureaus.

The only explanation of this ignorance I can give is that, for the most part, the work of the agricultural agencies is not much in the public eye, that there is little of the dramatic about it, and that the daily press occupies itself largely with the news of the hour.

As a matter of fact this nation has more helpful legislation and, in point of personnel, financial support and range of activities, larger and more effective agricultural institutions than any other three nations in the world combined.

The Federal Department of Agriculture is the greatest scientific organization in existence. It has on its rolls over 21,000 employees, nearly 10,000 of whom are classified as scientific or technical, a regular budget of \$37,500,000, and is charged with the administration of two laws, one of which, the agricultural extension act, involves the expenditure on the part of federal and state units of more than \$14,000,000 and the other, the road act, the coöperative expenditure of approximately \$1,000,000,000 during this year and next.

The great allies of the Department of Agriculture, the colleges of agriculture, of which there is one in each state, have plants and endowments valued at \$185,000,000, annual incomes aggregating \$48,000,000, resident and short-course students numbering 123,000, of whom 45,000 are in agricultural courses; and the two in coöperation are administering an extension act

Paul Thompson

Mr. Houston believes that education is as good for the farmer as for the professional man. Before becoming Secretary of Agriculture, he was in turn president of the Agricultural and Mechanical College of Texas, president of the University of Texas and Chancellor of Washington University in St. Louis, so his advice carries weight

which involves as its aim the training of all adult agricultural workers.

The Department of Agriculture has sixteen divisions and two boards, as follows: The Office of the Secretary, including the Offices of Farm Management and Information and of the Solicitor; the Library; the Division of Accounts and Disbursements; the Division of Publications; the Bureau of Biological Survey; of Soils; of Crop Estimates; of Entomology; of Chemistry; of Plant Industry; of Animal Industry; of Public Roads; of Markets; the Forest Service; the States Relations Service; the Weather Bureau. Its two boards are known as the Insecticide and Fungi-

cide Board and the Federal Horticultural Board.

It is almost easier to try to indicate what the department does not do than what it does do. It probably touches the people of the nation at more points than any other two departments of the government. Broadly speaking, its work is divided into three sorts, regulatory, investigational and educational. It administers thirty laws, among which are the following: The animal and plant quarantines; meat inspection; the 28-hour law; the food and drugs, and the migratory bird laws; laws providing federal funds for agricultural colleges, including the Hatch and Adams, and the agricultural extension acts; those relating to national forests; the cotton futures; the grain standards; the federal warehouse and the federal aid road act.

Many of these laws are of broad scope and importance and deal with problems of great complexity and delicacy. On the research side, there is no broad scientific agricultural problem with which it does not deal. For many years its activities were largely in the field of production and education, but within comparatively recent times it has occupied the field of distribution; and today, in the Bureau of Markets, it has the best organized and the largest trained staff of market experts in the world.

To attempt to give a view of the varied activities of the work of the department and of the specific results

Wide World

A group of Australian war veterans who have come to this country to study the latest farming methods, the United States, according to Mr. Houston, having larger and more effective agricultural institutions than any other three nations combined

accomplished would require volumes rather than magazine pages. I can only hint at them.

It has been estimated that the animal and plant diseases are causing annually a loss of \$1,500,000,000. Among these are hog cholera, Texas cattle fever, tuberculosis, and diseases attacking cereals, fruits and cotton. The Department of Agriculture has taken the leadership in controlling hog cholera, with a reduction in the losses from 118 per 1,000 in 1914 to 42 in 1918, or from \$75,000,000 to \$32,000,000. It has eradicated the cattle tick from more than 400,000 square miles in 13 years; and is rapidly proceeding with its elimination from the remaining area of less than 300,000. It has nearly eradicated the scabies of sheep and cattle from about one-half the territory of the nation. It has suppressed the foot-and-mouth disease in an area extending from Massachusetts to Montana; and this is the only nation that has succeeded in doing this sort of thing over a large area.

It has saved the citrus fruit industry of California from the white scale, the Florida orange groves from the citrus canker, and devised a system of cotton culture which promotes the growing of cotton in spite of the boll weevil. It has introduced into this country cereals, grasses, corns, cottons and other valuable plants. A short time ago Durham wheat suited to the semi-arid regions was not known. Now the production is 50,000,000 bushels. Kafir corns a few years ago were not included in our statistics. This year the production exceeds 125,000,000 bushels. One of the original navel orange trees from which an industry of many millions of dollars has been established is still in the department's possession.

It has made soil surveys of

one-third of the total area of the United States, and pointed out sources of potash and other fertilizers. With its more than two hundred fully equipped stations, it furnished daily predictions of the weather by mail, telegraph and telephone to every community in the union and to more than 5,000,000 telephone subscribers. These predictions are not only of interest to every citizen but are of incalculable value to navigators and to farmers. The service of the bureau proved to be of great value for military operations during the war and especially to aviators, whom it will aid increasingly in the future. It furnishes daily market reports to the various sections of the union as conditions require so that producers may

know where to ship their products and it has distributed in one year more than 62,000,000 bulletins and other publications.

The department is one of the largest landlords in the world. It supervises 155,000,000 acres of national forest land, protects the forest from fires, promotes the use of water for irrigation, develops recreation uses for millions of people, and conducts many scientific tests thru its great forest products laboratory. When the department took over from the Interior Department ten years ago the control of the national forests, the grazing was steadily deteriorating and sustained about 1,500,000 animals. Today, under scientific management, the grazing is steadily improving and the forests are supporting more than 12,000,000 animals. It handles 32 per cent of the water power of the nation, and controls under special permit the investment of over \$300,000,000 of private funds in or near the forests in the west. It is buying up and controlling in similar [Continued on page 330]

What the Department of Agriculture Has Done in the Last Seven Years

- 1—The Bureau of Markets made into the largest and most efficient organization of its kind in the world. The states followed suit in the establishment of similar bureaus.
- 2—Congress passed the greatest extension educational measure ever framed, for training farmers by the county agent system in cooperation with agricultural organizations, under which \$14,000,000 has already been expended.
- 3—Passed cotton futures act to correct abuses in cotton trade.
- 4—Passed the grain grades bill to insure farmers fair prices for specific commodities produced.
- 5—Passed Federal warehouse law to promote safe storage, orderly marketing and to facilitate financing.
- 6—Passed farm loan act by the terms of which farmers may secure long term loans on amortization principle at a low rate of interest.
- 7—Amended national banking laws to allow national banks, for the first time, to lend on farm security with maturity periods twice as great as those for commercial paper.
- 8—Passed Federal aid road act under which the Government is cooperating with the States in the building of highways, and which has led to the creation of expert highway commissions in each state. From state and Federal sources there will be expended under this act for road building this year \$1,000,000,000.

In his last annual report as Secretary of Agriculture, Mr. Houston urgently recommended the passage of bills now before Congress to bring about cooperative action between the Federal and state governments for a much-needed improvement in rural sanitation and the provision of adequate hospital facilities in the rural districts.

Rare Metals in Everyday Use

You may not know their names, but
you couldn't get along without them

By Edwin E. Slosson

A LONG in the latter half of the last century chemists had begun to perceive certain regularities and relationships among the various elements, so they conceived the idea that some sort of a pigeon-hole scheme might be devised in which the elements could be filed away in the order of their atomic weights so that one could see just how a certain element, known or unknown, would behave from merely observing its position in the series. Mendeléef, a Russian chemist, devised the most ingenious of such systems called the "periodic law" and gave proof that there was something in his theory by predicting the properties of three metallic elements, then unknown but for which his arrangement showed three empty pigeon-holes. Sixteen years later all three of these predicted elements had been discovered, one by a Frenchman, one by a German and one by a Scandinavian, and named from patriotic impulse, gallium, germanium and scandium. This was a triumph of scientific prescience as striking as the mathematical proof of the existence of the planet Neptune by Leverrier before it had been found by the telescope.

But altho Mendeléef's law told "the truth," it gradually became evident that it did not tell "the whole truth and nothing but the truth," as the lawyers put it. As usually happens in the history of science the hypothesis was found not to explain things so simply and completely as was at first assumed. The anomalies in the arrangement did not disappear on closer study, but stuck out more conspicuously. Tho Mendeléef had pointed out three missing links, he had failed to make provision for a whole group of elements since discovered, the inert gases of the helium-argon group. As we now know, the scheme was built upon the false assumptions that the elements are immutable and that their atomic weights are invariable.

The elements that the chemists had most difficult in sorting out and identifying were the heavy metals found in the "rare earths." There were about twenty of them so mixed up together and so much alike as to baffle all ordinary means of separating them. For a hundred years chemists worked over them and quarreled over them before they discovered that they had a commercial value. It was a problem as remote from practicality as any that could be conceived. The man in the street did not see why chemists should care whether there were two didymiums any more than why theologians should care whether there were two Isaiahs. But all of a sudden, in 1885, the chemical puzzle became a business proposition. The rare earths became household utensils and it made a big difference with our gas bills whether the ceria and the thoria in the burner mantles were absolutely pure or contained traces of some of the other elements that were so difficult to separate.

This sudden change of venue from pure to applied science came about thru a Viennese chemist, Dr. Carl Auer, later and in consequence known as Baron Auer von Welsbach. He was trying to sort out the rare earths by means of the spectroscopic method, which consists ordinarily in dipping a platinum wire into a solution of the unknown substance and holding it in a colorless gas flame. As it burns off, each element gives a characteristic color to the flame, which is seen as a series of lines when looked at thru the spectroscope. But the flash of the flame from the platinum wire was too brief to be studied, so Dr. Auer hit upon the plan of soaking a thread in the liquid and putting this in the gas jet. The cotton of course burned off at once, but the earths held together and when heated gave off a brilliant white light, very much like the calcium or lime light which is produced by heating a stick of quicklime in the oxy-hydrogen flame. But these rare earths do not require any such intense heat as that, for they will glow in an ordinary gas jet.

So the Welsbach mantle burner came into use everywhere and rescued the coal gas business from the destruction threatened by the electric light. It was no longer necessary to enrich the gas with oil to make its flame luminous, for a cheaper fuel gas such as is used for a gas stove will give, with a mantle, a fine white light of much higher candle power than the ordinary gas jet. The mantles are knit in narrow cylinders on machines, cut off at suitable lengths, soaked in a solution of the salts of the rare earths and dried. Artificial silk (viscose) has been found better than cotton thread for the mantles, for it is solid, not hollow, more uniform in quality and continuous instead of being broken

up into one-inch fibers. There is a great deal of difference in the quality of these mantles, as every one who has used them knows. Some that give a bright glow at first with the gas-cock only half open will soon break up or grow dull and require more gas to get any kind of a light out of them. Others will last long and grow better to the last. Slight impurities in the earths or the gas will speedily spoil the light. The best results are obtained from a mixture of 99 parts thoria and 1 part ceria. It is the ceria that gives the light, yet a little more of it will lower the luminosity.

The non-chemical reader is apt to be confused by the strange names and their varied terminations, but he need not be when he learns that new metals are given names ending in *-um*, such as sodium, cerium, thorium, and that their oxides (compounds with oxygen, or earths) are given the termination *-a*, like soda, ceria, thoria. So when he sees a name ending in *-um* let him picture to himself a metal, any metal since they mostly look alike, lead or silver, for example. And when he comes across a name ending [Continued on page 333]

Shall Armenia Perish?

By Henry Morgenthau

Former Ambassador to Turkey, and National Vice-Chairman of Near East Relief

TWO hundred and fifty thousand Christian Armenian women enslaved in Turkish harems call to the people of America for liberation! One hundred thousand women already rescued by Near East Relief agents from harems will perish unless support from America is continued! Two hundred and fifty thousand children, orphaned by the unspeakable Turks, are calling in the only English they know, "Bread, Uncle Sam." One million two hundred thousand destitute, homeless, clotheless adults look to the giant in the West for the succor that will keep them from annihilation. What shall our answer be?

If they were good enough to fight and die for us when we needed their help so sorely, are they not good enough to be given some crumbs from our plenty?

Since the beginning of the war, the Turkish Armenians have been largely refugees. A simple, agricultural people, they have been exiled from their farms and deprived of all opportunity to support themselves. Now, more than a year after the armistice, they are still living the life of nomads, able to continue alive only by virtue of American philanthropy. If ever unmerited suffering called for succor the plight of the Armenians should be heeded now. A few months more and it may be relief will come too late for those myriads whom only we can save.

Let the American slogan now become—Serve Armenians for a little while longer with life's necessities that they may be preserved for the day of national freedom and rebirth, which no people more truly and greatly deserves.

The belief, held by some persons, that Turkey has repented and can do no further harm, is without foundation. The group that led Turkey into the war on the side of Germany is now in the saddle. The Turk has not been disarmed and these leaders are now aiding the Tartars. Kurds and Bolsheviks are urging them on to

kill and rob the surviving Armenians at every opportunity. The deportations and massacres during the war were not spontaneous uprisings of unorganized mobs, but were the working out of a well-plotted plan of wholesale extermination in which regular Turkish officers and troops took part as if in a campaign against an enemy in the field.

More than 2,000,000 persons were deported. The system was about the same everywhere. The Armenians, men, women and children, would be assembled in the marketplace. Then the able-bodied men would be marched off and killed by being shot or clubbed in cold blood at some spot which did not necessitate the trouble of burial.

Next the women would be sorted out. Agents of the Turk officers picked the youngest and fairest for their masters' harems. Next the civil officials had their pick, and then the remainder either were sold for one medjidi—a silver coin valued at about 80 cents—or were driven forth to be seized by the lower class Turks and Kurds.

As a last step, those who remained, mothers, grandmothers, children, were driven forth on their death pilgrimages across the desert of Aleppo, with no food, no water, no shelter, to be robbed and beaten at every halt, to see children slain in scores before their eyes, and babies dashed to death against rocks or spitted on the bayonets of the soldier guards.

If America is going to condone these offenses, if she is going to permit to continue conditions that threaten and permit their repetition, she is party to the crime. These peoples must be freed from the agony and danger of such horrors. They must not only be saved for the present but either thru governmental action or protection under the League of Nations they must be given assurance that they will be free in peace and that no harm can come to them.

New York

Editorially Speaking

Never mind. Burleson still stays on.

* * *

A cinematograph of the Cabinet will soon replace the group photograph.

* * *

Nature still goes us one better. The sun cleans off more snow in an hour than our Street Cleaning Department can in a fortnight.

* * *

One good reason for reading the *Congressional Record* is to see if your Representative or Senator is attempting to stir up bad feeling between the United States and the Powers associated with us in the Great War. If so, punish him next November. The war was fought in vain unless it created friendship with our comrades in France, England and Italy.

* * *

However we vote, Nature may override us. In 1896 we voted against cheap money, but the war has brought it. In 1916 a good many people voted to keep out of war, but Germany made it impossible. If in 1920 the nation votes to keep out of foreign alliances and entangle-

ments the airplane and the transatlantic steamer will sooner or later veto any such policy.

* * *

The President's expressed reason for asking Mr. Lansing's resignation violates every principle of sound administration. When the head of an organization cannot function, it is the duty of the second in command to "carry on." This is good military practise. It is good business practise. It ought to be good governmental practise. To say that members of a President's Cabinet, who had been for four months prevented by his serious illness from consulting with him, must not consult with each other over their mutual responsibilities is to utter a wild and dangerous absurdity. The Secretary of State would have been derelict in his duty if he had *not* called his Cabinet associates into conference. The Government could not stop because the President was too ill to carry it on. Someone had to act. Someone had to decide. Someone had to take counsel. The Cabinet members were the ones to do it. If Mr. Lansing had neglected or declined to act as he did, the President would have had good ground for asking for his resignation.

The Story of the Week

Congress, the People and the President

AS the time for active electioneering approaches Congress grows daily more attentive to all expressions of public, class and group opinion. Both parties are striving to find out and in some measure to do "what the people want" for the purposes of their platforms and their pre-election records.

Any considerable group of responsible citizens that talks long enough and loud enough about what it wants can find in Congress today some group of members to take up its battle and fight aggressively and perhaps successfully if the end desired does not run directly counter to party purposes.

The threats and counterthreats of political action during the last few months have made both parties nervous, and from now until the time of the election each will try to outdo the other in proving itself the more willing and more efficient servant of the people . . . who control the votes.

The House, all of whose members come up for reelection in November, naturally is more anxious than the Senate, only one-third of whose members must stand. The Senate passed the Sterling anti-sedition bill. The House killed it before it got to the floor, because articulate public opinion was on the other side.

The Senate adopted the anti-strike clauses of the Cummins railroad bill, but the House conferees successfully insisted that they be stricken out. The recent threat of the railroad strike delayed the submission of the conference report to the two houses, and led to the re-writing of the bill's labor provisions.

As the bill stands there is created a Federal board of nine members, three representing employees, three representing management, and three the public, to which must be referred all labor disputes threatening an interruption of transportation service. The award decided upon by a majority of the board, containing at least one member of the public group, is to be final.

A strong group of Democrats in the House, led by Representative Thetus Sims, former chairman of the Committee on Interstate and Foreign Commerce, will oppose acceptance of the conference report because of its guarantee to the

railroads of a 5½ per cent return. Joined by the labor group, opposing both the guarantee and the provisions for compulsory arbitration, they may be able to prevent final enactment of the legislation in time for the return of the roads March 1.

In pursuing this course they will be responding to the demand of that group of the public that expresses its opinions most vigorously—organized labor. The announcement of the American Federation of Labor that it will take an aggressive part in the congressional elections, checking up the candidates offered by the political parties and supporting or opposing them according to whether they are friendly or unfriendly to labor, has caused no little apprehension among the members of the House.

Every new threat gives Congress a new attack of nerves. Both parties would like to include in their platforms planks calling for a more moderate prohibition policy, but with the Anti-Saloon League, which invented the method now to be used by labor, still on the watch, they doubt if they dare.

The question of how the women will vote adds to the political uncertainty. The parties are in a competition of adding women to their committees. And members of Congress who voted "no" on the suffrage amendment are now bringing all possible pressure in their states

for ratification, in order that the women may see their good works and vote for them in gratitude. Opponents of the peace treaty believe that the women would vote almost unanimously for the League of Nations if they get their wish and it is made a campaign issue. They are accused, apparently unjustly, of having agreed on a plan whereby the amendment will fall short of ratification before November by one state.

The protests of women's organizations and of the farmers against universal military training led the Democrats in the House in caucus assembled to adopt a resolution declaring

It is the sense of this caucus that no measure should be passed by this Congress providing for universal compulsory military service or training.

In doing so they violated the wishes of President Wilson, expressed in a letter

© 1920, New York Tribune, Inc.

This time it looks as if Jonah had thrown the rest of the crew overboard

London Opinton

"The paper that makes you think"

to Secretary Baker a few hours before, in which he said:

I would be very glad to have you convey to appropriate members of the House who will attend the caucus my strong feeling against action by the caucus which will tend to interpose an arbitrary party determination to the consideration which this subject should receive from the best thought of the members of the House.

The action of the Democrats killed the possibility of such legislation at this session of Congress. It would not have been taken so hastily had the caucus assembled a week later. At the time they regarded President Wilson as "a dead one," to use their own expression. His resumption of leadership, announced to the world in his dismissal of Secretary Lansing and his note to the Allies on the Fiume settlement, has convinced them of their mistake and added to their causes for worry.

Congressional comment on the President's action in forcing Secretary Lansing to resign ran in two phases. "Can it be vanity, or is it insanity?" was typical of the first expressions. Later, however, there was a general feeling that the President was justified in dismissing Mr. Lansing, altho his method was unnecessarily harsh, and there was a letup in the talk of legislation that would make it possible in future cases for Congress to judge whether a President was incapacitated for the duties of his office.

The effect of the Lansing episode upon Democratic senators on the verge of an open alliance with Senator Lodge in the treaty contest was immediate. They got back behind Senator Hitchcock. It may be doubted whether this strengthening of the Administration forces will tend to hurry favorable action on the treaty by the Senate.

Senator Hitchcock advanced during the week to the line of the Taft reservation on Article X, which he said the Democrats were now willing to accept, and Senator Lodge came up to the line of the bi-partizan conference agreements on other reservations, but did not budge an inch from his reservation on Article X.

Nevertheless, the Republicans and Democrats are now in practically complete agreement on this crucial point, for the Taft and the Lodge reservations on Article X mean exactly the same thing. The dispute is no longer one of principle but of words. No more complete sur-

render by the Democrats should be asked, now that they have accepted a slight revision of the reservation denounced by the President as "cutting the heart out of the covenant."

Public pressure for ratification is increasing and neither side can long continue to hold to its present position without the suspicion arising that the Senate does not desire ratification at all, and that the quibble over Article X is a cloak to cover a purpose it does not dare to reveal.

The Senate gave a demonstration of its willingness in other matters to obey public opinion—even a frothy public opinion billowed up by one man almost over night—when it blocked the proposed sale at auction of the thirty former German liners until it should have passed upon the bids. Ultimately it will follow public opinion on the treaty. If the question goes into the campaign, the issue cannot be made upon a distinction between the Taft and the Lodge reservations on Article X. The issue will be acceptance or rejection of the covenant in its entirety. And it is recognized that the party forced to accept the negative side of this proposition invites defeat. This being so, no other conclusion is possible than that the treaty will soon be ratified.

RICHARD BOECKEL, *Washington*

The Return of Ulysses

ULYSSES has returned to Ithaca and the long interregnum caused by his absence from active control of the affairs of state is over. Nor has he forgotten to set his household in order by a vigorous wielding of the bow against those who took advantage of this absence. Henceforth he will, it is announced, preside in person at every cabinet meeting and direct all the policies of the administration, and presumably the policy of the Democratic Party in the Senate and in the pre-convention campaign.

The first to be pierced by an arrow from the bow of Ulysses was Secretary of State Robert Lansing, whose offense was the summoning of special meetings of the Cabinet on his own authority during the illness of the President. President Wilson address to Secretary Lansing the following note on February 7:

Is it true, as I have been told, that during my illness you have frequently called the heads of the executive departments of the Government into conference? If it is, I feel it my duty to call your attention to considerations which I do not care to dwell upon until I learn from you yourself that this is the fact.

Under our constitutional law and practice, as developed hitherto, no one but the President has the right to summon the heads of the executive departments into conference, and no one but the President and the Congress has the right to ask their views or the views of any one of them on any public question.

Secretary Lansing replied that it was quite true that he had "requested the heads of the executive departments of the Government to meet for informal conferences." He thought that this action was both necessary and constitutional. But if the President objected, he would be willing to tender his resignation.

President Wilson answered that he was not satisfied with Mr. Lansing's explanation. Since the cabinet could take no binding action with respect to general policy except on the authorization of the President, he thought it was not necessary to hold conferences in his absence. The President added that even in Paris Secretary Lansing had "accepted my guidance and direction on questions with regard to which I had to instruct you with increasing reluctance" and that since his return to Washington "I have been struck by the number of matters in which you have apparently tried to forestall

The new Secretary of the Interior is to be John Barton Payne, of Chicago, who during the war was general counsel to the United States Shipping Board Emergency Fleet Corporation and later—after January, 1918—to the Director General of Railroads

my judgment." In view of this attitude he had no choice but to accept Secretary Lansing's offered resignation.

On February 12 Secretary Lansing wrote, saying that "ever since January, 1919, I have been conscious of the fact that you no longer were disposed to welcome my advice in matters pertaining to the negotiations in Paris, to our foreign service, or to international affairs in general." He had only retained his position as Peace Commissioner and as Secretary of State in order to support the administration and intended in any event to resign as soon as the President had recovered from his illness.

President Wilson acknowledged this letter on the following day and formally accepted the resignation of Secretary Lansing "to take effect at once." The five letters which passed between the President and the Secretary were made public forthwith and created widespread comment; generally favorable to Secretary Lansing even in the Administration press, because few could see in the summoning of informal conferences of the Cabinet during the President's illness an offense great enough to warrant the expulsion of the Secretary of State or the severe tone of the President's letters. The reference in the correspondence to previous causes of difference, however, seems to indicate that the irregular Cabinet meetings were not the real, or at least not the most important, reason for the President's action. Secretary Lansing's testimony before the Senate indicated some dissatisfaction with the Treaty of Versailles and the method by which it was negotiated, even if we reject Mr. Bullitt's hearsay evidence that Mr. Lansing had objected to the League of Nations Covenant as part of the Treaty. Recent threats to Mexico in the Jenkins case have been interpreted as indicating that Mr. Lansing was taking advantage of the President's illness to carry out a Mexican policy of his own.

The resignation of Secretary Lansing is the ninth resignation of a cabinet officer during President Wilson's administration. Only in three cases was there

an avowed break on a question of policy: Secretary Bryan's refusal to threaten Germany with war as the alternative to ceasing submarine attacks on unarmed merchant ships; Secretary Garrison's objection to reducing the military program of the Administration to meet the wishes of Congress, and the resignation of Secretary Lansing. Attorney-General McReynolds resigned to enter the Supreme Court, and Secretary Glass of the Treasury to enter the Senate. In the resignations of Secretary McAdoo of the Treasury, Secretary of Commerce Redfield, Secretary Lane of the Interior, and Attorney-General Gregory, the ostensible cause was the need to leave the relatively ill-paid public service for private business.

Ulysses sent his second arrow across the Atlantic. In a note address to the Governments of England, France and Italy he informed them that the United States must not be ignored in settling the question of the Adriatic. The proposed compromise boundary between Italy and the Kingdom of the Serbs, Croats and Slovenes runs east of the frontier advocated by the American Delegation at Paris, and has not been approved either by the Yugoslavs or by the United States. President Wilson objects particularly to the Italian threat that if the Yugoslavs do not accept the settlement agreed on by England, France and Italy, the Treaty of London would be put into effect.

The Adriatic question is unfortunately entangled with the whole position of the United States with respect to the Treaty. So long as the Treaty is held up in the Senate the European Allies can contend, in the first place, that by refusing to enter the League of Nations we have rejected the idea of interest in purely European affairs, and, secondly, that President Wilson cannot be said to speak with unquestionable authority in the name of the United States.

A Friendly Ambassador for Italy

ALL friends of Italy were delighted last week with the announcement that President Wilson had appointed Mr. Robert Underwood Johnson of New York, Ambassador to Italy to succeed Mr. Thomas Nelson Page, resigned.

© Reid.

Robert Underwood Johnson's appointment as United States Ambassador to Italy is an appropriate climax to his years of work to promote friendship between Italy and the United States

She Who Must Be Obeyed

THE National American Woman Suffrage Association has met at Chicago for its fifty-first annual Convention. There will never be another Convention, as within the next twelvemonth woman suffrage will cease to be a live issue in any part of the United States. Half a century of campaigning has brought federal equal suffrage to the verge of realization, and the era of propaganda gives way to the era of everyday politics. The change is symbolized in the absorption of the Woman Suffrage Association by the League of Women Voters.

The Convention was non-partisan but not indifferent to party politics. A vote of thanks was extended to President Wilson, to Chairman Hays of the Republican National Committee, and to Chairman Cummings of the Democratic National Committee for their favorable attitude toward the equal suffrage amendment. The resolution of thanks to Mr. Hays gave some indication of the attitude which the women will take in party conflicts, and hints that some of them will not be quick to forget their friends in both parties or to forgive their enemies:

We extend to Mr. Hays our sincere gratitude for any and all help he may have rendered in behalf of ratification and assure him that our members, being progressive women, hope to align themselves with the younger element of the parties of their choice.

Many "Old Guard" politicians who have been lifelong opponents of woman suffrage find themselves this year face to face with an electorate consisting largely of those whom they wished to disfranchise. The situation is an awkward one, and has led to many hasty recantations. Senator Wadsworth of New York, for example, whose renomination campaign is being contested by many suffragists, has declared woman suffrage a closed issue and has given up any active opposition to it.

Of the thirty-six states needed to ratify the nineteenth amendment but five are lacking. The legislatures of Idaho and Arizona have acted favorably in special session. Virginia has decided adversely, by a vote of 62 to 22 in the House of Delegates. Virginia is the fifth and Maryland the sixth state to cast a negative vote against the federal amendment. Oklahoma and New

A delegate to the first woman suffrage convention (1870) and the last (1920). Mrs. Helen Starrett is the only surviving member of the pioneer suffragets who first focussed public opinion by means of a general convention on the campaign for women's votes

Mr. Johnson, like President Wilson, is one of those rare American types who combine in one personality, statesmanship, eminence in letters and social breeding. Usually in America the politicians, literary men and society folk stick closely to their own reservations and do not mingle much with each other as is the case in England and France for instance.

Probably no living American excels Mr. Johnson in devotion to Italy. It is therefore evident that in his appointment President Wilson is holding out the olive branch to Italy and is hoping to resume once more the cordial relations of pre-Fiume days. Mr. Johnson's love of Italy dates back to his first visit in 1886.

In 1895, in recognition of Mr. Johnson's activity in the campaign for International Copyright, King Humbert decorated him as Cavaliere of the Crown of Italy and King Victor Emmanuel later promoted him to Commander of the same order.

Mr. Johnson was the originator of the memorial to Keats and Shelley in Rome, and when the war broke out was the originator and chairman of the American Poets' Ambulances in Italy. Under his direction a fund was raised which provided 112 ambulances and thirty-seven field hospitals, most of which were ready for work when the retreating Italian army made its heroic stand on the Piave. These ambulances were wreathed with flowers and received with honor wherever they went in Italy and gave her the first substantial evidence of American support.

Mr. Johnson was in 1918 elected to the Presidency of the Italian War Relief Fund of America, which has done such wonderful work in aiding war orphans, tubercular children or veterans, blinded and mutilated soldiers and other victims of the war. Both by pen and committee work the new Ambassador has been indefatigable in making Americans familiar with the achievements of Italy in the war and making Italy understand that America has not been indifferent to Italian victories or the extraordinary sacrifices that attended them. For this work Mr. Johnson has received the silver medal of the Red Cross.

It is fortunate that the one American who for many years has been urging the necessity of the fullest understanding and most intimate relations between Italy and America, will now have the opportunity to contribute officially to this consummation most devoutly to be wished.

President Wilson has appointed a Republican, William Phillips, to be United States Minister to the Netherlands. Mr. Phillips has been in the diplomatic service fifteen years and in the State Department since 1913. He is now Assistant Secretary of State

Mexico have summoned special sessions of the legislature to consider the question; but the Governor of Washington, which is a suffrage state, has thus far refused to follow the example of the other western governors. These three states, together with Connecticut and Vermont, would complete the needed thirty-six without winning any of the southern states which have still to act. But suffragists are hopeful of favorable action also in two or three of the doubtful southern states, which include Delaware, West Virginia, Tennessee, North Carolina, Florida and Louisiana.

Railway Strike Threatened

IN addition to putting an end to "Cabinet government" and intervening again in the Adriatic situation, President Wilson has successfully exerted himself to postpone the threatened railway strike. On February 9 the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers announced a general cessation of work to be effective on the morning of February 17. Three hundred thousand men were affected by the order. President Barger of the Brotherhood declared that more than 100,000 members of the union earned less than three dollars a day, although mechanics of the same grade in the building trades received twice as much. The order for the strike, he claimed, dated back to last July, when the President urged railway men to wait "a reasonable time" for a fall in prices before pressing their demands for a higher wage scale. The Railroad Administration, on the other hand, pointed out that the Brotherhood had violated its agreement by calling a strike without giving thirty days' notice.

The other railway Brotherhoods were not directly involved in the strike order, but they supported the demands of the maintenance of way employees and the shopmen for wage increase. On February 13 President Wilson met representatives of the railway men. The President agreed that the question of wage increase should be examined by a special tribunal. In view of this assurance, the men agreed to postpone the strike. On February 17 railroad trains ran as usual in all parts of the country. While awaiting a readjustment of wages, the Brotherhoods have agreed to carry on an active agitation for legislation to reduce the high cost of living.

Governor Allen of Kansas declares that under the Industrial Courts law Kansas would in any case have been exempt even from a nation-wide railway strike.

Under the Kansas law a strike or lockout on a common carrier, against the authority of the Court, may be punished as a misdemeanor by fine or imprisonment. The Industrial Court has also the power to grant the demands of the railway men within the limits of Kansas. The law categorically declares that:

Any order made by said Court of Industrial Relations as to a minimum wage or a standard of wages shall be deemed *prima facie* reasonable and just, and if said minimum wage or standard of wages shall be in excess of the wages theretofore paid in the industry, employment, utility or common carrier, then and in that event the workers affected thereby shall be entitled to receive said minimum wage or standard of wages from the date of the service of summons or publication of notice instituting said investigation.

Winding Up the Treaties

HUNGARY now stands at the judgment bar, while Turkey is awaiting the judge's word after Hungary has received sentence. On February 11 Count Apponyi and the rest of the Peace Delegation arrived at Paris. An extension of eight days has been granted in the time allotted for their consideration of the terms of peace.

With respect to the Turkish Treaty, Premier Millerand announces that it was unanimously agreed by the Allied representatives at the London Conference to maintain the sovereignty of the Sultan in Constantinople. Complete freedom of the Dardanelles is to be established and no Turkish army will be left in Constantinople. The discussion of mandates for Asia Minor was postponed.

An attempt was made in the British House of Commons to bring about a general "downward revision" of the conditions of peace with Germany. A motion to this effect by Mr. Thorne of the Labor Party was rejected after debate by 254 votes to 60. The supporters of the Government, however, dropped some remarks which will be heard with hopeful ears by Germany and the other defeated powers. In response to the suggestion that the amount of reparations payable by Germany should be definitely limited, Mr. Bonar Law said that if the Germans offered a reasonable lump sum the Allies would probably agree to accept it. Mr. Balfour said that the Reparations Commission might make use of the machinery provided in the Treaty to lighten Germany's burden. Lord Robert Cecil said that while it was not feasible to propose a revision of the Treaty at the present time, he thought that changes would

The treaty has been signed giving Norway sovereignty over the Spitzbergen Archipelago, a group of islands in the Arctic Ocean which have never been permanently inhabited. The islands lie close to Norway and the other nations have waived their rights in her favor. Coal mines give the islands their chief value at present. The mines were developed by Americans but acquired by Norwegians

have to be made in the reparations clauses of the Treaty so that Germany would have some surplus at her own disposal as an encouragement to increased production.

Nor are the reparations clauses the only ones concerning which some concession is possible. It is doubtful if the trial of German statesmen and officers guilty of violating the laws of war can be carried out as planned, in view of the refusal of the Netherlands Government to surrender ex-Kaiser Wilhelm and the equal obstinacy of the German Government in refusing to surrender to Allied tribunals the other men on the extradition list. Coercion of Germany threatens to result in some revolutionary movement which might bring into power an Imperialist or Bolshevik régime.

In view of these considerations the Allies have notified Germany that they will permit German tribunals to conduct the trials of accused officers without pressing any demand for extradition if trial and punishment are carried out in good faith. "They reserve to themselves the right to decide by the results as to the good faith of Germany, the recognition by her of the crimes she has committed, and her sincere desire to associate herself with their punishment." In a note to the Dutch Government the Allies hint that the Kaiser may be permanently interned on the responsibility of the Netherlands in case the Government persists in the refusal to surrender him to justice. The note envisages "the possibility of reconciling the scruples of Holland with some effectual precautionary measures to be taken either on the spot or by holding the ex-Emperor at a distance from the scene of his crimes, making it impossible for him to exert his disastrous influence in Germany in the future."

The Council of the League of Nations has entrusted M. Bourgeois with organizing the permanent Court of International Justice provided for in the League of Nations Covenant. Among the men invited to prepare plans for the Court is Elihu Root. This nomination raises the interesting question of whether an American citizen can take an active part in the work of the League of Nations until the United States has ratified the Treaty and any reservations which may be made by the Senate have been accepted by the other Allied and Associated Powers.

Switzerland has been admitted to the League with the reservation that she need not abandon her traditional position of neutrality in all international disputes. Switzerland will be expected to cooperate in economic measures taken against offending nations, but her military obligation is only to defend her own territory. In defense of this privileged position it may be pointed out first that since Geneva is to be the League capital it will be advantageous to the working of the League not to have Switzerland become the theater of any possible war, and secondly that Swiss neutrality is guaranteed in Article 435 of the Treaty with Germany, which has equal legal standing with the provisions of the League of Nations Covenant in the same Treaty.

REDEEMED SCHLESWIG

The shaded area north of the first black line has voted to rejoin Denmark. In the second zone the vote has still to be taken

Danes Win North Schleswig

THE plebiscite zone in northern Schleswig has returned to Denmark after more than half a century of subjection to Prussia. This is the first popular referendum held under the provisions of the peace treaties which ended the Great War, and is regarded by the Germans as an unhappy omen for the result of future plebiscites. It is true that the result was expected from the start by German official circles, but the overwhelming majority obtained by the Danes exceeded expectations; 75,023 Schleswigers voted for reunion with Denmark, while only 25,087 preferred to remain German. The country districts were almost solidly Danish, but the Germans were strong in the towns and obtained majorities in all the large municipalities except

Hadersleben. King Christian has sent his welcome to the long lost children of his fatherland, now once more reunited in the Scandinavian family. Many public men of Denmark, Norway and Sweden have added their congratulations.

German efforts are now concentrated on the second plebiscite zone, in central Schleswig. The election in this district will not take place until March 14. The Germans have ground for hope in spite of the unfavorable result of the elections in the north. In central Schleswig the population is more mixed, and there is a very considerable German element in the large town of Flensburg. Moreover, the voting in this zone will be by communes instead of by the whole zone taken as a unit, so that even if the Germans lose part of central Schleswig they may be permitted to retain other districts. Northern Schleswig, on the other hand, is lost to Germany in its entirety.

The Schleswig plebiscite writes the latest chapter to one of the most important political controversies in modern history. The neck of land which connects Denmark with the German mainland is the region where the "low Dutch" dialects of the German speech come into contact with the speech of Scandinavia. From this region came the tribes of Saxons, Angles and Jutes who invaded and settled England and were the ancestors of many millions of the British and Americans of today. In modern times the three Duchies of this region—Holstein, Schleswig (Slesvig in Danish) and Lauenburg—were united to Denmark by the person of the Danish King. The majority of the inhabitants, except in northern Schleswig, were German in speech and probably in sentiment, but this mattered little in the days when countries were not thought of as nationalities but simply as royal estates.

In the nineteenth century three new factors complicated the situation. One of these, of interest only to professional diplomats, was a legal dispute as to the right of the Danish dynasty to rule over the Duchies, to which the German Duke of Augustenburg put forth a claim. More important was the rising spirit of nationalism in both Germany and Denmark. The Danes

"Gassed," by John R. Sargent, R.A.—called by many critics the foremost of all war paintings, It vivifies the suffer

were no longer content with a mere personal union under the Danish crown; they demanded that Schleswig, at any rate, be definitely incorporated in the Danish State. The Germans demanded a reunion of all German peoples and carried on active propaganda for the annexation of all lands, such as Alsace and Schleswig-Holstein, where the German language was spoken under a foreign flag. In 1848 a Prussian army invaded the Duchies and might have conquered them, but for the intervention of other Powers on behalf of Denmark.

A third element in the situation was the grant of constitutional government in Denmark. Denmark, like Prussia, was an absolute despotism in the early part of the nineteenth century. But the introduction of constitutional government again raised the question of the political position of the three Duchies. If the Danish constitution were extended to them they would no longer be merely a personal possession of the King of Denmark; they would be an integral part of the Danish nation. Bismarck took advantage of this situation to appear as the champion of German nationality in Schleswig-Holstein. He engineered an alliance between Prussia and Austria against Denmark and conquered the Duchies. In 1864 the Duchies were lost to Denmark and definitely included in the limits of the German Confederation.

Bismarck was not, however, content with making the Duchies German; he wished them to be Prussian. He brought about a war between Austria and Prussia over the respective rights of the two nations in the conquered territories and succeeded in annexing them all to Prussia. As a concession to the principle of nationality the Treaty of 1866 contained a provision that "the population of the north of Schleswig shall be again united with Denmark in the event of their expressing a desire so to be by a vote freely exercised." This "scrap of paper" was cynically disregarded by Prussia, and the plebiscite then promised was never taken until the

victory of the Allies made it possible for them to force the Germans to keep their word. The German Government attempted to stamp out Danish national sentiment in Schleswig by measures of repression, but only succeeded in strengthening it.

During the war the Allies frequently considered handing back all of Schleswig to Denmark as far south as the Kiel Canal; thus making it possible to neutralize the great naval waterway which enabled Germany to transfer her fleet from the North Sea to the Baltic and return without passing north of Denmark. But at the Peace Conference it was thought enough that free navigation of the Kiel Canal should be granted to all nations, while leaving both banks in German territory. It was planned to hold the Schleswig plebiscite in three zones, voting at intervals, beginning from the north. But at the request of the Danish Government itself, the southernmost zone was abandoned. Why the Danes made this request is a matter of curious speculation; nations are not often willing to reject such a chance to enlarge their borders.

In the Treaty as finally signed, northern and central Schleswig were to be abandoned by German troops and officials and administered and policed by the Allies, together with some local assistance by Danes and Germans, and a representative each of Norway and Sweden on the International Commission in charge of administration. A plebiscite was fixed first for northern Schleswig, which was to vote as a unit, and at a later date for the central Schleswig zone, which was to vote by communes. The first part of this program has been carried out. Germans who live in the region transferred to Denmark must accept Danish citizenship or leave the country, but they will be permitted to retain property in Danish Schleswig. Similar provisions govern the other plebiscite clauses of the Treaty, pertaining to Upper Silesia, Allenstein, Marienwerder and, after a lapse of fifteen years, to the Saar district.

men who have sacrificed their most treasured sense and leaves a lasting impression of their indomitable courage

Out of Siberia

THE Americans in Siberia are being transported to the coast and shipped away as rapidly as possible. About half of them have been withdrawn already and there remained at the end of the year 274 officers and 4,910 enlisted men, besides some 500 civilian welfare workers. This brings an end to an adventure on which the United States entered with great reluctance and manifest misgivings a year and a half ago. It was at that time represented that the Czech prisoners who had fought their way out of Soviet Russia were in imminent danger of being overwhelmed by the thousands of German and Austrian prisoners in Siberia who had been armed for the purpose by the Bolsheviks. It has since been disclosed that these Austro-German armies were largely fictitious and that American forces were not needed—and in fact were not used—to defend the Czechs in their proposed movement westward into European Russia. A public declaration by Secretary of State Lansing in August, 1918, when our troops were first landed in Vladivostok, made it plain to the world that we dissociated ourselves from the ambitious plans of the Allies to overthrow the Bolsheviks and attack Germany from the east. Since the United States is now blamed by certain French, British and Siberian papers for not doing more it may be well to quote from that declaration to see what we at the outset undertook to do—and what we promised not to do:

In the judgment of the Government of the United States—a judgment arrived at after repeated and very searching considerations of the whole situation—military intervention in Russia would be more likely to add to the present sad confusion there than to cure it, and would injure Russia rather than help her out of her distresses.

Whether from Vladivostok or from Murmansk and Archangel, the only present object for which American troops will be employed will be to guard military stores

which may subsequently be needed by Russian forces and to render such aid as may be acceptable to the Russians in the organization of their own self defense.

In taking this action the Government of the United States wishes to announce to the people of Russia in the most public and solemn manner that it contemplates no interference with the political sovereignty of Russia, no intervention in her internal affairs—not even in the local affairs of the limited areas which her military force may be obliged to occupy—and no impairment of her territorial integrity either now or hereafter, but that what we are about to do has as its single and only object the rendering of such aid as shall be acceptable to the Russian people themselves in their endeavors to regain control of their own destiny.

This view of the situation has been fully justified by events. As we can all now see, it would have been better if the Allies had followed the American policy and abstained from participation in factional fights and from interference with local governments. The Russians, altho as a race they seem to be conspicuously lacking in the ability to cooperate politically on a large scale, are quite competent and accustomed to manage their own affairs in the communes (*mirs*) or district assemblies (*zemstvos*). But Kolchak as Supreme Ruler was more autocratic than the Czar and made no concessions to the spirit of democracy.

The fall of Kolchak in Siberia, like the fall of Denikin in Ukraine, was ultimately due to his failure to gain the confidence and support of the people over whom he ruled. Personally Admiral Kolchak was a brave, patriotic and well meaning man, but his most ardent supporters were men who wished for the restoration of the old régime with all their former powers and privileges. This prevented him from promoting the establishment of democratic institutions even if he had had the desire. Only at the last, after he had been driven from his capital, Omsk, by the Bolsheviks did he consent to call a constituent assembly and asked General Pepelaiev, whom he had dismissed from the

service because of his democratic tendencies, to form a representative government. But it was too late. The zemstvos declared their distrust of him. His soldiers mutinied, the people rose and both Kolchak and Pepelaiev fell victims to their fury. The Czechoslovaks are blamed for not protecting or rescuing Kolchak from the revolutionists, but there is another side to the story.

The most dependable troops that Kolchak had were the Czechoslovaks under the command of General Gaida, an energetic young Bohemian private whom they had chosen to lead them out of Soviet Russia. After reaching Siberia in safety the Czechoslovaks instead of going home by way of the Pacific, as they intended, turned back to fight the Bolsheviki at the request—or, as recently published documents indicate, the demand—of the Allies. But the Czechoslovaks are mostly republicans and Socialists and they were disgusted and incensed at the flogging, looting and unmentionable atrocities committed by the Russian officers. In their protest to the world in November, when Gaida raised at Vladivostok the green flag of the Siberian Constitutionalists, they said:

The military authorities of the Government of Omsk are permitting criminal actions that will stagger the entire world. The burning of villages, the murder of masses of peaceful inhabitants and the shooting of hundreds of persons of democratic convictions and also those only suspected of disloyalty occurs daily.

But the November rising was put down by the Cossacks with the aid of the Japanese marines and Gaida, who was wounded in the *melée*, was transported overseas. The American authorities put a stop to the bombardment of Gaida's headquarters by the Russian torpedo boats in the harbor.

A year ago when the Czechoslovaks were holding the Ural front on the north while Kolchak's Russian troops on the southern part of the line were giving way be-

fore the Bolsheviki or going over to them, General Gaida urged Kolchak, as the only way of averting disaster, to conciliate the people by calling a constituent assembly, abolishing promiscuous flogging and arrests and opening the land for settlement by the peasants. Kolchak promised reforms but did not carry them out. As Gaida continued to press the matter Kolchak in July discharged him from the service in disgrace and sent him to Vladivostok.

In December when the great crash came and the Siberian armies had to make a hasty retreat of 1500 miles over a single track railroad it was the Czech and American transportation experts who were able to keep the line clear and so save Russian refugees and foreign residents from the Bolsheviki. Kolchak, who had fled from Omsk to Irkutsk, found himself there between two foes, the Bolsheviki on the west and the revolutionists on the east, and he was forced to ask the Czechs to clear the line so his armored train could go thru the enemy country to the Pacific. General Syrov, the commander of the Czechs, offered to protect and escort him safely to Vladivostok if he would renounce his usurped power as Supreme Ruler of All Russia and travel as a private citizen. General Kolchak appealed frantically to the Allies. General Kappell, commander of the Siberian armies, challenged General Syrov to a duel. General Semenov, the Cossack Hetman who held the eastern section of the road at Chita, threatened Syrov "to move against you with all the forces at my command." But when Semenov tried to carry out this threat by despatching armored trains westward they were stopped and captured, one by the Americans and the other by the Czechoslovaks. According to the latest report Kappell and Syrov, instead of fighting a duel, have joined forces and recaptured Irkutsk.

But they were too late to rescue the Supreme Ruler, for at two o'clock on the morning of February 7 the local revolutionary committee of Irkutsk condemned Admiral Kolchak and Premier Pepelaiev to death and they were promptly shot.

In Vladivostok the revolution was accomplished without bloodshed, thanks to the Americans. The revolutionists entered the city secretly on the night of January 30 and seized the street cars to carry them up the main street to the residence of General Rozanov, Governor General of the Maritime Province. When they began to surround the house the Japanese undertook to prevent them, but an American officer with a detachment of marines interposed and told the Japanese that he would not permit their intervention. The Japanese thereupon withdrew without fighting. On the following day General Rozanov and his staff were allowed to depart to Japan on Russian warships. General Graves, commander of the American Expeditionary Forces in Siberia, reports that the revolutionists are very friendly toward the United States and show no desire for revenge on their Russian enemies. They have declared themselves opposed to civil war in Siberia and to foreign intervention. Naturally then they will rather facilitate than retard the departure of the American troops. The General Staff of the new Government at Nikolsk telegraphed to General Graves a message of gratitude for prohibiting interference with the revolutionary movement in Vladivostok and so preventing bloodshed.

The present situation may then be summed up in this way: The Soviet Government has control of Siberia west of Lake Baikal, while east of this the country is mostly under the control of local revolutionary bodies composed largely of the municipal councils, zemstvos and coöperative societies. Their attitude toward the Bolsheviki remains to be determined. Semenov, the

Paul Thompson

Smith—the largest college for women in the world—started less than half a century ago with fourteen students and an endowment fund of \$393,000, left by Sophia Smith "to furnish women with the means of usefulness, happiness and honor." Today Smith, to keep pace with its progress, is raising an additional endowment fund of \$4,000,000; and counts among its graduates leaders in practically every field of women's activities. A tableau during the Smith fund campaign in New York showed graduates in costume from the early days to the present; Sophia Smith, a descendant of the founder of Smith College, is shown here, dressed as one of the first college girls, talking to Mrs. Harold Irving Pratt, chairman of the New York committee of the Smith fund

Snow is an enemy in New York—an enemy that may bring starvation if the traffic ways become blocked. So the latest blizzard—and one of the heaviest New York has had for years—brought out two weapons for fighting snow: the flame thrower, adapted from Germany's liquid fire used in trench warfare, and the snow melter, first used on the Canadian Pacific Railroad. At the left United States soldiers are demonstrating the flame thrower's efficacy. At the right is a snow melter in action—the 1800 gallon tank holds crude oil which will burn for twelve hours on the principle of a gas torch, working at a pressure of sixty pounds

young Buriat leader, the "Napoleon of the East" or the "Siberian Villa," as he is diversely called, succeeds nominally to Kolchak's authority and has his headquarters at Chita.

Captain Jacob L. Milligan will represent the Third Congressional district of Missouri in the place of Joshua Alexander, Secretary of Commerce. The seat was contested by John E. Frost, Republican and enemy of the League of Nations Covenant, who fought the campaign on the Treaty issue. By a majority of about 1800 Captain Milligan's victory vindicated the cause of the League. The district is normally Democratic, but opponents of the Treaty were confident of swinging it to the Republicans this year in view of the hostility to the League of Nations among some of the Missouri Democrats, typified by Senator Reed. But now Missouri has been "shown."

Dr. Jacob Gould Schurman has resigned the Presidency of Cornell University, which he has held for nearly twenty-eight years. The resignation will take effect at the end of the academic year. In his letter of resignation, President Schurman says that he had intended to resign several years ago on the ground of length of service and advancing age, but that the problems of war time had compelled him to remain at his post until normal conditions returned.

Complete official reports show that 77,644 American soldiers died during the war with Germany, of whom 34,844 were killed in action or drowned at sea. Over 215,000 were wounded in action, but of these eighty-five per cent recovered in time to return to duty. The total number of those still listed as missing in action and unaccounted for out of more than four million mobilized men is just three individuals!

The Yugoslav Ministry has resigned with Premier Davidovitch at its head, owing to the refusal of Prince Alexander to dissolve the provisional Assembly and order general elections. The crisis with Italy on the Adriatic question has deeply stirred public opinion and the Government has thus far refused the settlement offered by England and France.

The British permitted a Sinn Fein demonstration in London on February 11. Among the speakers was Arthur Griffiths, "Vice-President of the Irish Republic." Cardinal Logue in his Lenten pastoral address condemned both the British Government for measures of coercion in Ireland and the Sinn Feiners for replying to these measures by violence and crime.

The Siberian Bolsheviki hold Alexandrovsk on the Pacific coast opposite Sakhalin as well as the northern half of that island which was ceded to Russia by the Treaty of Portsmouth. They are now starting revolts against Japanese rule in the southern part and have attacked the Japanese mines and oil wells there.

Polish and Czech sympathizers are reported to have engaged in a nationalist riot at Orlova in Teschen. Teschen has the double importance of a rich coal-bearing area at a time when eastern and central Europe is seriously short of fuel, and a plebiscite region on the linguistic boundary between the Poles and the Czechs.

Union wage scales, according to the Bureau of Labor Statistics, averaged 17 per cent higher last year than in 1918 and 55 per cent higher than in 1913. The average working week was five per cent shorter in 1919 than in 1918 for persons paid at time rates.

Canada has officially protested to Great Britain against the acceptance of any reservation which would deprive Canada and the other Dominions of a separate voice in the League of Nations Assembly and equal status with other members of the League.

A motion in favor of nationalizing the coal mines of Great Britain was defeated in the House of Commons by a vote of 329 to 64. The motion was offered by William Brace, President of the South Wales Miners' Federation.

The Polish Constitutional Commission has decided that the President of the Republic shall be elected by the Diet and Senate, thus copying the French constitution in preference to the American system of electing the President.

A census of the Czechoslovak Republic shows that in that part of the country which was taken from Hungary there are 1,340,900 Slovaks, 665,703 Magyars, 143,322 Germans and about 190,000 of other nationalities.

Sir Walter Defreese, Coalition Unionist, has won a Parliamentary by-election at Ashton-under-Lyne, defeating the Labor Party candidate by a narrow margin. The Liberal candidate ran a poor third.

A Watchdog for the Pork-Barrel

What would you think of a large department store where every cashier, floor-walker, foreman and clerk set up his own counter or desk, bought his own merchandise and office supplies and turned the bill over to the owner of the store directly without making use of a purchasing department to eliminate duplications and buy stock at wholesale rates? The Federal Government of these United States is that department store. The different bureaus which carry on Government work are not distributed among the Departments on any plan or system whatever. The Secretary of the Treasury erects certain public buildings, but so do twenty-four bureaus under other Departments. The Secretary of Agriculture will supervise the spending of \$100,000,000 on public roads in 1920, but more than a dozen bureaus in other Departments will also build roads.

The National Public Works Department Association, composed of business

men and engineers, met in convention in Washington a few weeks ago to find a remedy for this state of affairs under which it is literally true that the Government does not let its right hand know what its left hand is doing. The Association agreed to advocate a measure transforming the Department of the Interior into a Department of Public Works. This Department will bring together all the scattered bureaus now engaged in engineering and construction work, establish coöperation and eliminate duplication of effort.

The Association does not advocate any extension of the field of Federal activity. It urges merely that the \$650,000,000 which the nation is spending this year on public works should be spent under the control of an organization which can pursue the same systematic methods and effect the same economies as any efficiently organized private business.

How Steel Workers Beat the H. C. L.

One of the great causes of unrest at the present time seems to be the high cost of living. Almost every periodical we take up carries a cartoon of the consumer standing on the ground and striving vainly to reach a balloon marked "H. C. L." floating away into space. The reason given for asking an increase in wages in most industries and the cause of most strikes is that wages have not advanced as rapidly as the cost of living. For several weeks the steel industry in this country was more or less crippled in an attempt to unionize this industry. Little was said about the rate of wages by those in charge of the strike. The reason probably was that in this particular industry wages since the war began had risen more than the cost of living. This is brought out in the chart. The figures from which this chart was drawn were taken from the *Monthly Labor Review* of October, 1919, and were compiled by the Bureau of Labor Statistics. The figures in each case have been reduced to 100 at the approximate date of the beginning of the war. The index number of prices is computed from the retail prices of commodities appearing in family budgets and weighted according to their importance.

Index Number of Cost of Living and Wages in Iron and Steel Industry in the United States, 1913 to 1919.

Cost of Living.	Wages.		
	Shear-men.	Roll-ers.	Labor-ers.
1913.....	100	100	100
July, 1914.....	98	98	102
December, 1914.....			
June, 1915.....	105	99	99
December, 1915.....			
June, 1917.....	154	180	162
December, 1917.....			
June, 1918.....			
December, 1918.....			
June, 1919.....	237	193	263

From this study it is evident that during the early years of the war the cost of living advanced more rapidly than wages. In fact wages in some cases did not rise at all from 1913 to 1915. Then came a gain in wages which was so great from 1917 to 1919

that there is hardly a single trade connected with the iron and steel industry in which the increase of wages by 1919 was not greater than the increase in the cost of living during the same period. It is also an interesting fact that the increase in the rate of pay of unskilled labor in this industry had been more rapid than that of skilled labor. Since these figures were published in October the cost of living has gone up still higher, but in the iron and steel industry the increase in the cost of living has not yet caught up with the increase in the rate of wages. Unfortunately the figures for the iron and steel industry did not include the rate of wages of those engaged in clerical and office work. It is possible that this group has not shared the generous increase which has come to the manual laborers. In most lines of work the increase which has come to the factory operatives has not been shared to the same extent by the of-

fice force. Mr. Carnegie used to say that a man in the steel industry was either a "prince or a pauper." Certainly the war has dealt generously with the employees of this industry.

"I Am a Worm"

Prof. B. E. Kemkel, of Lafayette College, publishes an interesting article in the current *Scientific Monthly* entitled "The Disadvantages of Being Human." Here are some of the defects from which "Godlike man" suffers.

The weakness of the arch of the foot due to the long stretch between the ball of the foot and the heel.

The upright position of the pelvis which instead of serving simply as an attachment for the limbs to the vertebral column as is the case with animals now becomes a basin for the support of the viscera. This increases the difficulty of parturition especially among the white race who have somewhat larger heads at the time of birth.

The erect posture of man requires that the blood vessels are subjected to a relatively great blood pressure.

The straightening up of the body exposes certain organs and vessels and the entire abdominal wall to injury which animals on all fours are not subject to.

The skin of man is a less perfect hull for the internal organs than the skin of many lower animals. The coat of hair is scanty and is no protection from the cold.

With the loss of hair has gone a loss of dermal musculature by means of which the skin can be twitched as a horse or cow does to drive away flies.

We have lost the power of wagging our ears.

The eyes are imperfect but this is nothing to the defects in the sense of smell. So imperfect is man's sense of smell that it is only by courtesy that we can be said to have the sense at all.

By becoming a hand feeder man's teeth have grown smaller and more closely crowded together. The wisdom teeth are showing unmistakable signs of degenerating. The shortening of the jaws lets food decompose in the crevices between the teeth and that causes them to decay.

Professor Kemkel concludes that "as a mechanism man is far from perfect, but with his more perfect brain power, he shows a capacity to adjust himself by the use of tools and other devices of his ingenuity to a rapidly changing environment to defend himself against untoward circumstances and more than hold his own in competition with the other species of organisms on the earth today."

The Cost Of Living In The Iron and Steel Industry

Brek-ek-ek-ex

Up at New Haven the psychologists gave an intelligence test to the Yale Freshman class, the results of which have just been made public. 99.2 per cent of the Freshmen obtained grades A or B; denoting intelligence above the average of humanity. When it comes to making "odious comparisons" they show up even more remarkably. Eighty four per cent ranked higher than high school seniors similarly tested; sixty-nine per cent were above the Freshman average for another university, and half of these first-year men outranked the average of the Senior class for that other university! (Name of the other institution withheld.)

Comparison was also made with the result of psychological tests given to soldiers. All of the Yale Freshmen outranked the average for drafted men, and the average for the group was even a little higher than that for army officers. Perhaps one should not draw the deduction that each and every Yale "Frosh" should be forthwith given a commission, but it does seem that once they are trained in military technique the Yale students will compete on equal terms with the West Pointers. If the Yale Freshmen show such promise in the green tree

Library, church and community house all in a row focus this town's activities

what may we not expect from the ripe autumn of their wisdom?

Focussing a Community

Granby, Connecticut, has done a thing that might well be emulated in other towns and villages thruout the land. When some Croesus gave the town a library the good people of the South Congregational Church took steps to have the library erected on one side of the church, and then

\$10,000 was raised to build a community house on the other side. Now the town proposes to put the town school in the group. Thus Granby has focussed the life of the community at one point and the boys and girls, men and women will have a center in which all the social instincts of the people can find satisfaction and from which will radiate all the spiritual, intellectual, moral and recreational influences of the community. Such was the Acropolis to Athens.

Lost Empires of Britain

Great Britain rules, or professes to rule, the most extensive empire that the world has ever known, and this empire has recently been much enlarged by "mandates" over former German colonies and Turkish provinces. So great and rapid has been the expansion of overseas Britain that we are apt to think of it as being but the successful working out of a consistent program of imperial conquest.

So far is this from being the fact, however, that no nation, except perhaps Spain, has lost such extensive do-

main and no nation whatever has voluntarily abandoned so many good chances for territorial expansion. The British Empire as it stands is but a fragment of the British Empire as it might have been if in every case the home Government had followed the lead of those who offered it opportunities to "paint the map red." Many of these lost opportunities were recovered at a later date; for example the Queensland Government in northern Australia annexed the whole of eastern New Guinea on its own initiative in 1883, but the

British Government surrendered the northern coast to Germany as an act of friendship. The present war, of course, has cancelled that cession.

In some cases the shrinking of the empire was not voluntary; as for example when Washington won the independence of the American colonies in the field and when the French compelled the British kings to abandon their dynastic claim to the crown of France. Perhaps we may include here also cases when conquest was certainly possible but proved too expensive to

be worth the effort, such as the failure to extend a British protectorate over the wild tribes of Afghanistan. In other instances the British "swapped off" territory as part of a diplomatic bargain, as when they let Germany have Helgoland in exchange for colonial advantages on the east coast of Africa. Sometimes the cause was failure to appreciate the potential value of a country, as when the British long refused the offer of the chiefs of Fiji to establish a protectorate over those fertile islands for a nominal sum—a decision repented in time to secure dominion. On occasion the motive was disinterested good-will, as Gladstone's return of the Ionian islands to Greek sovereignty in 1862.

If we consider the losses of the British Empire by continents we may note in North America (1) Florida, obtained in 1763 from the Spanish; (2) the United States east of the Mississippi, lost in the American Revolution; (3) the territory of Oregon and Washington, abandoned to the United States by a compromise which left British Columbia on the other side of the frontier, both countries having claims to the whole Pacific coast from California to Alaska; (4) all of the islands of the West Indies, repeatedly at the mercy of the British fleet in wars with Spain, France and Holland. No account is here taken of early British plans to acquire Texas, California, Alaska or Central America, as these were in no case "followed up."

In South America the British have at one time or another stretched their claims over all Guiana and part of Venezuela. During the Napoleonic wars a British naval expedition occupied and held for several years the Plata river region, including what is today Uruguay and northern Argentina.

In Europe the British have abandoned Helgoland to Germany, the Ionian islands to Greece, and their claims in Spitzbergen to Norway. They have lost their French Empire, and Queen Elizabeth once threw away an offer from the Dutch Protestants, then in revolt against Spain, of the crown of the Netherlands. Hanover, tho never incorporated in the Empire, was long united with it in the person of the Hanoverian kings.

In Africa and Asiatic Turkey the British have regained most of their former lost opportunities as a result of the present war. But they have never consolidated their temporary advances in Afghanistan, Tibet and other wild countries on the border of India; contenting themselves with oc-

When You Go to London—

Don't make the mistake of seeking Temple Bar for liquid refreshment. Don't go to a "coffee house" for coffee—learn to do without it; and don't try to put up for the night, as one young American actually did, at Furnival's Inn; it might be advisable to take out life insurance there. Nor will the Inns of Court furnish you with hotel accommodation.

St. Clement Danes is not a dog show, but a church, and the Isle of Dogs is really a congregation of Docks. Don't expect to find Limehouse as it is pictured in "Limehouse Nights"; you may walk far there without seeing a Twinkletoes. And, by-the-way, the Hop Exchange is not an opium den.

Bond Street deals, not in bonds, but in clothes, while Threadneedle Street deals, not in clothes, but in bonds. It should also be noted that ladies do not go to Petticoat Lane for petticoats.

Don't ask where the "depot" is; and if you want to reach Shakespeare's birthplace don't ask for a ticket to Stratford. A sailor we know tried this; he landed in the London suburb of that name, a wilderness of bricks and mortar. He saw nothing of the birthplace, the Avon, or the bard, and the inhabitants themselves seemed strangely ignorant of these things.

Remember—if you can—that as you walk east from Buckingham Palace, the Mall becomes Spring Gardens, Spring Gardens becomes the Strand, the Strand fades into Fleet Street, Fleet Street is lost in Ludgate Hill, Ludgate Hill runs on as Cannon Street, Cannon changes to East Cheap, East Cheap takes the alias of Great Tower Street, and Great Tower Street plumps you straight into the moat of the Tower of London—and all without turning a single corner.

ARTHUR POWELL.

casional military expeditions. Nor has there been any fruit to the exploits of "Chinese" Gordon in the interior of China, British dominion being still limited to Hong-Kong and Wei-Hai-Wei.

Perhaps the most valuable territories ever willingly surrendered by Great Britain were the Dutch East Indies, occupied by a British naval force during the Napoleonic wars and admirably administered by Sir Stamford Raffles from 1811 to 1816. The population of these islands, duly returned to Dutch sovereignty, has grown to be greater than that of the British Isles. The Philippines also have been under British occupation, when Manila was seized from Spain during the Seven Years' War. It is hardly too much to say that the British fleet has had numerous opportunities during the past two hundred years of adding to the Empire every island in the Indian Ocean and in the Pacific, with the exception of Japan.

Self-Support for Imbeciles

New York state has made a success of its experimental colonies for the feeble-minded, according to a statement by Dr. Charles Bernstein, superintendent of the Rome School. The first of these colonies was established in 1906. It was self-supporting from its first year and returned a profit to the institution which established it. There are at present eleven of these colonies, numbering about twenty boys to each, and all have made a financial success in addition to benefiting the inmates. In 1914 a colony for girls was started. At the end of the first year every girl in it had a savings bank account. At present there are six such colonies in the state.

Superintendent Bernstein believes that fully half the feeble-minded persons committed to institutions can be cared for in self-supporting agricultural colonies. Many of them even show sufficient improvement to enter

life on their own account as "hired men" or "hired girls" on private farms. Of course there are many who must be cared for within institutions, but the majority are "borderline" cases who respond sufficiently to training to become almost normal men and women. Ten years ago, he said, eighty per cent of the persons committed to the Rome institution were hopeless imbeciles, but medical supervision has grown so much more exacting in its standards that today persons only slightly defective make up the mass of inmates; persons who in former decades would probably have remained in

their homes, dependent on their relatives. For such cases medical supervision is a distinct gain, but strictly institutional life is not necessary.

Facts

Los Angeles is the largest city in the United States—in area.

There are three ships in the world of more than 50,000 tons each.

Ninety per cent of the aluminum used in the United States comes from Arkansas.

Sixteen Presidents had war records but only two were in the military service when elected.

The agricultural output of the Southern states more than doubled in value during the Great War.

Twenty years ago the United States imported all its tinplate; today it manufactures three-fourths of the world's supply.

More than sixty million tons of iron ore were mined in the United States last year. 86 per cent of this came from the Lake Superior district.

An American submarine holds the world's record for long-distance diving, having traveled 1800 consecutive miles without rising to the surface.

The United States regular army has engaged in more than a hundred wars or military campaigns; about nine-tenths of them being with Indian tribes.

The *Crisis* says that during the past seven months negroes in New York City have purchased real estate totalling over \$4,000,000, between 127th and 145th Streets.

From 1857 to 1918 the United States produced more than three-fifths of the world's petroleum and at the end of that period the proportion had risen to seven-tenths. Russia and Mexico are our chief competitors and might surpass us if they took revolutions less seriously.

WINTON SIX

What's your desire?

LIVELY getaway? Speed? A wide range of driving flexibility? Power for hard hills and bad roads? A motor so alive that it "hangs on" all day long and finishes fresh at night? Restful passenger comfort, as in a lounging room? A car so good to see that people cannot help admiring it? And so sturdy that you are a stranger in repair shops? Which of these is your desire?

The reason we ask is that we know one surprising car that has them *all*. It is the newest Winton Six, a most exceptional and inviting automobile. May we send you literature?

The Winton Company

133 Berea Road, Cleveland, Ohio

Winton Oil Engines for belt drive, to be used in isolated power plants, and Winton Oil-Engine Generating Sets are manufactured by the Winton Company in a separate, splendidly equipped engine-building plant. Write us your needs.

Is there a Hole In Your Sales Map?

HERE is the richest large agricultural territory in the world—four million people, per capita wealth nearly twice that of the Nation's average.

Omaha

"Where there's lasting Prosperity"

Omaha is the market city of this vast, rich empire. Main rail lines and highways lead to Omaha, trend of traffic is east-west. Favorable freight rates, adequate terminal facilities.

You can cover this Omaha empire more economically and effectively from a factory branch or district office at Omaha.

Because of its strategic location, Omaha, although only thirty-fourth in population, is the SIXTEENTH city in bank clearings; second in corn and live stock receipts.

Let us give you more information about the wealth and buying capacity of the Omaha empire—and how to reach this territory. Ask for Sales Analysis.

Training for Authorship

How to write, what to write, and where to sell.

Dr. E. Esenwein

for many years editor of Lippincott's Magazine, and a staff of literary experts. Constructive criticism. Frank, honest, helpful advice. Real teaching.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Versification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein.

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize this, for over one hundred members of the English faculties of higher institutions are studying in our Literary Department. The editors recognize it, for they are constantly recommending our courses.

We publish *The Writer's Library*, 13 volumes; descriptive booklet free. We also publish *The Writer's Monthly*, the leading magazine for literary workers; sample copy 20 cents, annual subscription \$2.00. Besides our teaching service, we offer a manuscript criticism service.

Our Forward March in Agriculture

(Continued from page 312)

fashion the forested portions of the mountains of the east from Maine to Alabama.

What, I may be asked, has all this effort amounted to? Is it not true that farming has deteriorated, that soils are being impoverished, that acre yields have declined, and that production has not kept pace with population? These are the representations which I believe are most frequently made to the public and I apprehend that there is a general impression that they are sound. As a matter of fact, the reverse is true. Let me give the facts as briefly as I can.

First, as to the yields per acre. These show an upward tendency during the whole period for which we have reliable statistics. The average rate of increase for twenty-five years has been one-half of one per cent a year. The gain is not readily observed from one year to another, but, when averages for a series of years are obtained, the trend is clear. During the decade of the 70's and 80's, when there was a vast expansion of the farm area in the west, cultivation was on a very extensive and inadequate scale and the tendency was downward. Since the early 90's, however, the movement has been decidedly upward. Since 1880 the following increases in yield per acre are noted: Wheat 25 per cent, corn 10, oats 24, potatoes 33, hay 20, cotton 3½, or for all crops 16 per cent. The facts are even more striking when we take the more settled states of the union. For New York state, the weighted average increase for all crops was 18 per cent, and for New England 25 per cent. And yet it is not true that there is a general impression that farms in New England have been abandoned and that its agriculture has deteriorated. The explanation of the improvement is to be found in better agricultural methods, use of farm machinery, rotation of crops, disease control measures, and increased and more intelligent use of fertilizers.

But what about the other test—the relation of farm production to growth of population? Here, too, the facts are equally encouraging and contradict the prevalent view. It is true that the production of meats per capita has declined. In 1900 it was 248 pounds, decreasing in 1914 to 183, rising in 1918 to 222. It is worth noting that, with the great increase in the variety of our products and of our diet, we are not so dependent on meat as formerly; and, furthermore, that we are still large exporters of meat products. Fifty years ago, in the decade 1866-74 the production of the six leading cereals per capita was 38 bushels, while in 1905-14 it was 52; corn having increased from 23 to 27 bushels, wheat from 6-1/5 to 8; oats from 6-3/4 to 13; potatoes from 2-9/10 to 3-6/10; tobacco from 7-2/5 pounds to 12-1/5; cotton from 36-1/2 pounds to 60; and milk from 84 gallons in 1889 to 96 gallons in 1919.

I have spoken of the increase in the variety of our diet. In some respects the advance in agriculture has been most striking in the rise of new or minor crops to large proportions and their availability thruout the year. The only hint that I can give of this expansion is from the figures for canning of vegetables and fruits and the drying of fruits. The canning industry showed a gain from 20,000,000 cases in 1889 to 52,000,000 in 1914 and dried fruits from 85,000,000 to 521,000,000 pounds.

But there is still another test, and that is the number of farm workers and the production for each laborer. Their number increased from 5,900,000 in 1870 to 13,700,000 in 1910, and the production for each worker in terms of leading cereals rose from 266 bushels in the decade 1866-74 to 406 in 1905-14, or to 418 in the five years 1915-19.

The war revealed another fact, that whenever an emergency comes the farmers of the nation by straining a point can achieve very remarkable results. During the war, in spite of all the difficulties, including the abstraction of labor, they increased the acreage of leading cereals by 33,000,000, the yield 635,000,000 bushels above the pre-war average; and they did a more difficult thing; they increased the number of milk cows over 1914 by 2,750,000, of other cattle by 8,500,000, of work animals by 1,000,000, of swine by 16,000,000 or a total of approximately 29,000,000.

Wheat was an especially important war material. The Department of Agriculture asked the farmers to increase their fall acreage alone in 1918 to 47,200,000. There was actually planted 49,261,000, and the spring wheat acreage equalled the record of 22,500,000. It was this performance of the farmers that helped to save Europe and to preserve civilization.

Furthermore, this country has a long distance to go before it comes in sight of its limit of farm production. It can further increase its output of commodities by continuing to secure increased yields per acre, and still further by cultivating the tillable land which at present is unused, estimated to be over 60 per cent of the total. It has been estimated by experts that only about 15 per cent of the land in cultivation is yielding reasonably full returns. The opportunity, therefore, is presented of placing the remainder of the tillable land under cultivation and bringing it and 85 per cent of that now cultivated up to the point of full yields.

I see no particular point in feverish haste to reach this goal. Success would bring with it certain advantages but also many obvious disadvantages. We must give more intelligent consideration to the policy which should be pursued in reference to the expansion of the farm area and bring to bear the services of all the agricultural experts to make the survey and to point the

way. It is not in the interest either of producers or consumers to have extreme fluctuations in agricultural production. There is always danger of glutting the market and of serious loss. Furthermore, the right expansion of the industry is limited by the supply of labor and capital available for farming purposes and by the inelasticity of the demand for farm products. The aim should be to secure a steady flow of commodities of sufficient volume to supply an increasing demand at prices which will yield the farmer a decent wage and a fair profit on his investment. It seems difficult to get it into the minds of some people that farming is a business and must pay; that under modern conditions there cannot be an unlimited number of farmers. There could be a larger proportion of farmers to the total population if each farm were self-sufficient and produced no surplus of consequence; but today the average farmer produces many times what he consumes of some things and is dependent for his prosperity upon their profitable exchange. There should be, and in the long run there will tend to be, no more farmers in the nation than are needed to produce the quantity of products which can be disposed of at a profit. There will be farmers enough if the business of farming is made profitable and if rural life is made attractive and healthful. The consumers must be willing to pay prices for farm products which will enable farmers to produce them and to maintain a satisfactory standard of individual and community life. The nation, therefore, must be prepared to omit nothing to improve the countryside. The farmers have proven themselves worthy citizens and strong bulwarks against radicalism. It is of the first importance that satisfactory schools be provided, good roads be constructed, and that adequate provision be made to give rural communities the requisite sanitary and medical services, including hospital facilities.

With the aid of the bankers we must make certain, for the nation's welfare as well as for the farmers, that they can secure the requisite capital at a reasonable rate of interest, continue to devise facilities to aid farmers in marketing their products, and, to this end, promote cooperative enterprises. These are prerequisite because the individual farmer's operations are on too small a scale to make it possible for him to secure the necessary economics in handling his products and in transporting them. And especially must we see to it that the channels of trade are open and not controlled for selfish purposes. There will then be no difficulty in retaining in the rural districts a sufficient number of efficient people. What we need is not a "back to the land" propaganda. There are few urban people who could go back to the land to advantage or who will go. What we need rather is an acceleration of the movement for the improvement of the countryside which will render the abandonment of farming unnecessary and its expansion inevitable.

Washington, D. C.

"One or two Monroe Calculating Machines in the Division Superintendent's offices saved 3 clerks, which means \$2,500.00 a year in each of six offices, after the savings had paid for the machines in about five weeks."

(Signed)

Santa Fe Railway
Office of Vice-President
in charge of operation

An Extra Set of Brains— An Extra Set of Eyes—

For Everyone in Your Office

AN extra set of brains—that is the Monroe Calculating Machine. Whether you multiply, or divide, or subtract, or add—and every operation can be done with equal ease—the Monroe finds the result for you by the direct method from problem to answer.

You don't have to *un-learn* time-tested methods of figuring; you don't have to learn any new methods. You simply put your problem up to the Monroe by "writing" the problem on the machine; the Monroe assumes the rest of the burden for you—an extra set of brains thinks out the answer for you—with remarkable rapidity and with absolute accuracy.

And you're **CERTAIN** the answer is right.

AN extra set of eyes keeps a vigil over the work all the time guarding against the contingency of an operator's error. That is the visible check feature of the Monroe, which enables you to prove your work as you proceed.

In every business, on all kinds of figure-work, let the Monroe do the brain work of extending invoices, figuring pay-rolls, finding costs, footing ledgers, computing interest, proving freight bills and allowances, converting foreign currency, making estimates, solving engineering formulae.

Let the Monroe show you how—it will surely be worth a postage stamp to have a copy of "Book of Facts." Simply send along the coupon.

A Few Plain Words to the G. O. P.

(Continued from page 308)

for the solution of vast problems of international business: they cannot be dealt with by phrases, by stuffed-shirt oratory and party jockeying.

If it's General Wood against Mr. Hoover I will have to give the matter careful thought. Off-hand I have two things against the General.

First he is a General, and believes in universal military training. There are many things about universal military training I like. The idea of putting all the boys of the country at work for their country for a year, of putting the rich and poor side by side and letting them get to know each other—that sounds good to me. But how can you have universal military training without universal military trainers? Without an officer caste, such as Germany had? Without the snobbishness and intolerance—and the itching for a chance to fight—that always goes with such a caste? And didn't we fight the war to do away with armaments and with universal military training anyway. Haven't we forbidden it in Germany? And if forbidden in Germany, why advocated here?

And my second objection to the General is that he would probably be just the kind of President under whom we are now having our troubles: and I want no more such Presidents. The Constitution—a document seldom referred to in these days—invests the Government in a President and a Board of Directors called Congress. And for eight years we have had a President that despised the directors; and directors that spent most of their time venting their private venom against the President.

If you want to know where Bolshevism has its roots I'll tell you, tho I may be put in jail for saying it. It has its roots in Washington. When the branches of the Government have no respect for each other, how in the world can you expect an ignorant foreigner to respect them? What business could go forward and make profits with the President and Directors abusing each other all the time? How can we compete with the nations of the world when our administration has no time for anything except private animosities?

Now I may do General Wood an injustice, but I doubt if he would get on much better with Congress than Wilson has. He has spent his life in a business where you say unto a man "Go," and if he does not go you have him shot at sunrise. A Congress—unfortunate as the fact may be—cannot be handled that way.

We must restore respect for our institutions in this country. We can only do it by having a President and a Congress who can give the world an exhibition of team-work such as it never has seen before. And I doubt if the General has the training to do it.

Hoover is a good deal of an autocrat himself, they tell me. But at least he knows business, and is accustomed

to gathering strong men around him. If it comes down to Hoover against any of the gentlemen thus far mentioned I think it very likely that I will be found slipping quietly to the polls—without letting my Republican neighbors find it out—and dropping in one ballot marked for him. And my guess is that several million of those same respectable neighbors will be doing the same thing.

Of all the men mentioned on the Republican side, the one who is mentioned the least pleases me the most. He says he's not a candidate, but every man is a candidate if enough of us make up our minds on the matter. That's Coolidge of Massachusetts. They say that he is just a creature of circumstances, that the police strike came along and found him sitting at the cross-roads. That may all be so, but I like his talk, and I like his record also. There isn't a man of them who has had as long an experience in governmental administration as he. Starting down in the city council at Northampton, Mass., he held every job that the neighbors could elect him to, until he became President of the Senate, then Lieutenant Governor and Governor. Even when he vetoed the bill raising the pay of the legislators, he still held their respect and friendship. He seems to have no trouble getting legislation passed. Massachusetts is showing the kind of team-work that would look awfully good to me in Washington these days.

Quiet, unassuming; poor as Lincoln and as unostentatious; speaking his mind frankly, with no palaver, no stuffed-shirt oratory, no careful balancing of measures to discover their political effect—he looks pretty good from where I stand.

I repeat that I realize my individual unimportance. But in the aggregate I think I represent a good many thousand voters, even millions perhaps. And my suggestion to the gentlemen who are running the Grand Old Party is that they look carefully at the quiet Mr. Coolidge. I think I would vote for him even against Mr. Hoover.

But as for General Wood, I am in doubt: and as between Hoover and the other gentlemen mentioned so prominently by their press agents, I know very well that Mr. Hoover can count me present right now.

The Problem of the Pacific

PISO'S
for Coughs & Colds

Port Arthur or in Tsingtau. This conviction is rather strengthened when we reflect that a century ago, the United States, while not yet so powerful as she is today, denied the right of European powers to establish naval bases in the Caribbean Sea or on the American continent.

As to the former German Pacific Islands, the principle of governing them by the mandates of the League of Nations has been adopted. The peace conference at Paris has decided that the Empire of Japan is the mandatory for the former Pacific islands north of the equator, while the British Empire is the mandatory for those lying south of the equator. But a non-military policy embodied in this form of governing ex-enemy territories, prevents the establishment of naval bases or fortifications on these islands. Here, therefore, appears to have been established the precedent of "disarmament." This development is to be welcomed as a beginning of a general restriction or reduction of armaments.

I am recommending my countrymen to study seriously and to understand thoroly the United States and its people before they hasten to pass criticisms upon them. I wish earnestly to find more and more Americans impartially studying Japan and the Japanese.

It gives me much gratification to have thus an opportunity to express my frank views to the readers of *The Independent*; and, may I say in conclusion, it is my cherished wish to be an instrument when the chance offers, in promoting good neighborliness and amity between the peoples of our two countries thru an honest exchange of their views, thereby facilitating mutual good understanding.

Rare Metals in Everyday Use

(Continued from page 313)

in -a he may imagine a white powder like lime. Thorium, for instance, is, as its name implies, a metal named after the thunder god Thor, to whom we dedicate one day in each week, Thursday. Cerium gets its name from the Roman goddess of agriculture by way of the asteroid.

The chief source of the material for the Welsbach burners is monazite, a glittering yellow sand composed of phosphate of cerium with some 5 per cent of thorium. In 1916 the United States imported 2,500,000 pounds of monazite from Brazil and India, most of which used to go to Germany. In 1895 we got over a million and a half pounds from the Carolinas, but the foreign sand is richer and cheaper. The price of the salts of the rare metals fluctuates wildly. In 1895 thorium nitrate sold at \$200 a pound; in 1913 it fell to \$2.60, and in 1916 it rose to \$8.

Since the monazite contains more cerium than thorium and the mantles made from it contain more thorium than cerium, there is a superfluity of cerium. The manufacturers give away a pound of cerium salts with every

Dentists Now Urge

A New Teeth Cleaning Method

All Statements Approved by High Dental Authorities

Leading dentists all over America are urging the adoption of a film-removing tooth paste.

Millions of people have already proved it. In every circle nowadays you see white, glistening teeth. Ask about them and the owners will say, probably, that Pepsodent has done it.

By Fighting Film

Those results come from fighting film—that viscous film which ever forms on teeth. Most lack of luster is now traced to that, also most other tooth troubles.

Film clings to teeth, enters crevices and stays. The tooth brush does not end it. The ordinary tooth paste does not dissolve it. So much of it stays and hardens, until you have it taken off in the dentist's chair.

Film is what discolors—not the

teeth. It is the basis of tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. All these troubles have been constantly increasing for lack of a film combatant.

The Way is Found

Dental science, after years of searching, has found a way to fight film. Five years of clinical and laboratory tests have proved it beyond question.

For home use the method is embodied in a dentifrice called Pepsodent, made to meet every dental requirement. And to make it known quickly in every home, a 10-Day Tube is being sent to everyone who asks.

A Quick, Convincing Test

The Pepsodent results are evident and quick. A ten-day test will leave no doubt about them. And a book will tell the reason.

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to day by day combat it.

A new discovery makes this method possible. Pepsin must be activated, and the usual agent is an acid harmful to the teeth. But science has found a harmless activating method. Now

active pepsin can be constantly applied, and forced into every hiding place of film.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscous film. See how the teeth whiten as the fixed film disappears.

Look at your teeth now, then look in ten days. Let your own teeth decide between the old ways and the new. This is important. Cut out the coupon so you won't forget.

purchase of 100 pounds of thorium salts. It annoyed Welsbach to see the cerium residues thrown away and accumulating around his mantle factory, so he set out to find some use for it. He reduced the mixed earths to a metallic form and found that it gave off a shower of sparks when scratched. An alloy of cerium with 30 or 35 per cent of iron proved the best and was put on the market in the form of automatic lighters. A big business was soon built up in Austria on the basis of an obscure chemical element rescued from the dump-heap. The sale of the cerite lighters in France threatened to upset the finances of the republic, which derived large revenue from its monopoly of match-making, so the French Government imposed a license upon every man who carried one. American tourists who bought these lighters in Germany used to be much annoyed at being held up on the French frontier and compelled to take out a license. During the war the cerium sparklers were much used in the trenches for lighting cigarettes, but—as those who have seen “The Better ‘Ole” will know—they sometimes fail to strike fire. Auer-metal or cerium-iron alloy was used in munitions to ignite hand grenades and to blazon the flight of trailer shells. There are many other pyrophoric (light-producing) alloys, including steel, which our ancestors used with flint before matches and percussion caps were invented.

There are more than fifty metals known and not half of them have come into common use, so there is still plenty of room for the expansion of the science of metallurgy. We have seen how quickly elements formerly known only to chemists—and to some of them known only by name—have become indispensable in our daily life. Any one of those still unutilized may be found to have peculiar properties that fit it for filling a long unfelt want in modern civilization. Who, for instance, will find a use for gallium, the metal of France? It was described in 1869 by Mendeléeef in advance of its advent and has been known in person since 1875, but has not yet been set to work. It is such a remarkable metal that it must be good for something. If you saw it in a museum case on a cold day you might take it to be a piece of aluminum, but if the curator let you hold it in your hand—which he won't—it would melt and run over the floor like mercury. The melting point is 87° Fahr. It might be used in thermometers for measuring temperatures above the boiling point of mercury were it not for the peculiar fact that gallium wets glass so it sticks to the side of the tube instead of forming a clear convex curve on top like mercury.

Then there is columbium, the American metal. It is strange that an element named after Columbia should prove so impractical. Columbium is a metal closely resembling tantalum and tantalum found a use as electric light filaments. A columbium lamp should appeal to our patriotism.

The so-called “rare elements” are

All the Way by Water

An Answer to the Freight Problem that Hampers Production in the West

By Julius H. Barnes, Director of the U. S. Grain Corporation

THE increase in population and the large expansion in trade in the United States is apparent to everyone. The inadequacy of our present railroad system to care for the traffic during the periods of activity is also apparent. If trade is not to be stifled and development checked, there must be an increase of transportation capacity at once.

The general flow of commerce is from West to East. The Atlantic Coast furnishes the outlet for the short route to the consuming countries of Europe. Some diversion can be made to Gulf ports, with a longer ocean trip, but that movement is at present distinctly against the natural trend, except from producing areas tributary to the Gulf ports.

Either this increase in carrying capacity must be made by very expensive and slow expansion of rail facilities, with all the complications of rights-of-way, terminals and port facilities, or the unlimited capacity of the Great Lakes Waterway must be developed.

More than that, a large part of the commerce of the United States and Canada must be in the products of the farm. That means that there is a seasonal movement of unusual volume following the harvest period. It is therefore important that the route of outlet be capable of quick and large expansion. The Great Lakes Waterway, both by furnishing the outlet for our western farms and the farms of Canada and by influencing the competing rail rates as well, has been probably the greatest factor in establishing the sound economic position and the commercial prosperity of the great grain areas. It can solve, also, this immediate problem of the future. No railroad can expand its traffic as can a waterway. It is solely a question of the presence of carriers. If the Great Lakes Water-

way can be made available for the unlimited ocean carrying capacity, the whole problem of enormous traffic is solved practically at a stroke. To introduce the ocean carrier thru the St. Lawrence to the Great Lakes makes the enormous handling capacity of the inland Lake ports available for ocean service. Seaboard facilities in this country are already used to their maximum. Lake port facilities are not. I lay the weight, first, on this phase of service thus available, even before I take up the important phase of cost saving.

Transportation on the Great Lakes has been the cheapest in the world. The rate of carriage has been as low as one-tenth of the rail rate. The route for commerce that can use a carrier say for ten to fifteen thousand tons, with only one crew necessary, appeals at once to the judgment as possessing remarkable possibilities for economy of cost. This is confirmed by actual operating results. It is probable that on one billion bushels of grain affected by the opening of such a transportation channel there would be an immediate saving of five cents per bushel; besides that, the enlargement of immediate marketing opportunities would be of great value to dealers and producers.

There is a natural way from the Great Lakes to the Sea, namely, the St. Lawrence route. It is easily susceptible of improvements that will admit ocean going vessels of the ordinary tramp type. The chief obstruction, a drop of 326 feet between Lake Erie and Lake Ontario, is now being overcome. The Canadian Government has partly completed and is now prosecuting work on the new Welland Canal around Niagara Falls. This canal is planned to take vessels drawing 24 feet of water. This is equal to the depth of the largest canal at the "Soo" between

Each dot on this map stands for 15,000 population. Look at the three great states—Colorado, Montana and Wyoming, whose resources are scarcely touched, whose fertile lands are thinly populated. Distance from market governs production and population, too. The proposed route to the sea by the Great Lakes and the St. Lawrence would bring these states a thousand miles nearer the Atlantic seaboard and the consuming countries of Europe

Lake Superior and Lake Huron, and deeper than the present channels at the foot of Lake Huron.

To treat the St. Lawrence River so that its rapids are controlled in a series of great pools is not a formidable engineering undertaking. As a financial problem, it promises to support itself, since water-power to be developed would be more than sufficient to pay for the improvement.

It is astonishing to learn that the introduction of ocean carriers thru this channel to the Great Lakes could be made at a cost now estimated to be \$100,000,000, a sum which would be probably saved in every year by economy of transportation offered, which would affect every producer and every consumer within reach of the western Lake ports and for great distances affected thereby. The immediate difficulty is to arrange a plan of co-operation between the United States and the Dominion, since part of this river is international water and part is in Canada. Steps have been taken to overcome that.

It is a project which appeals to both sound business judgment and to the constructive imagination. That this great natural advantage of the Great Lakes Waterway, reaching into the very heart of the most productive continent in the world, can be opened to the Sea with such an inconsiderable expenditure and within a few years of time, appeals to the imagination as being one of the great constructive efforts in human progress. It is important that the American public realize how close to their door and how near within their grasp lies this tremendous improvement in their economic position.

The High Cost of Carelessness

THE continued heavy fire losses to the nation and therefore to the fire insurance companies who absorb this loss has caused these companies to engage actively in a publicity campaign in favor of more stringent precautions against fire outbreaks. The loss by fire in the United States and Canada during the month of December, 1919, is estimated by the *Journal of Commerce* at \$27,366,500 as compared with \$15,737,750 for December of the previous year. The last month of 1919 was marked by increases of loss reported from every section of the country, but some fire underwriters say that deduction should be made for the tendency to ascribe higher values to the property destroyed. The losses for the entire year aggregated \$269,000,775. Only twice in the history of American insurance have these figures been exceeded; in 1918 and in 1906, the year of the San Francisco conflagration.

THE BAD RECORD OF 1918

The National Board of Fire Underwriters has spent a year in making a detailed investigation of the destruction of property by fire in the year 1918 with a view to ascertaining the leading causes of the great economic loss. As a war year, with American munitions factories turning out huge quantities of explosives, it is not surprising that losses for 1918 should have been above normal; indeed, it is a matter for remark that the restoration of peace time conditions should have brought so little improvement, leaving the losses for 1919 higher than in 1917, our first war year.

During 1918 the reported destruction by fire in the United States alone reached more than \$283,000,000, to which must be added for Canada nearly \$32,000,000 more. Neither figure takes account of unreported fires or fires affecting uninsured property whose loss was not officially valued. The actuarial bureau of the Fire Underwriters Board places the total fire loss in the United States as probably not less than \$350,000,000. The loss of life during the same year from fires in this country is estimated at 15,000.

WHAT STARTED THOSE FIRES

The actuarial bureau divided fire losses into the three groups of "strictly preventable," "partly preventable," and "unknown, probably largely preventable." Nearly \$66,000,000 of the year's losses were classed as strictly preventable or, in other words, as inexcusable. Under this heading were included:

1. Defective chimneys and flues, costing Uncle Sam nearly \$12,000,000.
2. Stoves, furnaces, boilers and pipes overheating unprotected woodwork, costing more than \$12,000,000.
3. Matches, cigarets and cigars, causing fires amounting to over \$16,000,000.
4. Careless handling of petroleum, oil, grease and such inflammable substances with a fire cost of more than \$7,000,000.
5. Sparks falling on wooden-shingle roofs, causing a loss of \$6,700,000.
6. Live coal, hot ashes and unprotected open fires, with a damage bill of more than \$3,000,000.

7. Candles, lamps and other open lights, accounting for a loss of nearly \$4,000,000.

8. Fires resulting from the use of gas in cooking or illumination, costing \$2,700,000.

9. Fires starting in rubbish and litter. The loss from this cause was less than \$147,000, which was very much less than in previous years. This gratifying improvement is probably a reflection of the growing observance of "fire prevention day" and municipal "clean-up" weeks.

10. Fireworks caused fires doing nearly \$280,000 worth of damage. This in spite of the long crusade for "a safe and sane Fourth"!

It will be noted that most of the causes of domestic fires are in the "strictly preventable" list. On the other hand many causes that are listed as only "partly preventable" are peculiar to industry. Electricity, for example, accounted for a loss of more than \$20,000,000; explosions for over \$3,000,000; sparks from machinery for the remarkably high figure of \$7,775,000. The largest single item was, as might be expected, exposure to general fires such as forest fires, city conflagrations and the like. These caused a property loss of nearly \$64,000,000. Lightning caused a loss of \$9,500,000. "Spontaneous combustion" accounted for over \$10,000,000; and "miscellaneous known causes" for over \$6,000,000.

DON'T BLAME IT ON THE HUN

In view of the continuous reverberation of rumors as to German and Bolshevik "fire-bug" plots it is worth noting that in 1918 less than \$3,000,000 worth of property was proved to have been destroyed by incendiaries. The figure was less than in 1917 and considerably less than half the loss in 1916, a year when we were at peace and the authorities were probably less on the alert. Undetected incendiaryism may, however, have done something to swell the damage bill of \$88,000,000 from fires of unknown origin.

So many recent fires have occurred in Indianapolis that Mayor Jewett has urged the city council to pass an ordinance forbidding the use of shingle roofs. This ordinance has also the active support of the Fire Insurance Agents' Association of the city. The *Insurance Field* points out the similar experience of some southern cities with the shingle roof and the careless householder:

Fires traceable to carelessness and shingle roofs are conspicuous in the annual reports of the fire departments of Southeastern cities for the year 1919. Practically every city of any size in the Southeast attributes the majority of the causes of its fires to these two reasons. Tampa, Florida, reports that carelessness in securing equipment necessary to insure proper water pressure cost nearly \$500,000 in a fire which could have been controlled with adequate pressure. The annual report of the Atlanta fire department furnishes a striking example. Of 1636 fires, 600 were due to shingle roofs and 278 fires are put down to "carelessness." Carelessness with matches led the list with 59 fires and there followed: Gasoline with 41, stoves with 28, ashes with 22, cigarets with 20.

Does Your Church Want To Earn An Expensive Motion Picture Machine

Over 4000 successful churches are now adding to their influence, attendance and revenue by using the power for good that is contained in moving pictures.

The motion picture is now used as an instrument for Christ's teachings. Its power for good is just as great as its power for harm. Guided and directed by Christian minds the motion picture is destined to become a powerful influence in the cause of Christianity and righteousness.

Thousands of ministers are enthusiastic about the possibilities of motion pictures in churches. Below we give a characteristic letter from one of these ministers:

"There can scarcely be any question in the minds of right-thinking men and women, that the presentation of the great stories of the Bible and other morally uplifting subjects on the canvas, through the medium of the moving picture, one of the greatest inventions of the age, under the careful supervision of reliable Christian men, can be made a mighty power for good."

Recognizing as we do the vast results for uplift and wholesome recreation in the right kind of films we have decided upon a step that should be of interest to every church in the country.

We have made arrangements with a leading manufacturer of motion picture machines (one of the very best standard makes), that will enable your church to obtain a complete outfit in return for a little work on the part of some of your women members.

By having a high class Moving Picture Machine you can add greatly to your Sunday School and Sunday evening attendance, besides bringing out a big crowd at one of the mid-week evening meetings. A collection can be taken at the week-day meeting which will more than pay the weekly rental on all the films you use. There are several companies engaged now in producing and collecting films especially suitable for church use.

If you would like to see your church join the progressive churches that are enthusiastic about the value of moving pictures in church work write us at once. Full particulars sent free. Simply ask for our offer to supply your church with a moving picture machine without cost. This is the most liberal offer ever made to churches by any publication. Address

TODAY'S HOUSEWIFE

Motion Picture Department : : 461 Fourth Avenue, New York City

The United States Life Insurance Company

in the City of New York

Organized 1850. Non-Participating Policies only. Over Forty Five Million Dollars Paid to Policyholders.

JOHN P. MUNN, M.D., President.

Good territory open for high class, personal producers, under direct contracts with the Company. Address: Home Office, 277 Broadway, New York City.

DIVIDENDS

AMERICAN TELEPHONE & TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Thursday, April 15th, 1920, to stockholders of record at the close of business on Friday, March 19, 1920.

On account of the Annual Meeting, the transfer books will be closed from Saturday, March 20th, to Tuesday, March 30th, 1920, both days included. G. D. MILNE, Treasurer.

AMERICAN TELEPHONE & TELEGRAPH COMPANY

CONVERTIBLE FOUR AND ONE-HALF PER CENT. GOLD BONDS.

Coupons from these bonds, payable by their terms on March 1, 1920, at the office or agency of the Company in New York or in Boston, will be paid in New York by Bankers Trust Company 16 Wall Street.

G. D. MILNE, Treasurer.

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. A Message from the United States Government. By David F. Houston.

1. In a short talk explain the importance of improving the rural life of the United States.
2. Explain in what ways Washington Irving's account of rural life in England is applicable, or not applicable, to rural life in the United States.
3. Contrast what Edmund Burke, in his speech on "Conciliation," says concerning agriculture in the Colonies, with what is said in this article concerning agriculture in the United States.
4. What contrasts can you draw concerning rural life as presented in "Silas Marner," and rural life as presented in the article?
5. Prepare a talk concerning the work of an agricultural college in your own state.
6. Prepare a well-formed composition on the work of any great Federal department other than the Department of Agriculture.
7. Prepare a brief for an argument that will establish the truth of the following: "The Federal Department of Agriculture is the greatest scientific organization in existence."
8. Explain the purpose of every one of the sixteen divisions of the Department of Agriculture. Use a single sentence for every explanation.
9. Prepare a neat, well-tabulated list of the financial advantages contributed by the Department of Agriculture.
10. In a paragraph of cause and effect emphasize what the Department of Agriculture has done to increase the production of food.
11. Write an original short story that will emphasize the truth of the following: "There will be farmers enough if the business of farming is made profitable, and if rural life is made attractive and healthful."
12. Write a paragraph in which you show how the providing of good teachers and satisfactory schools is related to the providing of food for the United States.
13. Write a character sketch of the former Secretary of Agriculture, basing all that you say on conclusions drawn from the article.

II. A Message from the Imperial Japanese Government. By Vice-Admiral Isamu Takeshita.

1. In a single sentence summarize the message that Vice-Admiral Takeshita sends to the American people.
2. Prove the proposition: "The world is growing smaller."
3. Define the following words: aggressive, paramount, strategic, intolerable, analogy, embargo, antagonistic.
4. Consult any encyclopedia for information concerning Korea. Imagine that you have traveled in that land. Give a short talk concerning Korea, emphasizing the points that would be most likely to attract your attention if you had really visited Korea.
5. Explain in full, with specific instance, the simile, "The sailors fought like the Spartans of old."
6. Write a paragraph of contrast concerning Japan and the United States.
7. Draw from the article material for a composition on "The Character of the Japanese People."

III. Rare Metals in Everyday Use. By Edwin E. Slosson.

1. Prove the following proposition: "Solving problems in chemistry sometimes unexpectedly solves household problems."
2. Write the "autobiography" of a Welsbach mantle.
3. Write a dialog in which you present a dispute between an ordinary match and a cerite lighter.
4. Write an original short story in which you tell of a practical joke played with gallium.
5. Write a short story that could be used as suggestion for the scenario of a moving picture play, telling of some strange use that you imagine has been discovered for one of the rare metals.

IV. The High Cost of Carelessness.

1. Prepare a talk in which you show what school pupils can do to prevent destructive fires.
2. Write a composition on "The High Cost of Carelessness," developing your work on some other subject than fire losses.

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Coming Presidential Campaign—"A Few Plain Words to the G. O. P.," "Congress, the People and the President," "She Who Must Be Obeyed."

1. On the basis of the statements contained in these articles discuss some four or five of the probable issues of the coming Presidential election.
2. What grounds are there for the belief that, "It's a Republican year in spite of anything that can happen"?
3. On what grounds will the Republicans be able to attack the Democrats? The Democrats be able to attack the Republicans?
4. Who, in your judgment, is the leading Democratic candidate? The leading Republican candidate?
5. What part are the women likely to play in the coming election?
6. What evidences do you find in Congressional action to indicate that this is a Presidential year?

II. The President Assumes Control—"The Return of Ulysses," "Railway Strike Threatened."

1. State briefly the causes of controversy between President Wilson and ex-Secretary Lansing. What is your opinion of the constitutional question raised by the President? Of the President's complaints against Mr. Lansing in reference to the Peace Treaty and the Mexican situation?
2. "The resignation of Secretary Lansing is the ninth resignation," etc. Discuss the causes of the resignation of the other eight Cabinet members.
3. "Ulysses sent his second arrow across the Atlantic." Explain this figure of speech.
4. Indicate briefly the action taken by the President which prevented the outbreak of the threatened railway strike.

III. The Problem of the Pacific.

1. According to the author, what were the reasons for the Chino-Japanese and the Russo-Japanese wars? Do these reasons agree with those given in your text book?
2. Do you find in this article statements which justify us in calling Japan the England of the Far East?
3. Summarize the author's arguments in favor of the proposition that the interests of Japan and of the United States in the Pacific are identical.

IV. Lost Empires of Britain.

1. Make a list of Great Britain's most important dominions in each of the six continents. Indicate in a few words how she came into possession of each.
2. What parts of her empire did she lose in the eighteenth century? In the nineteenth century?
3. When and under what circumstances did Great Britain relinquish control of Heligoland? What is the present status of the island?
4. Write a brief history of the Dutch East Indies.

V. Danes Win North Schleswig.

1. What are the provisions of the Peace Treaty (Section XII, Articles 109-114) under which the recent plebiscite was held in North Schleswig?
2. "The Schleswig plebiscite writes the latest chapter to one of the most important political controversies in modern history." Write a brief résumé of this controversy.
3. Make a résumé of the provisions of the Treaty relating to the Saar Basin and to Upper Silesia.

VI. Out of Siberia.

1. Why did the United States send its troops into Siberia in August, 1918? Why are they being withdrawn?
2. Do you agree that "it would have been better if the Allies had followed the American policy" in Russia?
3. How does the author account for the failure of Kolchak and of Denikin?

VII. Our Forward March in Agriculture.

1. "The Department of Agriculture has sixteen divisions and two boards," etc. What are the functions of these divisions and boards?
2. What agencies of the Department are at work in your community?
3. Make a further investigation of one or more of the following subjects: (a) Eradication of hog cholera, Texas fever and foot and mouth disease, (b) White scale, citrus canker and boll weevil, (c) Durham wheat and Kaffir corns.

Remarkable Remarks

KING GEORGE—We have won the war.

ED. HOWE—I hate mayonnaise dressing.

CHAMP CLARK—They all cuss Congress.

HERBERT C. HOOVER—I am not a candidate.

MARQUIS OKUMA—All Americans are not good.

SAMUEL GOMPERS—My life has been most irregular.

SENATOR CAPPER—The public is being sandbagged.

SENATOR LODGE—I am fighting President Wilson.

LADY ASTOR, M. P.—I have just enough devil in me.

SENATOR SHERMAN—I am on a political hunger strike.

LOUISE CONNOLLY—Life for most women is a man hunt.

ETHEL LEGINSKA—I like bobbed hair because it saves time.

MARSHAL FOCH—From the age of seventeen I dreamed of revenge.

FATHER HUGHES—The Catholic Church will never recognize divorce.

SENATOR NELSON—The newspapers ought to eliminate the sporting page.

THE PRINCE OF WALES—The world seems rather lost at the present time.

COLONEL HOUSE—I have been fairly successful in dodging receptions all my life.

MRS. WINSTON CHURCHILL—It is I who invariably choose my husband's hats!

PADEREWSKI—We are no longer in days of lyricism. We are in days of action.

REV. CHARLES H. RICHARDS—There is no greater joy than that of a pastorate.

PROF. CLARE M. HOWARD—Very diaphanous blouses in an office are distracting.

REV. JOHN KELMAN—Christianity is to Bolshevism what insect powder is to vermin.

PREMIER HUGHES OF AUSTRALIA—The next world war will break out in the Pacific.

RAY STANNARD BAKER—The "shoot-him-down" program of the intolerant employer and the "blow-him-up" program of the intolerant worker! In either way lies perdition.

SIR OLIVER LODGE—Senator Lodge bears a striking resemblance to the present head of the English Lodges. It is extremely interesting to observe certain ancestral traits cropping out.

Change of Address

To meet the growth of its business the Independent Corporation, formerly at 119 West 40th Street, will on March 15, 1920, move its executive offices to its larger quarters at 311 Sixth Avenue. For the present the same telephone number will be retained—Bryant 6550.

New Plays

The theory that the play's the thing is being disproved by Broadway nowadays, where a vehicle must always be hitched to a star. In *Smilin' Thru*, for instance, the dominant impression is of Jane Cowl's charm. But that in itself is worth an evening. (Broadhurst Theater.)

Those New Yorkers to whom opera is a musical treat rather than a society function look forward—and backward—with delight to the time when Chicago comes to New York. Galli-Curci's clear precise notes combine the tones of bird and bell and when she sings "Caro nome" in *Rigoletto* even the opera-goers who remember hearing Patti bow to the new star. The Chicago Opera Company's production of *Norma* on February 19, with the Polish prima donna Raisa in the title rôle, was probably the best that has been given in America in thirty-five years. With Bonci, the unexcelled bel canto tenor, Mary Garden, the unique, and a host of other stars, the Chicago Opera Company can hold its own with the Metropolitan or any other for that matter. (Lexington Theater.)

Just a Word

"Pride is a virtue when it's based on fact" is a proverb that appeals to us especially this week—for we announce with particular pride the new series of articles to begin in the next issue of The Independent on America's part in the great battles of the war. Captain Joseph Mills Hanson, the author of the series, is the first man to write up the American battles of the war from a complete study of the official records. Captain Hanson has had full access to the War Department's files and has spent months in condensing from the mass of material in the Government records a concise, authoritative and humanly interesting narrative of what the Yanks did on the firing line. His articles for The Independent will be illustrated by official maps and war photographs.

You hear the real Caruso

TO hear the real Caruso—to hear all the greatest artists of the world in your own home just as they want you to hear them, it is as necessary that you should have a Victrola as that you should have their Victor Records.

The Victrola and Victor Records are scientifically coordinated and synchronized in the processes of manufacture, making it necessary to use them *together* to achieve a perfect result. The greatest singers and instrumentalists are Victor artists not only because their interpretations are so faithfully recorded on Victor Records, but because the Victrola is the one instrument that plays them with the degree of perfection and beauty of tone that meets the approval of the artists themselves.

When you play Victor Records on the Victrola—and only on the Victrola—you really hear these great artists exactly as they themselves heard and approved their own work.

Any Victor dealer will gladly play any music you wish to hear. Victrolas \$25 to \$1500. New Victor Records demonstrated at all dealers on the 1st of each month.

Competition Is the Death of Trade

By Edwin E. Slosson

"One of the things that have dropped out of our present is the old controversy between free trade and tariff. Free trade has become manifestly absurd and impossible. The tariff has become manifestly inadequate and antiquated. The two are no longer opponents. One has vanished and the other is superseded. The antithesis to 'free trade' is not 'protection' or 'tariff,' but 'regulated trade.' One object of trade regulation is protection: one form of protection is the tariff. Hereafter the tariff will be supplemented to a considerable extent by government control, encouragement, aid, management, direction and development. Commerce will no longer be allowed to run wild. It also must be brought under the sway of law and order, which means abandoning all idea of free trade."

THE world has taken a jump during the war. It has skipped several decades in the last five years. It has left quickly behind ideas which in the ordinary course of events would have gradually faded from view. One of the things that have dropped out of our present is the old controversy between free trade and tariff. Free trade has become manifestly absurd and impossible. The tariff has become manifestly inadequate and antiquated. The two are no longer opponents. One has vanished and the other is superseded.

By the accident of American politics these two terms, "free trade" and "tariff," or "free trade" and "protection," have come to be regarded as logical opposites, as the two horns of a dilemma between which the nation must choose. But as we can see on a moment's reflection these are not the only alternatives.

The antithesis to "free trade" is not "protection" or "tariff" but "regulated trade." One of the aims of the governmental regulation of trade is the protection of local industries and one of the methods of regulation is the tariff. But there are many other kinds of protection needed than the protection of local industries and there are many other methods of regulation than the tariff, some of them more direct and efficient. During the last five years almost all international commerce has been under the direct control of the belligerent governments. They have dictated where and when a ship shall sail, what its cargo shall be and what it shall be sold for. This was a war measure and will of course be relaxed. But governmental control of production, distribution and consumption will not be altogether abandoned but will be much more extensive than formerly in time of peace. All nations and practically all parties in each nation are committed to some kind of trade control. This may range from absolute prohibition to a five per cent duty on importations.

A tariff is the oldest, easiest and cheapest method of trade regulation. But it is a crude and clumsy method,

indiscriminative, inelastic, often ineffective, sometimes working the wrong way, easily capable of abuse. All governments are now employing the tariff, but many of them in the future will go farther and adopt new and more radical means of maintaining essential industries and channels of commerce. The tariff, at the best, is a negative measure, restrictive rather than promotive. Hereafter it will be supplemented to a considerable extent by government control, encouragement, aid, management, direction and development. Commerce will no longer be allowed to run wild. It also must be brought under the sway of law and order.

Free trade was the last surviving offshoot of the old *laissez-faire* or let-alone philosophy of the mid-Victorian era. The idea of it was that the sum of individual selfishnesses would be the general welfare. We should rather expect the resultant to be zero if all individuals were of equal ability, but since they are not it meant that the stronger gained strength at the expense of the weaker and the virtuous were at the mercy of the unscrupulous. To make the matter worse the superman came on the scene, the trust, the conscienceless corporation, whose capacity was unlimited, who never died and never tired and had neither body to be kicked nor soul to be damned. Now this new and superhuman being was above the law, for the law had made no provision for controlling any creature larger than a man. There were no prisons built big enough to put Big Business in. He was like Ibsen's Great Boyg, invisible, invulnerable and all pervasive. When Government ordered him to dissolve he multiplied. He was merely a legal fiction, but could not be got to confess it. Man who made him did not know how to unmake him, could not in fact get along without him so the only thing to do was to manage him. That, it seems, is not altogether impossible. It is no harder to control commerce for the benefit of the community than to control steam or electricity or water-power. But it means abandoning all idea of free trade.

Indeed if we had to choose it would be safer to abolish criminal law than commercial law. If there were no law against murder there would be lively shooting for a while, but soon, as in a wild west mining camp, the biggest bullies would be met by a bullet and the community settle down to an armed peace. If everybody were free to steal from everybody else nobody could accumulate very much wealth. But under a régime of unrestricted commercial liberty a man may multiply his millions without limit and the operations of international finance may, with quite unconscious cruelty, cause the death of thousands by depriving them of a livelihood.

Free trade means every man for himself and the devil take the hindmost. This was bad enough when only individuals were involved, but it becomes intolerable when the corporation enters the arena. Anarchy leads inevitably to tyranny in the commercial as in the political world. Where there is no regulation the strongest dominates the weaker, the strongest man, the strongest nation or the strongest aggregation of capital. The strongest man dies and gives a chance to the rest, but the strongest trust may live forever.

SO much the better of course if big business can be made the servant of the people instead of their master. It would be as absurd to try to abolish the gigantic commercial mechanism which is one of the most marvelous of modern inventions, as it would be to get along without steam and electricity. Obviously, too, the labor union in some form has come to stay. But the single individual cannot compete on even terms with such collective corporations, whether of capital or labor. If a corporation is soulless it cannot be cruel any more than it can be kindhearted. It is simply a machine and such harm as it may do to individuals is as unconscious and unintentional as when a locomotive runs over a man on the track. However cautious and tender-hearted may be the engineer we cannot dispense with an efficient sign and signal system. Whenever commercial and industrial combination enter in, whether they are trusts, corporations, syndicates, unions, guilds, coöperatives, cartels or soviets, henceforth free trade, that is, unrestricted commerce, becomes impossible. Government does wisely to regulate them, altho it does not always regulate them wisely.

Where commercial relations are unregulated not only does the stronger have the advantage over the weaker but the wicked have the advantage over the good. Under such a "free trade" régime dishonesty is the best policy. The grocer who adulterates his food, the employer who underpays his labor, the financier who evades his obligations, the shipper who gets secret rebates from the railroad, the manufacturer who crushes his rival, all sorts of sharpers and cheaters and taskmasters get rewarded at the expense of their competitors and the public. The only deterrent is the danger of detection. It is not merely infant industries that need protection; it is infant children. Consequently we have laws prohibiting free trade in watered and doctored milk and in the products of child labor. For many years attempts were made to restrict the liquor traffic by taxes or duties, but

now it is simply prohibited. The various states prohibit the free passage and sale of lottery advertisements, cigarets, explosives, obscene literature, immoral films, infected cattle, insect-infected plants and innumerable other things. The Federal Government controls interstate commerce with constantly increasing stringency. The League of Nations is pledged to prohibit traffic in dangerous drugs, and plans to regulate international commerce with a view to prevent those countries that pay the lowest wages from getting the advantage.

FREE trade has proved a failure between the states of the Union and has been abandoned. It has proved a failure between the nations and is now abandoned. England, being the strongest commercial country in the world, gained most by a free trade régime, but in the end she was beaten by protectionist rivals and has now been forced practically to reverse—if not verbally to repudiate—her former policy. The fact that the United States outdistanced England was plausibly accounted for by British free traders on the ground of the undeveloped natural resources of America, but when Germany, an old country with a worn-out soil, forged ahead of England in both manufacturing and agriculture by adopting protection, this excuse would no longer pass. England had in her tropical possessions the best sugar producing land in the world, but Germany, by means of tariff, bounties and export rebates, developed a home-grown sugar industry that swamped the British market and ruined the West Indies. Consequently England before the war had to set aside her free trade theories and adopt strict regulations to prevent sugar being sold too cheaply in Great Britain. At the present time tea grown inside the British Empire pays an import duty of ten pence a pound in England, while tea from foreign countries pays a shilling. Imperial preference is likewise extended to sugar and tobacco. All of the British dominions have protective tariffs with discounts for British products. Welsh tin plate producers are now demanding protection against American tin plate, which can be sold cheaper in the home market. Yet I remember that when tin was first put into the tariff bill the free traders of America said that the United States could never compete with Wales, which had the advantage of mines, labor and experience, and that it was absurd to provide protection for an infant industry which was not in existence. But a wise government, like a wise mother, provides a layette for an anticipated infant. It was lucky for England that we did build up a tin plate industry of our own by means of the tariff, for

if it had not been for that we could not have supplied the British, French and American armies with the canned goods that they had to have.

The British Government in its new protective policy is not going to confine itself to tariff duties, but has adopted and proposes to extend more effective measures of direct restriction and prohibition of imports and exports. The British Committee on Commercial Policy After the War, altho it contained free trade members and was presided over by a free-trader, Lord Balfour of Burleigh, reported unanimously in favor of imperial preference and governmental regulation. El Dorado

By Edwin Markham

Into dim and nameless lands,
Over dry and desert places,
We have followed waving hands,
We have followed fading faces.

All in vain we followed dreams—
Followed echo, followed shadow;
Where's the source of golden streams,
Where's the longed-for El Dorado?

Still forever must we fly
Over hill and over hollow;
Still forever hear the cry:
"Follow, mortal—follow, follow!"

Civilization's Surrender to Barbarism

By James W. Gerard

Former United States Ambassador to Germany

SHOULD the proposed retention of the Turks in Europe and the spoliation of Armenia be ultimately confirmed by the Supreme Council, they will constitute the two most indefensible crimes of modern history, and future generations will recall the names of their authors with shame and righteous indignation. Great Britain and France will be condemned by decent men and women everywhere for their partnership with a nation of criminals, and American friendship for England and France will be dealt a deadly blow to the lasting injury of the interest of Christian civilization. This will be all the more regrettable because the preponderant opinion of the democracies of England and France is as bitterly opposed to the proposed surrender of their governments to the Turkish criminals and to the forces of greed and of imperialism, as the democracy of America is. This fact, however, cannot and will not in the slightest degree change the logical consequences of things. For, as the replying memorandum of the Allied Powers to that of the Turks so cogently states, "generally speaking, a nation must be judged by the government which rules it, which directs its foreign policies, which controls its armies."

DURING the presence of President Wilson in Paris and later during our active participation in the deliberations of the Peace Conference, the moral tone of that body was pretty nearly kept up to the standard of the high motives and principles for the defense of which we entered the war and for the success of which we fought the war; but no sooner had we withdrawn than the forces of reaction gained the upper hand.

Mr. Lloyd George is deservedly recognized as a great and liberal statesman, but in his handling of the Turkish treaty he has not the backing of Liberal Britain.

As for France, the judgment of history will be that a body of politician-journalists, some of whom have stood sponsor for Abdul Hamid since 1895, and others who have been the staunch and admiring friends of the Young Turks, have used their influence to sell the honor of France to a string of financiers and to the unspeakable Turks, to the lasting injury of the interests of France.

The Allied replying memorandum to that of the Turks, dated June 25, 1919, is the severest condemnation of Turkish rule on one side and that of the present Allied policy on the other. It reads in part:

The experiment has been tried too long and too often for there to be the least doubt as to its result. . . . History tells of many Turkish successes and of many Turkish defeats—of nations conquered and nations freed. . . . The Turkish Empire is, it seems, to be preserved unchanged, not so much because this would be to the advantage of the Moslems or of the Christians within its borders, but because its maintenance is demanded by the religious sentiment of men who never felt the Turkish yoke or have forgotten how heavily it weighs on those who are compelled to bear it. . . .

What was true in June, 1919, is equally true today—the surrender of the Allies to the Turks cannot possibly be justified on the ground of probable Moslem uprising as a result of the expulsion of the Turks from Europe. The Allies did not appear to be bothered with the threat of Moslem uprising as a result of the expulsion of the Turks from Egypt, Mesopotamia, Syria

and Arabia. The Allies can readily recall the significant fact that a Turkish Empire with an army of 1,500,000 men, and backed by the armies and resources of the German and Austrian Empires, did its best to stir up Moslem fanaticism against the Allies during the Great War, and did not succeed, and that, it would be well nigh impossible for dismembered Turkey, whose army today consists of less than 100,000 improvised and ill-assorted troops and which does not enjoy the material support of any great nation, altho possibly the moral support of Great Britain and France, could not make any serious trouble in the Moslem world against Great Britain and France.

If it were to be assumed that the Turks could really stir up the Islamic world against Great Britain and France, then the most elementary consideration of the interests of Great Britain and France would suggest the advisability of facing that immediate risk today rather than of leaving the Turkish case in a position to be a constant menace to the peace of the world.

Moreover, if it be true that the compromise with the Turks was in any way due to the feeling that the Islamic world would be stirred up against France and Great Britain as a result of the expulsion of the Turks from Europe, then it should be stated that France and Great Britain are setting a most dangerous precedent, for by keeping the Turks in Europe in obedience to the Turkish threat, they are solemnly recognizing the extravagant and spurious claim made by the Turks that they hold a dominant influence over the Islamic and Turanian peoples. They are serving notice on the Islamic and Turanian peoples that whenever they want to extort any sort of concession from the Christian world all that they will have to do will be to threaten riots and insurrections. The surrender of the Allies to the Turks will make the Turanian and Islamic peoples conscious of a power the possession of which they have heretofore claimed, but in whose force and efficiency the great majority of them did not believe.

BUT we would not be performing our full duty if we were to confine ourselves merely to uttering words of condemnation against the proposed deeds of France and Great Britain in the Near East. We must tell our British and French friends in unmistakable terms that the retention of the Turks in Constantinople and the spoliation of Armenia will seriously affect the friendly sentiment which today exists in America for England and France—and will provoke most dangerous anti-English and anti-French propaganda in America. We must tell them that the conscience of America will revolt with an irresistible passion of abhorrence and of indignation against those who so complacently offer to shake the bloody hands of the Turks and who endanger the peace of the world under the nefarious influences of greedy financiers and discredited imperialists.

It is our duty to tell these things because the retention of the Turks in Europe and the decimation of Armenia will give the lie to the underlying principles and purposes of the League of Nations; reduce every international covenant and agreement to scraps of paper; expose governments to the ridicule and contempt of peoples everywhere, and make another war, in the not distant future, inevitable.

New York

A Message from the British Nation to the American People

The Strike Epidemic

"There is a wind of unrest blowing across the continent of Europe, disturbing old beliefs and upsetting the minds of men in all countries. I hope, and I believe, that the British constitution will have enough stamina to withstand it"

By C. A. McCurdy, K. C., M. P.

I ALWAYS think the saying in the Scriptures, "Blessed are the meek, for they shall inherit the earth," must be the real explanation of the growth of the British Empire. There are really no people on earth quite so meek and lacking in any national spirit as the English. In the last two years of the greatest war in which the English people, or any other people in the world's history, were involved, the English were hardly represented in the supreme government of the Empire. Canada, South Africa, Wales, Scotland and Ireland naturally took their place in the British War Cabinet, where a Welsh Prime Minister found himself sitting between a Scots Canadian like Mr. Bonar Law, and a Cape Dutchman like General Smuts. For a time, until someone thought of asking Mr. Austen Chamberlain to join their councils, the English constituencies had no representation in the War Cabinet at all. It is a pathetic fallacy to think of the English people as a governing or imperial race. For centuries the English people have never even been permitted to govern themselves. The Irish, Scots and Welsh do that for them, and if any part of the British Empire is mismanaged the Englishman is the last person to whom it would be fair to impute blame.

It is perhaps due to this placid temperament of the English that until quite recently labor politics in this country have been free from the revolutionary and sensational elements which mark the Syndicalism of France and Italy, or the Bolshevism of Russia. Until recently Labor politics in Great Britain have meant little more than trades unionism of the old-fashioned sort—non-political, non-revolutionary—just the association of workmen, who pay their weekly subscriptions into a common club and draw benefits in the form of sick pay and strike pay, combining together, not with any idea of fighting governments or interfering with political institutions, but for the purpose of getting on even terms with the employer.

We have known nothing in the country of Social Revolutionaries, the Anarchists and Terrorists who

have embittered labor disputes in every other country in the world. We have regarded as extremists and firebrands such men as Ramsay Macdonald and Philip Snowden, whose kindly, old-fashioned Socialism would probably mark them out for immediate execution as reactionaries at the hands of any Syndicalist or Bolshevik form of government. In fact, Socialist doctrines of any kind had made very little headway in Great Britain up to the beginning of the war. Only in a few constituencies could a genuine Socialist hope to poll more than a few hundred votes.

Today the old country is moving with the times. The British labor movement is becoming a Socialist party, a Syndicalist party, and some of its leaders would apparently like it to become a Bolshevik party. There is a new spirit of labor unrest which is very embarrassing to the British Government. Since the armistice we have had an epidemic of strikes—a coal strike, which cost us about five million pounds; a police strike, which led to actual disorder and looting in Liverpool; a dockers' strike, strikes of calico printers, strikes of agricultural laborers, a general railway strike, an iron molders' strike, and others too numerous to mention.

It is a tribute to the British love of order that in all this orgy of unrest which has marked the year 1919 there has been no single case of violence or injury to property, so far as I know, except in the case of the police strike at Liverpool. I watched that strike from start to finish: the rioting only lasted for a few hours, and was entirely due to the high spirits of the Irish quarter. It is the absence of violence and

London Opinion

ONE DOWN—ONE TO GO

John Bull: "All the time I've been fighting Fritz you've been threatening me. Now come on—if you're sure you really want to fight!"

disorder which makes the onward sweep of the labor movement in this country more impressive. The next few months will see a decisive trial of strength between the Labor Party and the Government. The issue that will be decided is not a question of wages or hours of labor; it is bigger than that.

The miners of Great Britain, who with their families form about a tenth part of the entire population, demand the socialization of the entire mining industry of the country. Before the war it was well known that the miners were preparing for a trial of strength with the mine owners, which was to take place in 1915. When 1915 came the miners, like patriotic men, decided to postpone their demands until the war was over. At the beginning of last year they sent in their ultimatum. They demanded a six hour day, a thirty per cent increase of wages, and nationalization of the mines. The Government tried to settle, but the miners were in no settling mood. The only choice they gave the Government

was between a general strike and the concession of everything they asked. Finally it was agreed to wait until a Royal Commission, appointed to inquire into the whole conditions of the coal industry, should report, with a promise that the Commission should make up its mind with regard to hours and wages within a fortnight. The Commission consisted of twelve members, with Mr. Justice Sankey, a judge of the High Court, as the chairman. The miners had among their representatives Mr. Sidney Webb, Sir Leo Chiozza Money, and the redoubtable Robert Smillie. It must be admitted that the commissioners who represented the Government and the general public were a little outclassed by these brilliant representatives of socialistic views. In a fortnight the Commission had issued its Interim Report: it gave the miners practically all they asked in the way of hours and wages—a seven hour day until 1921, a six hour day after that—an additional thirty millions a year in wages.

But the Interim Report, to the astonishment of the Government and the general public, also declared that even upon the evidence already given the present system of ownership and working stood condemned, and that nationalization or some other system of national purchase and joint control must be substituted for it. As the Commission up to that date had heard no evidence about the schemes of nationalization and joint control, except the evidence of one of the miners' representatives, it is difficult to see by what mental process they had arrived at this startling conclusion. Upon this, the miners put up a demand for immediate nationalization, and were with difficulty restrained from a general strike to enforce it. Finally the Commission was allowed to resume its sittings. Mr. Sidney Webb, one of the commissioners, took the rather unusual

course of going into the witness box, and proceeded to explain the principles of nationalization, on the well-known lines advocated by the Fabian Socialists in this country for many years, with great brilliancy and effect. For a whole month the battle of collective ownership versus capitalism was fiercely fought. Sir Leo Chiozza Money also left his seat on the tribunal to appear as a witness to the blessings of collectivism and to the evils of private management. While this intellectual duel went on the Commission seems to have forgotten altogether about the miners. It was not until the 23rd of May, when the Commission had been sitting for a whole month, that the miners for the first time put forward a witness to explain what it was that they wanted. What they demanded was not that the nation should acquire the mines in a collective ownership, the scheme of socialism which Mr. Webb and Sir Leo Chiozza Money had so brilliantly explained, but something quite different. They demanded that the mines should be transferred without compensation as regards royalties and mining rights to a Mining Council, of which one-half was to be appointed by the Miners' Federation; that the Mining Council should have no power to settle wages in future, except in consultation with the Miners' Federation; and that the Miners' Federation should still retain the right to strike. They demanded, not "nationalization," but Syndicalism, not the mines for the nation, but "the mines for the miners."

The commissioners by a majority recommended "nationalization." What that recommendation means, nobody knows; what the miners want is perfectly clear—it is the application to the greatest industry of this country of those economic doctrines which have replaced the doctrines of Karl Marx among the extreme and revolutionary Socialists of the continent. The British labor movement has passed at a bound into the ranks for the revolutionaries.

Nationalization of the mines, in the sense in which the miners use that term, is now the first constructive plank in the labor policy of Great Britain. It may be a turning point in this history of British politics. I am not afraid for one moment that Syndicalism in Great Britain will follow the course of Syndicalism in Italy or France, where, for a quarter of a century, it has been closely allied with all the elements that desire world revolution and the [Continued on page 367]

A Message from the United States Government

The Thing We All Want Most

By Edwin T. Meredith

Secretary of Agriculture

THERE is an idea, fairly widespread and deep rooted, that reducing the cost of living is essentially an agricultural problem. If satisfactory results are to be secured, however, business men must also give their attention to the problem. Getting food delivered at the kitchen door at the right price does not depend solely on how much of it the farmer produces or what price the farmer gets for it, but also on the expedition and economy with which it is handled between the farmer's wagon and the pantry. The problem of the high cost of living is common to the whole people, and cannot be solved unless business and labor, as well as agriculture, put their mind on a solution.

The consumer, of course, pays the production cost of farm products—except when the farmer sells his products for less than it costs to produce them. Production costs are high now, and the farmer must get satisfactory prices, or he will have to go out of business. If he goes out of business, both he and the city men will suffer.

When the farmer has been paid for his product, the bill that the consumer must pay is by no means made out. The consumer pays the freight from the farm to the city market. He pays for all back hauling and round-about hauling that result in so much delay and so much loss of perishable products. He pays for terminal facilities—and, if those facilities are not what they should be, he pays a penalty because of inefficiency.

International

As Secretary of Agriculture, Mr. Meredith occupies the office formerly held by David F. Houston, now Secretary of the Treasury

He pays the profits of the commission man, of the wholesale merchant, of the retail grocer, as well as the wages and salaries of the boy who drives the delivery wagon and of everybody who has anything to do with the product from the time it leaves the farm until it reaches the kitchen. Every inefficient man in that chain of distribution, every man who draws a salary or wages for work not needed, every man who does not render honest service, is adding a burden to what the consumer must pay for his food.

When we have taken the lost motion out of distribution and properly emphasized production in the factory and on the farm, we will have gone a far way toward reducing the price that the ultimate consumer pays for his necessities. The farmer and the agencies that operate for and with the farmer, of course, are powerless to do that alone. It can only be done with the help of business men and laboring men everywhere.

DISTRIBUTION, of course, is just as essential as production, but if, out of every ten men, we have six engaged in distribution and only four in production, there can be consumed by each of the ten men only four-tenths of what one man can produce. If six of the ten are engaged in production and only four in distribution, each man can have for his own use six-tenths instead of four-tenths of what one man can produce. The principle applies to the 110,000,000 people in the United States in exactly the same way that it would apply to ten men marooned on an island. We cannot consume more than we produce, and the quantity produced by the whole tends to decrease with the increase in the number of men unnecessarily engaged in the distribution of the products.

I am not prepared to say that any given number of men should give up merchandizing or the place they may now occupy in distribution, and become factory laborers or miners or farmers, but I am prepared to say that, in justice to himself and to his country, every person ought to see to it that there are no drones in his own hive to add to the cost of distributing what the farmer and factory produce, and that every so-called laborer should see that he contributes just as largely as possible to the sum total of production, no matter what article he is making or what duty he may be engaged upon.

The farmer, of course, must produce—and of course he will produce. He gets paid only for what he produces. But there is one thing which will take him out of production and that is to be obliged to sell the product of his year's labor and investment for a price which does not enable him and his family to live as well as his friends in the city who devote their money and energies in other directions.

The farmers ask, naturally enough, that the high cost of living be approached by all the people as a common

Special to the World-Herald

The Struggle

problem. They ask that those engaged in distribution "take up the slack," eliminate the lost motion and refrain from putting so great a burden on production. They ask that the banks, the railroads, wholesale houses, retail establishments and factories—all of which they recognize as vital necessities—be put on the highest plane of efficiency. They look to the factory executive to speed up his operations so that two days' labor instead of three, if possible, will go into a given article which he finds necessary to his comfort or the conduct of his farming operations. Without taking anything from the manufacturer's profit, the farmer's margin is increased because of the fact that his equipment and supplies are thereby reduced in cost, his production is stimulated, and he is encouraged to stay on the farm. The farmer asks these things of business.

The farmer asks also that the laborers in the mine, the factory and the mill make an effort comparable to his to see that there is just as little labor expense as possible in each article turned out by their hands.

If labor in every line produces all it can produce, if manufacturers, jobbers and dealers recognize the harm that must ultimately come from profiteering upon the farmer and content themselves with a reasonable profit, an important contribution will have been made to the solution of the problem of reducing the cost of living, to the good of all concerned. On the other hand, if these things are not done, if farming is not as remunerative, pleasant, and attractive as other lines of endeavor, conditions will not improve. More and more will the young men leave the farms. More and more will the older men become discouraged. Less and less will there be of farm produce to divide among the whole people for their sustenance and higher and higher will go the price of that which is produced.

I hope I have made it clear that, in my opinion, the business men of America must recognize the problems of the farmer as their problems also. They must have a real understanding of the farmer's place in our national economy and they must help to provide and maintain facilities which will aid him in his business. The Federal Farm Loan Bank, for instance, is of great advantage to the farmers of America, making money available to them on favorable terms, without commissions, without renewal charges, giving him a long time to plan ahead where necessary and financing him to carry on the fundamental activity of the country; and yet an assault is being made upon this system. The success of the opponents of the Federal Farm Loan

Banks would be a blow to agriculture in America and would ultimately result in harm to all. The business men must interest themselves in retaining for the farmer this aid, and help in securing others.

On the production side the farmer has aided him all the accumulated knowledge of the United States Department of Agriculture, the Agricultural Colleges of the several states, and the experiment stations. The extension machinery of these institutions, functioning thru the county agricultural agents and the home demonstration agents in a great majority of the agricultural counties of the country, makes the information immediately available and directly applicable to the individual farmer. The county agents and home demonstration agents, while not neglecting production and utilization, are giving more and more attention to the economic end of the farm business, and more attention to buying and selling in cooperation with the Bureau of Markets and the Office of Farm Management in the Department of Agriculture.

It is desirable to make two blades of grass grow where but one grew before, but to encourage this you must have a market where you can sell the second blade at a profit. The farmers of the United States have been able to increase the number of blades and they are beginning to do something on their own account toward getting the extra blades to a profitable market. The farmer would prefer to devote his entire time to production. He has learned, however, that he is not made prosperous simply by what he produces but by what he can dispose of at a fair price, and he is giving more thought to the distribution end of his business than ever before.

I speak of those things by way of conveying to the business man this assurance: The farmer is not without the inclination or the necessary aids to do his part in reducing the cost of living. He is anxious to do his share and more, and he seeks the cooperation, the support and good will of the business world. All those who work together in strengthening agriculture and making it attractive, and this necessitates making it profitable, will aid in strengthening and making permanent the very foundation of our whole economic structure and will render a real service to the nation as a whole.

Washington, D. C.

Thomas in Detroit News

That shell-shock alibi

Inspection at one of the United States aviation fields

We'll All Take a Flight

By Lawrence La Tourette Driggs

President of the American Flying Club

AMERICA'S annual aeronautical show will be held this year in the armory at Thirty-fourth street and Park avenue, New York, from March 6 to March 13, inclusive. And thither will repair the thousands of war-trained pilots, their mothers, sisters and sweethearts, to see for themselves whether or no aviation is dead in America. In many respects the aero show is more interesting to the public than is the more familiar exhibition of new-model automobiles. There are many people who still have a hazy notion as to how the aeroplane stays in the air, and why. The interior of the pilot's cabin is a complete mystery even to those who may have seen the machines flying far overhead. The pleasure of actually touching the wings, examining the curve of the propeller, experiencing the sensation of seating oneself in the pilot's seat and imagining the voyage thru sparkling skies—these human emotions cause the crowds to throng the annual show in increasing numbers year after year.

And well it is that there is this public interest shown in aviation in this country. Abandoned by the Government even to the extent of reducing our national defense to a minimum, aviation here in the land of its birth depends now solely upon the support it gets from the people. Wo betide aviation if this support fails!

As a result of the lack of Government interest, the aeroplanes being designed today tend more and more toward commercial machines—machines for carrying passengers and freight, swiftly, safely, comfortably and in increasing quantities.

Instead of the crude "home-made" interiors of yesterday the machines of today have elaborately upholstered cockpits and cabins. Chairs instead of a bench seat you. There is a carpet on the floor and at your elbow is an unbreakable glass shield from wind and weather. You

are warmed by electric heaters. You read your morning paper or converse with your nearest neighbor much as you are accustomed to do on the Pullman chair-car.

The instrument board rather resembles that on the automobile except there are many more queer confusing open dials and registers. But they all become exceedingly interesting to you when their uses are explained. By one you count the number of revolutions the propeller is making; another gives you your altitude; a third is a compass which you easily recognize; then there is the oil pressure indicator, and other indicators of various kinds. Like a high-priced motorcar, the up-to-date aeroplane designed for passenger traffic contains these various instruments mounted and inserted in the very latest mode and finest workmanship to create the desire for ownership that is irresistible.

Vanity cases, cigar lighters, buffet luncheon tables (which can be used for card tables), thermos bottles, telephone connected with the pilot up in front, radio wireless telephones to enable you to talk down to your wife while you are speeding onward two miles a minute—all these concessions to luxury remind one that aeroplane travel has really come to stay.

Such a machine will be seen in the Martin Transport, a twelve-passenger, two-engined ship, capable of carrying its load a thousand miles in half as many minutes.

Orville Wright's company has turned out a smaller machine of still greater luxury. It has a sedan coupé, with deep chairs covered with whipcord. Flower vases are on the walls and electric lights can be turned on and the window shades drawn when you are passing thru plebeian crowds you wish to ignore. You and your wife sit side by side in individual chairs, while Jehu sits forward on the box with his hand on the throttle.

Small ventilators in the isinglass may be [Continued on page 368

The days when flying was sport only for the hardy are past. This interior of an Aeromarine plane to be shown at the New York Aero Show this spring is as comfortable and luxurious as a limousine—and the riding is much smoother

Editorially Speaking

All governments are "provisional governments."

* * *

The rubber stamp is hard to eliminate. The British keep a King and we keep an electoral college.

* * *

A favorite son means a candidate who does not expect any votes on the second ballot at the convention.

* * *

The parties go around looking for issues. If democracy worked in practise as it does in theory the issues would go around hunting for parties.

* * *

The novel theory that Mr. Hoover has lost his Americanism by residence abroad seems to prove too much. It makes our army in France less patriotic than the men who stayed at home and it casts terrible suspicion on all our ministers and consuls in foreign capitals.

* * *

The London *Times* in its Review of the Year 1919 records in its obituary column the death of "Sir Horace Plunkett, that great Irishman." Is it then his astral form who is now lecturing in the United States? Or does *The Times* think that any man who goes to America is as good as dead?

* * *

The Great War has made the philatelists happy. In the year 1919 they got more than 2500 new stamps to collect and classify. Many of them were issued by evanescent governments, like the two months' Bolshevik régime in Hungary, so will be rare enough to suit collectors who always value things by their uselessness.

* * *

The Countess Markiewicz, who is confined in the Cork Gaol for sedition—why is it that these Sinn Féin leaders have such foreign names?—threw an onion out of the window of her cell one night and the guard took it for a gas bomb and blazed away in the darkness for some minutes. But we cannot blame the British soldiers in Ireland from feeling jumpy just now.

* * *

The gross earnings of the British mercantile marine this year will be about \$2,000,000,000. An old tramp steamer can now earn in a single year more than twice what it cost to build twenty years ago. One day during the war, when Premier Hughes of Australia was in London, he went downtown and bought a lot of old ships. These have paid for themselves several times over and the Australian Government is building more to bring down the high cost of living. But Uncle Sam is selling out his ships below cost. He doesn't want to be bothered with 'em.

* * *

Tho we doubt if all Socialists have the wit to see it, and tho we are quite sure that the New York Assemblymen have not, Mr. Hillquit's explanation of why the Socialists believe in physical force sounds the death-knell of Bolshevism in the United States. Mr. Hillquit said that the Socialists favored force not to forestall the result of elections, but to vindicate victories already achieved at the polls against "any bloodshed attempted by unlawful or lawless privileged minorities."

It is true that Mr. Hillquit was speaking more especially of counter-revolutionary attempts to overthrow a legal Socialist government, but his principle was stated broadly enough to cover the insurrectionary attempts of Bolshevik minorities. Bolshevism has nowhere come about by a victory at the polls or by a direct revolution against monarchy or capitalism; always,

whether in Russia, Hungary, Finland or Germany, the Bolsheviks have climbed into power by overthrowing a democratic Socialist Government or have failed in the attempt to do so. It is therefore most reassuring to learn from the ablest of "orthodox" American Socialists that in this country the Socialists, if they ever come to power, will meet the attempt to establish a minority dictatorship with machine guns. Comrade Hillquite will no more tolerate a conspiracy by Comrade Haywood than Noske tolerated the Spartacists.

* * *

The League of Nations now includes (1) all the Great Powers except the United States; (2) all important European nations except the enemy states and Russia; (3) practically the whole of Africa; (4) Japan, China, India and nearly every part of Asia except Siberia and "un-mandated" parts of Turkey; (5) a large part of Latin-America; (6) all of Australasia and British America. The prospects of an isolated competitor of this world combine do not look particularly cheering to us. Or are we expected to form a counter-alliance with Germans, Turks and Bolsheviks?

* * *

We invite the attention of the Anti-Tobacco Society to Mr. Henry Holt, the well-known book publisher and editor of the *Unpartizan Review*. On January 2, Mr. Holt celebrated his eightieth birthday. Being in a self-revealing mood he admitted that he had never smoked regularly before he was six years old, that he did not become an inveterate smoker till eleven, and that for the last twenty years he had cut out his morning and afternoon smoking, so that now he indulges in only four to six after-dinner cigars. Mr. Holt says he cannot say what effect smoking has on longevity, as he is only eighty and must wait fifteen or twenty years longer to find out.

* * *

The League of Nations may find its most effective work in its subsidiary and non-political organizations. One of these, the International Labor Bureau, got to work before the League was established and now the new and enterprising French weekly, *Europe Nouvelle*, proposes another annex, an International Bureau of Instruction and of Sciences, Arts and Letters. It cites as an example the Institute of International Education which was founded in New York last year, but plans a more ambitious program for the promotion of peace and prosperity thru the interpenetration of ideas among the associated nations and coöperation in educational efforts. The Bureau would facilitate the exchange of students and professors by furnishing information as to universities the world over. It would arrange international conferences in the various sciences. It would circulate books, periodicals and works of art and prepare international bibliographies on all subjects. It would encourage the translation of literary and scientific works. It would prepare histories written from an international standpoint and correct the errors and malevolent expressions that get into school histories thru misdirected patriotism. It would establish at the seat of the League of Nations a library to include the important books and periodicals of all nations. It would develop and promulgate the best methods of teaching modern languages.

In short, altho the prospectus does not put it that way, the Bureau would be a sort of telephone central for the exchange of ideas among the associated peoples.

The Story of the Week

At a Deadlock

SATISFIED that labor had definitely overstepped the mark with its last-minute threats of political revenge, the Congress took courage and declared its independence of labor domination by adopting with decisive majorities the conference report on the new transportation act.

Samuel Gompers sat with his supporters in the galleries and saw the House disobey, by a vote of 250 to 150, labor's command that the report be rejected. Two days later the Senate took similar action and the roll call showed ayes 47, nays 17.

The bill then went to the White House and labor followed with a more moderately phrased demand upon the President that it be vetoed. The President had ten days to make his decision. Should he fail within the prescribed period to send a veto message to Congress, the bill would automatically become a law.

The success of any attempt to pass the bill over a presidential veto is doubtful. The Senate would give the necessary two-thirds majority, but the House, unless many members reversed their previous votes, would not. To veto the bill, therefore, would be to invite the possibility of a deadlock that might delay legislation many weeks.

In his message to Congress, December 2, 1918, the President said:

The question which causes me the greatest concern is the question of the policy to be adopted towards the railroads. I frankly turn to you for counsel upon it. I have no confident judgment of my own.

In view of this statement, coupled with the fact that turning back the railroads without legislation to safeguard their interests would result in chaotic transpor-

tation conditions, it was regarded as unlikely that the President would yield to the leaders of labor and reject the "counsel" Congress has given in a bill passed after more than a year of study.

The decisive stage of the renewed treaty contest was reached just before the Senate laid the pact aside to vote on the railroad conference report. Both Senator Lodge and Senator Hitchcock were defeated when the Senate voted 45 to 20 to include in the resolution of ratification, without change, the original Lodge reservation relating to withdrawal from the League of Nations.

In this vote and those immediately preceding it, the fifteen irreconcilables asserted their dominance of the treaty situation by voting first with the Republicans against an amendment by Senator Hitchcock that would have required the President's signature to any congressional resolution of withdrawal, and then with the Democrats against Senator Lodge's proposal that the reservation permit notice of withdrawal to be given either by the President or by Congress, acting independently, as agreed in the bi-partizan conferences.

The original Lodge reservation, providing that notice of withdrawal shall be given by Congress acting alone, was sustained on the final vote, when the bitter enders again shifted their strength to the Republican side. The vote came exactly one year after the League of Nations debate started in the Senate, and marked the first time in the long treaty contest that any proposition has received a two-thirds vote.

It became immediately apparent that if the irreconcilables were permitted to carry out their program of "preventing any reduction of the irreducible minimum," by voting first with one side and then with the other, the Senate, when it reached a final vote on the ratification resolution, would be voting on the same proposition it rejected November 19—ratification with the Lodge reservations unchanged.

In the present situation the only way the Democrats can secure any modification of the original Lodge reservations—even those agreed to in the bi-partizan conference—is by definitely breaking away from Senator Hitchcock's leadership and giving Senator Lodge enough votes to carry the modifications he is willing to make, as a means of balancing the negative votes of the irreconcilables.

A new move to this end by Senators Underwood and Simmons is beginning to gather strength. It is not the first time such a movement has developed among the Democrats, but on each other occasion the President has been able to scotch the effort when it gave promise of results.

If there is no move by the White House to check the new breakaway, it will be accepted that the President is willing to accept the Lodge reservations with whatever modifications the Democrats are able to secure as the conditions of American ratification. Senator Ashurst, Democrat, told the Senate he "spoke by the book" when he said the President would be glad to have the treaty ratified on whatever terms two-thirds of the Senate is able to agree upon.

Thomas in Detroit News

Why they hate each other

But here enters another complication—the warning of the President to the Allies that he might have to consider withdrawing the treaty from the Senate, and presumably withholding ratification should the Senate act in the meantime, if the Adriatic problem were settled without consulting the United States. The principal effect upon the Senate of this warning to the Allies has been a strengthening of the feeling that the Senate should perform its function in connection with the treaty independently—in no way taking account of the President's plans or wishes.

It developed in some Republican senators a keener desire for early ratification in order that he might not by withdrawing the treaty be able to cloak the defeat of his original purpose to secure ratification without reservations, and also that he might be made to bear the full responsibility if he desires to withhold ratification after the Senate has acted. The Senate as a whole does not understand what the Adriatic muddle is all about and therefore has little sympathy with the position taken by the Chief Executive.

The recent debate on the treaty in the Senate has been marked by efforts on the part of the leaders on both sides to fasten "the responsibility" on the other, seemingly in preparation for a new rejection of the treaty. The leaders have asserted also that the treaty will go into the campaign as an issue, whether it is ratified in the meantime or not. One faction of the Republicans will seek to have the issue come on withdrawal from the League, if the United States is already a member, and the other on the calling of a new international conference for revision of the treaty.

RICHARD BOECKEL, *Washington*

Don't Give Up the Ship

THE historic words of Lawrence acquire a new appropriateness now that the Shipping Board has determined to divest itself of the responsibility for further management of the mercantile fleet. A particularly sharp issue arose over the question of the disposition of the ships acquired from Germany during the Great War. Early in February the Shipping Board announced that President Wilson had approved the following resolution:

Resolved, that the ship sales division be and is hereby authorized to sell all ex-German passenger ships, subject to the approval of the board as to each ship.

The sale was to be by public auction, the Shipping Board retaining absolute power to reject any bid and requiring information from each would-be purchaser of the commercial and national status of the concern which he represented.

The proposed sale attracted much criticism in the country at large as well as in Congress. There was, first of all, the sentimental objection that ships which were the nation's property and a prize of war should not pass into the hands of private companies, especially if there was danger of their eventually coming under a foreign flag. Some military men also raised the objection that the Federal Government should retain under its direct control sufficient merchant shipping to supply all possible needs for army transport. Perhaps the strongest argument against the sale was that there was danger of letting the ships go for a small fraction of their true value. Resolutions against the sale were passed by the New York Assembly, the Virginia House of Delegates, the Massachusetts Senate, the Portland Chamber of Commerce, the Farmers' National Council, the Farmer-Labor Coöperative Congress, and many other official, semi-official or private organizations.

William Randolph Hearst, the newspaper magnate and stormy petrel of American politics, took the bold

Knott in Dallas News.

About time to saw some wood

step of demanding an injunction against the Shipping Board to prevent the sale of the former German ships. In his petition Mr. Hearst alleged that the ships were worth more than \$100,000,000, that the auction had been inadequately advertised, that Congress alone had the right to decide the ultimate disposition of Government shipping, and that "the defendants are without power or authority to sell said vessels."

Chairman Payne, of the Shipping Board, replied to "the vicious, but characteristic, attack against the Shipping Board emanating from a certain quarter" by an assurance that "The ships are to be sold to Americans only, and will sail under the American flag, will serve the routes which in the opinion of the Shipping Board will best serve American commerce, and will always be available to the Government in case of any national emergency." He denied that insufficient publicity had been given to the sale or that it was intended to sell all the ships to a single company. He gave three reasons for selling out the German ships at the present time: that it would cost the Government \$75,000,000 to make over ships used as army transports for civilian passenger service, that "in view of prohibition" passenger ships could not be operated by the Shipping Board at a profit, and that the existing scarcity of tonnage made certain that there would be good bids, "indeed, we do not believe we can ever get more for them than now."

Justice Bailey, of the Supreme Court of the District of Columbia, ruled that a temporary injunction be granted to Mr. Hearst in his right as taxpayer. Numerous bids were received, but, in deference to the injunction of the court, no sales were made. Chairman Payne immediately appealed. He urged that Mr. Hearst be compelled to furnish bond to secure the United States against loss arising from the delay in consummating the ship sales.

In response to a request from the Senate, President Wilson transmitted the agreement with Great Britain by which title to the German ships taken over in American ports was confirmed to the United States. This agreement stipulated that:

The Reparation Commission will take such steps as will secure that each of the allied and associated Governments will retain as its own the complete title to and use of all ships captured, seized or detained during the war as a war measure and prior to November 11, 1918, and will own the same free from any claim of any of the allied or associated Governments.

In all cases where the ships and boats so to be retained by any allied or associated Government are in excess of the

Up in the clouds

claims of such Governments respectively for war losses in merchant ships such Government shall not make any claim for a share in other ships and boats ceded under the treaty of peace.

As the ships and boats so to be retained will, in the case of Brazil, China, Cuba, Siam, and the United States, exceed the total amount of tonnage which would be allocated to those countries were the total enemy tonnage captured, seized, detained, or still in existence shared in proportion to losses of ships and boats during the war, in each such case a reasonable value on the excess of ships and boats over the amount which would result from such a division will be determined. The amount of the value so fixed will be paid over by each such state to the reparation committee for the credit of Germany toward the sums due from her for reparation in respect to war losses in merchant ships.

The President also put an end to many malicious rumors by the categorical statement that "There is not nor has there been any agreement or understanding between the President of the United States and officials of Great Britain concerning the sale of the ex-German vessels in possession of the United States, nor is there any agreement or understanding with respect to what disposition shall be made of those ships by the United States." Chairman Payne also said that nothing in the agreement with Great Britain affected our right to dispose of the ships to private owners. He announced that since the injunction applied only to passenger ships, he would proceed with the sale of German cargo ships as formerly.

The Atlantic Coast Shipbuilders' Association has made the statement that nearly a million tons of steel steamships are now under construction in the shipyards of the United States. The tonnage being constructed on the order of private enterprizes is "seven times as great as the ship construction of all types under way in this country at the beginning of hostilities." The Bethlehem

Shipbuilding Corporation announces orders amounting to approximately \$232,000,000 for the year 1920. It has on hand the construction of thirty-one vessels for private owners, of 382,000 aggregate tonnage, valued at about \$80,000,000. The rest of the construction is for the navy and emergency fleet vessels.

As John Barton Payne will leave the Shipping Board in a few weeks to succeed Secretary Lane of the Department of the Interior, it seems probable that many difficulties arising from the popular opposition to the sale of German passenger liners will fall to the lot of his successor. Rear Admiral Benson, Chief of Naval Operations during the war, is the unfortunate man who will take Chairman Payne's place at the head of the Shipping Board. The new appointment has won widespread approval on its merits, altho certain senators have urged that Mr. Payne remain at his present post until the present problems confronting the Shipping Board are solved.

Labor Politics

ORGANIZED labor is not content with its partial victory in eliminating from the Railroad Bill the original drastic provisions to prevent strikes. The majority of labor leaders are opposed to the whole congressional program of returning the railways of the country to private ownership and have persistently tried to block the measure or secure its veto. The reason for this attitude is not only a general sentiment in favor of nationalization but more specifically the fact that the railway men have outstanding controversies as to wages which they think would be more sympathetically considered by the Government than by private corporations. No one expects that the Brotherhoods will try to force nationalization by a general strike, but equally no one will be surprized if the restoration of private ownership is soon followed by strikes for higher wages.

A convention of the Farmer-Labor Coöperative Association, held recently in Chicago, advocated a two years' extension of Federal operation of the railroads and endorsed the principle of the Plumb plan as to the permanent basis of the transportation system of the country. The resolution extending the period of Federal operation was approved also by the Farmers' National Council, an organization said to represent 750,000 farmers in eighteen states.

The convention presented a far-reaching program for the reconstruction of American industry on a basis of voluntary association of workers. The program included the establishment of coöperative wholesale and retail stores on the model of the Rochdale experiment in England; coöperatively owned factories, workshops and dairy farms; banking and credit associations to finance coöperative enterprizes, and a chain of newspapers to familiarize the public with the new ventures. Resolutions urging direct trading between farm and city, Federal control of meat packing, preference for union-made goods, and opposition to the proposed anti-sedition laws were adopted.

Mr. Glenn Plumb, originator of the much discussed "Plumb plan" of railroad ownership, spoke at the convention. He attacked the present banking system as a 'monopoly of credits' and urged that the national debt be paid off by concentrating taxation on the very wealthy. "We may be compelled," he asserted, "to accept the solution already adopted in Germany and now considered as inevitable in Great Britain—the discharge of the entire national debt by placing a capital levy upon property."

In spite of the injunctions of Mr. Gompers to work thru the existing party organizations, local labor lead-

A bricklayer needs very little education to earn his \$60 a week

But a school teacher, after eight years of training, gets a weekly salary of only \$20

The longshoreman's only qualification may be muscular, but by the union scale of wages he can earn \$80 a week or more

The fireman must pass a Civil Service examination, work twelve hours a day, and risk his life often—all for \$30 a week

Adding tips to salary enables a waiter to earn from \$65 to \$100 a week—and it doesn't take long to train for the profession

A chemist can get his license only after an examination that requires years of study—and then he seldom gets over \$40 a week

Pity the poor tailor! A little skill with the needle and a union card give him weekly wages that range from \$65 to \$125

A bank clerk is lucky if he gets \$30 a week for doing work that requires intelligence, training and a sense of responsibility

ers in New York and Indiana are going ahead with their plans for an independent labor party. To William Mitch, leader of the labor party movement in Indiana, Mr. Gompers sent a long letter of protest, in which he outlined the "balance of power" policy of the American Federation of Labor in the 1920 campaign and the reasons which led to its adoption:

The effect of a separate political labor party can only be disastrous to the wage earners of our country and to the interests of all forward looking people. The votes that would go to a labor party candidate would in the absence of such candidate go to the best man in the field. In no case would they go to an enemy of labor.

There can be no hope for success of labor party candidates. The effect, therefore, of a political labor party will be to defeat our friends and to elect our enemies. . . .

The welfare of American humanity demands in this hour of national crisis that there be success at the polls. This is no time for experimenting with political theories which are proved false at the outset. The workers of America must use the tactics of success. They must have results.

Bryan and Marshall

TWO of the elder statesmen of the Democratic Party have recently announced their views on the issues of the 1920 campaign. Mr. Bryan prophesies that there will be a plank in the Democratic platform endorsing the administration of President Wilson "not that a majority of the convention will endorse everything that has been done," but because in general it has been "a great Administration." Another plank will endorse prohibition as a permanent policy. National woman suffrage will also be approved. In view of the action of the Democratic caucus in the House of Representatives, he predicted that universal military training would be opposed. Other planks proposed by the leader comprize approval of the Federal income tax, opposition to a protective tariff, denunciation of the trusts and of profiteering, approval of the eight hour workday and of collective bargaining and advocacy of the substitution of arbitration for strikes.

Vice-President Marshall has emerged from the retirement traditional to his office and outlined his view of Democratic policy in a letter to the Secretary of the Democratic National Committee. He advocated a return to the simple principles of Jefferson and "the presentation to the people for their suffrages of a man upon an oldtime Democratic platform." He urged that "the states discharge the duties of local self-government, resisting the usurpations of the general Government" and insisted that Congress should be responsible for the active discharge of its duties, "serving notice upon it that it cannot skulk behind an alleged interference upon the part of the executive branch." The candidate for President should, in his opinion, reduce the civil service to a pre-war basis and economize drastically in every way.

These statements have been widely interpreted, whether correctly or no, that Mr. Bryan and Mr. Marshall consider it possible that the party may call on one of them as its standard bearer in the campaign. The two platforms differ somewhat from each other, but both lay more emphasis on reforms already achieved than on programs for the future. Conservative Democracy speaks thru them; and there is an undercurrent of rebuke to the Administration in Bryan's denunciation of universal military service, which the President has recently inclined to favor, and in Mr. Marshall's reference to "usurpations of the general Government." Neither program lays much emphasis on foreign policy. If Mr. Bryan or Mr. Marshall is nominated the war-cry will be "Back to Jefferson" rather than the Wilsonian "Forward to Utopia."

France goes in for horrors in her prohibition propaganda, which, of course, does not mean prohibition as we have it, but the abolition of distilled liquors and instead the use of light wines and beer. This poster has been shown widely thruout France to advertise especially the dangers of absinthe drinking

Another Whisky Rebellion?

RECENT events in Michigan bring forcibly to mind the earliest days of the republic. Major Dalrymple, supervisor for the Volstead enforcement law, has notified Attorney General Palmer that Iron County, Michigan, has resisted agents of the Federal Government who attempted to seize barrels of wine and brandy of high alcoholic content. State's Attorney McDonough of Iron County and other local officials took the barrels away from the Federal agents who were conducting the raid and returned them to the owners. The reason given by Mr. McDonough for this action was that the liquor, altho kept in a store, had not been offered for sale by the owners and was presumably retained for their private use, and that he resisted the Federal agents because they did not have proper warrants to make the raid. Attorney General Palmer replied to Major Dalrymple's representations, "Enforce the law. You have full authority."

In Washington's day a similar but far more serious case of local resistance to Federal control of the liquor traffic arose. The excise on whisky introduced by Alexander Hamilton with the double motive of improving national finances and enlarging the sphere of national authority was strenuously resisted in certain counties of western Pennsylvania, where the farmers had been accustomed to manufacture liquor without tax or restriction. President Washington called on the army to enforce the law and the so-called "whisky rebellion" was speedily crushed. The incident had little importance in itself, but it is noteworthy as the first

use of Federal troops under the Constitution to overpower disorders within a state. Jefferson and the states' rights party generally regarded the President's action as a dangerous precedent and feared, or affected to fear, the erection of a military dictatorship in the country.

"States' rights" are involved in many ways under the operation of the eighteenth amendment, which vests "concurrent" power for the enforcement of prohibition in the nation and in the several states. Rhode Island and New Jersey are contesting the constitutionality of the amendment in the courts. Some of the states which ratified the amendment, on the initiative of the Governor of Maine, have agreed to appear as co-defendants with the Federal Government in the suit of Rhode Island before the Supreme Court. Vermont emphatically refused to join this movement in spite of the fact that the legislature had ratified the prohibition amendment. Governor Clement declared, "I hope that Rhode Island will be successful in her efforts to free the United States from the operation of the eighteenth amendment, which is, I believe, opposed by a large majority of the people of the country, and, unless declared unconstitutional by the Supreme Court, must inevitably bring trouble to us all."

Governor Smith of New York and Governor Edwards of New Jersey, whose attack on the prohibition amendment has created another Presidential boom in the Democratic party, are the most prominent leaders of the wets. The New York Board of Aldermen has passed a resolution condemning the action of the legis-

lature in ratifying the amendment and approving the stand of Governor Smith for a popular referendum on the question. The Supreme Court of Colorado refused to sanction a referendum on the ratification by the Colorado legislature.

The various attempts which have been made to find the eighteenth amendment, or at least the Volstead Enforcement Act, unconstitutional, or to nullify its effect by unfriendly "concurrent" legislation or lax enforcement, have not discouraged the Federal authorities. The office of Prohibition Commissioner Kramer reports 1500 arrests to the present time for violation of liquor laws in various parts of the country, altho the organization to supervise the enforcement of the law has been in existence only a few weeks. The issue of prohibition, which began as a political struggle over an issue of great human interest, is rapidly becoming a constitutional struggle over the balance of power between Federal and local authority. Thus far all the victories have fallen to the Federal cause.

The Crucial Question of the War

THE question out of which the Great War arose, that is the ownership of the territory east of the Adriatic, remains still unsettled and is now retarding the peace. The aim of Serbia in the war was to gain those of their race who lived under the Austrian flag. The aim of Italy was the same. And since the two races are commingled in the territory in dispute the defeat of Austria set the Serbs and Italians to quarreling over the partition of the spoils.

Before Italy would enter the war she secured from England, France and Russia a promise (the now famous Pact of London, April 26, 1915) that she should share with them in the partition of Turkey and Africa and Albania and should annex Trent and Trieste and a large part of the Dalmatian coast and most of the outlying islands. This meant in case of victory the Italians would annex territory about as great as European Italy and in much of this the Italian population is comparatively small.

Naturally it was stipulated in Article XVI of the Pact of London that "the present treaty is to be kept secret" for it would have dampened the enthusiasm of the Serbs to know that a large part of the country which they were fighting to free had been bargained away to an alien power without their knowledge or consent. But when the Bolsheviki came into power at Petrograd they published the Pact of London along with other secret treaties discovered in the Russian archives.

President Wilson took the stand from the start that all secret agreements as to the disposal of conquered territory should be abrogated and that the inhabitants of any disputed area should have a voice in the decision of their destiny. These conditions were agreed to by the Allies before the armistice and Germany and Austria-Hungary surrendered on the expressed understanding that the peace should be made on the Wilson terms. But when President Wilson came to Paris he met with so much opposition on the part of the Allies that he was obliged to compromise on many points. He wished to have the principle of self-determination applied to the region east of the Adriatic and to have the boundary to be drawn between Italy and the new Yugoslav state drawn in accordance with local plebiscites as has recently been done in the case of Schleswig. The Yugoslavs were willing to agree to this, but the Italians refused, knowing that the vote would have gone against them in a large part of the territory they claimed. There are about half a million Slavs in the territory which Italy desires to annex. Her demands

International

An English cartoon of prohibition, ridiculing the "Pussy-foot" propaganda. The microbe that the workman is fishing out of his beer is a miniature of Uncle Sam

have expanded since the victory and now she is no longer satisfied with the territory allowed her by the Pact of London. She insists upon having in addition the city of Fiume, which was assigned by the Pact to the Croats since it is their only practicable outlet to the sea. When the Allies refused to concede Fiume to Italy, Captain d'Annunzio seized it by force and still holds it with the tacit approval and secret support of the Italian army and naval authorities. The people of Fiume, altho a majority of them are of the Italian race, have twice voted against d'Annunzio, but he has suppressed the returns. The total population of Fiume is less than 50,000, which is about one-tenth of the Italian population of New York City.

France, Great Britain and the United States considered that the demands of Italy for more territory on the east of the Adriatic were excessive and they agreed upon a boundary (the so-called "Wilson line") which would avoid giving the control of the Gulf of Fiume to Italy and reduce the number of Slavs to be brought under Italian domination. This agreement was signed at Paris, December 9, by Premier Clemenceau for France, by Sir Eyre Crowe for England and by Under Secretary Frank L. Polk for the United States. This is the settlement for which President Wilson still stands. But Premier Nitti protested that his Government would be in danger of overthrow, perhaps of revolution, if he accepted such a reduction of Italian claims, so Clemenceau and Lloyd George consented on January 9 to a compromise line which gave the Italians an additional strip of land, some twenty miles wide, between Trieste and Fiume. This brought the boundary right up to the city of Fiume and gave the Italians the whole of the north shore of the Gulf of Fiume and the island of Cherso, which bars the port. Premier Nitti consented to accept this compromise and the proposal was then presented to the Yugoslavs with the warning that if they did not accept it France and England would fall back upon the Pact of London, which was still more disadvantageous to the Yugoslavs.

But on February 10 a note was sent by Secretary Lansing which stated that President Wilson stood by the agreement of December 9, which was signed by the representatives of the United States, England and France. The note ended with a paragraph warning the Allies that if they settled the Adriatic question without consulting the United States the President "would seriously consider" withdrawing from the Senate the Treaty of Versailles and the treaty by which the United States and Great Britain promised to protect France in case of invasion.

The reason why the Yugoslavs insist upon the Wilson line as the limit of their concession to Italian demands is given in their memorandum as follows in part:

The frontier between Italy and

Yugoslavia established by the Wilson line from the Julian Alps to the Arsa is the only frontier which responds to the geographic, strategic and economic conditions, and it is entirely to the advantage of Italy. This frontier is accepted, altho it seriously violates the principles of nationalities by leaving 400,000 Yugoslavs to Italy. So great a sacrifice, the like of which no other allied state has undergone, is, however, consented to by the Yugoslav people in the interest of agreement and of peace.

The annexation, which nothing can justify, of territories purely Yugoslav beyond the Wilson line would constitute a new and profound violation of the principle of nationalities. The Gulf of Fiume represents for Yugoslavia an essential condition of existence, being its only economic outlet. By the cession of this territory to Italy all the hinterland, which, with the coast, is inhabited by a purely Yugoslav population, would be separated from the sea.

It is the avowed aim of the Italian expansionists to control both shores of the Adriatic and to convert the sea into "an Italian lake." But this is only the beginning of their ambition, for the policy of the former Foreign Secretary Sonnino as expounded in the semi-official *Giornale d'Italia* of July 4, 1919, is to use these three bridge-heads, Fiume and Istria on the north, Valona and Albania on the south, and the Dalmatian coast and islands in the middle, for the expansion of Italian military, economic and political power in the Balkans with a view to ultimate annexation.

But the efforts of Premier Orlando and Sonnino to carry out this program were checked by the united opposition of the British, French and American representatives at the Peace Conference and Orlando had to give way to the more moderate-minded Nitti, who has tried to restrain the Italian imperialists on the one hand, while on the other he has labored to secure acceptable concessions at Paris. On February 7 a fierce attack was made on Premier Nitti in the Italian Chamber of Deputies and he was accused of betraying the interests of his country to curry favor with England, France and America. His chief opponent, Signor di Cesaro, read a secret telegram addressed to Secretary Lansing on October 21, 1919, by Premier Nitti in which he said that unless Italy got Fiume it might lead to revolution. The Premier said that the telegram was "not quite exact" and challenged Signor di Cesaro to tell how he got hold of it, but he refused.

The Premier met the criticism and overcame his opponents by his plain speaking. He pointed out in the first place that when Italy entered the war most Italians were asking only for Trent and Trieste and therefore Italy, even without Fiume, is getting more than she expected. If he insisted upon the letter of the Pact of London he would not only have to relinquish Fiume, but also to drive out d'Annunzio by force. It would mean also that Albania would, according to Article 7 of the Pact, be in part divided between Greece and Serbia

THE DISPUTED ADRIATIC TERRITORY

The various lines show the various proposals for dividing the conquered Austrian territory between Italy and the newly established state of the Serbs, Croats and Slovenes. In the shaded parts as well as in the cities of Trieste and Fiume the Italians are in a majority. Pact of London (1915) brought the line so far over that it included in the Italian annexations a large Slavic population, and while it excluded Fiume it brought the boundary so close to Fiume that the city and harbor and railroad could be commanded by the Italian guns. The British, French and American experts agreed on the "Wilson Line" of December 9, 1919, which was acceptable to the Yugoslavs but not to the Italians. After the withdrawal of the American peace delegations from Paris the French and British consented to the "compromise line" which was acceptable to the Italians but not to the Yugoslavs. President Wilson has also made objection to this compromise

instead of being given to Italy under a mandate from the League of Nations as is now proposed.

Premier Nitti denounced the Conservatives for encouraging D'Annunzio in his insubordination and for using virulent language against America and the Allies. He said:

It is not America which refuses to lend to Italy, but it is Italy which is lowering her credit that prevents America from lending to us now.

Did the Conservatives expect me to act like a Don Quixote? Did they expect me to declare war on America. I spoke as an honest man with perfect sincerity, making an appeal to the American sense of justice.

We must avoid exaggeration, such as calling the Adriatic an Italian lake. In doing so we are committing a crime.

The feeling prevails that America will not lend us money unless the war spirit is over, unless the money spent is employed in reconstruction. We must work to bring about true peace—not one for the victors, not one for the vanquished. We must forget all rancors and bring about in our foreign relations a broader sense of humanity.

Premier Nitti closed by telling of the efforts he was then making to reestablish relations with Soviet Russia and even to make friends with the Yugoslavs.

This question is one in which the United States is more intimately concerned and on which it is better qualified to judge than any other nation. All the races involved, the Italians, Slovenes, Croats, Dalmatians and Serbs are represented in the United States by hundreds of thousands of immigrants. We know their characteristics and capabilities, their ideals and aspirations, by direct contact, while the French and British lack the advantage of personal acquaintance and have to depend upon what they read or are told by travelers. Two of America's most famous electricians, Nikola Tesla and Professor Pupin, are Yugoslavs, and we have numerous distinguished Italian citizens.

Soviet Russia from Sea to Sea

BY the capture to the north of Archangel on the White Sea and Murmansk on the Arctic Ocean and by the capture to the south of Odessa on the Black Sea and Krasnovodsk on the Caspian Sea, the Bolsheviki have now secured ports on both sides of the country. On the west they have made peace with Esthonia, which will give them access to Reval on the Baltic Sea, and on the east they have gained two-thirds of Siberia, while most of the rest is in the hands of revolutionists, who will doubtless come to terms with the Bolsheviki and give them access to the Pacific thru Vladivostok.

The overthrow of the Kolchak Government in eastern Siberia was accomplished with ease and without bloodshed. General Graves, the commander of the American expeditionary force now being withdrawn from Russia, reports favorably of the new régime:

The conditions in Vladivostok are remarkably quiet, and practically no disorder. The head of the new Government told me today that they hoped it would not be necessary to spill a drop of Russian blood; that they were determined to handle the situation entirely free of revenge; that no man would be condemned except by a legally constituted civil court. No one has been killed in this sector from Vladivostok to Nikolsk by the new Government, which, in my judgment, is remarkable.

Lithuania and Poland are now engaged in peace negotiations with the Soviet Government. In their anxiety to make a break in the quarantine barrier on the western frontier the Bolsheviki granted such liberal terms to Esthonia that they will be an embarrassing precedent in negotiating with the other seceding states. To be sure, the Soviet secured the insertion in the treaty of a provision that no concession made to Esthonia should

Harding in Brooklyn Daily Eagle

The bear that walks like a question mark

be deemed a precedent in dealing with the other border nationalities, but in spite of this they will doubtless demand equal favors. On the other hand, the Esthonians insisted upon an article providing that if Russia concedes to any other border state any privileges not given to Esthonia, that such privileges shall automatically accrue to Esthonia. The Esthonians managed to obtain surprisingly favorable financial concessions. They compelled the Soviet Government to assume all responsibility for the Esthonian share of the debts of the old Russian Empire, and besides this to pay Esthonia \$7,500,000 in gold, the first instalment within two weeks. Furthermore, Esthonia obtained preferential rights in constructing a direct railroad connection between Moscow and the Esthonian frontier and in exploiting 2,500,000 acres of timber concessions in the forests about Petrograd. On the other hand, the Soviet got the right to use the power of the waterfalls in the Narva River on the Esthonian frontier and the privilege of transporting goods thru Esthonia without payment of duty, tax or toll. This virtually makes the port of Reval a free port of entry for Soviet Russia.

The long hesitation as to the proper policy toward Russia came to an end on February 24 when the Supreme Council made a declaration in part as follows:

The Allies cannot enter into diplomatic relations with the Soviet Government, in view of their past experiences, until they have arrived at the conviction that the Bolshevik horrors have come to an end, and that the Government at Moscow is ready to conform its methods and diplomatic conduct to those of all civilized governments.

Commerce between Russia and the rest of Europe, which is so essential for the improvement of economic conditions, not only in Russia but in the rest of the world, will be encouraged to the utmost degree possible without relaxation of the attitude described above.

Furthermore, the Allies agree in the belief that it is highly desirable to obtain impartial and authoritative information regarding the conditions now prevailing in Russia. They have therefore noted with satisfaction the proposal before the International Labor Bureau, which is a branch of the League of Nations, to send a commission of investigation to Russia to examine into the facts. They think, however, that this inquiry would be invested with even greater authority and with superior chances of suc-

cess if it were made on the initiative and conducted under the supervision of the Council of the League of Nations itself, and they invite that body to take action in this direction.

The Supreme Council does not advise the border states to continue war against Soviet Russia, but will support them if "their legitimate frontiers" are attacked. Since the United States is not yet a member of the League of Nations there will be no American representative on the proposed commission which will arrange for trade with Russia and doubtless have an influential voice in determining its boundaries and relations with the Baltic States on one side and Japan on the other.

General Yudenitch, whose attempt to take Petrograd came to such an ignominious end, was arrested at Reval by the Esthonians on the charge of confiscating funds, but he was later released and allowed to leave on condition of handing over 250,000,000 marks to pay for the liquidation of his Army of the North-West Russian Government.

Denmark, Norway, Sweden, Finland and Holland have called a conference to meet at Geneva and arrange for reopening trade with Russia on condition that the Soviet Government promises to pay the foreign indebtedness of the Russian Empire. This the Soviet has repeatedly offered to do. The United States and the Allies are invited to participate in the Geneva conference.

Leon Trotzky, the Soviet Minister of War, has announced that now, since the people of Russia have repulsed their foreign foes on all fronts, they must turn their attention to fighting their greater enemies, hunger and cold. If peace can be secured he proposes to turn his troops, said to number nearly a million men, into an industrial army to provide for the needs of the nation. In preparation for this transformation he has resigned the War portfolio to General Palanov and assumed the post of High Commissioner of Food Transportation. The Soviet forces in Siberia will be under the command of General Evert, one of the Czar's best strategists, who has conducted the successful campaign against Admiral Kolchak.

Thomas Edison's inventive genius turned recently to the problem of house shortage. This poured concrete house is the result. Four and six room sizes have been built extensively in New Jersey and Pennsylvania, and have proved satisfactory

The Fate of Turkey

THE Turks are to keep Constantinople—such is the decision of the Allies. The two straits, the Bosphorus and the Dardanelles, are to be kept under international control. Three commissions have been appointed to report on questions involved in the Peace Treaty now in preparation; one to study Turkish finances, the second to determine the boundary of the proposed Armenian republic, the third to pass upon the Greek claims to Smyrna. Meantime the Turks are warned to stop slaughtering the Armenians. It is said that no less than 7000 Armenians have perished in the recent massacres and that many more are in peril.

The question of the disposition of Turkey has caused serious discord between France and England. According to secret agreements during the war Russia was to get Constantinople and northern Armenia; France was to get Syria and southern Armenia; England was to get Mesopotamia, Egypt, Cyprus, and Kurdistan; Italy was to get Adalia and the Dodecanese; Greece was to get Smyrna; the Emir of Mecca was to get an Arab kingdom including Damascus; the Jews were to get Palestine; the Turks were to retain such part of Anatolia as was not otherwise appropriated. But as the war went on the ambitions of the heirs of the Sick Man of the East expanded and their claims came into conflict. The rival European powers were suspicious of one another and the subject nationalities, aspiring for independence, were suspicious of them. For that reason the United States was the preferred mandatory for Armenia, Constantinople and other parts of Turkey, but the slowness of the Senate in acting on the first of the five treaties compelled the powers to make other arrangements. The delay in concluding peace further gave opportunity for the Turks to recover their courage and to rally to their support the Mohammedans of all lands. Now England and France rule most of the Moslems of the world and when the call went forth from Constantinople to Tangier and to Delhi that the Caliph, the head of the faith, and the last of independent Moslem sovereigns, was about to be robbed of his temporal possessions by the Christians, an ominous murmur arose thruout Islam. The proclamation of the principle of self-determination by President Wilson and its acceptance by the victorious Allies and defeated powers as the basis for peace gave the ground to the subject races to urge their independence. Nationalistic risings in Egypt and India foreshadowed more serious revolts in case Constantinople was taken away from the Caliph. Imperial Russia had been eliminated as a claimant for Constantinople and northern Armenia, but Bolshevik Russia proved to be a still more dangerous neighbor. Altho the Bolsheviks ostensibly repudiate nationalism and profess internationalism, they have made skilful use of nationalistic sentiment, both to rally their political opponents to their support against foreign invasion and also to fan the spirit of revolt against their enemies. An active Bolshevik propaganda has been carried on in India, Persia, Afghanistan, Turkey, Egypt, China and Korea. Pamphlets in Arabic and Asiatic languages were printed on Soviet presses to prove by citation of texts from the Koran that the Soviet system was approved by the gospel of Mohammed.

It is hoped that leaving the Caliph in Constantinople will relieve the unrest in Mohammedan lands, but the decision is a bitter disappointment to Englishmen like Lord Bryce, who believe that Gladstone was right when he said that "the Turk must be driven out of Europe bag and baggage."

Dunno in Manchester (England) Sunday Chronicle

The heir apparent

New Mexico was the thirty-second state to ratify the federal suffrage amendment. Both branches of the legislature approved equal suffrage by large majority. A special session of the West Virginia legislature has been called to act on the question, and similar action has been taken in Oklahoma. The Governor of Washington has hitherto refused to call a special session of the legislature of his state, but it is announced that if action by Washington should prove essential to secure the nineteenth amendment by next November the legislature will meet. The attitude of Connecticut, Vermont, Delaware, Florida, Louisiana, North Carolina and Tennessee is still in doubt.

Bainbridge Colby of New York has been selected by President Wilson as Secretary Lansing's successor in the Department of State. He was one of the ablest lawyers of the city and constantly active in politics. In 1912 he was one of the leaders of the National Progressive Party, but he did not return to the Republican fold and in recent years he has been a supporter of the Wilson administration. A few months ago he retired from the Shipping Board to which he had been appointed by the President.

Charles R. Crane of Chicago has been appointed by President Wilson as Minister to China to succeed Dr. Paul Reinsch, who recently resigned. Mr. Crane was appointed to the same post by President Taft in 1909, but resigned at the desire of Secretary of State Knox, who accused him of giving out indiscreet interviews to the press on American policy in China. Since 1912 Mr. Crane has been a strong supporter of Mr. Wilson and his administration. His son, Richard Crane, is Minister to Czechoslovakia.

The first announcements of the 1920 census give the population of Washington, D. C., and of Cincinnati. The capital of the United States has increased in ten years from 331,069 to 437,414, a growth in the number of actual residents of almost one-third. Transients, war-time workers and members of foreign diplomatic corps are not included in the total. In the meantime Cincinnati has grown from 363,591 to 401,158 an increase of about one-tenth.

Ex-Premier Asquith was elected to Parliament from Paisley by a vote of 14,694 against 11,840 for the Labor candidate and 3778 for the Coalition candidate. The contest at this by-election was of national interest because Asquith took direct issue against Lloyd George, who succeeded him at the head of the Coalition cabinet and because the Labor party hoped that the result would show such gains as to bring them soon into power.

Exports from the United States for January amounted to \$731,000,000, an increase of \$49,000,000 over December, 1919. For the seven months' period ended in January our exports amounted to \$4,594,000,000, an increase of about \$800,000,000 over the corresponding seven months of 1918-19. Imports in January showed an even more rapid increase than exports; amounting to \$474,000,000 as compared with \$381,000,000 in December.

The Union League Club has adopted a resolution approving the suspension of the Socialist members of the New York legislature, in spite of the opposition of ex-Justice Hughes and other members of the organization. The trial of the accused Assemblymen still drags on and bids fair to consume a great part of the year's session, making it impossible to carry out any important legislative program.

Secretary of War Baker has given instructions for the prosecution of draft dodgers. The Adjutant General is authorized to set aside the charge of desertion by men wrongly classified as draft deserters or who were reclassified by the local draft boards. The list of "wilful" delinquents is now stated to include 173,911 names. These men are liable, if convicted, to a year's imprisonment.

Mathias Erzberger has resigned his position as Minister of Finance in the German Cabinet. He was charged, in the libel suit that he brought against former Vice Chancellor Helfferich, with abusing his power for private purposes and with sending his funds to Switzerland to escape taxation.

Loriot, the leader of the Left Wing of the Socialists in the French Chamber of Deputies, has come out in favor of joining the Third International organized at Moscow last year for the establishment of a proletarian government after the Soviet example.

Six thousand telephone girls of the New York Telephone Company have organized a labor union. It is predicted that the telephone operators will soon be entirely unionized and may apply for membership in the American Federation of Labor.

Shall we let a shortage of teachers close the rural schools?

A Living Airplane

The American Museum of Natural History has acquired the fossil skeleton of a giant pteranodon, a species of flying reptile now happily extinct. The skeleton measures sixteen feet

more like the wings of a bat than of a bird, and Dr. Matthew of the American Museum compares its flight to that of an airplane. "A careful investigation of the problem in the light of modern

from wing tip to wing tip and would stretch nearly twenty-one feet if the wings were pulled out straight. In life this reptile lived on the shores of the great interior sea which then occupied the Mississippi valley, and his bones were found in the chalk beds of the Smoky Hill river region of western Kansas.

The wings were long and leathery,

aeronautical knowledge," he says, would yield very interesting results, and, in turn, it seems altogether probable that such a research would throw some light on the more practical problems of aeronautics, for the pterodactyl, in so far as we can judge, approached much nearer to the airplane in structure and principles of flight than any of the birds."

The Power of the Future

DURING the years preceding the great strike of 1901, the price of coal stood at a pretty firm level; but since that date, the consumer will testify, coal bills have doubled and then some. We are now threatened by the operators with a further doubling in the price of a ton of coal. The present immediate crisis is laid at the door of labor; but this must not blind us to the true fundamentals of the situation. In a word, the world's accessible coal supplies are so close to exhaustion that immediate consideration of every possible means of conservation becomes an urgent necessity.

Fortunately the bolt does not come out of a clear sky. For years there has been an increasing tendency to employ nature's "white coal," which is a metaphorical term for water power derived from streams and lakes. This is rendered possible by two developments—the application of the water-driven turbine to produce electric current, and the transmission of that current over high-tension lines for distances mounting into the hundreds of miles. Twenty years ago we would hardly have been able effectively to convert water power into electricity on a big scale, or to send current for any great distance without a prohibitive loss thru leakage.

Today, however, large sections of the country depend entirely upon white coal for their industrial life. It is well that this is so, for otherwise much of the world would have to be industrially dead; the cost of getting coal out of the ground is already so high that severe transportation charges cannot be met by the consumer at a distance from the mines. So in places like the Rocky Mountain and Pacific Coast sections of the United States, the entire interior of Canada, and the Scandinavian peninsula, we must fall back upon the

hydroelectric development. This consists essentially of a big dam and a power house. Where before it was necessary to burrow into the bowels of the earth, to insure that the burrow would not cave in, and to get the coal to the surface and distribute it over the country, the problems now are those of the caisson, the concrete dam, and similar big construction work. The mining engineer is giving way to the civil engineer as creator of the world's supply of power.

But all the hydroelectric plants that could be built and operated for a long time to come would not be sufficient for the world's work. So we must go on using coal for many years. And this opens the way for a further striking innovation which has likewise already commenced, and which will in the end lead to extraordinary savings. For the manner in which we have been mining

our coal is criminally wasteful. In the first place a quarter of all coal mined is consumed by the railroads; and at least a quarter of the coal thus used is employed in the transportation of other coal. This means that close to 10 per cent of all our fuel is used up in hauling more fuel around the country.

In the second place, the smaller a fire is, the more expensive it is bound to be. The ideal power plant of a thousand kilowatts capacity will consume coal at the rate of 25 tons per year for each kilowatt of power produced. If we increase the capacity to 5000 kilowatts we cut the fuel consumption of fuel to 14 tons per kilowatt-hour; while in plants with a capacity of 100,000 kilowatts, we need burn only 6¼ tons of fuel per kilowatt-year. Finally, under present practice, in the average power house making current for sale, the fuel consumption is 23 tons per kilowatt-year, while in plants generating the current for use on the premises the coal is used up at the rate of 35 tons per kilowatt-year.

If we could eliminate the transportation of coal, and could generate all power in units of at least a hundred thousand kilowatts, it is therefore obvious that we would bring about a saving of at least 80 per cent in the coal burned each year. Nor is this any idle dream; we already know how this result is to be brought about, tho we may still be a bit weak on some of the technical details. The idea is simply to burn all coal at the mouth of the mine, transporting the power thence over high-tension lines, as is already done by the hydro man. The bold suggestion that the coal might actually be burned *in situ*, without going to any mining expense at all, would probably be ruled out by the difficulty of supplying oxygen and of controlling and applying the heat created. But there is absolutely no permanent engineering obstacle in the way of ultimately generating all power at the mouth of the mine, and transporting power *per se* instead of transporting coal as we now do. We are already doing this very thing in

Rules for a Successful Banquet

By Lindsay Russell

Founder of The Pilgrims, The Japan Society, Etc.

1. *Begin the banquet on the scheduled time.*
2. *Have few courses—make the banquet short.*
3. *Get the speakers started before the audience is wilted, by 9 p. m. if possible.*
4. *Four speakers are the limit—preferably two or three.*
5. *The speaking part of the evening should not consume more than one hour.*
6. *Abolish the undemocratic raised guest table. Have a dais for the speakers.*
7. *Never have a deficit. Either charge enough per cover or get extra contributions beforehand.*
8. *Stop speakers from overtalking by a flashlight system—a warning green light at nine minutes, a red light at ten. This is better than a bell or nudge from the presiding officer.*

some places and on a limited scale; and when the innovation is entirely consummated, and at the same time the hydroelectric possibilities of the world are adequately utilized, the price of coal will no longer trouble us. In that happy day we shall probably use coal, away from the mine, only for the operations of steel making and other chemical industries which depend upon the material properties of the coal, in distinction from the heat latent within it.

X-Ray Movies

Hitherto the cinematograph has dealt only with the externals of life. But the *New York Sun* tells of the achievement of Professors Lormon and Cormandon in combining the moving picture apparatus and X-ray photography. The French scientists believe that this apparatus will be a boon to medical students. By its means it is possible for the students to watch for a considerable period of time, without pain or inconvenience to the specimen observed, all the normal life processes of any animal—the beating of the heart, the contraction of muscles, the digestion of food and the filling of the lungs with air.

Up to the present time X-ray movies have been taken only of some of the lower animals. But it is expected that the apparatus will be sufficiently improved to give accurate and reliable "films" of anything that may happen inside the human body. The advantage of this to the physician and the surgeon needs no pointing out.

One of the falls in Golden Trout Creek, a stream in the California Sierras, famous for the beauty of its fish and scenery

at an elevation of almost 13,000 feet and is about sixteen miles in length, emptying into the Kern River just above the Big Kern Lake. It has a fall of 1600 feet in the last two miles, with several falls which prevent the fish from the river from mingling with those of the creek above. This stream dashes thru a canyon of highly colored volcanic lava for half its course and many anglers who have visited it express the opinion that the fish take their marvelous coloring from their surroundings.

Is the Farmer a Profiteer?

One evil of rising prices is the bitterness it creates between social groups and classes; each accusing its neighbor of being the cause when, as a matter of fact, such world-wide and impersonal causes as currency inflation and the diversion of labor to war industries are the real culprits. The Department of Agriculture has recently put forth a statement vindicating the western farmer from the charge of deliberate profiteering.

The Department calls attention to the assertion of various newspapers (in the cities, of course) that land values have been inflated in the Mississippi and Missouri valley states by speculation, "booming" and combinations to maintain high prices to the consumer. It quotes the statement, "Last year there was an unprecedented turnover in Iowa farm lands, and values were artificially increased by speculators to such an extent that land formerly selling at \$30 an acre found willing purchasers at \$400, \$500, up to \$800 an acre."

In answer the Department presents statistics showing that the average selling price of Iowa land is only about \$250 at the present time and that only five per cent of the sales in recent months netted \$400 an acre. None of this land has sold for as low as \$30 an acre since 1890. A special investiga-

tion was made of a group of farms on the richest lands in Iowa, and it was shown that the average yearly profit was \$3,480. Allowing five per cent interest on the pre-war value of the land, leaves only \$1,124 to pay for the labor of the farmer and all his business risks. If the present, somewhat inflated, land values are considered, five per cent interest would cover all but \$151 of the year's profits, and it is on present values that taxes must be paid and new lands bought.

The Department concedes that the rapid rise in farm values is an evil, but it contends that no one has deliberately schemed to bring it about. Land has risen in price in response to increased prices of foodstuffs, and these prices have only increased in due proportion with the rising price of manufactured goods and all other commodities. It is putting the cart before the horse to charge the high cost of foodstuffs to the inflated values of farmland.

Vive Seattle!

A bas Birmingham

Comparisons are odious, but did you know that Seattle, Washington, is the best large city in the United States and Birmingham, Alabama, the worst? Such is indeed the case, for no less an authority than the Professor of Sociology at Reed College, Portland, Oregon, has just directed a statistical inquiry into the thirty-six largest cities of the United States and finds this to be the case. He divides the subjects by which the cities are to be judged into eighteen categories and finds that all the western cities are in the first quarter, the southern cities in the last quarter and the East betwixt and between.

As to the separate categories:

Seattle pays the highest wages per hour, Charleston, South Carolina, the lowest.

The cost of living is lowest in Minneapolis, highest in Birmingham.

The death rate is lowest in Seattle, highest in Charleston.

The infant mortality rate is lowest in Omaha, highest in Charleston.

The proportion of population married is highest in Cleveland, lowest in San Francisco.

Louisville heads the list in church membership. Portland, Oregon, foots it.

Minneapolis has the lowest percentage of child labor, Atlanta the highest.

Providence has the largest park area per inhabitant, Atlanta the smallest.

Baltimore is the best paved city. Salt Lake City the worst.

The destruction by fire is less in Baltimore and more in Birmingham than elsewhere.

New York City owns the most valuable public properties per inhabitant, Birmingham the least.

More people draw books out of the public library in Cincinnati, and fewer in Birmingham than elsewhere.

As might be expected Boston has the best school attendance. Charleston has the worst.

Kansas City has the most school property per child attendance, Jacksonville the least.

New York pays the public school teachers the most, Jacksonville the least.

In the lowest number of pupils per teach-

A Bit of Local Color

Golden Trout Creek, a beautiful stream in the high Sierras of Tulare County, California, is famous for the fish found in its waters. The golden trout there are a different variety from those in any other stream in the world—or at least they were until a few years ago when the California Fish and Game Commission transplanted young fish into neighboring streams and lakes that had hitherto been barren, so that now golden trout may be caught in other waters in the immediate vicinity.

The trout that appreciate Sierra scenery are remarkably beautiful in themselves. Back and sides are brilliantly marked with red and gold, much after the fashion of goldfish seen in aquariums, and the belly is of a rich cadmium color.

Golden Trout Creek has its source

er, Los Angeles leads. Atlanta brings up the rear.

Seattle is the most literate city, Charleston the most illiterate.

Jacksonville has the fewest foreign born unable to speak English, Milwaukee the most.

Here they all are in their proper order:

1 Seattle	19 New York
2 Salt Lake City	20 Pittsburgh
3 Denver	21 Chicago
4 Los Angeles	22 Indianapolis
5 Washington	23 Louisville
6 Portland, Oregon	24 Detroit
7 Minneapolis	25 Springfield, Ill.
8 Cincinnati	26 New Haven
9 San Francisco	27 Philadelphia
10 St. Paul	28 Baltimore
11 Omaha	29 Memphis
12 Cleveland	30 Providence
13 Boston	31 New Orleans
14 Buffalo	32 Scranton
15 St. Louis	33 Jacksonville
16 Kansas City	34 Atlanta
17 Milwaukee	35 Charleston
18 Newark	36 Birmingham

Profit from Dust

There is a cement plant in California that was formerly the source of great annoyance to the owners of the orange groves nearby because of the clouds of cement dust that settled on the orange trees. The dust also proved injurious to the employees of the plant.

These facts and the resulting lawsuits led the owners to try to abate the nuisance by installing an apparatus which precipitates the fine dust by electrical action before it leaves the

exhaust stacks. The recovered dust particles were found to contain potash in the form of crystallized salts, a product that is so scarce and valuable at the present time that the company mentioned now devotes its entire attention to recovering the potash, and treats the cement as a by-product. The sales of potash pay the entire operating cost of the plant and a reasonable profit besides, and the cement, now produced at the rate of five thousand barrels a day, is so much clear gain for future sales.

We Merely Mention

Florida makes more "Havana" cigars than Havana, Cuba.

In 1919 Kansas produced more wheat than any other two states.

Italy is looking to Asia Minor as a possible source of fuel supply.

Thirty years ago Alaska had no reindeer; today there are 125,000.

The colored people of Atlanta, Georgia, have incorporated a stock exchange.

The Red Cross announces the curtailment of its Siberian relief operations.

In favored Iowa and Nebraska there is an automobile to every seven persons.

The Government has received more than \$1,107,000,000 from the sale of Thrift

Stamps, War Savings Stamps and Treasury Savings Certificates.

Since 1907 Walt Mason, the Kansas bard, has written more than 5000 poems.

A cylindrical blotter has been invented that can be mounted on the end of a fountain pen.

Last year American automobiles were exported abroad at the rate of one every nine minutes.

There were 72,000 divorces in the United States in 1916. No other nation can compare to this number except Japan.

The number four is as unlucky in Japan as the number thirteen is in America. The word "Shi," which is "four," means death.

Large petroleum deposits have been discovered in the State of Coahuila, Mexico, which may make the state the richest in all Mexico.

In the United States today there are over 400,000 billiard tables in use, and 4,000,000 people play billiards at least one hour every day.

There were five persons in the United States in 1917, according to a recent statement of the Bureau of Internal Revenue, with incomes over \$5,000,000.

The direct costs of the Great War to the belligerent nations is estimated at over \$186,000,000,000, which is more than five times the cost of all previous wars for the last hundred and thirty years.

The Republic of Goodyear

The "Senate" of Goodyear's industrial republic in session

The plant of the Goodyear Tire and Rubber Company has tried an experiment in industrial self-government which will be watched with interest by those who speak of the greater participation of labor in management. Perhaps the most democratic feature of the plan is that it was not simply imposed from above but was approved by a referendum of the 25,000 employees of the plant in June, 1919, before being put into effect. "Citizenship" in the plant is given automatically to all employees of six months' standing who speak English and are American citizens, for it is not intended that alien or floating labor should ever hold the balance of power at Goodyear.

The citizens of the plant elect an Assembly of two Houses; the mem-

bers of the House of Representatives being chosen for one year and the Senators for two. Each member on taking office pledges loyalty to the constitution of the United States, of the State of Ohio and of the factory. The Assembly passes all the rules affecting the conduct and welfare of the men and may even vote to change factory rules and regulations made by the management. Mr. P. W. Litchfield, Vice-President and Factory Manager of the company, has a veto on all legislation, but the Assembly can override his veto by a two thirds vote, in which case the question goes to the Board of Directors for final decision.

The Assembly has already a record of achievement to its credit which should stand it in good stead at the factory elections. Laws providing for

a Saturday half-holiday in all departments have been passed and approved, and the penalty for tardiness has been decreased when traffic conditions were bad. All shifts have been made permanent. The Assembly has even passed resolutions on questions of general civic interest, such as improvement in the municipal trolley system and the endorsement of a bond issue for city improvements. At a recent sale of the company's preferred stock over 17,000 employees subscribed to the extent of \$7,700,000, giving Goodyear the largest number of employee-stockholders of any corporation in the world except the United States Steel Corporation. So even the Board of Directors is in some measure responsible to the employees, and the Assembly is wholly in their hands.

Twenty Thousand Products

There is striking proof of the universal character of Crane service in the fact that no less than 20,000 articles—bathroom and kitchen appointments; heating, ventilating and vacuum cleaning systems; valves, fittings and steam specialties and plumbing and sanitary adjuncts in general—are made by

CRANE

In addition, thousands of articles supplemental to the Crane line are manufactured by other firms from Crane patterns and designs, thus preserving uniformity of quality. When you can have the reliability you seek, in any one of Twenty Thousand specified forms, by the simple expedient of specifying "Crane," there can be no reason for accepting anything less definite and complete.

The practical co-operation of our Engineering Department is always available to architects, builders and owners. Advise us of your requirements.

Crane Valves—all types, all sizes—are made to supply every need

There is no better covering than

CON-SER-TEX Canvas Roofing

Above all things you are interested in your home. You are always willing to add to its comfort and coziness—its security and charm.

Here's an opportunity to make your porch floors and roofs as up-to-date as the interior of your home. Your opportunity lies in the use of CON-SER-TEX, a scientifically treated canvas roofing.

When properly laid it lasts longer than tin or shingles. It is much easier and cheaper to lay. It is mildew proof. It deadens the noise of the rain and stops the rattle of the wind. It lessens work and the cost of repairs. The cold of the blizzards and the heat of midsummer do not affect it.

It adds charm and neatness to your home because it lies flat, clings tight and does the work. Generous sample, price list and descriptive matter upon request. Write today.

Competition Is the Death of Trade

(Continued from page 344)

In accordance with its findings the Government introduced an Anti-Dumping bill into Parliament last November that proposes to confer upon the Board of Trade, which corresponds to our Department of Commerce, unprecedented powers of trade regulation. The Board can prohibit the export of gold, silver, fuel alcohol, meat, wheat, fats, sugar, opium and many other things. It can prohibit the import of dyes, drugs, synthetic chemicals, rare earths and metals, optical glass, scientific instruments, electrical apparatus, potash, phosphorus, zinc, tungsten and other products or materials of "key industries." The wording of the bill is extremely sweeping. The Board can put an embargo on imports whenever it believes that "the production or manufacture of similar goods is or is likely to be adversely affected." Any dealer selling such goods may be penalized to any amount up to the full value of the goods—which means possible confiscation. The president of the Board is empowered to act immediately and on his own initiative in an emergency, so if, for instance, he hears that a ship is approaching with too cheap goods he can clap on a tariff or an embargo before it unloads. Any goods may be excluded if they are sold below the selling price in the country of manufacture. The embargo may be withdrawn in case the difference between the two prices is paid to the British Government. This would, of course, interfere with our custom of remitting the duty on imported raw materials where the finished product is exported so as to enable the American manufacturer to compete in the foreign market. The British Board of Trade is further empowered to shut out all goods which, due to the collapse of exchange and depreciation of currency, may be sold so cheaply as to endanger British industry. But if sterling keeps on falling at its present rate it will be the United States rather than Great Britain that will need such protection.

While the Anti-Dumping bill is pending in Parliament the present more stringent system of trade restriction by special licenses for particular products and dealers will probably be continued. This bill may not go thru, but some similar measure will be necessary in any case if the United Kingdom is to keep its industrial and financial system stable in the present crisis. All other countries will be forced to take such action for their own interests. This is often deplored or denounced as "trade war," but here, as in the case of military measures, we must discriminate between wars. A "trade war" for revenge or for aggression is unjustifiable. A "trade war" in self defense may be a patriotic duty. Only the most incorrigible of commercial pacifists would deny the right of a nation to protect itself against an invasion of foreign goods. Protection is Article X of the Covenant of Commerce.

But governmental protection is a negative measure and must be supplemented by governmental promotion if a nation is to make progress or even hold its own. Economic independence is more essential than political independence, but this only provides an opportunity for prosperity, otherwise a Pacific island of the olden times would have led the world. The new era which we are entering demands of a government something other than restriction and hostility toward the commerce that is the life of a nation. A government that is to serve the people must plan for their prosperity and participate in their industry. The ship of state must steer between the two extremes of unbridled competition (free trade or economic anarchy) and complete consolidation (socialism or capitalism). Neither competition nor combination ought to be extinguished, but we must somehow manage to avoid the waste of the one and the ruthlessness of the other. By wise regulation we must prevent either the centrifugal force of competition or the centripetal force of combination from carrying the world out of its orbit. If either tendency should come to prevail it would destroy our real freedom.

We must not let the magic of that fine word "free" carry us away. "Free trade," "free love" and "free thought," in the common signification of the words, are all devices of the devil. They were invented by the Eternal Anarchist, the enemy of God and man, whose sole purpose is to destroy all law and reduce the cosmos to the chaos, out of which it has been slowly built by the labor of God and man. The devil most appears as an angel of light when he uses the word "free," for it is under the banner of freedom that the battles of progress have been begun. This is because the earth is old and so cluttered up with antiquities that we must clear the ground before we can build, we must tear down before we begin to erect. To affirm we must first deny. But freedom is a negative thing, not an ideal in itself; it is a means to an end, not an ultimate aim. In a universe of law and order absolute freedom is insanity. So when we call for freedom we mean relief from arbitrary, antiquated and irrational restrictions, not the abolition of those internal and essential rules of action by which the thing in question depends for its existence. We want freedom 'n thought indeed, but not freedom from the laws of logic. That way madness lies. We want freedom in love but not freedom from the laws of morality by which true love subsists. We want freedom in trade but not freedom from the laws that protect trade from self-destruction thru unlimited competition.

Doctor (to patient)—"You had a pretty close call. It's only your strong constitution that pulled you thru."

Patient—"Well, doctor, remember that when you make out your bill."

The Strike Epidemic

(Continued from page 347)

overthrow of existing governments. Nor do I think that British Syndicalism will ever follow the example of the Syndicalists in Spain, who for months past have been carrying on a campaign of terrorism and assassination. But the significance of the present movement is not diminished by the fact that it is proceeding without resort to acts of violence. The Labor Party is conducting a campaign of propaganda which may be far more effective to subvert the economic basis of society than the methods of anarchism and terrorism which are advocated and employed in other countries to achieve precisely the same end. If they succeed they will have commenced a new chapter in the industrial and political history of the world.

Syndicalism is almost as great a departure as the Soviet Government of Russia from all the ideals and institutions of western democracy. The supreme authority of Parliament disappears; the organization of government is no longer central, but multiple. Industrial Soviets, each within the limits of a single industry, dictate the terms upon which the rest of the community shall receive the necessities of life. The masses of the workers are to take possession of the machinery and means of production, not in the manner which Marx and Lassalle dreamed of, but advancing to the assault in separate battalions, the mines for the miners, the railways for the railway men, the land for the agricultural laborers. All society is to be organized on the basis of trades-union ownership and control of industries. To this vast and perilous adventure the Labor Party of Great Britain is now committed.

A curious feature of the situation is the fact that the ostensible leaders of the Labor Party, men like Clynes and Thomas and Henderson, are no more Syndicalists than they are Socialists. In this matter they are not leading, they are being forcibly propelled from behind. I well remember in 1912 in the British House of Commons, when the new fangled doctrines of Syndicalism were probably for the first time discussed in the British Parliament, the scorn which the labor leaders poured upon them. I do not think that any of the labor leaders have altered their views from that day. Nor on the other hand need anyone suppose that the rank and file of British labor really understands the economic doctrines to which they are being committed. There is a wind of unrest blowing across the continent of Europe, disturbing old beliefs and upsetting the minds of men in all countries. It is a malady blown in from abroad, like the Russian influenza. I hope, and I believe, that the British constitution will have enough stamina to withstand it.

London

"All Liquor Signs Must Come Down."—Headline. Pretty soon it will be illegal to remember the smell.—*New York Evening Post.*

Don't worry when maids leave

Do the cleaning easily yourself with the ARCO WAND Vacuum Cleaner. It totally eliminates all labor, saves your time and leaves your curtains, carpets, upholstery, mattresses, etc., absolutely free from dust, dirt, lint, and grit.

ARCO WAND VACUUM CLEANER

Is the permanent cleaner for steady everyday service the year around all over the house.

The house equipped with the ARCO WAND is easy to care for and quickly cleaned. No moving of furniture, no bending, beating or straining to get all the dust and dirt out. The ARCO WAND takes it all out by suction into the sealed dust bucket of the ARCO WAND machine. It is the greatest time- and labor-saver ever introduced into the modern home. Find out all about its wonderful results.

Buy on Easy Payments at present low prices

See your dealer today about an ARCO WAND for your home. Easily installed in OLD buildings. Made in sizes for Apartments, Residences, Clubs, Factories, Hotels, and all Public and Private Institutions.

Autumn Glory
Finest Fall Flower

WHAT WE HAVE DONE

During the last twenty-five years, we have named and introduced hundreds of wonderful new flowers, vegetables and berries. Among them which stand pre-eminent the world over is the *Cosmos*, *Rudbeckia Golden Glow*, *Gladiolus Childs*, and *G. America*, *Chinese Woolflower* and *Giant Christmas Kochia*.

WHAT WE ARE DOING THIS YEAR

Our catalogue for 1920 is replete with sterling novelties; notably *Autumn Glory* (*Helianthus Questifolius*) the most showy of all autumn flowers; *American Red Cross*, queen of all *Cannas*; *Gladiolus White America*; *Mammoth Long-Stemmed Asters*; three new colors in *Woolflower* and three in *Salvias*; *Mastodon Pansies* and *Early Spencer Sweet Peas*; new *Sweet Corn Sixty Day Makegood*, ten days earlier than any other; *Jack Frost*, a new white *Cucumber*; *Matchless Lettuce* and *Supreme Muskmelon*, both superior to all other sorts. *Rajah Beet*, *Top Notch Tomato*; *Great Dane Cabbage*; and *Farmer Potato*. These are all real wonders-in-their-way.

In *Berries* we have the marvelous *Thornless Grape Vine Blackberry*; *Everbearing Blackberry Macatawa*; *New Everbearing Raspberry Leyerle*, and the greatest of all *Everbearing Strawberries Neverfail*, and the wonderful *Pierce Giant Grape*.

Flower and Vegetable Seeds. Select standard and new varieties of greatest merit. *Dahlias*, the most wonderful new sorts from all parts of the world.

Gladioli. We claim the largest and finest stocks of these. We grow *Gladioli* by the hundred acres.

Cannas, Irises and other Bulbs. Immense stocks and most superb varieties.

Hardy Plants, in great variety, *Lilies*, *Phloxes*, *Peonies*, etc.

House Plants. Many wonderful new sorts, including thirty-five kinds of *Boston Ferns*.

Hardy Shrubs, Vines, Roses, etc. in select varieties.

Our Big Catalogue for 1920. Fully up to date—176 pages, 20 colored plates, **FREE** to all interested. It will open your eyes to many new Garden Joys.

RUTHERFORD, NEW JERSEY

We'll All Take a Flight

(Continued from page 350)

opened if your wife complains of your cigar smoke, in the aeromarine "Queen of Water and Air." Behind your seat you will find a miniature ice chest and cellarette for food and drink. The whole interior is prettily decorated in white, gold and blue. At night you switch on the electric lights, select a book from the rack in the corner of the library, and while away the minutes that separate you from Chicago or St. Louis. You dictate to your secretary sitting behind you in the third seat, and she finds that the typewriter rack and chair are quite as comfortable as that in your office.

Uncle Sam's mails have not been neglected. Huge aerial mail-carriers will be shown at the exhibition, one of them capable of carrying fifteen hundred pounds of mail from New York to Omaha without stop. Trap doors in the floor permit the mail clerks to drop bags of mail into the aerodromes of intervening cities. Two Liberty motors of 400 horse power each drive this new air mail plane.

The L. W. F. Company has produced the largest mail-carrier, a huge pair of wings measuring 106 feet from tip to tip marking its position among the small fry at the show. Two long bodies run back to support the tail of this great mail car, and in their interiors 6000 pounds of mail and cargo can be speeded thru the skies at over one hundred miles per hour. It is safe to assume that this means of transporting our mails will have the monopoly of this business. One conservative congressman recently objected that the cost of transporting our mail by air slightly exceeded the cost by rail. An opponent ironically asked him if he desired the country to go back to canalboat mail-carrying, which was still cheaper!

The aeroplane industry is now being worked on by the accessory specialist. It is these small details affording luxury and delight to the traveling public that will win for American aviation the support that is denied it by the Government. Flower vases, foot warmers, telephones, card tables and ice boxes are no less necessary to develop this sadly hampered industry than are the more vital details of spark plugs, carburetors, stream lining and motors. All of these accessories are to be shown in profusion at the coming aero exhibition. Flying clothes that are "just right," nobby, comfortable and the latest thing in styles, may attract the attention of some young gentleman and induce him to try a flip. Thus one more customer is found for the trade.

Parachutes will be shown which are guaranteed to let the nervous passenger down without injury at any time he becomes frightened. A recent American invention in this line has dropped a passenger safely from only four hundred feet altitude when the aeroplane was passing over the ground at nearly two miles a minute.

The Goodyear Company has a "Pony Blimp," or a small dirigible balloon,

which will be exhibited to attract sportsmen to take up this less exciting form of air travel. A quiet cruise of 400 miles can be enjoyed by a small house party, and the modest speed of thirty-seven miles per hour should not alarm the most nervous type of chap-erone. Of course, this "lighter than air" craft has many other uses than mere sport. Mails can be carried, surveys made and photographs taken, coast patrols and forest patrols executed with many advantages over the speedier but non-hovering aeroplane. In war work this type of aircraft has decided advantages over the stationary observation balloon in scouting, ranging artillery fire, taking photographs and general observation.

When flying the Pony Blimp across country a special harnessing device enables the balloon to be anchored safely at night in the open field. Inflated rubber pontoons enable the airship to land on water and ride there as securely as on land.

The Curtiss Company, which produces far more aeroplanes than any other concern in the United States, has designed several new models of machines, notably hydroaeroplanes, or seaplanes. Upon the rivers and inland seas one always finds good landing places; and this form of sport machine is extremely popular with the aviator. The yachtsmen and the motor-boat fans are beginning to find that the winged boat offers more sport than the two combined. The Curtiss "Seagull" is used in many parts of the country as a ferryboat carrying passengers from mainland to islands in the sea and lake.

From twenty-five hundred to twenty-five thousand dollar aeroplanes may be purchased at the coming exposition. Men and women learn to fly an aeroplane today in a fortnight's schooling. Not only the enthusiast and the sportsman, but the ordinary citizen as well should encourage the development of American aviation, as a patriotic duty. The days of the great naval dreadnaughts as a first line of defense are numbered, according to the public support given to the development of the aeroplane. Cheaper, swifter and more deadly in destructiveness, the nation that neglects her aviation will never cease to rue it. Congress is blind to the examples of European nations and deaf to the entreaties of the aviators of this land. It remains to the discernment of the American public to determine the place in the skies our aeroplanes, commercial and military, shall grow to take.

New York

The Woman—"Here's a wonderful thing. I've just been reading of a man who reached the age of forty without learning how to read or write. He met a woman and for her sake he made a scholar of himself in two years!"

The Man—"That's nothing. I know a man who was a profound scholar at forty. Then he met a woman, and for her sake made a fool of himself in two days!"—*Blighly*.

Winter Has Taught This Lesson

That homes that were not Chamberlin Metal weather stripped were hard to keep warm. For draughts were ever present—cold air currents sifted in around the doors and windows. Costly heat escaped increasing fuel consumption.

Chamberlin Equipment prevents all this. It pays a profit in fuel economy and what's more it assures comfort and even temperature—a vital factor in the health of the family. For it effectively seals up the cracks around the doors and windows—keeps the cold out and the heat in.

Because Chamberlin Metal Weather Strips keep out air currents they serve as a protection against soot and germ laden dirt so prevalent at this time of the year. In fact they are an all year 'round necessity.

Chamberlain Metal Weather Strips can be applied to case-ment windows, sliding windows, doors and French windows—wood or metal sash.

Plan your weather stripping now. Our booklet "26 years of weather stripping" will help you. Write for it

A Game of Personalities

Various novel and ingenious means are being used nowadays to measure one's mentality and discover his ability. Binet puzzles, optical illusions, reaction times, equilibrium apparatus, intelligence quotients, information tests and such like are being used to sort out major generals from mere privates and to determine whether a freshman shall go in for art or aviation. Why should we not also have a test of imaginative ability that would reveal to the future fictionist his true vocation? The fundamental requisite of a successful writer of short stories, novels or plays is, I take it, the power to develop a situation and characters from such hints as he may happen upon in print or life. Just as a paleontologist can reconstruct an entire skeleton of some extinct animal from a fragment of a femur or a stray tooth, so the romancer is able to build up a story from a snatch of street conversation, a glimpse of home life as seen from the elevated train or newspaper paragraph.

The best material that I can think of for testing the creative imagination is to be found in the "Personal" column of the London Times and I clip the following from the copies received today:

PERSONAL.

FRIDAY.—So it was only a wonderful dream after all. Good-bye, dear.—B.

G.W.—Foiled again: we will yet make the welkin ring with a joyous madrigal.—Sumatra.

ESCURIAL.—Does the muleteer approve of the proposed proceedings?—Grande of Aragon.

ARKANSAW.—Poor Bear. Don't understand, but we're one always—now and evermore.—A. L.

P.LIN.—Your quips and jests may seem harmless enough to you, but recollect there are some to whom they are as a poisoned dart.

IT seems to me 'tis only noble to be good.—
LAUGHING EYES.

FRED.—Any soap, any candles?—SAUSAGE.

"SAUSAGE.—No thanks; but a box of matches.—
Fred."

"ANY pencils, Corporal?"

NEWT.—Drop a few crumbs into the bowl.—J.

IF lady lunching, Midland, Birmingham 23rd, afterwards 2.55 p.m. Paddington, in Black Musquash, Opossum collar, single pearl third finger right hand, mentioned names Adkins and Wilson, communicate Box V.608, The Times, will receive something her advantage.

LITTLE WOMEN.—Meet me Holborn Empire any afternoon, 2.15, to see Twins.—MEG and JOHN.

NITA.—Full many a flower is born to blush unseen, and waste its sweetness on the desert air.—
MOOLTAN.

LINDA.—Now haughty, then coy, what's a poor fellow to do-o-o?—Jack-in-the-Green.

JOSEPHINE.—Your suggestion is unkind, for I asked you most politely.—FRANCOIS.

TULIP.—Don't get cold feet!—Nicholas.

FAIR DAZZLING SNOW-QUEEN of New Year's Eve, will you be my partner?—Pan-ball King-Cole.

JANE.—Oi do loike oo.

7932.—May we meet in eternity, where the truth alone will be known and be believed, and calumnies and false judgments cease.

LADDIE.—Please come back to us all. We are brokenhearted. Otherwise all available cash will be spent in search for you.—FLUFFY.

DARK LADY. Persian Lamb Coat, Pulborough.—
Waited two hours at Ritz's; sad; no one with such charm.

NEB.—Yaas, ma honey.—Fum.

'MELIA.—Play a little music in the band.—DRYAD.

I Never heard such musical discord, Such sweet thunder.—ECHO.

DOUBLE. S. Kensington, morning of 6th, much regrets his honesty.—Box V.958, The Times.

NYANZA.—You will have to be fitted with a 106 fuze unless you buck up.

LADY. old (but young in spirit), wishes to find a man or woman to SHARE her beautiful Sussex COTTAGE, with fine garden; beautiful country; artist or writer could have use of studio.—Box A.13, The Times.

NINA.—Bah!—Y.

BELLE.—You have floored me flat.—Raymond.

WOULD any one POSSESSING SKELETON, and having no use for same, kindly LEND it to TWO STUDENTS who are unable to buy.—Elford, 142, Cambridge-street, S.W.1.

WADDON CHASE.—"Sack the Lot." President "Anti Poke your Nose, into other People's Business Association."

These tantalizing glimpses of real life set one wondering. What was the dream of Man Friday—or is it Woman Friday? How was George Washington—if that is his name—foiled and why should the Sumatran—I wonder what his color is—want to make the welkin ring with a madrigal? The third is a Spanish romance, but why should a muleteer have the veto power over a grandee and a royal palace? What happened to the Arkansaw Traveler and what is it that A. L. does not understand? Why should that reputable Latin author be accused of malicious jesting? Laughing Eyes and Mooltan appear to be familiar with Bartlett's "Quotations" but why do they advertize the fact? Why should Sausage sell soap and why does Fred want matches? V 608 must have stared hard at the lunching lady to describe her furs so accurately. How can a Tulip get cold feet? Apparently S.S. Kensington has found that honesty is not the best policy. Everyone carries a concealed skeleton, not counting what he may have in his closet, but he is not likely to lend it to the two poor students so long as he lives.

There is a \$100 short story, salable to some of our fiction magazines, in any of these two-line advertisements if one has the knack of unraveling its mystery. And there's fun to be got out of them if you use them as a game. Cut them and paste them, on cards; shake them up in a bag and pass them around; each person to draw one and write, or better, tell the story of it. Or write one on a sheet of cardboard, hold it up before the company and give them ten minutes to think up an explanation of it; a prize for the best and poorest. Or weave them into a continued story, each person in turn to tell a chapter about his item. Try it.

E. E. S.

Pebbles

She—How did you get insky?

He—With a latchky.—*Froth.*

Instinct is that subtle something which tells a woman she is always right.—*London Opinion.*

"Yes, Miss Flipp, I'm continually breaking into song." "If you'd ever get the key, you wouldn't have to break in."—*Life.*

"Speaking of bathing in famous springs," said the tramp to the tourist, "I bathed in the spring of '86."—*Orange Peel.*

"Why don't you get an alienist to examine your son?"

"No, sir! An American doctor is good enough for me."

The Doctor—"I had a great many more patients this time last year; wonder where they have all gone?"

His Wife—"We can only hope for the best, dear."

"Am yo' daughter happily married, Mrs. Perkins?"

"She sho' is, Mrs. Lumley. She's done got a husban' dat's skeered to death of her."—*Boston Transcript.*

"What do you think of the two candidates?"

"Well, the more I think of it the more pleased I am that only one of them can be elected."—*Michigan Gar-goyle.*

Maud—Can you run a flivver?

Beatrice—No indeed.

Maud—Why, I thought you graduated at an automobile school.

Beatrice—So I did, but I only took the classical courses.—*Life.*

"An awful thing has happened, father."

"My darling!"

"I'm afraid you'll have to adopt a son."

"What the——! Who the——!"

"I proposed to Freddie Chardmore last night, and he promised to be a brother to me."—*Blighty.*

A poor man had hardly been able to supply his wife and family with the necessities of life until one day he struck it rich.

"At last, my dear," he said to his wife, "you will be able to buy yourself some decent clothes."

"I'll do nothing of the kind," she said. "I'll get the same kind the other women wear."—*Asheville Push.*

Lady Duff-Gordon was talking about the 1919 ball gown.

"The V in the back," she said, "is actually open now clear down to the waist. It's a shocking gown, as shocking as little Winnie's text."

"Winnie's papa said to her one Sunday at luncheon:

"Winnie, dear, what was the parson's text this morning?"

"Oh, papa," said Winnie, with a shocked look, "it was, 'Abdomen, Abdomen, my son Abdomen!'"

Like Nut Bubbles Yet It's Whole Wheat Puffed

There lies the fascination of Puffed Wheat.

The grains are light and airy—puffed to eight times normal size. They almost melt away.

An hour of fearful heat has given them a taste like toasted nuts.

Yet they are whole wheat. Every food cell is exploded so digestion is easy and complete.

They supply whole-wheat nutrition as no other food can do. In lesser ways of cooking, the outer wheat coats pass largely undigested.

Dozens of Delights

The three Puffed Grains with their different flavors offer dozens of delights.

They are not for breakfast only. Every home finds countless uses for these nut-like, flimsy grains.

Remember These Three

Puffed Wheat in milk is the utmost in a food. With every food cell broken it is easy to digest.

For luncheons, suppers and at bedtime there is nothing to compare with this dish.

Puffed Rice or Corn Puffs mixed with fruit adds a delicious blend. It adds what a light and dainty crust adds to shortcake or to pie.

Puffed Rice or Corn Puffs, crisped and lightly buttered, become a food confection.

Have a dish ready when the children come from school. They will eat them like peanuts or popcorn. And they take the place of foods less healthful, less easy to digest.

Millions of children are now enjoying Puffed Grains, but not half of them get enough.

Every home should keep all three Puffed Grains on hand.

**Puffed
Wheat**

**Puffed
Rice**

**Corn
Puffs**

Also Puffed Rice Pancake Flour

To Make Royal Pancakes

Our food experts have worked for years to make an ideal pancake mixture. Now it is ready— with Puffed Rice Flour mixed in it. The ground Puffed Rice makes the pancakes fluffy and gives

a nut-like taste. You can make the finest pancakes ever tasted with Puffed Rice Pancake Flour. Add just milk or water, for the flour is self-raising. Order a package now.

A GOOD FLORIDA (17c) LUNCHEON

Along about Christmas time a little town in Florida held a Farmers' Rally, and the Clubwomen were able to give the 500 persons in attendance a splendid Noon-luncheon, according to press reports—for 17 cents per plate. Most of the articles appearing on the Menu were *home-grown*.

The High-Cost-of-Living today is bearing down most heavily on salaried folks—office managers, clerks, professional men, and others of that class. According to Bradstreet's, living costs stood last December at 131 per cent above pre-war level. Profiteering, extravagance and inflation of the currency all have their effect, but the real, fundamental, underlying cause of our troubles is **UNDER-PRODUCTION**.

Florida growers, however, need worry but little about their own living costs, when you consider the big prices they receive for luxuries shipped north in mid-winter. The Christmas strawberries brought them from 90c to \$1.00 and as high as \$1.46 per quart, after shipping and selling expenses were paid. In December Green String Beans brought close to \$6.00 per hamper in New York. Tomatoes shipped to Northern markets brought \$2.75 to \$4.00 per crate, and Peppers \$3.25.

The Leesburg Commercial states: "We visited a twelve acre farm Saturday—ten acres in fruit and the crop sold on the trees this season for \$10,000 cash. Cost of production was \$1,100, leaving \$8,900 for interest on the investment—nearly 18 per cent on a value of \$5,000 per acre."

These are not "Pipe Dreams"; they are **Florida Facts**. Grove land that is at present in an uncultivated state will not last forever in Florida—note the lesson of California. I own and am offering for sale in Orange County some of the finest orange and trucking lands in the state.

Truck gardeners near Orlando cleared as high as \$1,500 an acre from head lettuce last year. We have copies of their signed testimonial letters in our book. Many of these truck gardeners are Northern men and they know our summer climate is cool and more pleasant than in Northern states.

Here is OPPORTUNITY reduced to its simplest terms. All you need is a moderate amount of capital and a little knowledge of farming. We will clear and cultivate your land on our fair and equitable **TEN PER CENT ABOVE COST PLAN**. Send for our Big Free Book—**TWENTY ACRES AND PLENTY**. It tells all about our dollar-an-acre monthly payments, sick and out of work clauses and other attractive features. Address **Sylvester E. Wilson, Dept. G-1, Orlando, Florida**.

(NOTE: Mr. Wilson is Treasurer and principal owner of the Produce Reporter Company, Chicago, publishers of the "Blue Book," which is to the Fruit and Produce Trade what Dun's and Bradstreet are in other commercial fields.)

A Number of Things

By Edwin E. Slosson

This writing for the schools has got¹ on my nerves. When I dropt the professorial chair to pick up the sanctum I thought I had shaken² off the sharp eyes of undergraduate criticism but it was out of the frying pan into the electric stove for me. I get roasted every time this page appears. I can't talk about the anatomy of a chicken or of a phonograph but that somebody has a bone to pick with me. When I said that the homemade phonograph needles might be better than "the boughten ones" a Kentucky school girl wrote to politely inquire³ if "boughten" was⁴ not obsolete as the dictionary said it was.⁵

Sure,⁶ my dear young lady, that's why I used it. But when I lived in the Elizabethan Age—that is to say when I was a boy—we talked of "boughten candy" and one can't stay grown up all the time. If you want precedents I might cite to you Southey and Coleridge, but instead I will ask you to read over the sentence aloud and see⁷ if it does not run more trippingly off the tongue with a "boughten" in it. That's the main thing in writing English, to get the right swing to the sentence. You know that when you are having a dress fitted the main thing is to make it "hang right."⁸ To get a proper roll and rhythm one may well use an unusual word or alter the ordinary arrangement.

Of course if I had said "store" needles I might have been accused of using a barbarism for it is undeniably "a word not English" altho it is American. But the English have stuck to the -ten verb endings in many cases where we have dropt them. Sometimes the usage is dangerous. I have heard of a man who when he came into town was given a couple of opera tickets by his boss who had been unexpectedly called away. He telegraphed to his wife in the suburbs: "Have gotten seats for Caruso tonight." His wife getting a message reading: "Have got ten seats for Caruso tonight" supposed that he had fallen heir to his boss's box. So she appeared at the entrance to the Metropolitan at 8:15 with eight of her most fashionable friends and the unlucky man had to mortgage all his jewelry to buy tickets from the speculators.

Mnemonic rimes are sometimes useful in remembering rules. For instance this old spelling rime:

*I before e
Except after e
And when sounded as A
As in neighbor and weigh*

works well except when one is confronted by an emergency such as *seize* and *leisure*. I can never forget the date of the discovery of America since I was taught as a child:

*Columbus sailed the dark blue sea
In 1493.*

Or was it:
*Columbus sailed the ocean o'er
In 1494.*

So when puzzled by the -ten verbs I say over to myself these lines by the

poet laureate of a town in which I once resided:⁹

If all the pomes that I have written
Were piled together in a pile,
And with a lighted candle litten
You'd see the flame for more'n a mile—
But all the gold that I have gitten,
For all the pomes that I have wrote
Wouldn't harm a little kitten
If poured molten down its throat.

Perhaps I should explain that the other editors gave me this page as a backyard to play in hoping that I might behave more properly when admitted to the front room. So classes in English are hereby warned that they read it at their own risk. This too long foughten¹⁰ treaty controversy requires too careful attention. One must blow off steam somewhere. It would make a body¹¹ mad¹² if he had to pull up¹³ and explain every time he used a seven-teenth or twenty-first century word.¹⁴ Still I can do it if I have to.¹⁵

¹Or gotten.

²Or shaken.

³Or inquire politely.

⁴Or were.

⁵Or says it is.

⁶See Dictionary of New York Dialect.

⁷Or to see.

⁸Or rightly.

⁹I refer to Bill Nye of Laramie. See my biography in the Encyclopedia Britannica, 12th edition.

¹⁰Or fit.

¹¹An individual.

¹²Vexed or angry.

¹³Halt.

¹⁴That is to say, a word which has passed out of or not yet come into good usage.

¹⁵Or have got to.

Orators must beware of making odious comparisons with the Pilgrim Fathers. Because the Rev. Percy Stickney Grant of the Church of the Ascension, New York, likened the deported Russian anarchists to the Pilgrim Fathers he is denounced by a fellow churchman, the Rev. Gustav A. Carstensen of Holy Rood for besmirching the cross and defiling the pulpit. That may remind the reader of the time when President Eliot in a too generous speech at Salt Lake City compared the pilgrimage of the Mormons across the Great American Desert to the voyage of the Puritans across the Atlantic Ocean. The whole country—outside Utah—arose and hissed at him.

This is truly the "land of the Pilgrims' pride." That means "the land that takes pride in the Pilgrims," not that the Pilgrims would take any pride in the land if they saw it now. On the contrary they would be highly disgusted at such a godless nation and repent having founded it. We modern Americans have renounced their theology. We have abandoned their principles. We have repudiated their moral code. We make fun of their customs. We decline to study their philosophy. We will not listen to their sermons. The most we know about them is that they burned witches and that is not true. We get along quite peaceably with Episcopalians like the Reverends Grant and Carstensen and with Unitarians like Dr. Eliot, all of whom our pious forefathers would, to use their

own vigorous language, "spew out of their mouths" as they would anarchists and Mormons. We are getting away from the ideals of the Puritans as fast as we can. We refuse to imitate them—but, oh, how we admire them! We will eat turkey in their honor every year. We will raise money for a memorial to them. And we will not allow any one to speak disrespectfully of them. One of Dr. Grant's critics calls it "blasphemy" to talk as he did about the Pilgrim Fathers. I am as fond of crowing over my Plymouth Rock ancestors as anybody, but I had not thought of them as divine beings. ***

While the Senators are excited over the wording of Article 10 of the Treaty the artists are excited over the wording of Article 247. This demands that Germany deliver within six months from January 16, 1920:

the leaves of the triptych of the Last Supper, painted by Pierick Bouts, formerly in the Church of St. Peter at Louvain, two of which are now in the Berlin Museum and two in the Old Pinakotek at Munich.

Now if the Belgians had a four-leaved triptych no wonder they were willing to fight to win it back. It belongs in a dime museum alongside of Barnum's "five-legged quadruped." But we have often searched the grass for a four-leaved trifolium and found it and if the Treaty does not require anything more impossible of Germany than the restoration of the four leaves of a triptych it is better than some people think it.

One would imagine that after taking away four leaves from a triptych it would be a minus quantity. But no, Louvain still boasts of the main panel of it, the "Last Supper," while the Berlin museum catalog lists the "Pass-over" and "Elijah in the Desert" and the Munich museum catalog lists "Abraham and Melchizedek" and the "Israelites Gathering Manna." But these appear each to be two pictures on one panel, not two separate leaves as the Treaty has it.

Poetry is a matter of relativity. Those whose feet point in the opposite direction from ours see the seasons in another way. Here is the Sydney Bulletin's prize sonnet on February:

FEBRUARY

By S. ELLIOTT NAPIER

The scorpion summer—every burnish'd scale
Aflame with mortal agony and hate—
Crawls, blind and frenzied, to his venom'd fate
And stabs his life out with his arm'd tail!
The sun is brazen and the skies are mail;
The airy argosies bear dusty freight;
And, see! The witches of the wind gyrate
O'er that which, once so green, has grown so pale!

But, ah! Tho February, burnt and bare,
May claim—and take—his toll a little space,
Above his wailing western winds that parch
And thru the haze that weights his sad-den'd air,
There comes a whisper of autumnal grace:
There breathes a promise of the rains of March!

No Lather Seems Perfect Without Shavaid

This new combination makes shaving easier, as a Free trial will convince. And it saves time, keeps the skin in condition, does away with harshness. You, too, will be delighted with Shavaid.

"The greatest advance in shaving comfort" is the unanimous verdict of men the nation over who have adopted Shavaid, the instant beard softener.

Men who have tried every way to ease the harshness of the morning shave, now agree that Shavaid is the final development. And to prove it to you, we'll send a free trial tube.

Try it as others have, judge it yourself. Note all that it does to relieve the morning's irksome task.

Quicker easier pleasanter

No need now to apply hot towels before shaving. That is a bad habit, anyway, for it brings the blood to the surface at the wrong time.

Merely apply a thin coating of Shavaid over the beard. Then cover over with your favorite lather.

But do not rub the lather in. That is unnecessary and it takes time. Shavaid saves all those moments of hot towel applications and rubbing in the lather.

Then shave, after thus applying the Shavaid and lather.

You'll be surprised! The razor responds so willingly. Pulling is minimized. Abrasions are rare.

A soothing balm

Note the instant effect of Shavaid—how cooling, how pleasant! Then note how the lather stays moist and creamy.

That usual "drawn," smarting feeling is absent.

Shavaid keeps the skin in prime condition—smooth, firm, free from that tenderness and dryness which are caused by hot water and too much rubbing.

In fact, Shavaid is so much of an emollient that no after-lotions are necessary. Following your shave, you will experience immediately a skin softness, a pleasant glowing that you never knew before.

A scientific preparation

Shavaid was perfected after long scientific study and countless experiments. It is the product of a company which for 25 years has been inventing and perfecting new helps for mankind.

And we want you to try Shavaid, so that you can experience this new delight. A free trial tube will be sent to you at once, if you mail the coupon below. Then after proving the value of Shavaid,

you can secure full size tubes from your druggist at 50c each. Or if he cannot supply you, we'll be glad to fill your order direct.

Shavaid

Softens the beard instantly

—apply to dry face before the lather.

Saves time and trouble

—no hot water, no "rubbing in" of the lather.

Protects the face

—skin remains firm and smooth.

Removes the razor "pull"

—harsh ways age the skin prematurely.

Replaces after-lotions

—Shavaid is a cooling, soothing balm.

THE LENOX and THE BRUNSWICK

When You Come to Boston

It is rarely one finds a truly homelike atmosphere in an up-to-date hotel. But *The Brunswick* is fortunate in having just that quality. Recently renovated throughout.

The Brunswick

Boylston Street, at Copley Square

L. C. PRIOR, Managing Director

The Lenox reflects the tone of its neighborhood—Boston's Back Bay. And it is the bright spot of that neighborhood—a smart hotel, ideally appointed.

The Lenox

Boylston Street, at Exeter

Both houses convenient to Back Bay stations

The New Books To Understand Russia

There are just two things to do if you want to have an opinion on the situation in Russia, read one book, no matter which one, and believe it implicitly, interpreting all newspaper items and all remarks of your friends in its light; or else read all the books on Russia. If you commit the fatal mistake of trying to get a broad point of view, if you once get beyond the one book, you are lost. You will have to read everything everybody writes about Russia, which will be utterly disastrous to your peace of mind, tho perhaps a good thing for the Russians for you may begin in some small measure to understand them and that is the one point on which almost all writers about Russia agree: America must understand Russia.

There are several new books on Russia. Arthur Bullard's *The Russian Pendulum* gives a good comprehensive view of the whole revolutionary movement. His idea is that the pendulum has swung from extreme autocracy under the Tsar thru a brief moment of real democracy at the beginning of the 1917 revolution to the other extreme of Bolshevik autocracy. He does not think it can stay there tho he is not bold enough to predict where it will swing next. Mr. Bullard was in Russia with the Committee on Public Information so he is naturally concerned with the attitude of the United States toward Russia. His plea is for a definite line of action. What line is not nearly so important as having one and sticking to it; then you can get somewhere, now you are simply wasting breath and time and energy. He also stresses America's opportunity of appealing to Russia along educational lines.

The demand for freer educational opportunities in Russia is universal. This was the one subject on which we could always interest people in our American propaganda. They wanted to know all about our public schools. . . . If we wish for friendly relations with the New Russia, if we wish to popularize our ideals of government there, there is no better means than the encouragement of Russian students in our institutions of learning. In no way could we do more "to help Russia" than by the establishment of a great scholarship endowment which would attract Russian students to America to complete their technical training. The allotments would have to be sufficiently generous to cover the difference in cost between coming here and going to Germany. But no money could be better spent.

Emile Vandervelde, whose *Three Aspects of the Russian Revolution* has recently been translated into English, writes of Russia with a lightness of touch which no Anglo-Saxon has so far achieved. He takes her seriously but not hard. With two other members of the Belgian Labor Party he made a brief trip to Russia in the spring and summer of 1917 to work against the tendency toward a separate peace, to lay the case of Belgium and the Belgian workmen before their Russian

**Crooked Spines
Made Straight**

Thousands of
Remarkable Cases

An old lady, 72 years of age, who suffered for many years and was absolutely helpless, found relief. A man who was helpless, unable to rise from his chair, was riding horseback and playing tennis within a year. A little child, paralyzed, was playing about the house after wearing a Philo Burt Appliance 3 weeks. We have successfully treated more than 30,000 cases the past 17 years.

30 Days' Trial

We will prove its value in your own case. There is no reason why you should not accept our offer. The photographs show how light, cool, elastic and easily adjusted the Philo Burt Appliance is—how different from the old torturous plaster, leather or steel jackets. Every sufferer with a weakened or deformed spine owes it to himself to investigate thoroughly. Price within reach of all.

THE INDEPENDENT

119 West 40th Street

New York

comrades and to discuss the question of the International Conference at Stockholm. His observations on the political, military and industrial aspects of the revolution are interesting.

In *Russia White or Red*, Oliver M. Saylor considers the revolution from a new point of view. He is writing neither theory nor history, but "first hand impressions," "personal experiences." We had scores of similar books about the war in France, but from Russia they have been very few. Mr. Saylor, dramatic editor of *The Indianapolis News*, went to Russia in the fall of 1917 with "the desire to study at first hand the most important theater of our time before the pressure of revolution should bear too harshly upon it; and the impulse to be in the most uncertain and interesting and eventful place in the world." His account of that place is picturesque, vivid and very readable.

The Russian Pendulum, by Arthur Bullard. Macmillan Co. *Three Aspects of the Russian Revolution*, by Emile Vandervelde. George Allen & Unwin Ltd., London. *Russia White or Red*, by Oliver M. Saylor. Little, Brown & Co.

Law for the Layman

Business Law, by Alfred W. Bays, is a sort of "what to do before the doctor comes" for the man in the street or the office. In simple, primer, question and answer form it sets forth the main principles of law with which the average business man or woman comes into daily relationship: How is the transfer of a document of title effected? What are the powers of a minor to contract? What is the status of a corporation outside the state creating it? and so forth and so forth. There is a brief but not inadequate index. It is a distinctly useful reference book.

Business Law, by Alfred W. Bays. Macmillan Co.

More Chronicles of America

The best description of the *Chronicles of America* series, which is being published by the Yale University Press, would be to say that it is non-professional but not amateur history. Many of the volumes are written by professors of history, some by journalists and literary men, some by men of affairs, but in no case does the author affect an arid impartiality or hide his personality from the reader behind a rampart of footnotes. In every case a specialist speaks simply and from first hand knowledge of that aspect of American life which he best knows and cares most about.

In *The Red Man's Continent*, Ellsworth Huntington not only gives a general description of the physiography and climate of North America and of the various levels of culture of the Indian tribes, but works out an interesting correlation between climate and civilization. Thus he points out, of the Iroquois, who lived in the stimulating climate south and east of the Great Lakes, "They were so energetic that they pursued their enemies with an implacable relentlessness similar to the restless eagerness with which the

PUSHED to the wall by our wavering nerves, some of us turn to stimulants for aid, or to treacherous bracers. They exact a heavy toll for the temporary lift they give.

Not the goading whip of a stimulant, but the lasting help of a scientifically devised builder, a natural builder that actually adds to the substance of cells and tissues — this is the help your weary nerves need. And this, to judge from the voluntary testimony of thousands of physicians, is exactly what Sanatogen offers. As Richard Le Gallienne, the writer, himself a grateful user of Sanatogen, says,

"Sanatogen is no get-well-quick remedy. It professes no dishonest possibilities with nature. It does not lift you up one moment, to leave you in the lurch the next. But what it does, it does for good."

Give your nerves the constructive help they need today. Let Sanatogen help restore their balance, bringing better appetite, better digestion and more restful sleep.

Sanatogen is sold by good druggists everywhere, in three sizes, \$1.20 up. Awarded Grand Prize at the International Congress of Medicine, London, 1913.

A SHORT HISTORY OF BELGIUM

A Fascinating Story

It tells how Belgium became a nation and relates

Her Part In the Great War

Written by a Belgian Historian
LEON VAN DER ESSEN of the
University of Louvain

If you would understand the reasons for the heroic part Belgium played in the world war, learn something of the history of this brave nation.

It was this glorious past that inspired the little Belgian army to fling itself against the might of all Germany. Red-blooded Americans will read this vivid narrative of Belgium's history with pleasure.

New Enlarged Edition, \$1.50, postpaid \$1.65.

INTRODUCTION TO THE PEACE TREATIES

By **ARTHUR PEARSON SCOTT**, Assistant Professor of History, University of Chicago. This book will give you an understanding of the causes, elements, and purposes of the negotiations during and after the great war. It is a comprehensive explanation of the Treaty of Peace—a book of vital importance to American citizens who are interested in their country's welfare.

Ready in May. \$2.00, postpaid \$2.15.

A Short History of Japan. By **ERNEST W. CLEMENT**. New impression ready March 15. \$1.50, postpaid \$1.60.

THE NEW ITALIAN SERIES

Edited by **ERNEST H. WILKINS**. This is a new series for students of the language and literature. It consists of a grammar, a reader, and annotated editions of novels and plays.

people of the region from New York to Chicago now pursue their business enterprizes." The failure of the Indians to develop a civilization of European level is traced to the absence of domestic animals and of iron implements for agriculture.

The volumes of the *Chronicles of America* which have most recently appeared represent every period of American history, for the order of publication is not strictly chronological. Colonial days are represented by Charles Andrews's *Colonial Folkways* and Sydney Fisher's *The Quaker Colonies*; the rise of nationalism in the early Republic is depicted in Edward Corwin's study of *John Marshall and the Constitution*, Constance Skinner's *Pioneers of the Old Southwest*, dealing with the era of Daniel Boone, and Frederic Ogg's account of *The Reign of Andrew Jackson*. For the period since the Civil War Walter Fleming has written the story of reconstruction in *The Sequel of Appomattox* and Henry Jones Ford has recounted *The Cleveland Era*. Particularly interesting is Mr. Ford's judgment of the failure of Congressional government in the United States:

Somehow the American Congress fails to produce capable statesmen. It attracts politicians who display affability, dexterity, and eloquence, but who are lacking in discernment of public needs and in ability to provide for them, so that power and opportunity are often associated with gross political incompetency. The solutions of the great political problems of the United States are accomplished by transferring to Washington men like Hayes and Cleveland whose political experience has been gained in other fields.

The Path of Empire, by Carl Russell Fish, is a history of American colonial expansion and foreign policy from Monroe to John Hay, with particular reference to the results of the war with Spain. Mr. Fish shrewdly contrasts the light-hearted enthusiasm with which we entered on the Spanish war with the grim solemnity of our participation in the Great War; a generation of world responsibilities having educated us in the meantime to the meaning of international relations and the needs of military preparedness. In 1898 "The atmosphere of the country was one of a great national picnic where each one was expected to carry his own lunch," and "The navy was dogged by press dispatch boats which revealed its every move."

Prof. Shepherd's account of *The Hispanic Nations of the New World* covers the wars for independence of the twenty republics south of us, the outstanding figures of the "age of the dictators," and the emergence of some few Latin American states to real constitutional government. It was a difficult task to keep an even course of narrative for so many different nations with their individual histories and characteristics without neglecting some nations altogether or else swamping the book with masses of local detail, but the just medium has been preserved thruout.

The Red Man's Continent, by Ellsworth Huntington. *Colonial Folkways*, by Charles M. Andrews. *The Quaker Colonies*, by Sydney G. Fisher. *Pioneers of the Old Southwest*, by Constance L. Skinner. *The Reign of Andrew Jackson*, by Frederic A. Ogg. *The Sequel of Appomattox*, by Walter L. Fleming. *John Marshall and the Constitution*, by Edward S. Corwin. *The Cleveland Era*, by Henry Jones Ford. *The Path of Empire*, by Carl Russell Fish. *The Hispanic Nations of the New World*, by William R. Shepherd. Yale University Press.

Daughters of the Four Hundred

Margaret Schuyler's father read Balzac and collected etchings—or was it dry points? his friends often asked. Her mother had undergone seventeen surgical operations (five of them of the sort known as major) and her conversational tendencies may therefore be considered as having been sufficiently described, I think. She was a charmingly pretty person, her mother—in spite of the operations—and one of the five best-dressed women in New York. For two years she never touched meat in any form; for eighteen months she avoided starch: there was one summer when she gave up fruit acids entirely. You can see that she was thoroly modern and well-informed.

This is Josephine Daskam Bacon and it is very entertaining. She keeps it up with a surprising degree of evenness and she practically never overdoes it. *Square Peggy* is a collection of ten tales concerned chiefly with how girls who didn't fit the round holes into which they were born found their own particularly square ones. All of the stories have utterly preposterous plots which doesn't prevent them from being exceedingly amusing, tho it seems almost a pity to spread so much clever social satire over such flimsy structures. One is inclined to suspect Mrs. Bacon of being a bit lazy, of thinking that she can "get away with" a poor story if she tells it well enough—and really, you know, she can.

Square Peggy, by Josephine Daskam Bacon. D. Appleton & Co.

The Good Old-Fashioned Way

There are some people you would never think of asking to dine with you, but if you both happen to drop into the same restaurant, about 7 o'clock you can spend a very pleasant evening together. Which is exactly the way we feel about Archibald Marshall. We should never think of buying one of his books, but if we found it, for instance, on a guest-room bed-side table we might be late to breakfast the next morning. His latest novel is *Sir Harry*. It might, perhaps, be called a war novel, inasmuch as the war begins before the story is fairly launched and is responsible for its conclusion, but its strong wind barely ruffles the surface of the quiet life at Royd Castle. The story goes tranquilly and restfully on its way. Sir Harry is a likeable lad, tho at times almost too noble. His proud, aristocratic grandmother, his shallow, selfish little mother, the tutor, the artist and the three girls are well drawn, but the best character in the book is the clergyman-novelist who wrote to his wife:

I must confess that I was gratified when Mrs. Brent, who had not taken much part in the conversation, said, "I have read all your books, Mr. Grant, and think they are

lovely. So touching!" This is the sort of compliment that I value. It is to the simple mind that I make my appeal, and Mrs. Brent is quite evidently of a lower class of intelligence than those about her.

It is in this sort of gentle satire that Mr. Marshall is at his best and really justifies Professor Phelps in comparing him with Trollope. But he seems to lose his sense of humor when he writes of love or strong emotion and he never, never, never leaves anything to your imagination.

Sir Harry, by Archibald Marshall. Dodd, Mead & Co.

More "Beautiful Nonsense"

It is utterly useless to argue about E. Temple Thurston. You find him either a pure joy or rather dull and silly nonsense. If it is the latter it is not worth while to attempt to convert you, one can simply pity you. Wherefore it is a waste of time to write criticism of E. Temple Thurston at all. If you found delight in "The City of Beautiful Nonsense" you will find delight in *The World of Wonderful Reality*, its sequel. If the first book bored you, the second will. If you have never read Temple Thurston try *The World of Wonderful Reality*. It is worth the risk; you may turn out to be one of those people who "love to dream a moment in a sleepless world," who "need to get away from the insomnia of facts."

The World of Wonderful Reality, by E. Temple Thurston. D. Appleton & Co.

Just People

Is your laundress a yellow primrose to you or is she something more? Life will be infinitely more interesting if you can develop her beyond the primrose stage. This is the theory on which most character studies and little sketches of people are written. It is a good theory. Everyone ought to be able to write that kind of character study for himself, but whether you can or can't they are interesting to read provided only that they are fairly well done. Robert Cortes Holliday does them fairly well, tho very nearly damns them with the painful title, *Peeps at People*. "Peeps" is in a class with that most horrible of modern magazine words, "wee." These peeps are brief sketches of the forgetful tailor, the nice man, the wife of the tenant of the second floor front and their kindred. Mr. Holliday has the right idea, but he is a little forced in his style, not quite spontaneous in his humor, unpleasantly self conscious. He seems to have determined that he would write and then looked about for subjects. Broome Street Straws, which are essays on things literary and otherwise, chiefly otherwise, has the same faults—minus the one of title—and has them rather more virulently.

In *Dust of New York* Konrad Ber-covici has written character studies elaborated often into dramatic little stories. There is a type for nearly every nation of the world as they are gathered in New York, "The Newly-Rich Goldsteins," "How the Ibaneses

The mark of a book written to meet a need

Constructive and Challenging Publications of Religious Leaders of Today

The Army and Religion

PUBLISHED
FEB. 1

Edited by D. S. CAIRNS, D.D.
Preface by the Bishop of Winchester

Perhaps, as never before, the British Army during the Great War represented a sort of cross-section of the nation's life. Here, then, was an exceptional opportunity for an enlightening analysis of an army that represented the life of the men of the nation itself.

"It would be difficult to present the religious revelation and results of the war more skillfully and judiciously than they are presented in this report."—Robert E. Speer.

Cloth, \$2.00

God and the Struggle for Existence

PUBLISHED
JAN. 15

B. H. STREETER

A simple, straightforward assertion, based on both biology and history, of the solid grounds we have for "the larger hope"—a reaffirmation in these days of persistent questioning, of the fundamental relation of God to the universe and to the individual life.

Cloth, \$1.50

That One Face

A NOTABLE
1919 BOOK

RICHARD ROBERTS

A series of reading studies for twelve weeks marked by spiritual insight, intellectual keenness, and literary skill, which show the distinctive impression made by Jesus on ten of the world's great poets and prophets and thus "help men and women to reach a true judgment about Jesus" for themselves.

Cloth, \$1.25

Between Two Worlds

HAS COMMANDED
MARKED
ATTENTION

JOHN HESTON WILLEY

"The Great Adventure" has called millions of young men in the past few years, giving new emphasis to the old questions of death and the hereafter. This fearless and unconventional discussion throws a renewed light from the Bible on some of the eternal mysteries.

Cloth, \$1.25

Missionary Outlook in the Light of the War

PUBLISHED
MAR. 1

Also prepared by the Committee on the War and the Religious Outlook.

A presentation, by recognized experts, of the missionary enterprise as the fullest expression of noblest ideals in the World War, the changed outlook in practically every mission field, and the new light thrown on missionary principles and policies.

Cloth, \$2.00

Two 1919 "Everyday Life" books which have been notably successful

Building on Rock

HENRY KINGMAN

Thin paper, art leather cloth, round cornered, pocket size, .90.

A thoughtful book, which seeks to meet the demand of our day for reality in religion by studying what Jesus showed to be essential to a life built on eternal foundations. Arranged for daily reading and study during 10 weeks.

Marks of a World Christian

DANIEL JOHNSON FLEMING

Thin paper, art leather cloth, round cornered, pocket size, .90.

An analysis of "the mind which each Christian should bring to bear upon the world," which comes with an unusually fresh and vigorous appeal in these days when we hear much of world citizenship and need to realize that we must be world Christians if Christians at all. Arranged for daily reading and study during 9 weeks.

Love," "All in One Wild Roumanian Song," "The Tragedy of Afghan's Living Rug," and so on. They make New York a bigger, a stranger and more fascinating place than ever. The man who saw these people saw them not only with keen interest and understanding but with humor, with emotion and with a vivid sense of the dramatic.

Peeps at People, Broome Street Straws, by Robert Cortes Holliday, George H. Doran Co. *Dust of New York*, by Konrad Berco-vici. Boni & Liveright.

"The Sober, Cleanliving, Struggling Bohemia of Today"

Strong-minded indeed, quite lacking in curiosity and undoubtedly a very dull sort, is the person who can read the title and first sentence of one of Leonard Merrick's stories and not go on to the end. For instance:

"The Man Who Understood Women"—

Nothing had delighted Wendover so much when his first book appeared as some reviewer's reference to "the author's knowledge of women."

"The Laurels and the Lady"—

When Willy Childers was sent to the Cape, he went to the last country on the face of the habitable globe to which he was suited.

"The Favorite Plot"—

The financier was cracking walnuts when the curate arrived.

"A Letter to the Duchess"—

"You said to me last night, Duchess, 'you are a great musician, Socoloski, but a great musician may be a great fool!'"

And the beauty of it is that the stories fulfil the promise of their beginnings. Once in a while the plots are a bit knocked about so that their endings are either obvious or forced but skill in characterization, humor and irony are never lacking. There is always charm in the telling, there is always a perfection of finish which is never obtrusive but always a delight. As William J. Locke says in his enthusiastic introduction:

In none is there a word too little or a word too much. . . . Everywhere is seen the firmness of outline which only comes by conviction of truth, and the light and shade which is only attained by a man who loves his art.

The Man Who Understood Women and Other Stories, by Leonard Merrick. E. P. Dutton & Co.

America in the War

Two recent popular histories of the recent conflict bear the title *The Story of the Great War*. Under this title Professor Roland G. Usher of Washington University, St. Louis, has written a very readable and picturesque account of the war. The book has nothing in common with the original and distinctive, if sometimes eccentric, diplomatic studies, such as *Pan-Germanism*, by which the author is best known to the public. His present work does not stray at all from the conventional account of military events and stands apart from the mass of war journalism only in the clarity and verve of its style. There are some good illustrations, in-

cluding French and German war cartoons. W. S. Braithwaite's book of the same title is intended for children, written in the rambling and discursive manner characteristic of histories of this class.

Frederick Palmer's account of *Our Greatest Battle* covers a more limited field with greater thoroughness. It deals exclusively with the final phase of American military activity: the Meuse-Argonne campaign. The author, however, does not confine his description to the battle front; there are interesting chapters on the Service of Supply and other agencies that worked behind the trenches and a long discussion, which will probably provoke some comment, on the professional jealousy of some West Point officers toward the new men in posts of authority. No book has given a completer picture of the American war machine at work in every part at the final crisis of the war.

Our War with Germany, by Professor John Spencer Bassett of Smith College, devotes relatively little attention to the purely military side of the war. Nearly half of the work is devoted to the diplomatic history of our controversy with Germany and to the administrative preparations made at Washington for the conduct of the war. At the end of the book there is a well-balanced account of the Peace Conference. The point of view of the author throughout is that of a defender of the Wilson administration against its critics in Congress. The brief account of our army in France is judiciously handled, but the chief importance of the book is the account of the executive and legislative measures carried thru by the President in the furtherance of the war; summarizing information not so easily available elsewhere to the student of America's war.

The Story of the Great War, by Roland G. Usher. Macmillan Co. *The Story of the Great War*, by W. S. Braithwaite. Stokes & Co. *Our Greatest Battle*, by Frederick Palmer. Dodd, Mead & Co. *Our War with Germany*, by John Spencer Bassett. Alfred Knopf.

The League and the Teuton

Mathias Erzberger's work on *The League of Nations* is now available in the English translation of Bernard Miall. Herr Erzberger is not an academic dreamer but a very practical politician, the leader of the "Center" or Catholic Party in the German National Assembly, and his views are typical of the sensible, prosaic, moderate republicans who are now in the saddle in Germany. The book was written for a German audience, shortly before the German military collapse, and this fact must be remembered if the reader is not to be offended by the "demand" for an enlarged German colonial domain in Africa and other sentiments which are now outside practical politics.

It is all the more creditable that even before the armistice so conservative and nationalistic a German should rebuke the whole militarist trend of German policy, demand limitation of armaments, denounce the invasion of Belgium as a crime which must be expiated, and welcome the

declarations of President Wilson and Lord Grey in favor of a League of Nations.

After citing historic proposals for the League of Nations (with particular emphasis, of course, on the German pacifist, Immanuel Kant) and the practical steps which have already been taken in international coöperation, Herr Erzberger outlines his own plan. The scheme here given, which corresponds in great part to the official German proposals concerning a League of Nations, is more drastic than the Covenant enacted at Paris and the Senate might have had more excusable compunctions about entering into it. Any nation may join the League, but once joined may never leave it.

The League of Nations "guarantees the territorial possessions of every one of the League States, as well as the undisturbed possession of their colonies"; a requirement which makes "Article X" seem tame indeed. Arbitration is obligatory in all cases. The decisions of the League are enforced by "complete and unmitigated ostracism" of the offending nation; with military force added to economic pressure if a League State is wantonly attacked. It is remarkable that Germany, so long the enemy of arbitration, limitation of armament, and pacific methods of diplomacy should now be willing to place such drastic restrictions on national sovereignty in the name of world peace. Perhaps effecting this change is the greatest triumph of America and the Allies.

The League of Nations, by Mathias Erzberger. Henry Holt.

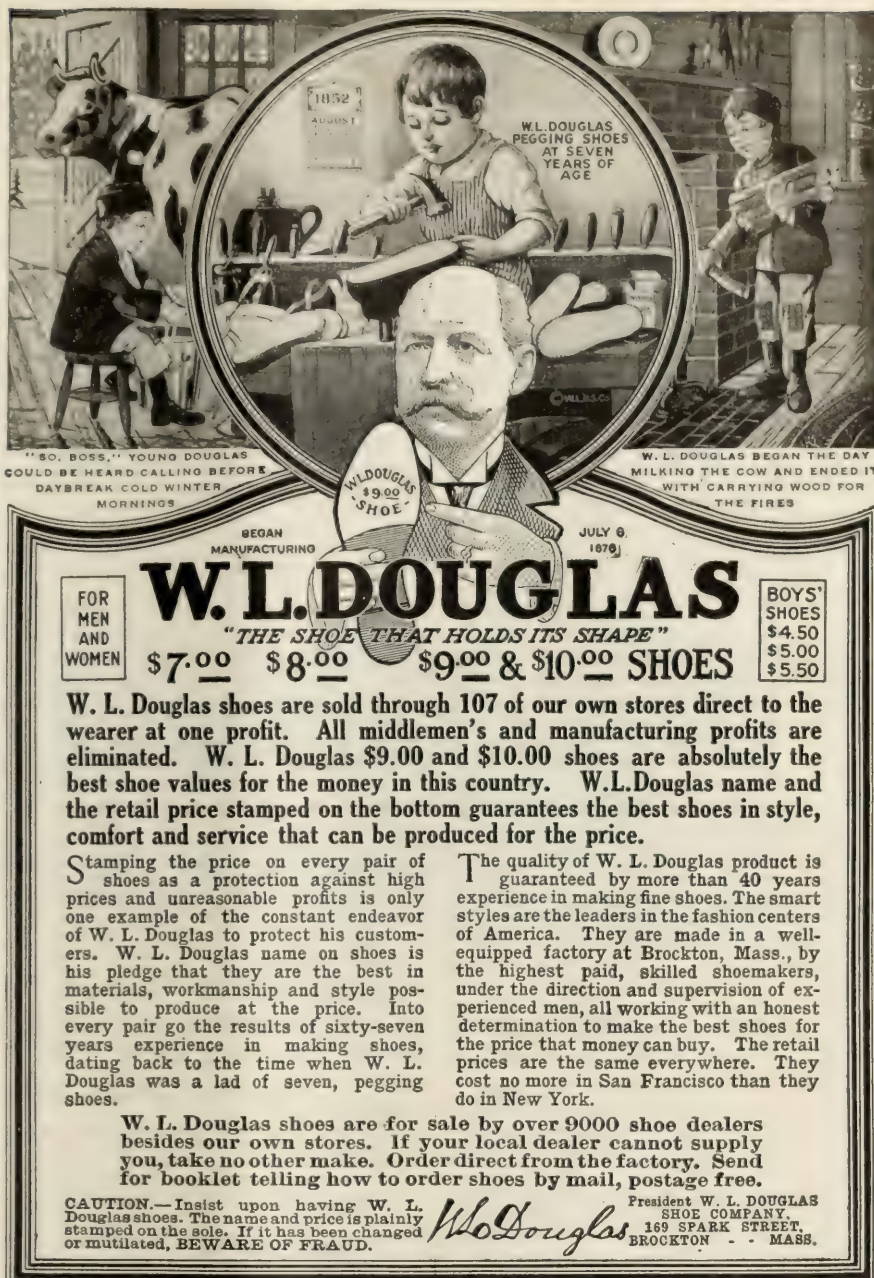

Another Masefield Poem

Reynard the Fox, the first poem published since the war by John Masefield, is a long narrative which falls into two parts, not very closely connected. The first, reminding the reader of Chaucer's "Prologue," sketches vigorously the preparations for the hunt or catalogs the men and women who take part in it. The second is a straightforward narrative of the chase itself, in which the fox is the center of attention, and the carefully drawn persons of the drama merge into the man-pack.

It is a poem flavored by the sun and wind and running water, a poem that only a man with intimate love of the English fields could have written, a poem in which the broad sweep of country and the homely details of inn-yard and brookside are alike suggested with that skilled, yet apparently naive artistry which marks Masefield's work. In the hunt are men and women of types which he loves to present—full-blooded passionate, some of them cruel, some of them keenly alive to beauty, but all of them interesting.

Yet the poem bears ample evidence of being a relatively early piece of work. It was almost certainly written before the war, probably before "The Everlasting Mercy." Can it be that the Masefield of "Lollington Downs" is not writing today?

Reynard the Fox, by John Masefield. Macmillan Co.

Stop the Leaks That Keep You Poor

Saving money is hard work until you get the secret. No matter how large or how small your income you will never save as much as you should until you get the knack.

If the average business were operated on the haphazard basis on which our household finances are run, there would be fifty times as many bankrupts. The truth, whether we admit it or not, is that very few families know where their money goes. At the end of each year we find ourselves little better off, if any, than at the beginning. We have earned \$800 or \$1,500 or \$5,000, yet practically all has been spent—and the pitiful part of it is we have nothing to show for it!

New Method Makes Saving a Pleasure Instead of a Hardship

How to Study This Number

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

I. A Message from the United States Government. By Edwin T. Meredith.

1. In one short paragraph summarize the principal thought that the writer presents.
2. Prove that the article has, or does not have, a clearly conceived plan.
3. Does the article have a satisfactory introduction?
4. Is the article so formed that it increases in emphasis?
5. Write an original short story that will show how the inefficient work of a grocer's boy aids in increasing the cost of living.
6. Write an account of a chance meeting of a farmer, a railroad man, a commission merchant, a wholesale merchant, a retail merchant, and a driver of a delivery wagon. Give the important parts of the conversation at the meeting. Add to your account of the meeting some of your own opinions on the subjects they discuss.
7. Present arguments that will tend to prove the truth of the proposition: "The farmer's problems are also the problems of all business men."
8. Explain orally, as if to a group of farmers, how a farmer may gain Government aid.
9. Explain the meaning of the last sentence of the article.
10. Imagine that an artist has asked you to suggest another drawing to illustrate the article. Write a description of the drawing that you suggest.

II. The Strike Epidemic. By C. A. McCurdy, K.C., M.P.

1. What figure of speech is employed in the explanatory sentences that follow the title? Prove that the figure is well formed.
2. Does the account of the characteristics of the English people as given in the article harmonize with the account of the characteristics of the English as given in Irving's "Sketch Book"?
3. Express in well-formed sentences the most important points made in the article.

III. El Dorado. By Edwin Markham.

1. Write a picturesque, poetically-worded description of "El Dorado."
2. Write a short story that will tell clearly and interestingly about the search for "El Dorado."
3. Explain how the poem is related to the legend of "El Dorado."
4. Prove that the thought of the poem is applicable to modern life.
5. Compare or contrast the poem with Poe's "Eldorado."

IV. We'll All Take a Flight. By Lawrence La Tourette Driggs.

1. Explain why the title is particularly good.
2. Write a series of attractive titles for school compositions.
3. Give a talk in which you explain in what respects the airplane has been improved.
4. Write a short story, of the Jules Verne type, telling about the use of airplanes in the future.
5. Draw from the article at least one proposition suitable for debate.

V. Competition Is the Death of Trade. By Edwin E. Slosson.

1. Define the following words: decades, manifestly, antithesis, unprecedented, embargo, stringent, irrational.
2. Explain the sentence: "The devil most appears as an angel of light when he uses the word 'free.'"
3. Explain the sentence: "In a universe of law and order absolute freedom is insanity."
4. Explain how the article is related to what is called "Bolshevism."

VI. Civilization's Surrender to Barbarism.

1. If the proposed retention of the Turks in Europe and the spoliation of Armenia were confirmed by the Supreme Council, why would such an act (a) give the lie to the underlying principles and purposes of the League of Nations; (b) reduce every international covenant and agreement to scraps of paper; (c) expose governments to the ridicule and contempt of peoples everywhere; (d) and make another war, in the not distant future, inevitable? Explain orally.
2. Why is it the duty of the United States to see that such a thing does not happen? Explain orally.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Labor Problem—"The Strike Epidemic," "Labor Politics," "At a Dead lock," "The Republic of Goodyear."

1. Show that in some respects, the labor organizations in this country and in England are contending for the same things. That in some respects, they are working along different lines.
2. "The British labor movement is becoming a Socialist party, a Syndicalist party... a Bolshevik party." Distinguish between the three things. What evidence does the author offer in proof of his assertion?
3. Outline briefly the history of the coal mine controversy in England. Compare this controversy with the one in this country.
4. On what grounds are the labor organizations opposing the recently passed Railroad Law? What suggestions for handling the situation do the labor leaders offer?
5. Does the Goodyear plan and other similar plans meet the difficulty which Mr. McCurdy outlines?

II. Competition Is the Death of Trade.

1. Why, according to Dr. Slosson, is the old controversy between "free traders" and "protectionists" no longer a vital issue?
2. Explain the statement: "The antithesis to 'free trade' is not 'protection' or 'tariff' but 'regulated trade.'"
3. Explain the statement: "Free trade was the last surviving offshoot of the old *laissez faire*... philosophy of the mid-Victorian era."
4. "England... has now been forced practically to reverse... her former [free trade] policy." What has brought about the change? What new policy is England now adopting?
5. "Neither competition nor combination ought to be extinguished," etc. What compromise between the two does Dr. Slosson suggest?

III. The Crucial Question of the War.

1. Give the facts which justify the statement that the question out of which the Great War arose was the ownership of territory east of the Adriatic.
2. What were the terms of the Pact of London? How did this agreement interfere with the hopes of Serbia?
3. What was the basis of the so-called "Wilson line"? What changes in this line were proposed by the compromise of January 9?
4. State as clearly as you can the grounds for the Italian claims. For the Yugoslav claims.

IV. Another Whisky Rebellion?

1. Look up the history of the "Whisky Rebellion" of 1794. In what respect is the Whisky Rebellion in Iron County, Michigan, similar to the one in Pennsylvania in 1794?
2. On what grounds will Rhode Island and New Jersey attack the constitutionality of the eighteenth amendment?
3. "The issue of prohibition... is rapidly becoming a constitutional struggle over the balance of power between Federal and local authority." Is there any historical precedent for such a struggle? In the light of history, how will the struggle probably end?

V. Don't Give Up the Ships.

1. On what grounds was the proposed sale of ex-German passenger ships opposed? Why was Mr. Payne anxious to sell the ships? Which side in the controversy, in your judgment, was right?
2. By what right does the United States retain title and ownership in these vessels?
3. Look up in some standard Year Book the statistics of American shipping for the past four or five years. What conclusions do you draw from these statistics?

VI. Soviet Russia from Sea to Sea.

1. Compare the present extent of Soviet Russia with the extent of Russia under the Czar. What states have been created out of the lost provinces?
2. If Soviet Russia concludes peace with Lithuania and Poland how will the rest of Europe be affected?
3. If the five countries mentioned in this article agree to reopen trade with Russia what action will the Allies probably take? The United States?

CHANDLER SIX

Famous For Its Marvelous Motor

MANY CHOOSE THE CHANDLER DISPATCH

MANY admirers of the Chandler Six choose the Chandler Dispatch. For two years this model has outsold all other cars of the so-called sport type. Its popularity is one of the high spots in motordom.

The new series Dispatch is a snappy, handsome car, seating four adults in perfect comfort.

It is of most beautiful design and finish; mounted on the standard Chandler chassis, famous for its mechanical excellence.

You are asked to pay much more for cars which might perhaps be compared with the Chandler. And cheap cars sell for but little less.

Letters to the Great and the Near Great

By John Citizen

Herr Einstein,
University of Berlin,

Dear Herr Doctor Professor:

I understand from reading *The Independent* that you know all about the fourth and fifth dimensions, why straight lines travel in curves, why yesterdays stray into the middle of next week, how the speed of a body affects its shape and weight, why a beam of light gets nervous when it passes the sun during an eclipse, and what would happen if Time and Space got loose from each other and went on a spree by their wild lones, and what is the matter with matter anyway.

You are just the man I am looking for.

Please come and help me figure out the income tax blank which Uncle Sam sent me.

Plaintively yours,
JOHN CITIZEN.

Senor Blasco Ibanez,
Somewhere-on-lecture-tour,

Dear Sir:

So you would be "the Abraham Lincoln" of the American husband! You say that our wives are our rulers and therefore despise us, whereas if we were better cave men they would the more respect us. Not knowing what to answer, I put the question to Mary Citizen, who was washing the dishes in her habitual autocratic and dictatorial manner. What she said was something like this:

"Say, John, tell that Spanish toreador, or whatever he is, that I pity the Spanish husband. Whenever you see a Lord of Creation you see somebody's puppet, and Bunty is pulling the strings all right! It is these meek and submissive women who are the real despots. In the United States we are as good as the men and so we have to have rights and votes of our own because friend husband won't let us use his. In Spain and Germany and countries like that a husband is an absolute ruler so long as he does what he is told. The clinging vine squeezes the very life out of the sturdy oak."

I pass this along to you.

Fraternally,
JOHN CITIZEN.

Remarkable Remarks

LADY ASTOR, M. P.—I am so fond of men.

EX-PREMIER CLEMENCEAU — Don't smoke.

CHAMP CLARK—Bow legs should be straightened.

KING GEORGE—Ireland causes me grave concern.

W. J. BRYAN—The profiteers control the newspapers.

NOVELIST BLASCO IBANEZ — Treat women a little roughly.

LORD DERBY—I hate the man who says his nation won the war.

BARNEY BARUCH—The profiteers and hoarders will soon run to cover.

RABBI ALEXANDER LANSFIELD—I do not knock Christian Science.

JAMES W. GERARD—A woman's fear of a mouse is a very sensible thing.

New Plays

Jeanne Eagels is prettier than ever in *The Wonderful Thing*, a sweet young play of popular type. (The Playhouse.)

Not the Irene Bordoni of Guitry farces, but the Bordoni of musical comedy lightness and just fame lends her captivating voice and presence to *As You Were*. (Central Theater.)

Beyond the Horizon, by Eugene O'Neill, is a play of powerful theme and weak construction. Richard Bennett gives a masterly portrayal of the sensitive, idealistic New Englander whose dreams are crushed out by the farm. (Criterion Theater. Afternoons only.)

Lionel Barrymore does a convincing piece of character acting as Mouzon, the Examining Magistrate, in Brieux's *The Letter of the Law*, a play showing that a rigorous application of the French law may impose cruel injustice on its victims. (Criterion Theater.)

Shavings, we venture to predict, is one of the plays that will live a long, long time. It is very human. It keeps all the whimsicality and flavor of Joseph Lincoln's Cape Cod stories and it adds a dramatic intensity all the stronger for its simplicity. (Knickerbocker Theater.)

Elsie Ferguson has returned to the legitimate stage in a melodramatic stage version of Arnold Bennett's *Book of Carlotta* called *Sacred and Profane Love*. More beautiful than ever, Miss Ferguson, however, has acquired some very bad mannerisms in the movies. (Morosco Theater.)

Jane Clegg. The Theater Guild and St. John Ervine have achieved an artistic triumph equal to their *John Ferguson*. Margaret Wycherly presents an heroic type of the new woman and Dudley Diggs again portrays the part of a contemptible man with horrible accuracy. (Garrick Theater.)

Visitors to New York interested in dramatic novelties should not fail to hunt up *The Neighborhood Playhouse* of the Henry Street Settlement, where now is being given Lord Dunsany's *The Glittering Gate* and Andreyev's *Sabine Women*. The latter is the most amusing political satire that has come out of Russia and is played with amateur enthusiasm and artistic taste.

Why these cities endorse Cocoa for children

NEW YORK - CHICAGO - PHILADELPHIA - ST. LOUIS

SOME noon-time walk into any of the school lunch-rooms of these cities.

There you will see hundreds of school boys and girls drinking cocoa.

New York has given cocoa an even stronger endorsement. In a booklet published by the Department of Health they say, "Use cocoa—it is easily prepared and a most nourishing drink. Tea and coffee are not nourishing and do not help the body."

Of course you and I take a chance on tea and coffee. But for our children most of us would probably choose LOWNEY'S Cocoa.

And why particularly LOWNEY'S?

Simply because in LOWNEY'S we find

the cocoa particularly adapted to the needs of the *growing* body.

Some cocoas, you know, are far too "lean" to properly nourish a growing child. These cocoas have been "robbed" of most of their nutritive butter fats.

And there are those excellent cocoas which are very rich in butter fats. You may like these very much yourself, but you would hardly tax your child's digestion with such super-richness.

In contrast with these, LOWNEY'S has the correct proportion—25%—of these necessary fats. Your little child can assimilate all the nutriment in LOWNEY'S without any tax on its digestion.

Of course you know that LOWNEY'S has always been in accord with the Government Pure Food Standards. It is in accord, too, with Dr. Wiley's and the Westfield Standard of pure Pure Foods.

ATTENTION
MOTHERS!

LOWNEY'S COCOA

THOUGHT

The Greatest Commercial Product in the World

By Charles F. Haanel

Illustrated by Willy

YOU are, because you think. When you cease to think, you cease to exist. You are therefore what you think. Thought is a spiritual activity; in fact, it is the only activity which the spirit possesses. All spiritual

activities are creative, because spirit is the one creative Principle in the Universe. Thought is mind in motion just as wind is air in motion. When a thought goes out into the world, it combines with other similar thoughts and forms an idea. The idea then exists independently of the thinker. This idea becomes a seed-thought in the spiritual world and as soon as it finds congenial soil, it begins to sprout and grow and bring forth fruit a thousand fold.

FOR this reason we find that the men who hold the \$50,000.00 positions are always men who think, who know how to control their thought processes. A single idea is often of more value than all the lost mines of Mexico, all the argosies that ever sailed from the Indies and all the silver laden ships of storied Spain. An idea has life, vitality, it is the essence of the creative spirit and can reproduce itself exactly the same as a germ or a cell, so that in an incredibly short time there may be millions of these ideas all clamoring for self-expression. As thought is creative, it is constantly trying to express itself in form. For this reason thought leads to action and actions bring about results and conditions.

CIRCUMSTANCES and environment are therefore the result of thought, but frequently of unconscious and destructive thought, for thought will create disagreeable, discordant and destructive conditions, just as readily as it will create wealth, beauty, refinement and harmony. We may think what we will, but the result is governed by an immutable law. That we reap what we sow is scientifically exact.

THOUGHT was until recently the possession of the few, but it is now about to become the priceless possession of the many. Until recently, the few assumed the privilege of thinking for the many, but men are beginning to do their own thinking and this is multiplying results and bringing about a new era, an era containing limitless possibilities.

THE Master Key System is the only clear, concise, comprehensive, definite, distinctive, exhaustive, original and scientific presentation of the creative power of thought ever formulated by any one at any time. It is copyrighted in every civilized country in the world, and is having an almost unbelievable influence upon the lives of the hundreds of thousands who are coming into an understanding of the most important and far-reaching truths of which the human mind can conceive.

ONE reader says, "The Master Key is too modest a title for such a stupendous revelation"; another says, "It is the most wonderful teaching ever conceived"; another says,

"I AM able to extract from this System all that can be made known by the finite mind relative to origin, evolution, destiny and the much-mooted riddle of the Universe."

"ITS teaching that Mind is the dominating force is precisely in line with the wonders of the most recent psychology. All persons having desks should have this book thereon, and it would be a fitting pocket companion."

"YOU have led a hungry world to the threshold and placed in their hands a key with which the understanding ones may unlock the door and enter the Secret Place of the most high and enjoy the abundance of all good to be found therein."

"THE Master Key is the answer to the demand, 'Knock and it shall be opened unto you.' All the world seeks the wonderful key."

"I HAVE found the Master Key and with it I am each day unlocking the storehouse of wealth and wisdom concerning which I was heretofore in utter ignorance."

"THE lash of circumstances and the logic of events are more than ever impelling men to think. A philosophy of life having as its basis blind optimism, a religion that won't work seven days in a week, or a proposition that is not practical appeals to the intelligent not at all. It is results that we want, and the acid test is—will it work? The Master Key qualifies! Intelligence rules! Thought intelligently directed automatically causes its object to manifest on a material plane."

"YOU have synthesized the wisdom of the East and West and given it in a manner so logical and penetrating, that by its aid one is able to distinguish wisdom from sophistry, truth from delusion, spiritual expression from psychic vagaries, and the sublime operations of spiritual insight and intuition from deceptive visions and false revelations. You have successfully taken the mystery out of mysticism and placed all propositions in the clear light, so that 'He who runs may read.' I consider you a true benefactor to the world."

I WANT the privilege of sending you a Master Key. You will find it a priceless possession, a Key with which many are converting loss into gain, fear into courage, despair into joy, lack into plenty, hope into fruition, a Key which thrills, fascinates, carries conviction, perception, understanding, power, a Key by which you will be enabled to organize victory, realize your ideals and come true. Send me your address for

make your dreams come true. Send me your address for a copy, it is free, there is no cost or obligation of any kind.

"Let the People Freeze!"

Coal operators and miners were willing to fight all winter for their selfish ends. But Kansas took up the challenge of the coal strike. And where capital and labor failed the state made good.

By Governor Henry J. Allen of Kansas

WHETHER government is supreme; whether the nation and the state were sovereign in their powers and superior to an organized minority of capital or of labor or both; whether a helpless people were to be protected against industrial strife, in the making of which they had no part; whether the forces that regard neither the name nor the fundamental principle of democratic government, using its freedom as an opportunity to destroy the spirit of democratic institutions, should overawe and set at naught the welfare of the majority; these are the questions that were at stake when Kansas and the nation faced a fuel famine, the result of a country-wide coal strike at the beginning of last winter.

Shall those who use the shelter of citizenship for the promulgation of doctrines and practices and the instigation of acts against the rights of the many be permitted to continue, or shall new laws reasonable and consistent with the essential spirit of this land of the free be invoked to the end that justice may reign in a nation torn by individual madness and organized lawlessness?

The hardy pioneers of Kansas who came from New England and all the older states of the union imbued with the spirit of freedom wrote into the Kansas Bill of Rights these words: "All men are possessed of equal and inalienable rights, among which are life, liberty and the pursuit of happiness."

The nation-wide strike, involving the Kansas coal fields, brought us squarely face to face with the issue. Not the problem of continuing industrial activity, but the question of keeping warm and preparing food, made the situation poignant. Until the miners had walked out and the mining machinery had stopped, the seriousness of the strike in all its consequences was not realized. The two hostile camps sullenly faced each other, each striving to gain the coign of vantage. "The public be damned," said an arrogant man of power in American life. "Let the people freeze," said capital and

labor with a callousness without parallel except in French bourbon rule. Winter weather was upon us. There was no reserve supply of coal. Extreme suffering, not a theory, faced us. Schools and churches were closed, industries were shut down, stores were restricted in their operation, a pall hung over business and people were actually begging for a scant supply of coal. More stringent than during the war conservation was enforced.

Kansas, facing this crisis, set out to redeem its guarantee to the people of the state. The challenge came to me with increasing frequency, "Let's see the state make good."

Governor Allen believes that Kansas is blazing a new trail toward the solution of the age-long industrial controversy. The volunteers who took the miners' work during the coal strike did more than to relieve the danger of famine, he says. "The real test was to determine whether the traditions of democratic government could be maintained, whether the government still had power to protect the public. The submerged nine-tenths was beginning to make itself articulate."

The challenge was accepted and the most valuable contribution Kansas ever made to the nation is a demonstration of the principle that this was and is a sovereign state and not helpless when confronted with dire necessity. Perhaps Kansas did not know

what the strike was all about. But Kansas knew that coal was needed to save her people from the imminent danger of freezing in the icy winds of winter. Nearly two million people made to suffer at the hands of thirteen thousand coal miners and a hundred or more mine operators! The issue was joined. There was no half way ground, no twilight zone of duty. The state would and must protect her citizens from suffering and death; her industries from stagnation. The test of the sovereignty of the state was to be made. If the state failed, its usefulness to its citizens would be greatly impaired and confidence shaken.

So Kansas decided that it had a duty to perform without fear. An application was filed with the Supreme Court of the State for a receivership for the mining corporations on the grounds that these corporations were derelict in their corporate duties. Receivers were appointed who immediately took over the coal properties of the entire state. Having obtained possession of the coal, the next move was to get the coal out of the ground and into empty bins.

I went direct to the coal camps, called meetings, ar-

guing and pleading with the miners to return to their jobs and work for the state. Fully realizing that they would not and could not go back to work for the operators, I felt that an appeal to them, to their sense of duty, to their fealty of citizenship, that the state was now running the mines and the people needed coal, would win them to work. The State proposed to them that the old scale of wages should govern until the new scale was fixed, until the national settlement of the strike, and then that scale would be retroactive to the date they returned to work. It was further proposed that if no national agreement should be reached by January 1, 1920, the State would enter into a separate agreement with the Kansas miners.

The proposal met with quiet and respectful attention, but no one returned to work. They were wedded to the settled policy that not one pound of coal should be dug in Kansas. They were obdurate to the promptings of service. Further appeals were useless. The State then called for volunteers.

The response was electrifying. Over ten thousand men responded from every walk of life. A thousand picked men were first taken from the ten thousand volunteers. They were all husky young fellows, chiefly returned soldiers and sailors and college students, many of them accustomed to the hardships of army life overseas.

Coal miner and coal operator alike scouted the idea that volunteers, none of them holding cards from the mine workers' union or accustomed to work in the coal mines, could accomplish anything of value. Both sides to the controversy had come to look upon the mining of coal as something that could be done only by men who had been initiated into certain organizations, who observed certain rules and practices, who hated the operator and who believed his organization was greater than government itself. With the enthusiasm of a conquering army these volunteers proceeded under escort of the National Guard to the coal pits, drained them, repaired the machinery and, in ten days, produced a quantity of coal sufficient to relieve the emergency in Kansas. The men who were put to work disregarded rain, sleet, bitter cold, mud, ice and whatever the elements offered. They slept in tents and submitted to very irregular commissary service. They mined coal from daylight to darkness and produced an amount which broke all records. They cheerfully endured great hardships in the open pits and joked at their work. The

"Over 10,000 men, from all walks of life, responded to the state's call for volunteers," says Governor Allen. "One thousand picked men were chosen. . . . With the enthusiasm of a conquering army these proceeded under escort of the National Guard to the coal pits, drained them, repaired the machinery and, in ten days, produced a quantity of coal sufficient to relieve the emergency in Kansas"

only complaints came from those who could not be used. The volunteers took no sides in the controversy, manifesting the broad-minded fairness of real Americans, the sort of Americanism which always comes to the surface in every real crisis. The work continued until the miners appeared at the mines they had abandoned, signifying their intention to go back to their old jobs.

Let it be said to the credit of the mine workers that no act or violence on their part interfered with the orderly preliminaries and the operation of the volunteers. A few railroad switchmen at first refused to switch our cars, but they soon fell into line. There were a few other untoward incidents, but no overt act of any consequences.

I want to pay tribute to the regnant purpose of these splendid young Americans who volunteered to relieve the coal famine. They dug

the coal, but back of that there was a purpose to define an issue at stake. They were there to dig coal for practical and humanitarian purposes, but the real test was to determine whether the traditions of democratic government could be maintained, whether the Government still had power to protect the public. The submerged nine tenths was beginning to make itself articulate. I doubt if any situation less dramatic would have stirred the public to this realization of its power. What happened in Kansas would, under similar circumstances, happen anywhere. It demonstrated that the average American citizen is a very dependable person in times of strife and stress.

While at Pittsburg, the heart of the mining section, I issued a proclamation calling a special session of the Legislature. I wanted to make sure that never again would Kansas be lacking in the legal machinery necessary to adjust disputes threatening the very existence of her people. On January 5 the members assembled, actuated by a calm determination to write into law nothing tyrannical, but principles of industrial relations, emphasized by the crisis just passed. Labor was invited to present its side. The best talent they could find was brought to Topeka. Frank P. Walsh, recently of the War Labor Board, came. He led off in a speech of four hours to a joint assembly of the two Houses. He was followed by J. I. Sheppard, a well known lawyer and labor advocate of Kansas, in a speech of equal length. Legal talent, labor statisticians, union officials, appeared and for two days labor had its hearing. Then came representative legal talent from the employers. The public, as distinguished [Continued on page 409]

Frank O. Lowden

Including an Interview with the Governor of Illinois

By Donald Wilhelm

WHEN you meet Colonel Lowden (he was Lieutenant Colonel of the First Regiment, the "crack" regiment of the Illinois National Guard, before he became Governor), you realize an abrupt sense of check and balance, if you are indigenous to the East. For, tho the Middle West is the heart of the body politic, and is surrounded as it were by it, if there is anything wrong with the body politic we should give it a good dosage of the West, according to the westerner.

Everything good in the effete East, remember, came from the West!

Even in business.

In truth, Chicago sat in a metropolis club one day, listened indulgently to New York, finally heard one of the older Morgan's business associates dilate, at length and latitudinously, on the achievements of his chief.

Chicago grinned and interrupted: "Why, Mr. Morgan really never did anything!"

"Eh, what?"

"Fact. All he did was to get a lot of fine young fellows from the West around him. One of 'em would say, 'Mr. Morgan, here's a good thing.' Mr. Morgan would say, 'All right.' Then he'd say to another young western man, 'Is this all right?' He'd say, 'It's all right.' And Mr. Morgan would say 'All right.' Then it would be all right."

One may have another theory about the West, and the Middle West!

But probably that circumstance merely whets one's interest in Governor Lowden.

HE meets one on the threshold. His hair is nearly white, but it is plentiful. He has shrewd eyes, narrowing in quick appraisal; a clean-cut, forceful, almost defiant jaw, a broad mouth with lips mobile and indicative of generosity and feeling; a brow in consonance with the rest—a brow that a physiognomist might call audacious. He is nearly sixty years of age, but he looks much less. And, incidentally, he knows when to say "yes" and when "no" to an interviewer, and when to say neither "yes" nor "no." I doubt much if any interviewer could stampede him with flattery—this humble interviewer cheerfully tried and came to confirm a first impression—that Governor Lowden has a certain love of audacity that might, perchance, run to turbulence. It may be guessed that he loves a campaign; that, having had a good, lively, interesting time climbing the rope ladder to success, and having pulled the rope ladder up after him he still loves the challenge of combat. That's the way with some men of sixty years. Whereas most men look back, or up or down, a few look forward as do young men, albeit with the judgment of old men.

Listening, without batting an eye, to the rather premature remark that Illinois and the Middle West have the strategic handshake, as it were, between ex-

tremes, he shakes hands. Then he proffers a chair, takes another, proffers a cigarette from a mere red cardboard box in his coat pocket, takes one, offers a light, takes one, throws one leg athwart the other and accepts the business in hand.

GOVERNOR Lowden said some interesting things, which conclude this article. Then, in a trice, the interviewer found himself in the next room, where Messrs. Mason, Wright & Co., cordial gentlemen of the Illinois Administration, enunciated so many and so comprehensive attributes of the Governor that one perforce inquired at last, "Is there anything *at all* against the Governor?"

The replied in smiling unison: "Nothing!"

Moreover, as they pointed out, Governor Lowden has had—even for a young man of sixty years—profound experience "in almost every line."

He was born in a log cabin!

He was valedictorian of his college and of his law school class—twice valedictorian!

Previously, in Minnesota, he was a farmer boy, whose father—"the village blacksmith"—with the calm and courage of a Dutchman, had struck westward from Pennsylvania! Later his father had moved to Iowa, where the boy was again a farmer boy, indeed, no doubt, sometimes a barefoot farmer boy. In fact, he trudged behind the family prairie schooner from Minnesota to Iowa. Thus, he is "favorite son"—vicariously at least—of three states other than Illinois, which is Republican and the second state of the Union!

Then country school teacher, spending much of the formative years from fifteen and twenty in a "little red school house." Later self-supporting student in the University of Iowa, head of his class, class valedictorian; then law student in Union College of Law, now Northwestern Law School; then a law clerk earning eight dollars a week in Chicago; then organizer of a firm of lawyers, and an exceptional trial lawyer. A bachelor until at thirty-five he married Miss Florence Pullman, daughter of the late George M. Pullman, of the Pullman Company. Also, before and since, member of innumerable clubs, president of the Alumni Association and trustee of Northwestern, trustee of the University of Chicago and of Knox College. Also occupant of the chair of Federal Jurisprudence in Northwestern, where "Lowden Hall" is named for him. In 1900, delegate to the Republican National Convention, afterward an eloquent and influential campaigner for McKinley. In 1904 candidate for Governor of Illinois, defeated in convention—one of the longest conventions on record—by combination of Yates-Deneen forces; then campaigner for Deneen, who was duly elected. Republican National Committeeman for eight years. In 1906, elected to Congress from the Thirteenth Illinois district, in which one of his farms is located, and

where he has his home. Served two and one-half terms, part of which on the Committee on Foreign Affairs, retiring mid-term on score of ill-health, to return to his farms and his private affairs. Finally, in 1916, elected Governor, taking office three months before the Declaration of War against Germany.

He is reputed to have proven himself the best Governor Illinois ever had. And that is all the more amazing because of reasons described by a gentleman from Illinois to whom the writer went after having written the preceding pages.

"Altho," he said, "Colonel Lowden was never accused of being a humorist, we looked upon his inauguration as Governor with great doubt because we thought he would yield when he should stand fast. But, tho amiable, he was adamant. It was amazing how much he accomplished."

Then, when I went to Senator McCormick who, when in the Illinois legislature, agitated for administrative reform, and was, later, the first with good results to do likewise in the House of Representatives, then in the Senate, where he is chairman of the Select Committee on the Budget, the Senator said: "I expected that thoro-going administrative reform in Illinois, if it ever came at all, would take a generation. But the Colonel promised the voters he would get it. Promptly on taking office he went at it.

And he did the job—the best that ever has been done in America. He did it in less than two years. Now, let me add, one of the things that people believe Mr. Hoover would do is effectually to reorganize the administrative machinery of the Government. But Lowden has done it, in his own state."

Just what did Governor Lowden do?

He, who was looked upon generally as a good "mixer," a good-natured gentleman of great amiability, having given due advance notice, squared his jaw. He then took an administrative junk-heap, and, at a time when the whole state demanded money from a treasury that had none, and when the cities especially were groping energetically for revenue to replace liquor license money, initiated what is, by reputation, the most effective state machine in America. In other words, there were exactly 128 different, often overlapping, state departments, bureaus, divisions, boards. Among them was a State Equalization Board of twenty-five members concerned with the tax rate. This board he cut down to three members—experts, every one—which three managed, by dint of the reorganization, and in spite of the demands of the war, to shove the state tax rate 'way down, instead of 'way up. The other 127 state agencies were, in the Lowden plan, all consolidated into ten state departments. These ten, in plan and in actuality, were headed-up to the Governor, and made into a compact and pliable organization, which "functions," as

the expression is. The Governor did this mighty deed, moreover, in the face of powerful and resourceful opposition, and did it with such thoroughness that when the National House of Representatives and Senate committees at last in earnest proceeded to grapple with a budget plan for the Washington departments and wanted authoritative information as how best to proceed, about the first man both committees sought was Governor Lowden.

Now, as Senator McCormick suggested, a National budget—and with it a thoro reorganization of federal plan and personnel—is becoming an issue, and clearly there is no sound argument whatever why the Nation, which has a far bigger task than any corporation, should not have a modern organization to employ in grappling with that task. Clearly, too, even tho there are greater complexities, perhaps, confronting reorganization in Washington than there were in Springfield, Mr. Lowden could, no doubt, come at the problem intelligently.

With him as Governor, Illinois at last accomplished, after a generation of effort, satisfactory legislation looking to a waterway from the Great Lakes to the Gulf.

Also he procured legislation providing a bond issue of \$60,000,000 to be used in a part-and-part plan of the Federal Government, for a complete system of hard roads for Illinois.

Also, legislation for the elimination of uninspected private banks.

Also, legislation for a state farm for minor offenders—a correction of the ancient evil of the jail system.

It should be added, too, that Governor Lowden made a terrific fight for an eight-hour day for women, in which fight he lost, in part because the telephone girls and other workers in small towns, along with others of similar point of view, were rallied against him, and partly because the leaders of the women making the fight with him refused to entertain any compromise. Moreover, not only did he see to it that every returning sailor and soldier was looked out for by the State, but, in recruiting the full energies of his State for the war, he proved to be a really admirable leader and, by frequent speeches at the camps and elsewhere, and by many little acts of personal solicitude, did a great share in seeing that Illinois gave 314,504 men to the service, 55 per cent of whom were volunteers; that Illinois bought more than a billion dollars in Liberty Loans, gave more than \$42,000,000 to war relief; and beat any other state in farm production. Withal, it was no wonder people were amazed at the man who was born at Sunrise, Minnesota, and has been going hard ever since.

As President, he would have had extensive business experience—has been, in fact, director of many corporations, including the Pullman Company, from which directorate he resigned when [Continued on page 411

Between Two Worlds

Sir Oliver Lodge Answers Our Questions

What was it that convinced you of the truth of spiritualism?

It was not any one thing that convinced me of what you call spiritualism—we use a different title. It was cumulative evidence—experience piled upon experience. I already believed in 1902, and I openly announced my belief in 1906, that the so-called dead can and do communicate with us. So the World War and my personal loss in it had nothing to do with convincing me.

Why are so many spirit controls Indian maidens, Sioux chiefs and folks of that sort instead of great men like Darwin, Huxley and others from whom people would much rather hear?

A medium cannot choose. She must take what comes and the great men are greatly busy on the other side. Indian maidens have more time for gossip. But it is not true that only Indian maidens and such like come to the mediums. The Reports of the Society for Psychical Research prove otherwise. For instance, F. W. H. Myers frequently comes over, and others of my friends.

Why not put this matter of communicating with the spirit world on a sound business basis;—have the spirits establish an information bureau and so do away with incoherence and irrelevance?

That is not a new suggestion. W. T. Stead had a scheme of that sort. It may be done.

Have you ever had an opportunity to question Browning as to how he feels about "Mr. Sludge the Medium" now?

That was a mixed sort of thing. In it Browning does not deny the truth of spirit communications. He abuses a particular

Press Illustrating

Sir Oliver Lodge, one of the foremost living physicists, who is at present lecturing in this country, has been criticized by Viscount Halifax and others for his "notorious" devotion to psychical research and for his belief in the immortality of the soul. They base their criticism on the grounds that he may perhaps be taken too seriously on this subject, because of "his preëminence in what are accounted the more legitimate regions of science." According to Sir Oliver, however, human immortality is not the bugbear which ignorance and prejudice have made it but . . . is subject to a law and order of its own and tho comparatively in its infancy is a genuine branch of psychological science. Perhaps Sir Oliver's most controversial book is "Raymond," in memory of his youngest son, Second Lieutenant Raymond Lodge, who volunteered for service in September, 1914, was struck by a fragment of shell in the attack on Hooze Hill on the 14th of September, 1915, and died a few hours later. In this book Sir Oliver gives examples of what seem to him conclusive evidence of the survival after death of memory and affection. "Raymond" was preceded by other books on the same subject, "The Immortality of the Soul," "Life and Matter" and "Continuity," the latter embodying a discourse which caused considerable consternation among the members of the British Association for the Advancement of Science when it was delivered before them in 1913. Sir Oliver Lodge had previously written some Fabian Society tracts, including one on Competition vs. Coöperation and many textbooks on mechanical subjects, the best known of which are perhaps "Hydrostatics and Pneumatics," "The Ether of Space" and "The Modern Theory of Light." He was professor of physics at University College, Liverpool, from 1881 to 1900 and principal of the University of Birmingham from 1900 to 1919. He has also been Romanes Lecturer at Oxford, president of the Mathematical and Physical Section of the British Association, president of the Physical Society of London, and president of the Society for Psychical Research. As a pioneer in wireless telegraphy he is Albert Medallist of the Royal Society of Arts. Sir Oliver Lodge's "The Survival of Man" contains the records of many of the famous spiritualistic cases which came up during the first meetings of the Society for Psychical Research

medium, and there are plenty of dishonest mediums.

Can the spirits aid us with our worldly affairs? Can they help us solve our problems?

Yes, they can and do in many instances.

What constitutes the power of a medium?

We don't yet know what it is. Probably something similar to the power of the water-finder—the dowser. That is not a mere idle superstition. There are dowsers who can find water by means that to ordinary men seem mysterious. We have proofs. The dowsers found water for the troops at Gallipoli after all other means failed. I am rather inclined to believe that these powers of the medium and the dowser are survivals from a previous state of evolution when it was the common property of all individuals. We know that animals possess some powers which we have lost.

How far has the investigation of psychic phenomena gone?

It is only in its infancy. Progress has been made as is set forth in the forty-six volumes of the Reports of our Society. But that is only a beginning. When we understand more we will probably be able to improve the communication between the two worlds.

Did the world war show deficiencies of British scientific education as compared with German?

No, decidedly not. It was the German system of education that beat the Germans. They had paid all attention to material things and had neglected the humanities which the British cultivated.

A Message from the United States Government

Getting Into the Ship Habit

The war has given us ships, but ships alone do not make a merchant marine. Who loans money on ships? Who buys ship mortgages? How many of us are planning to send our boys to sea? Yet these things we must do before we are a great maritime nation

By John Barton Payne

Secretary of the Interior and recent Chairman of the United States Shipping Board

THE problem of establishing a permanent American merchant marine is at basis a problem of converting a nation of landmen to a love of the sea. The war has given us ships, but ships alone do not make a merchant marine. Ships are but the superstructure, less difficult of construction than the foundation, which must be rooted in the very consciousness of the people.

Sixty years ago the American merchant marine, with its skilled and hardy seamen carrying the starred flag into every sea, was the envy of the world. In 1860, when the peak was reached, there were registered 8,030,807 tons of American deepsea shipping and scores of thousands of tons of American-built vessels were being sold to British and other foreign buyers.

For the rapid decline of the American merchant marine thereafter there were several causes: the competition of foreign iron ships, the effects of the Civil War and others. The principal cause, however, was the intensive internal development of the United States. The opportunities on land were so great that men went west rather than to the sea.

It was not unnatural that, with a half continent to conquest, farms to clear and forests to fell—and even to seek—cities to build and railroad lines to throw across the country, the energy and interest of the American people should be diverted from the high seas. The development of foreign shipping was not similarly checked, so that thru this period there was always ample foreign tonnage to transport American surplus products for sale abroad. The United States came to occupy the position of a manufacturer who gives his carrying business to a trucking company because its service is satisfactory—and cheaper than he could provide for himself. American shipping dwindled until it became almost negligible.

"The question of whether the ships shall be owned by the Government or by private interests," says Mr. Payne, "is of secondary interest. The thing of real importance is that they be owned by Americans—and not by foreigners"

When the war broke out in Europe large numbers of foreign ships were withdrawn from the American trade and used for belligerent purposes; competition was diminished and ocean freight rates advanced—to the enormous disadvantage of American producers. It was then that the United States began to take thought to organizing its own carrying system to make it independent once more of foreign shipping. It was then that the Shipping Board was created for the purpose of establishing a permanent American merchant marine. Now that the war is over we must not go back to a condition of dependence.
